THE HISTORY OF  
THE WAR AGAINST RUSSIA  
ILLUSTRATED.

*Fall of Sebastopol.*

THE  
ILLUSTRATED HISTORY  
OF  
THE WAR AGAINST RUSSIA.

*Edward Henry*  
BY  
E. H. NOLAN, Ph.D., LL.D.

---

"Now all the youth of England are on fire,  
And silken dalliance in the wardrobe lies;  
Now thrive the armourers; and honour's thought  
Reigns solely in the breast of every man.

\* \* \* \* \*

O, England! model to thy inward greatness,  
Like little body with a mighty heart,  
What mightst thou do, that honour would thee do?"

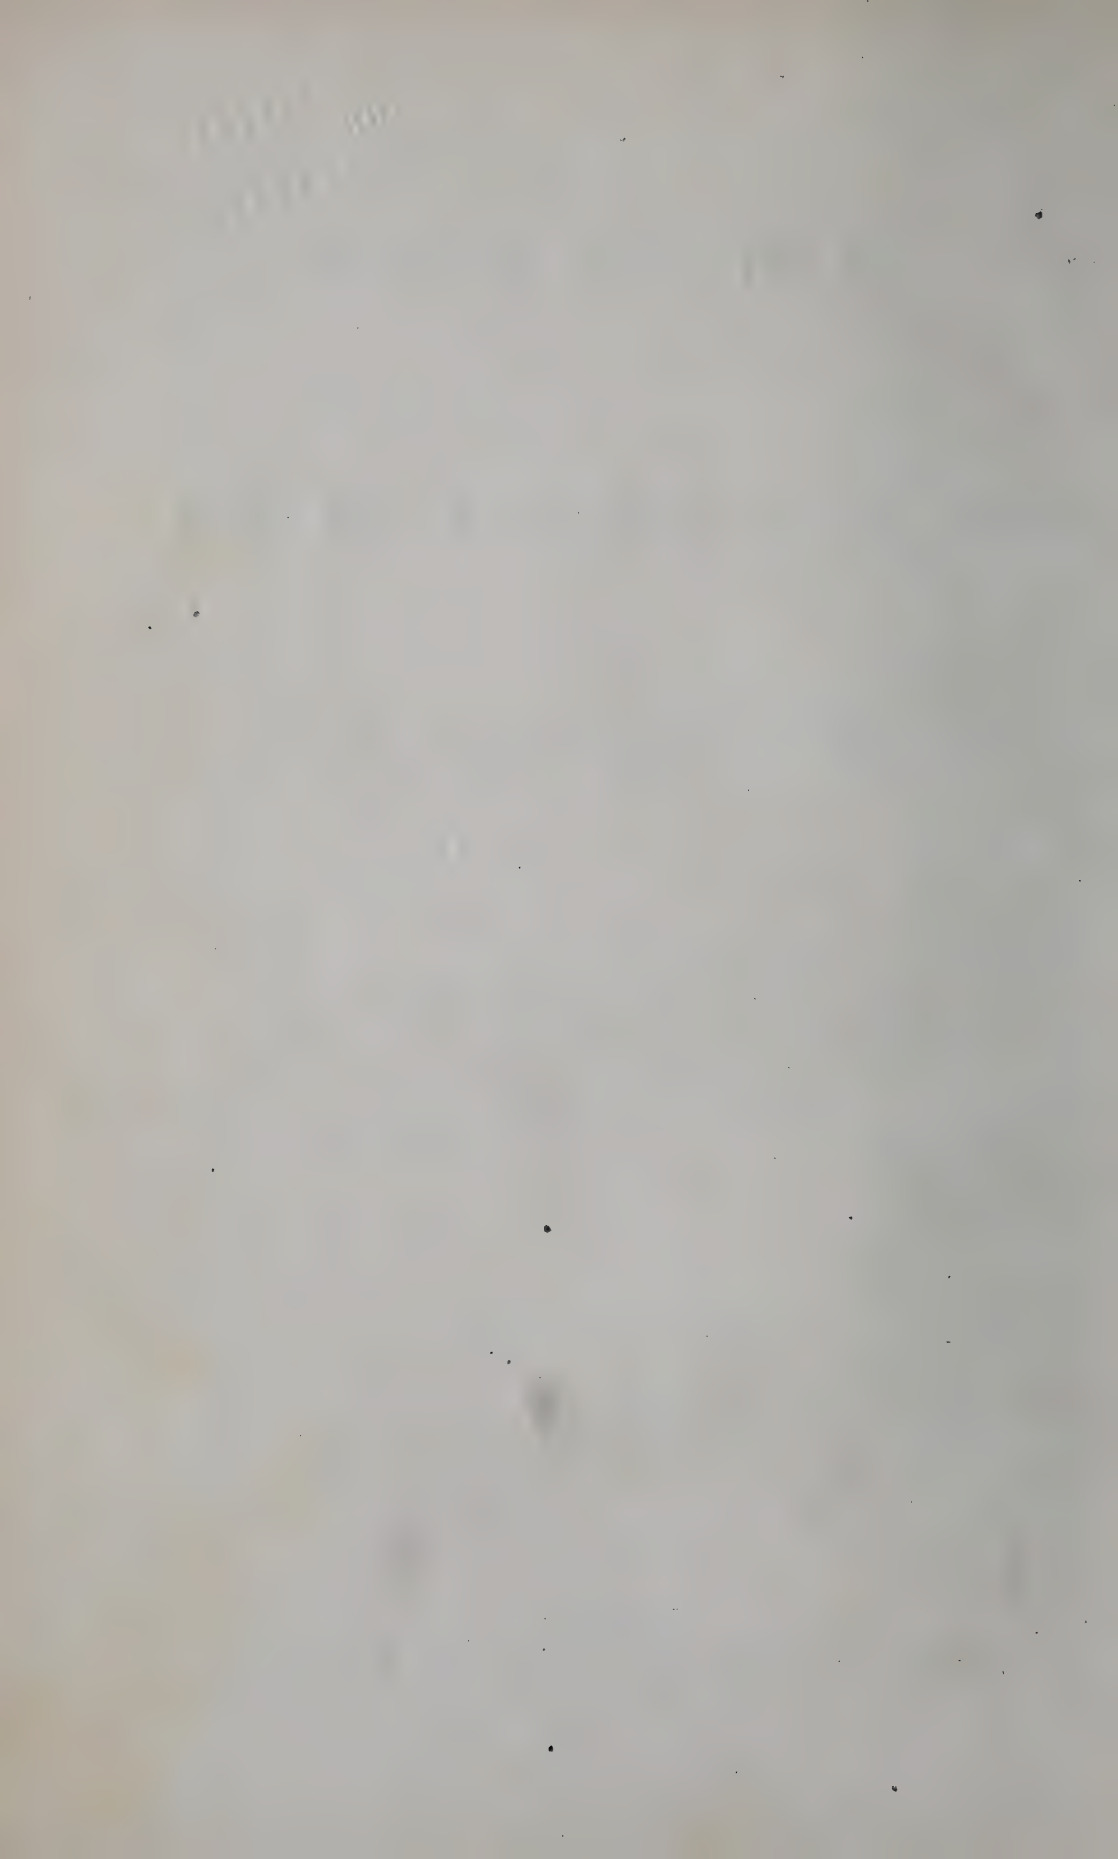

SHAKSPERE. *Henry V.*

# CHRONOLOGICAL TABLE

OF

## THE PRINCIPAL INCIDENTS OF THE WAR.

1853.

- MAR. 2. Prince Menschikoff opened up his demands upon the Sultan.
- MAY 21. Prince Menschikoff left Constantinople.
- " 28. Sultan's diplomatic declaration addressed to the governments of Europe.
- " 31. Count Nesselrode's demand for material guarantees.
- JUNE 8. British fleet approached the Dardanelles.
- JULY 2. Russian army entered Moldavia.
- OCT. 5. Declaration of war by Turkey against Russia.
- " 23. Conflict between Turkish and Russian forces at Isaktcha.
- " 28. The Turks crossed the Danube at Kalafat.
- " 30. British fleet entered the Bosphorus.
- NOV. 4. Battle of Oltenitza—terrible defeat and slaughter of the Russians by Omar Pasha's forces.
- " 30. Naval Massacre at Sinope.

1854.

- JAN. 2. Treaty of neutrality between the Western and Scandinavian powers.
- " 4. The fleets of the allies entered the Euxine.
- " 5. Splendid victory of Citate gained by the Turks over the Russians.
- " 8. Luders forced his way into the Dobrudscha.
- " 29. The Emperor Napoleon sent an autograph letter to the czar.
- FEB. 9. Emperor Nicholas replied by autograph letter to Napoleon III.
- " 10. Interview of a deputation from the English Peace Society with the czar.
- " 23. Departure of the Guards from England.
- MAR. 11. Departure of the Baltic fleet from Spithead.
- " 19. Embarkation of French troops for Turkey.
- " 20. French fleet for the Baltic set sail from Brest.
- " 28. Declaration of war against Russia by the Western sovereigns.
- APR. 14. Russians lay siege to Silistria.
- " 15. Convention between England, France, and Turkey.
- " 18. Turkish victory at Rassova.
- " 20. Austrian and Prussian convention of neutrality.
- " 22. Bombardment of the batteries of Odessa.
- MAY 28. Allies advanced to Varna.
- JUNE 14. Treaty of Boyadji-Keny between Turkey and Austria.
- " 16. Defeat of the Turks at Orzughetti.
- " 23. The Russians raised the siege of Silistria.
- JULY 7. Desperate battle at Giurgevo, in which the Turks gained a signal victory over the Russians.

- JULY 21. Naval squadrons of the allies off the Crimea.
- " 28. The Russians driven from the province of Wallachia.—Utter defeat of the Turkish army of Asia by the Russians, at Bayazid.
- " 30. Arrival in the Baltic of French troops, in English ships.
- AUG. 6. Signal defeat and slaughter of the Turkish army of Asia by the Russians, at Kuyukdere.
- " 13. Commencement of the siege of Bomarsund.
- " 16. Surrender of Bomarsund, and of the general and garrison, as prisoners of war.
- " 20. An Austrian Army entered the Rouman provinces of Turkey, by virtue of an especial convention.
- " 21. Bombardment of Kola, in the White Sea, by British ships of war.
- " 30. Suicide of Admiral Price off Petropaulovski.
- SEPT. 4. Defeat of the allies by the Russian garrison of Petropaulovski.
- " 5. Embarkation of the allied armies at Varna for the Crimean expedition.
- " 9. French troops returned home from the expedition to Bomarsund.
- " 14. Landing of the allies in the Crimea.
- " 15. The Russians evacuated their only remaining post in Moldavia.
- " 19. Skirmish at the Bulganak between the Russians and the British horse artillery and cavalry.
- " 20. Battle of the Alma; total rout of the Russians by the allies.
- " 23. Russians sank their fleet across the harbour of Sebastopol.
- " 24. Arrival of General Williams at Kars.
- " 26. Capture of Balaklava by the British.
- " 29. Death of Marshal St. Arnaud.
- " 30. Todleben began to fortify Sebastopol.
- OCT. 12. Fund for the sick and wounded established by the *Times* newspaper.
- " 13. Patriotic Fund originated.
- " 17. First bombardment of Sebastopol.
- " 23. Departure of Miss Nightingale and other benevolent ladies for Scutari.
- " 25. Battle and grand cavalry charges at Balaklava. Slaughter in the light cavalry brigade. Death of Captain Nolan.
- " 26. First battle of Inkerman. An inferior British force, under command of Lieutenant-general Sir de Lacy Evans, defeated a large Russian force, driving them back with great slaughter.
- NOV. 5. Second battle of Inkerman. Total defeat of the Russians. Dreadful losses of the British army.

# CHRONOLOGICAL TABLE.

- NOV. 14. Hurricane in the Crimea. Much loss of shipping and of life. Cruel conduct of the Russians to the shipwrecked.
- " 20. Battle of the Ovens, before Sebastopol.
- DEC. 2. Conclusion of the tripartite treaty between England, France, and Austria.
- " 22. Sir Edmund Lyons assumed the command of the British fleets in the Mediterranean and Black Seas.
- " 24. Admiral Bruat took command of the French Black Sea fleet.

1855.

- JAN. 7. Prince Gortschakoff signifies to the cabinet of Vienna the czar's unconditional acceptance of the Four Points, as preliminaries for peace negotiations.
- " 23. Lord John Russell left the Aberdeen ministry.
- " 26. Sardinia joined the alliance against Russia.
- " 29. Appointment of the Sebastopol committee in the British House of Commons.
- " 31. The Aberdeen Ministry driven from power, by the indignant voice of the British people and parliament.
- FEB. 5. Lord Palmerston at the head of a new British ministry.
- " 20. Night expedition of Sir Colin Campbell against the Russians on the Tchernaya overtaken by a terrible snow-storm.
- " 22. The "Pecletes" left the Palmerston ministry; great satisfaction of the English people, and increased confidence in the government.
- " 24. Repulse of the French attack upon the White Works at Sebastopol.
- MAR. 2. Death of the czar.
- " 4. Lord John Russell arrived at Vienna.
- " 15. Opening of the Vienna conference.
- " 22. Formidable sortie of the Russians from Sebastopol repulsed.
- APR. 4. Second expedition to the Baltic left Spithead.
- " 9. Second bombardment of Sebastopol.
- " 19. Gallant capture of rifle pits before Sebastopol by the British.
- " 24. Embarkation of the Sardinian army for the East.
- " 26. Close of the Vienna conference without deciding upon terms of peace.
- MAY 1. Rifle-pits before Sebastopol captured by the French.
- " 16. Superecession of General Canrobert, and appointment of General Pelissier to the command of the French army.
- " 22. Conflicts between the French and Russians at the Cemetery, Sebastopol.
- " 23. Allied expedition to Kertch.
- " 25. Capture of Kertch and Yenikale by the allies.
- " 26. Allied squadrons steamed into the Sea of Azoff.
- JUNE 3. Attack by the allied squadrons upon Taganrog.
- " 5. Russians massacred an English boat's crew under a flag of truce at Hango.
- " 6. Third bombardment of Sebastopol.
- " 8. The Mamelon, Quarries, and White Works captured by the allies.
- " 9. Unpopular speech by Prince Albert at the Trinity Corporation dinner.

- JUNE 17. Fourth bombardment of Sebastopol.
- " 18. Grand assault upon Sebastopol by the allies. The French signally defeated at the Malakoff. The British signally defeated at the Redan.—Report of the Sebastopol Committee. Great sensation in England caused by the official and military mismanagement it revealed. Popular indignation against the former (the Aberdeen) administration.
- " 28. Death of Lord Raglan by cholera.
- JULY 16. Lord John Russell compelled to resign his post in the Palmerston ministry, in consequence of his conduct in the Vienna conference.
- " 29. Public funeral at Bristol of the remains of Lord Raglan.
- AUG. 9. Bombardment of Sweaborg.
- " 16. Battle of the Tchernaya. Destructive defeat of the Russians by the allies.
- " 17. Fifth bombardment of Sebastopol.
- SEPT. 5. Sixth bombardment of Sebastopol.
- " 8. Storm of Sebastopol.—Terrible defeats of the French by the Russians at the Curtain, the Little Redan, and the left attack. Surprise and capture of the Malakoff, the key of Sebastopol, by the French. Defeat of the British at the Redan.
- " 9. Allies entered the ruins of Southern Sebastopol.
- " 24. Expedition to Taman by the allies.
- " 29. Cavalry action at Eupatoria between the allies and Russians.—The Russian army of the Caucasus, under the command of General Mouravieff, storm Kars, and were defeated by the garrison under General Williams with extraordinary slaughter.
- OCT. 3. Omar Pasha landed at Souchoum Kaleh in command of a Turkish army for the relief of Kars.
- " 17. Capture of Kinburn by the allies.
- NOV. 6. Battle of the Ingour. Defeat of the Russians by Omar Pasha.
- " 10. The Czar Alexander II. visited Sebastopol.
- " 15. Explosion of a French magazine at Sebastopol—great loss of human life and matériel of war.
- " 21. Treaty between Sweden and the Western powers negotiated by General Canrobert.
- " 25. The garrison of Kars, constrained by famine, surrendered with all the honours of war.
- DEC. 8. Retreat and disorganisation of Omar Pasha's expeditionary army of Asia.

1856.

- JAN. 16. Russia accepted the Austrian terms for a treaty of peace.
- " 29. The sultan issued a declaration of religious liberty for his empire.
- FEB. 25. Opening of the Paris Peace Congress.
- " 29. Armistice in the Crimea.
- MAR. 30. Treaty of peace executed at Paris.
- APR. 15. A separate tripartite treaty signed by England, France, and Austria, having for its object the execution of the terms of the treaty of March 30.
- " 27. Ratification of the treaty of peace, and formal termination of the war.

# THE ILLUSTRATED HISTORY

## OF THE

# WAR AGAINST RUSSIA.

### CHAPTER LIX.

PROGRESS OF THE SIEGE.—CHARACTERISTICS OF THE OPPOSING ARMIES.—DESPATCHES, SORTIES, COMBATS.

*Alençon.*  
Lean raw-boned rascals. Who would e'er suppose  
They had such courage and audacity?"

"One to ten.

SHAKESPEARE. *Henry V.*

HAVING shown the state of the armies before Sebastopol—the manly endurance of “the raw-boned English”—the neglect to which, in the severe winter which opened 1855, they were exposed, and conducted our readers a second time to the hospitals and their dire scenes, we now proceed to relate the progress of the siege, its obstacles, successes, and the havoc which it made on all who shared its perils. Before entering upon any of the incidents of combat, we present to our readers an admirable paper, published in the *Constitutionnel*, upon the characteristics of the Russian army, and a comparative view of it and the armies of the allies. The paper was written about the middle of January, and was suggested by the aspect of affairs at the period of our narrative:—“The battles of the Alma and Inkerman, and the siege of Sebastopol, have enabled us to study the Russian army employed in the Crimea. Although this army is partly composed of troops from the Danube and the Caucasus, it is clumsy, not easily handled, and manœuvres badly in presence of an enterprising enemy. Its generals always place it for bivouac, as in the field of battle, in great masses, and they do not know how to deploy it after an attack, nor when to make it resist in a thin line. The Russian infantry is very badly armed. Some companies only have carbines made at Liege; the muskets—but recently transformed—badly kept, and with but-ends in white wood, do not last long in a campaign. This infantry will never attain the level of the French infantry, which is really the first in the world for making war in woody or hilly countries, where the general-in-chief leaves a great deal to the initiative of the soldiers and to the chiefs of corps and battalions. In the defensive, the preference must

be given to the English infantry, who, under the fire of the enemy, rest immovable as a rampart. In a level and exposed country our infantry will have to modify its manner of combatting, and to resume its old one. This consists in employing compact or thin order (*épais ou mince*), but it can only be employed with intelligent and experienced troops. Its superiority in arms and intelligence will, however, always give to our infantry the advantage over the Russian infantry, which will always lose half its value when obliged to change its place rapidly. On the Alma, entire Russian battalions took to flight in surprise at the Zouaves way of fighting, they having advanced on them in large bodies, deployed, having taken advantage of all the accidents of the ground to shelter themselves and to rally, and having made against the masses a terrible use of the peculiar arms confided to their skill. At Inkerman, in the upper part of the battle field, and on the line of the English, the Russian infantry bravely attacked the enemy, but did not know how to deploy its masses so as to bring more muskets into play, and when the French attacked their left flank entire battalions did not know how to change their position. The first ranks bravely resisted, but the following ranks fired in presenting arms. Surprised afterwards by the sharp attack of the Chasseurs d’Afrique, masses of men, instead of effecting their retreat by the crests of the hills, descended slowly to the lower parts of the ground and the ravines, where they allowed themselves to be crushed almost without defence by from 1000 to 1200 French. The English have so well understood the advantages which troops would have in attacking either artillery or masses of infantry in woody or hilly countries,

whilst preserving the order deployed by the first line, that at Inkerman they did not employ the order in columns, which caused them to lose so great a number of men on the Alma. On the Alma the Russian cavalry was worse than timid, not a charge did it attempt. At Inkerman the nature of the ground prevented it from taking part in the affair. At Balaklava, it did not dare to await the charge of two squadrons of Chasseurs d'Afrique. The famous Cossacks have, in fact, never attempted, even in the plain, to carry off our advanced posts, or the marauders who pass our lines; but it is said that this cavalry is but little esteemed even in Russia. As a set off to this, the Russians really possess great superiority, both over the French and the English, and especially over the French, in their artillery. The Emperor Nicholas, in, no doubt, the expectation of a war against all the nations of the south of Europe, occupied himself a good deal with that arm, which has made great progress since the wars at the beginning of the century. The cannon are of a large calibre, the carriages and caissons well made and easily moved; the artillerymen are brave and accustomed to their service; the officers know perfectly well how to choose offensive and defensive positions; they occupy them with boldness, hold them a long time, and know how to leave them without leaving their guns. You will now understand why we are still before the walls of Sebastopol, and why that place would cost us so much blood if we were to make an assault before its unextinguished batteries. But we hope that the town will surrender in consequence of the difficulty it is under of obtaining supplies of provisions, or that we shall obtain its keys by giving a grand battle to the army in the field. The stores of ammunition in Sebastopol are inexhaustible, and as the investment is not complete, the garrison can be relieved and increased every day. Without being initiated in the secrets of the generals-in-chief, everything causes us to believe that they are waiting the arrival of the reinforcements which are on their way, in order to resume the attacks which, so to speak, have been suspended since the day of the battle at Inkerman. We shall have in the French and English trenches at least 300 pieces, which will open their fire, and it is more than probable that in the meantime the army of observation will destroy in a battle the Russian army in the field."

At this juncture the condition of the army was an all important consideration. Its state, and the state of the harbour and of the camp, we shall therefore present to our readers from a source upon which they may rely. A relative of the late, and of the present, Sir Andrew Agnew visited the Crimea in January, 1855, and addressed the following letter to some

friends at home. It may be well matter of astonishment to the reader how, in the condition of harbour, camp, hospital-tents, trenches, and troops, the siege could be conducted at all, so far as the English were concerned. The explanation consists in their indomitable self-reliance and heroic courage:—"Now for a description, if possible, though I fear I shall fail in the attempt. Until you almost touch the rocks you can hardly perceive an opening, and, when you at last reach the mouth of the harbour of Balaklava, it is not above sixty yards wide; and, after passing several men-of-war, transports, &c., all with the ends of their bowsprits nearly touching you, you get into rank, and add another to the number; and now the scene changes, about forty yards from our stern is the landing-place. The town—'did you say town?'—no, I mean a scattered number of wretched hovels—say 150. In the rear and in the front high precipitous rocks; on the face of the latter several tents with marines and a body of Highlanders; in fact, suppose a basin one quarter full of water placed on the table, and drop a wafer into it, and then you have a good idea of the position of a ship in the harbour of Balaklava. Yesterday being a beautiful day, I thought it a good opportunity to pay a visit to the camp, and as I had understood that the light division of the army occupied, together with the French, the nearest point to Sebastopol, to that place I determined to set out. An officer of the 19th, belonging to the division, who had come on board amongst a host of others 'foraging,' purchasing geese and turkeys, a guinea a-piece, and fowls 12s. 6d. a couple, kindly offered to put me in the right road, and invited me to dine with him in his tent. Now for it—I landed—my first step up to the very knees in mud; French, Turks, English, and camp-sutlers in glorious confusion; such swearing, shouting, and row you never heard in your life; artillery waggons, six and twelve horses attached to each; others with half-starved camels; cavalry horses whose riders and hard-worked steeds have probably not seen a comb or a brush for a month together; with Turks every here and there bearing the dead upon stretchers, all wading through a sea of mud, complete this picture until you emerge from the town. The crowd appears then to deploy over an interminable space. In the distance, on the right, are the mountains of the Crimea, covered with snow; at the foot several Russian encampments; nearer to us, the Balaklava battle-ground; on one of the slopes you see the remains of our light cavalry and their horse-hospital, not 100 effective animals left. The Scots Greys nearly as bad. How can it be otherwise? The poor creatures are worked all day with the artillery in dragging heavy loads to the trenches and camps, fastened up

to posts driven into the ground, and scarcely a morning breaks but the troopers drag out fourteen or fifteen out of the 'slush,' as they term it. On the left you see Lord Raglan's quarters, though all agree in saying they have not seen him for the last month; and, having proceeded over destroyed vineyards, every here and there dotted with dead horses emitting a most delightful perfume, you at last get upon higher ground and approach the French camp, extending miles on the left, having the Turks between them, and the British skirting the latter. I thought I would have a look at the French, so having paid a visit to several of the huts, and been very hospitably invited to partake of their contents, I passed on towards the light division. A little on the left of the French is the Picket-house, about a mile and a half from Sebastopol, into which a shell often drops, to the danger of all who are in it—and being a good look-out place, is seldom unoccupied by the curious endeavouring to get a glimpse at what is going on in the far-famed fortress in the distance. Being determined on exploring I still proceeded, and presently I heard firing right below me. The French were pitching their shot into the town, and the Russians returning three to one. Within 300 yards is the 40-gun battery, and directly opposite is the Russian, mounting much heavier metal. From this spot I first saw what they call the 'trenches'—I mean the actual working trenches. Now, suppose a soldier six feet high in the trench, in some places, if he stands upright, he gets shot at—his head appearing over the parapet, and then he is obliged to kneel down, with the mud and water up to his middle, to avoid the danger. This state of the trenches and laborious work that the poor soldiers undergo, being sometimes thirty hours thus employed, badly fed, badly clothed, and, I fear, much dispirited, tends to engender disease. We are losing on an average 160 men a-day, not including those who fall from the enemy's guns. I now had an opportunity of a good view into Sebastopol. Its appearance is both picturesque and beautiful, and, though I was within half a mile of it, and had a capital seven-guinea glass, I could not perceive any damage that had as yet occurred. On the contrary, I could see no marks of the cannonade that has now been going on for upwards of two months, though I believe that the portion directly opposite the French batteries is much cut up. After satisfying my curiosity, I returned to the light division camp; and now for a description of Mr. Gorham's tent (19th regiment). The tent inside is eight feet diameter, round the circumferences were a medley of boots, caps, kettles, empty bottles, and many other things of general daily utility; next was a soldier's bayonet stuck into the

ground for the purpose of a candlestick; next two beds, or rather hard-stuffed straw mattresses with a scanty coverlid, each on the bare ground. Dinner at length was brought in—two tin panikins with *soupe-maigre* that would frighten S—, followed by two pieces of hard salt beef of about half a pound each, a little rice (this was good), and a very, very hard biscuit. However, exercise sharpens appetite, so I set to, and having as a finale taken a glass of bad rum with my entertainers, I bid good-by to the officers of the light division, and taking a building in the distance as my landmark, I started for Balaklava. The sun had melted the hitherto execrable roads, and, together with the traffic, I shall never, to the longest day of my life, forget the walk back; suffice it to say that, having passed several fellows who were endeavouring to urge their worn-out horses to get up out of the mud where they had dropped down for the last time, I reached the *Charity*."

The numerical force of the troops in the British army actually able to serve at this time was variously computed; perhaps the estimate of Colonel, afterwards Major-general Windham, is as likely to receive credit as any other. In a speech delivered by him after the termination of his services in the Crimea, he made the following reference to the muster-roll at this period:—"Look too at what the troops had to go through. In the middle of the winter—and I see many officers here who can confirm what I say—we had not more than 12,000 bayonets to do duty, which would properly have required 36,000. Why, gentlemen, you might as well try in Norfolk to farm 1000 acres with capital for 300. Throughout the whole of the winter, however, notwithstanding the hardships to which they were exposed, the men discharged their duties without grumbling, and with a cheerful readiness which has justly elicited the admiration of the country."

Small as their numbers were, they were not all adequately armed, the Minié musket not having been universally distributed to the infantry; the fourth division, to some extent, still carrying the old "brown bess." Not only were they inadequately armed, but they were often obliged to turn out hungry, and literally tottering from weakness. The men sought death from the enemy as a relief.

The early despatches of Lord Raglan were at this time mere records of the weather, so that his lordship was sneeringly called at home the "weather-glass of the army." But there could be scarcely any subject of deeper interest to the commander or the troops committed to his care than the state of the weather; for on it not only depended the health of his ill-clad soldiers, but also the state of the road or rather rut from Balaklava, and the prospect of getting up food, ammunition, or, in fact, any-

thing that was wanting in the camp. On the 2nd of January, his lordship's despatch referred to *the weather*; on the 6th, a similar communication was made to the British war minister. Everything looked more gloomy as the overwhelmingly severe weather of January set in. The state, opinion, and feeling of the English soldiery may be gathered from the following letter from a non-commissioned officer to his friends in Glasgow:—"To tell you the truth, the beggar that wanders about the streets is better off than the British soldier in the Crimea. Winter has set in, the snow is about four feet deep, and we have received none of the winter clothing the papers say we have got, except four extra greatcoats for a company, instead of one to each man; and as for rations, we are on half—that is, half a pound of meat and biscuit, and half a gill of rum, *per diem*, and a little raw coffee. That is the British soldier's fare for a day, and even that we can't get cooked—no wood to be got. I cannot describe our miseries. When we are off duty we have nothing to shelter us but the tent, which lets in everything—wind, rain, and snow—often knee deep in mud, in which to lie down and rest our weary bones, after doing duty in the trenches, with only twelve hours off at a time. Our regiment left Dublin 800 strong, and, with deaths and sickness, we are now only 230. Other regiments are worse. Still, those who are left of us bear up bravely; we try to keep our spirits up, hoping for better days to come. Our neighbours, the French, are much better off than we are; they get their pay, and have canteens in all their camps, where they sell brandy, tea, sugar, bread, tobacco, &c. We could purchase of them too, but, unfortunately, we have no money, so we are done. The battle of Inkerman was fought on our side of the Tchernaya, about two miles from where our regiment is encamped. There are a number of dead Russians still lying about, but nobody takes notice of them. As for Lord Raglan, I have certainly seen him since I came here; but I suppose if you were to ask some of the soldiers how they liked him, they would ask you who he was. Sebastopol stands as strong as ever, and will do till we take it by storm, which ought to be done long ago. We have got scarcely a battery. On our 21-gun battery there are only three available guns. I must stop, as I have no more paper." Thus, ill-fed, ill-clothed, without fire-wood or coals, which we could have easily sent them—without good tents, or with roofless huts—with three endemic diseases, and great liability to dysentery, the brave soldiers of our army were pining and dying before Sebastopol, the victims of official inefficiency at home and in the camp, when called on to meet the various combats now about to ensue. It was of no avail for the government at home

to plead inexperience on their own behalf, or that of the officials; for, in the first place, it was not true as to the officials in all cases—many of them having, during other campaigns, served in the commissariat, or in the government offices at home; and the very men then at the helm of affairs were those who had composed, in greater or less proportions, most cabinets since the peace of 1815. When they pretended that the commons was the culprit, the reply was, that they held office knowing the commons were enfeebling the country by refusing such supplies as were adequate to the effective material of the army. The mere threat of a resignation or a dissolution would, on scores of occasions during that long period, have caused the commons to vote any supplies necessary for the full efficiency of the fleet and army.

Under these circumstances, many at home were in favour of raising the siege; and though personally fearing no danger, and quailing before no difficulty, there were officers in the Crimea who felt that, unless larger reinforcements arrived, and the army was immediately and amply supplied with the instrumentalities of warfare, the enterprise must be abandoned. The general feeling, however, in the camp was hopeful; and all were ardent to meet the enemy, despite sickness and neglect. In this feeling the French partook; they were full of confidence; many reinforcements were on the way, and, flushed with high hope, there existed throughout the French host the utmost eagerness for a bombardment which should prove the certain preliminary to an assault. The impression in the French camp was, that no good would come of delay; that Russia would only grow stronger by the arrival of new succours; and that as soon as the next cannonade should partially disable the batteries, they should be led to the assault. They addressed one another in the spirit of the language of Brutus to Cassius:—

"Our legions are brimful, our cause is ripe.  
There is a tide in the affairs of men,  
Which, taken at the flood, leads on to fortune;  
Omitted, all the voyage of our life  
Is bound in shallows and in miseries.  
On such a full sea are we now afloat,  
And we must take the current as it serves,  
Or lose our ventures."

The French troops were much gratified with the acknowledgment of their services by their allies generally, but especially with that of the British queen, government, and people for their aid at Inkerman. General Canrobert opened the new year by the following "general order:—

*Head-quarters before Sebastopol, Dec. 28.*

The commander-in-chief is happy to have to communicate to the troops the expressions, most honourable for our arms, in which her Majesty the Queen of England appreciates their conduct at the battle of Inkerman.

The queen has remarked, with grateful satisfaction, on the vigour with which the troops of her ally, the Emperor of the French, came to the assistance of the divisions of the English army engaged in so unequal combat. Her majesty is profoundly sensible of the cordial co-operation of the commander-in-chief, General Canrobert, and of the valiant conduct of that distinguished officer, General Bosquet. She beholds in the cheers with which the soldiers of the two nations mutually encourage each other during the action proofs of the reciprocal esteem which this campaign, and the traits of bravery it has produced, have given rise to on both sides.

Her Majesty the Queen of England could not praise in a more flattering manner the attitude of the army at the battle of Inkerman. In marching to the aid of our brave allies, we fulfilled a duty which they themselves would fulfil towards us with that valour we know they possess, and so many proofs of which we have witnessed with our own eyes.

The Commander-in-chief,  
CANROBERT.

His excellency signalised the opening of the year by another order less to his credit and to the interest of the army. All the correspondents of the French press were ordered out of the Crimea; even one gentleman, who was said to have an introduction from the emperor himself, was compelled to leave by a ship departing to Marseilles.

The Turkish army in the Crimea began now also to assume some importance; the name of Omar Pasha had a magic effect upon the drooping Osmanli, and the allied army regarded his arrival with the old army of the Danube as an element of speedy success. It had been rumoured that he was deposed, but the sultan took suitable opportunity of publicly proving that the great muschir was restored to favour, if ever he had been deprived of the light of the imperial countenance. By way of Constantinople, Paris, and London, in rapid succession, the following imposing documents arrived, and showed, beyond all doubt, that the sirdar was not only a great man, but a great power in the Ottoman empire:—

(HATTI HUMAYOUN).

TO MY SUPREME GENERAL AND ZEALOUS  
MUSCHIR, OMAR PASHA.

As you will see by the annexed imperial firman, the laudable efforts you have made hitherto deserve the greatest praise and general approbation, and have raised you in my favour, as also the faithful and courageous conduct of the generals, officers, and soldiers of the imperial armies which have been placed under your command—conduct which gives proof of the zeal, fidelity, and valour which is natural to them, and which has given us unlimited satisfaction, and met with our approval. On this occasion also make every effort in the Crimea, as your zeal and fidelity require you to do, and placing full faith in the mercy and aid of the Lord Almighty of the universe to render great services, in order doubly to strengthen our favour towards you, endeavouring with great care to entertain a friendly intercourse with the generals, officers, and soldiers of the high powers my allies in this question, in which the good rights of my empire have by all been acknowledged, so that I may have fresh proofs of your inborn valour, and of your constant attention to the execution, under all circumstances, of the fundamental military laws, and of your sincere sentiments towards us.

[Translation of the Firman.]

TO THE MUSCHIR OF THE IMPERIAL ARMY OF  
ROUMELIA, TO MY GENERAL-IN-CHIEF OMAR  
PASHA, &c.

As soon as my high imperial signet will have reached thee, know that the principal and most respectable thing for me, and for every sage and intelligent person who faithfully loves his government, is to defend the power and independence of my empire, of my trusty subjects, and to maintain their prosperity and tranquillity; and in like way, that the laudable care that ever since the commencement of this war, of happy issue, which has been undertaken with that good intention, thou hast given, by thy intelligence, to the high administration of the army which thou commandest, having merited my praise and approval, have increased my imperial favour towards thee. In like manner, my victorious imperial troops, which are under thy orders, having displayed before the whole world a faithful conduct, and that abnegation which is part of the zeal, fidelity, and valour which are natural to them, and have again proved before friend and foe that they are the valorous descendants of those brave men, who, in the times of our glorious ancestors, and in their service, spilt their blood and sacrificed their lives in order to strengthen the foundations of the empire, and cause the country to prosper, equally shows that the confidence which we place in them with regard to the privations and fatigues of every kind, which they will bear with pride for the defence of the independence and glory of our empire and our fatherland, is based upon the truth of existing facts, and as they have completely and afresh regained the country high military glory, that conduct has obtained our extreme satisfaction, our goodwill, and our praise.

It is certain that, in our prayers, we constantly remember thy intelligent person, as also all the generals, officers, and soldiers, high and low, of our imperial army; that we never for a moment cease personally to occupy ourselves with solicitude, with what can solace the pains and increase the felicity and welfare of them all; and, finally, that wherever my imperial army may be, my favour and high attention for its welfare will accompany it.

It now happens that the service of my empire indispensably requires that a sufficient portion of the troops belonging to my imperial army of Roumelia should proceed with thee to the Crimea, rejoin thy victorious troops which have preceded them and the armies of the high powers, sincere and intimate allies of my empire, in order to combat the enemy. My eyes rest upon you. Place confidence in the help and mercy of the Lord Almighty of the universe, and add to your glorious precedents, by worthily serving the cause of the honour of the empire and nation. Take the greatest care to behave amicably and in harmony with the generals, officers, and the soldiers of the two high powers above-mentioned, my allies in the cause in which the good right of my empire is recognised by the whole world. Fortify thus doubly my imperial favour towards you. Give fresh proof of your inborn valour, of your well-known respect for the fundamental military laws, and of your sincere devotion to my imperial person.

My present all mighty firman has been expressly given by my imperial Divan, and graciously headed by my Hatti Humayoun, to command what precedes, and to honour thee and my imperial troops under thy command.

To convey to you, and also verbally to declare to you my lively satisfaction and my high imperial will, one of the high functionaries of my empire, Mahmoud Bey, mustichar of the ministry of foreign affairs, has been sent to you.

On his arrival, hasten to make known to, and proclaim my high will and my lively imperial satisfaction to all the generals, officers, and soldiers who stand under thy orders, and take care, day and night, as hitherto, of their welfare in every respect.

Know it thus, and believe in my noble sign.

Given in the 1st decade of the month of Rebiul Akhir, 1271.

In pursuance of the above, the dispatch of the redoubtable Omar and his gallant followers, as auxiliaries to the Western allies, was ef-

fect. In a previous chapter the departure of this expedition was noticed; in a future page its efficiency will be recorded.

On the arrival of Omar at Varna, he requested the British commissioner to forward to the commander-in-chief the following handsome acknowledgment of the services rendered to the sultan by various British officers. This politic and just measure bespoke for the Turkish commander a greater measure of popularity with the English.

*Varna, January 8th, 1855.*

"MY LORD,—His Highness Omar Pasha has requested me to write to your lordship to return his best thanks for the services rendered to his army by Major Bent, of the Royal Engineers, and the detachment of sappers under his command.

"His highness desires me to express his regret at the losses which have been sustained by this small detachment, who, under the direction of Major Bent, have well sustained the character of the British army.

"His highness has already expressed to your lordship his regret at the loss of Lieutenant Burke, of the Royal Engineers, whom his highness considers to have been an officer of much merit.

"His highness desires me to inform your lordship that he has done himself the honour to write to the Turkish ambassador at the court of St. James's, expressing the desire of his majesty the sultan that Private Andrew Anderson, of the Royal Sappers and Miners, may receive and wear the decoration of the fourth class of the order of Medjidié, in commemoration of his gallantry in recovering the body of Lieutenant Burke, after he was killed at the passing of the Danube, on the 12th of July last. In the meantime he has presented Private Anderson with the decoration, and trusts your lordship will allow him to wear it until the commands of her majesty may be received.

"His highness further desires me to express to your lordship his entire approbation of the manner in which Major Bent has conducted his duties. He desires me to inform your lordship that this officer showed great energy in his endeavours to enter Silistria before the siege was raised, and that he subsequently showed great gallantry."

The Russians were not less confident than their rivals; yet with their usual caution, despite the sternness of winter, they made preparations for the defence not only of Sebastopol but of the whole Crimea, believing that the arrival of reinforcements early in the spring would enable the allies to take the offensive, for the especial purpose of cutting off the supplies. The Russians were also

eognisant of the appointment of Omar, and the landing of the Turks at Eupatoria:—"In order to prevent a *coup de main* against Perekop, the division of General Pauloff, the brigade of General Wrangel, and four regiments of dragoons, were detached on the 18th ult. towards Armgansk, and took up a position on the road which commands the isthmus. The light division of Hulans, under General Korff, was still holding its winter-quarters near Eupatoria, its head-quarters being at Saki. The 51st regiment of Cossacks of the Don had joined it, and these troops will in the early part of January, it is said, commence an offensive movement against Eupatoria. In the meantime, in order to secure the communications with Perekop, reinforcements are being brought up from Odessa. The total force now at Perekop, in cavalry and infantry, amounts to 50,000 men. The eighth division, which arrived at Bagtché Serai on the 28th of December, was immediately after reviewed by General Osten-Sacken, who complimented it on its fine appearance, and said, 'You have come by order of your august sovereign to maintain the glory of your ancestors and the honour of Russia, our sacred country, my children! It is unnecessary for me to tell you that the eyes of your sovereign, as well as those of your fellow-countrymen, are on you, as the defenders of the word of Jesus Christ, our Saviour. There are among you many whom I have already commanded on fields of battle in Persia, Poland, and Hungary: remember the past, and continue to behave as becomes brave Russians. The moment will soon arrive when you will leave no other choice to the enemy than death or captivity. Until that time, adieu.'"

A letter from Vienna to London gives the following brief sketch of Russian activity at this period:—"We have to-day no late news from the seat of war in the Crimea, beyond the usual despatch from Prince Menschikoff, stating that, except two trifling sorties attempted by the garrison, nothing important had happened before Sebastopol up to the 8th of January. The *New Prussian Gazette*, in a communication coming from an acknowledged Russian source, states that Prince Menschikoff has profited by the respite to fortify the exterior *enceinte* of Sebastopol with new works of fortification, and has transformed into redoubts 28 of the 350 houses of the town, in addition to the batteries erected on the barricades, and in the principal streets, and on the bastions, the 460 guns of which answer the fire of the allies. The Prussian paper supposes that there will be no assault till the place is completely invested."

On New-year's day our French allies effected a reconnaissance towards the village of Tchor-

goum, and returned with only a loss of nine men. On the 6th the Russians showed great activity in the neighbourhood of the Tchernaya, towards the north side of which, and near Inkerman, there were three or four strong divisions of infantry, whose movements were unaccountable. The Russian general dispatched a considerable force of cavalry by the gorges to the east of Balaklava, and a strong body of infantry moved off northwards by the Inkerman tunnel. Silent movements on the part of the Muscovites, and silent vigilance on the part of the allies, were not destined to fill up the history of the day; the former opened fire from their new earthworks opposite the French right attack, and were replied to with spirit—the brawling guns kept up the noise of battle for hours. The English were not permitted to be mere spectators of this artillery practice, for a masked battery was opened against their advanced posts. Every night the French and Russians exchanged some cannon shots, and the riflemen on both sides did some execution. The camps of the allies were much annoyed with spies, who assumed every disguise with dexterity and success: sometimes that of a rifle officer was chosen, and one Russian officer actually imposed upon a party of the Rifle Brigade as an officer of their own corps. Another, as an officer of Zouaves, rode about Balaklava, escaping in the evening in the direction of Tchorgoum. Another personated a British officer of engineers, and escaped over the parapets of the trenches through a musketry fire from the men in the trenches. Those Russians showed skill, courage, and a perfect mastership of dissimulation and self-possession. Desertions became very common, from both French and English; those from the former chiefly belonged to their foreign legion. On the 10th a private soldier of the Connaught Rangers, who had been captured in one of the sorties of December, made his escape; he arrived in the camp in a wretched condition—his feet and legs, hands and arms, all much lacerated by broken glass, which he represented as strewn thickly for a great distance around the enemy's works. His description of the woe-begone plight of the Russians encouraged his fellow-soldiers.

The French worked hard by day in assisting to make a road to the English camp. By night, their mortar batteries (which were much more numerous armed than those of the English, although the latter had mortars of much greater calibre) flung shells with much effect—it was afterwards heard from deserters—into the works of the enemy. On the 10th and 11th the French mortar fire was especially animated. The navies, although so lately arrived, were engaged in earnest work. By the 10th of January the railway had been brought up a

considerable distance in the main street of Balaklava. The Turks were greatly surprised at this operation; they could not maintain their accustomed *sang froid* when they beheld the railway engine snorting and fuming along. The main street of Balaklava was not improved, however, by the presence of “the line”—as nearly its whole breadth was thus occupied, and the ordinary current of passengers was obliged to find vent in other directions still more encumbered than the old route had been.

Several British deserters were shot in their efforts to reach the enemy. These men were generally hard drinkers, and had deserved punishment, or were dishonest, and feared that their practices would be brought to light. Some, when caught, pleaded an unconquerable desire to see Sebastopol; this curiosity was found in the ranks of the Zouaves more than among the British. Shot, shell, and provisions, were brought up during the early days of January in considerable quantities, but at a very heavy cost to the poor soldiery. But for the assistance of the French, in men, mules, and ambulances, neither food nor ammunition could have been brought up to the camp, nor invalids brought down to Balaklava. Tea was served in the hospital tents in the latter place, and to the sick on board ship.

During the desultory cannonade, officers and men, especially among the French, experienced the most wonderful escapes. A correspondent of the *United Service Gazette* communicated the following adventure in the British trenches:—“The covering parties in the trenches who are not actually on sentry have excavated large holes in the bank, inside of the guns, to screen themselves from the cold wind. Two men had ensconced themselves in one of these holes, and were comfortably rolled in their blankets, when a large shell fell exactly between them without injuring either; one of the men, who happened to be awake, got out as quickly as he could, but the other poor fellow, who was sound asleep, remained quietly ‘taking his rest,’ wrapped up in his blankets, unconscious of his danger. Most fortunately the fusee had been extinguished in its flight, or had burnt out without reaching the inside, and the shell did not explode. Had it not been for this fortunate circumstance, the two men and some officers standing near, would in all probability have been killed or maimed on the spot. Our first impulse was to throw ourselves flat on the ground, as the only chance of escape, and we remained there some time before being satisfied that the fusee was not burning. We then awoke the man who had remained in the hole from his sleep, which was nearly proving his last, but who for some time did not appear to comprehend the danger

he had escaped, and after a little time, and rubbing his eyes, he said, 'I'll knock over a few more Russians for this trick that they have played me.' "

The general neglect which the staff-officers of the British army had hitherto exhibited was not now so apparent. Lord Raglan having started into life, his "aids," also became more animated. Indeed, if the general officers had done their duty, the divisional and general staff of the army—however incompetent many of the officers undoubtedly were—would at all events have shown more alacrity and more concern for the welfare of the men. "The Queen's Rules and Regulations for the Army" are very positive as to the duty of the chief officers on this head:—"General officers in command are to be very circumspect in their recommendation of officers for staff appointments of any kind, and are responsible that the officers on whose behalf they interest themselves are, by their previous personal services, as well as by their acquirements and character, qualified to discharge with advantage to the service the duties attached to the situation for which they are recommended."

There was some discontent shown about this time, arising from what was considered partial conduct on the part of Admiral Lyons. When the troops entered Balaklava, there were five mortars found in the old fort there. These were removed on board the *Agamemnon*, Admiral Lyons' ship, and ultimately on board the *Firebrand*, with the inscription on a brass plate, "Agamemnon, Balaklava, 1854." As the *Agamemnon* had shelled the heights, that circumstance was made a pretext for taking the credit of capturing the mortars. The Rifle Brigade were the real captors, for it was to them that the fort surrendered.

On the 12th of January (the Russian New Year's-day) the frost gave way, and a south wind setting in, the weather became unseasonably mild, and the plateau was once more a vast area of mud. This was the new year of the Russians, and they ushered it in with ostentatious gaiety. They lighted huge bonfires on the north side, and placed long rows of lights on the heights over the Tchernaya. The windows of Sebastopol were illuminated, and the light flashed over the heights occupied by the allies. At midnight, the bells of all the churches were rung in the manner the Russians are accustomed to perform that preliminary to a grand religious rite. At one o'clock a shout arose along the whole line of the Russian works and throughout the city. It was a loud cry, as of a host inspired by some joyous intelligence, or by some project of fanaticism. Soon after a tremendous cannonade burst forth from the whole of the Russian works, perhaps the heaviest experienced by

the allies since the bombardment of the 17th of October. The French and English replied, but not with the same violence and power; indeed, the French gunners had to take shelter in the trenches from the shells, shot, carcasses, and rockets, that flew in fiery crowds among them. Their riflemen, and especially those who, being in the advanced positions, were commonly called *enfants perdus*, kept up an incessant fire; and as few of the enemy's missiles fell among them, they were able to take very deliberate aim, and bring down the Russian gunners as they "showed" in the embrasures. A strong sortie was made against our allies; the Russians forced their way within the parapets of one of the mortar batteries, and succeeded in spiking several of the pieces with wooden plugs. The French rallied, took them in flank and front within the trench with a quick discharge of musketry, followed by a rushing bayonet charge and a cheer; the Russians recoiled; a fresh body of French pressed them with the bayonet, the retreating Russians fled in disorder; and so rapid and bold was the pursuit that many of the French entered with them within their lines. The French soldiers were with the greatest difficulty prevented by their commanders from penetrating beyond the advanced works of the enemy; and for many a day after they murmured, complaining that if their officers had only given the word, they would have captured Sebastopol. It does not appear, however, that they were the best judges in this case: they would have soon learned that the discretion of their officers was at least as useful as their own forward valour.

While the contest was yet raging in the lines of the French, a similar attack was made on the front and flank of the British left. As the Russians always take occasions of great festivals for their enterprises, both of the allied armies might have expected that the bell-ringing and illuminations would be followed by a sortie. It appeared that neither exercised sufficient vigilance. Mr. Russell represents the British authorities as taking every precaution. A steady sergeant, "one of the steadiest in the service," and twelve men, were posted on the point of probable attack, but "somehow or other, the enemy crept up upon the little party, surprised, and took them prisoners." The result of this was of course an unexpected advance upon the covering parties, compelling the detachments of the 68th and 21st regiments there on duty to retire, almost without firing a shot. These parties, forming upon the supports, opened fire rather slowly upon the assailants, and then advancing with the bayonet, drove them back, and continued the pursuit to the Russian advanced works, but lost six men who were shot dead, and nine men and an officer who were wounded. A

letter from the camp strongly contradicts Mr. Russell as to the precautionary vigilance of the English superior officers. The writer of the letter was a non-commissioned officer.

*Camp above Sebastopol, Jan. 15.*

"There was rather an unfortunate affair on the night of the 12th. The 68th found the guard for the advanced works, and gave 170 men for it. There ought not to have been less than 300 there. It was pitch dark. The Russians in large numbers made a sortie at about one o'clock in the morning, took the guard by surprise, wounded an officer and six men, and took a sergeant and thirteen men prisoners. After the Russians retired, a most tremendous fire was opened on the trenches, of round-shot, shell, and grape; but, as usual, though it sounds very awful, that sort of firing does little or no damage at night.

"Simultaneously with the attack on our advanced works, an attack was made on the French on our left, but, to show you how differently the French authorities act from ours, it appears that the 12th is the Russian New Year's-day, and it was perfectly well known by the authorities, both French and English, that an attack would most likely be made to usher in the new year. The French gave their people a hint to be on the alert, and to show that they were in earnest, doubled all their advanced guards. Our bright people, having just the same opportunity of learning as the French, never took the trouble even to remind us that it was the Russian New Year's-eve—a fact of which we were totally ignorant. I merely mention this little instance to let you see the sort of stupid, quiet, confident way in which some people go on."

This affair was followed by a despatch from Lord Raglan, in which he communicates an error as to the casualties; the correct account was given above.

*Before Sebastopol, Jan. 13.*

MY LORD DUKE,—The weather continues very severe, and to-day it blows a gale of wind, with drifting snow.

Although I have not received the official report from the officer commanding the fourth division, the officer of the quartermaster-general's department, whose duty it is to visit the advanced posts at daylight, has brought in an account of a sortie made by the Russians in the course of last night upon our right and left attack, the enemy advancing, under protection of a heavy cannonade, along the Woronzoff Road and the ravine on our extreme left.

The enemy succeeded in driving in the troops in the advanced trench, which was not re-occupied until the reserves were brought forward from the second parallel.

A party in pits on the right of the advanced trench, consisting of one sergeant and thirteen rank and file, are missing, and one officer and thirty-six privates are stated to be wounded. The time for the dispatch of the mail being at hand, I am very sorry that I shall not be able to send your grace to-day a more accurate statement of this affair. I inclose a return of casualties between the 8th and 14th. Great progress is making in disembarking and issuing to the troops vast quantities of warm clothing of all descriptions, and I believe I may assert that every man in this army has received a second blanket, a jersey

frock, flannel drawers, and socks, and some kind of winter coat, in addition to the ordinary greatcoat. The provision of fuel is still a great difficulty. Every effort is making, and with tolerable success, in landing and putting up the huts; their great weight (2½ tons each) is a serious obstacle to their conveyance to the camp with our limited transport. Each hut requires three stripped artillery waggons, with from eight to ten horses each, or 180 men. Much sickness continues to prevail.

I have, &c,  
RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

It will be seen from this despatch that the warm clothing was beginning to afford some comfort to the shivering troops. His lordship was, however, misinformed as to the extent of the distribution; until more than a week after the day he wrote but little progress was made in this respect. The reader will observe that the statement of his lordship about the difficulty of obtaining fuel is at variance with the facts, that masses of timber were floating or frozen up in the harbour of Balaklava (according to the weather), and that vast piles of portable patent fuel were stowed carelessly away in Balaklava, under piles of dirt and rubbish, which had been allowed to accumulate above them. Difficulty indeed there was, but that difficulty was created by the neglect and want of capacity for organisation at headquarters.

His lordship manifested considerable activity at this juncture, and began to show something of the old alacrity and spirit which characterised him when on the staff of the Duke of Wellington in the Iberian peninsula, and in France. The *Moniteur de l'Armée* published a letter from the French camp, dated the 19th of January, exemplifying this, and giving a very correct account of the habits of the English troops:—"Lord Raglan came this morning to our headquarters. He is a good rider, and does not appear to feel the want of the arm which he left at Waterloo. He looks well, has a good colour, with a beard a little grey. He came without any ceremony, wearing a cap covered with oilskin. The English are the most free and easy men we know. The following, which occur under our eyes, will appear, perhaps, scarcely credible. In the trenches they light a fire, make their tea, and then, sitting down on the back of the trench, quietly smoke. The sentinel now and then goes and looks over the parapet, and, if he sees nothing, he comes down again amongst his comrades. A shell falls, but no one takes any notice of it. If one of the party should be hit, two of his comrades raise him up and carry him away with the greatest coolness; the others do not stir. With us we are careful not to make any fire. We suffer more in the trenches from this circumstance, but we have less casualties, as the smoke of a fire forms a good mark for the enemy's batteries. The engineers continue to surround Sebastopol with

their trenches, which are now at ninety metres from the place. It is at this distance that the third parallel is placed. We are prepared to establish ourselves by main force in the Flagstaff Bastion as soon as the English artillery shall be ready to support ours in silencing the cross fire of the enemy."

Our allies were very free, yet on the whole very generous, in their critiques upon the ways of the English soldiery and officers; but the private letters both of officers and men among the French found much fault with the general constitution of the British army, and expressed very much admiration of its regimental system. That which seems most to have fixed itself upon the attention of our allies was the want of encouragement to the private soldiers and non-commissioned officers, and the promotion of commissioned officers by purchase, which seemed to them utterly irreconcilable with justice, sound sense, or military efficiency. The following document arriving in the camps pleased both our men and their allies:—

COPY FOR THE INFORMATION OF REGIMENTS  
AND DEPOTS, ETC.

SIR,—Her majesty having been graciously pleased to extend her previous royal warrants for the special purpose of granting rewards for distinguished and meritorious service, and gallant conduct in the field, I am directed to transmit herewith a copy of a warrant which has been issued for that purpose, and to request that you will immediately make it known to the regiment under your command.

The sergeant to be selected for the annuity of £20 is to be the individual whom you may consider to be most deserving of such a reward, and which, when granted, is at once to be at his own disposal, though he may be still serving.

I am further directed to observe that, in selecting individuals for the gratuities to be awarded for distinguished service or gallant conduct in the field, you are not to be fettered in your selection by any consideration as to length of service—the general good conduct of the individual (and especially in the late operations) being alone the qualification to entitle him to this reward.

I have, &c.,  
B. HAWES.

To Officers commanding Regiments, &c., under  
Field-marshal Lord Raglan.

Mr. Russell relates an anecdote which shows how much the men required both assistance and encouragement:—"As a newly-arrived and freshly-mounted officer was riding along one of the narrow paths to the camp he called out to a man who was toiling along with a sack of biscuit on his shoulders, the last of a long file similarly engaged, 'Now, then, soldier, out of the way, if you please.' The man turned his head round, and, with an expression I never shall forget, exclaimed, 'Sojer, indeed! Faix, we're no sojers! we're only poor broken down commissariat mules!'"

At last the central depots for provisions were established, and some slight symptoms of decrease in the sickness which prevailed appeared; it continued, however, very heavy—the rate of

mortality through many dreary weeks being still frightful. The establishment of the provision depots near the camp had a very salutary effect.

About this date 800 Croats left Constantinople for the Crimea to work as labourers; they proved to be strong burly men, rude and barbarous in the extreme, slow and slovenly, but having a good deal of "wear and tear" in them. They, however, fell before the climate rather fast on their arrival. Attempts to engage the Tartars as labourers were not successful; they could not endure the cold. They would give up the labour assigned to them, and sit down, huddled together in the mud or snow, until the sleep of death crept over them, and left them in groups, as if slain by the bursting shell or close encounter. Generally they were removed in a state of torpidity or extreme exhaustion to the hospital tents, to die there.

On the 14th, the 39th regiment was landed, marched up to the head of the creek at Balaklava, and placed on ground previously occupied by the Royal Irish regiment of the line. They suffered severely, encamped beneath the cold sky of a Crimean January day. They had one hut among them all! there were many fragments, but the whole came up in a confused way, and such wretched progress was made in the arrangements for their shelter that many sickened and died.

The French lent waggons, which were as much required as freely and generously accorded. Shot and powder were in this way brought up to the lines. Our own artillery waggons were horsed by French mules (if the Hibernicism may be pardoned), and brought up by French commissariat drivers, laden with useful material of all sorts. The drifting snow impeded these auxiliary agencies; but our allies bravely worked on, and their mules seemed animated also by the *entente cordiale*, for they exerted themselves vigorously to pull up the heavy loads which our needy camp demanded. Several of the men of the French commissariat and waggon train fell, stricken with the prevailing sickness, or exhausted with fatigue, or paralysed with cold, while rendering us these invaluable services.

The weather now became truly formidable; snow fell in large quantities, and the cold tried the troops to the uttermost. The preparations for a renewed bombardment did not intermit, except as heavy falls of snow impeded the track for transport, and rendered all trench-work impossible. Fifty-three new 32-pound guns, thirteen of the largest mortars, and a number of siege-guns of the largest calibre, were by this date placed in the camp depot, ready for mounting; and all who were cognisant of these awful preparations for a cannonade

began to feel sanguine as to the result. Vast stores of ammunition for these engines of destruction were also brought up.

The arrival of the *Trent*, with a cargo of Spanish mules from Barcelona, was an important event, affording hope that we should be less dependent upon our allies for the means of transport.

The despatches of Lord Raglan were very meagre, and afforded to the British public no true conception of the state of things. Many important incidents in the progress of the siege are to be learned from the despatches of General Canrobert, concerning which Lord Raglan was silent; and some of these incidents nearly affected the honour of England and her army, and the relation of both to France and to the army of France before Sebastopol. The following were the despatches of the British commander at this juncture:—

*Before Sebastopol, Jan. 16, 1855.*

MY LORD DUKE,—I have the honour to lay before your grace the copy of a despatch\* from Lieutenant-colonel Simmons, which he wrote by desire of Omar Pasha, expressing his highness's approbation of the services of Major Bent, of the Royal Engineers, and the detachment of sappers which I lent him in the summer; his regret at the loss of Lieutenant Burke, of the Royal Engineers, and his high sense of the conduct and exertions of Lieutenant Glyn, of the Royal Navy, and His Serene Highness Prince Ernest, of Saxe Leiningen, and of the detachment of seamen of her majesty's fleet, employed in the construction of the bridge across the Danube, the success of which he attributes in a great measure to their well-planned dispositions. Colonel Simmons, your grace will perceive, has further been desired by Omar Pasha to say, that it would be very gratifying to him if her majesty should be graciously pleased to reward these officers for the able services they have rendered to the Ottoman army and the common cause. I think it right to mention that the Hon. Major Gage, of the Royal Horse Artillery, was the officer who conducted these detachments to Rustchuk from Varna. I appointed him to this duty, having previously sent him to examine the armament at the former place, and being satisfied that the employment of his services on the occasion would be advantageous. I beg your grace will be so good as to obtain her majesty's permission for Private Andrew Anderson, of the Royal Sappers and Miners, to accept and wear the decoration of the fourth class of the Order of Medjidie, in consideration of his gallantry.

I have, &c.,  
RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

*Before Sebastopol, Jan. 23, 1855.*

MY LORD DUKE,—Nothing has occurred of importance in our front; but the enemy has occasionally opened a fire upon our left attack, and Mr. Spalding, a fine young man, an acting mate of her majesty's ship *London*, and in charge of the battery, was unfortunately killed by a round-shot the day before yesterday. The weather has become milder, but the country is still in a dreadful state from melted snow. The army is well supplied with warm clothing, and if the commissariat were adequately provided with transport, and the huts could be at once brought up, there would be no other cause of suffering than the severity of a Crimean winter, and the duties imposed of carrying on a siege in such a climate at this season of the year.

I have, &c.,  
RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

From the despatches of General Canrobert, and the official communications made to him by his staff, we perceive that the most serious correspondence was going on through the whole of January between the French and English commanders, as to the unpreparedness of the latter to undertake any important operation against the enemy, and between the French chief and the war minister of his emperor, on the same subject:—"I do everything to assist our brave allies, who are far from being ready," writes General Canrobert, in a despatch dated in December; "while all our batteries await only the signal for opening their fire. This situation is painful, and even dangerous, if the enemy, becoming aware of it, should shower his projectiles upon our batteries, thus forced to be silent." He adds, subsequently:—"Our excavations towards the town having been necessarily suspended, I have directed the general of engineers to prolong them towards our left, in a course parallel to the defences of the enemy; and we have already reached the bottom of the Quarantine Bay, and occupy the lazaretto upon its southern shore."

The Baron de Bazancourt, the emperor's commissioner to his own army, makes this observation upon the correspondence then going on between the allied commanders in the Crimea:—"It was already to be foreseen, that in order to effect the completion of the plan of attack, the French, whose troops were the most numerous and their means of transport the most considerable, would be obliged to assume a part of the works comprised in the English lines. This was a serious matter; and the chief of the English army, far from declaring plainly his inability to complete the portion of the siege allotted to him, gave no reply which could lead to any new decision; but allowed these precious days thus to elapse."

Ultimately Lord Raglan was obliged to do what he incurred delay, and danger to the cause, and entailed suffering upon his army, by not doing earlier. In the meantime, the despatches of Canrobert to his master are—with perfect courtesy and kindness on his part—chapters of humiliation for England:—"The English army," writes the general-in-chief, "undergoes privations and sufferings, which, unhappily, it is not in my power to relieve. Its effective strength diminishes to such a degree, its draught and saddle horses are so enfeebled, their numbers are so reduced,—that it has great difficulty in transporting to its camp even the necessary supplies of food: it cannot therefore,—even with the addition of the assistance which we are so happy to give it,—arm and man its batteries as should be done, in order to act efficaciously in concert with our army." "In answer to my pressing requests,"

\* For the despatch referred to see p. 6.

writes General Canrobert, in a private despatch dated the 9th of January, "Lord Raglan and the lieutenant-general commanding the English engineers have just addressed to me some very detailed documents, from which it appears necessary for our army to undertake a part of the siege which had been originally allotted to our allies. Strong arms and hearty goodwill will not be wanting on our part; and, from the time that the state of the roads will permit it, I shall occupy myself directly with this new attack, and shall neglect nothing to enable it to give assistance to our own, without which the latter are paralysed." In another despatch the general again wrote:—"The assault to be made by the French upon that part of the town situated in front of them, to the west of the southern harbour, cannot be crowned with success, but upon the condition of having previously silenced the fire of the enormous batteries, called the Arsenal and Redan, situated to the east of the southern harbour, in front of the English; and this part of the harbour is disposed in such a manner, that even admitting the success of our columns of assault and the capture of the town (properly so called), we could not retain it but upon the condition of the capture of this eastern part also. Everything requires me, in the interest of the common cause, to occupy myself directly (by the consent of Lord Raglan) with the English works. But until the return of the fine weather, this will be difficult, and even impossible."

Another of these despatches of the French general will show still more plainly the light in which he regarded the position of his allies. This feeling was well known to Lord Raglan, and was not unconnected with the ultimate resignation, by General Canrobert, of the command of the French army:—"My general plan is the taking of Sebastopol. This is not a result of calculation, it is a result of necessity. Since we have accumulated an immense *matériel* before the place; since we want means of transport, and the soil absolutely refuses to admit of long-continued movement; while the existence of our army depends for supplies upon the presence of the fleet; while this army has to operate in the depth of winter; and its allies, from whom it cannot, and ought not to separate, are not in a condition to undertake anything;—the force of circumstances binds it down to the definite object in the way of which it meets this host of difficulties. This definite object is the stronghold of Sebastopol. We must capture it; for circumstances render it impossible for us to attack the relieving army, at the risk of abandoning the fleet, the harbour, and the means of subsistence."

During the whole month of January the combats of the French were incessant. The

correspondents of the English press from the Crimea represent the month as one of inaction. Colonel Hamley passes over lightly all the sorties and conflicts before the lines, which the French repelled and maintained; but the colonel spent most of the time on the shores of the Bosphorus, in the discharge of other duties, and trusted to hearsay—a very uncertain guide at that time; for, as one of the correspondents of the London daily papers observed, "the troops are worked so hard that no one has time to learn anything that transpires out of his own regiment, and sometimes not even out of his own company; the camp is a bad place in which to look for news." Mr. Woods, as well as Colonel Hamley, underrates the combats of January; he also having been absent from the Crimea, could not have personal knowledge of what occurred. Mr. Russell's account is more full; but his notices of the skirmishes and sorties between the French and Russians are imperfect, some of the most "stirring affairs" being omitted. The fighting between the "French rifles," as Mr. Russell calls them, and the Russians was incessant during the whole month. The men designated "rifles" by the English correspondents were from various corps of the most different constitutions, and were all volunteers; they received in the French army the name of "scouts." Their position was dangerous, being kept in front, yet the only difficulty the French chiefs had in obtaining them depended upon selection—so much more numerous were the volunteers than the men required. The following is the constitution of this corps (for such it may be termed) according to French documents:—

#### SERVICE OF VOLUNTEER SCOUTS.

The object of this organisation is:—

1st. To know all that passes in front of the intrenchments of the enemy; 2nd, to be warned of the sorties, and to harass them; 3rd, to take possession of any posts, parties of men, &c., who are outside of the place; 4th, to destroy all the hiding-places of the Russian marksmen, and the obstacles which might oppose themselves to the march of our columns; to attack the fougades and to spike the guns, &c.

For that purpose, the companies will be subdivided into thirty brigades of five men each; each officer of this company will have ten brigades, of which five are to be in reserve and five placed in advance on the most favourable points to observe the enemy's movements.

When there will be occasion to make a *coup de main* of small importance, but which will require promptitude, the officers must make use of the brigades which they will have in reserve, under their hands, without however disturbing the small posts already placed in front of the trenches.

For an operation of any importance, the engineer commanding the trenches will seek instructions.

The service of Scouts is divided into two very distinct parts, which it is necessary not to confound. The first, invariable; that of the small posts placed here and there in advance of the trenches which it is necessary always to maintain there. This is the service of every night which must have no interruption. The second, intended for *coups de main*, composed of several brigades, can act according to circumstances. The commander of engineers on duty may command its services.

The French commissioner, writing of the month of January, observes that "it was fertile in *partial combats*, and sudden but *sanguinary and obstinate struggle*." How irreconcilable such a statement with Mr. Woods' remarks—"At the commencement of the severe weather hostilities almost ceased. English and French soldiers showed themselves without hesitation outside the parallels and beyond the batteries, and were seldom molested while they searched about for little sticks with which to make a fire. The French, well fed, well housed, and with an army twice too numerous for the duties it had to perform, were enabled to continue their siege works, and to strengthen the parapets and replace the ordnance in the batteries they had already constructed. Little skirmishes took place each night between parties of their riflemen and the enemy's, but without any permanent advantage to either side."

According to M. Bazancourt, there was very great disadvantage to the French in these "sanguinary and obstinate combats," for the French troops were harassed, and their works impeded. Neither were they able to inflict that punishment upon the enemy which might compensate for the injury; for, although the Muscovite loss was numerically more severe, yet they so managed, by signal, that generally when the French pursued in force, they were exposed to showers of grape from the Russians. The latter lost very heavily in brave and intelligent officers in these skirmishes and sorties. Undoubtedly the French would have paid a more extensive penalty had it not been for their excellent arrangements. Colonel Raoult, major of the trenches, much distinguished himself in carrying out the organisation of defence there. All the French trenches converged from what was called the Clock Tower, which was night and day the centre of most active scenes. At that spot the battalions going on guard mustered each morning. There the soldiers and workmen received supplies and directions. When night arrived, the large beacon of this tower was lighted, and served as a guide to the files sent to the depot of the trenches, and to the litters which all passed by when removing the sick and wounded—and, alas! not unfrequently the dead—to the rear. From that spot a vigilant look out was always kept, lest in any part of the trenches a surprise was being attempted, when immediately the detection was followed by the alarm trumpet, and that was followed by rockets signalling the point of attack. These rocket signals were so organised as that misapprehension was next to impossible. *Stars* indicated a left attack, *squibs* a centre attack, and *serpents* directed attention to the right. Two of these rockets were fixed for the *garde à vous*; three for the *rappel*;

four for the *assemblée*. In an instant, upon sound of the trumpet, some of these pyrotechnic signals ensued; and these, according to the directions intimated, brought forth the picket battalion, followed by other battalions, according to the supposed extent of the danger. The *garde à vous* gave the alarm; the *rappel* declared a real attack; the *assemblée*, that the attack was serious.

The following is a copy of the French order of the "Service in the Trenches," as organised by Colonel Raoult. In January, 1855, this was the mode in which the trench service of our allies was conducted:—

#### SERVICE IN THE TRENCHES.

Every twenty-four hours, night and day, there is a picket battalion in its camp, taken from the corps the nearest to the Clock Tower (the quarters of the major of the trenches), and always ready to march at the first signal. The battalion sends, at from eight to nine o'clock in the evening, two companies to form the picket of the Clock Tower itself. (Up to the month of January there was only one battalion of reserve at the Clock Tower; in the month of January this battalion of reserve gave place to a picket battalion.) There is besides a battalion of reserve, placed on the left, in the rear of the batteries 1 and 2, forming an effective strength of 450 to 500 men.

Every day there are seven battalions on guard in the trenches, in addition to a battalion of Foot Chasseurs, employed as sharpshooters, and placed along the whole extent of the most advanced parallel, in order to maintain a fire of musketry. Besides which, a company of marksmen, of about 150 men, is generally scattered upon different points, favourable for their purpose. A post of 200 men is placed in the English ravine in order to unite our right attacks to the English left attacks.

Every day workmen are ordered,—in the divers corps,—for the work of the trenches, to the number of about 300, and are equally distributed upon different points, either to make new lateral trenches for intercommunication, or to construct the site of new batteries, or repair the parapets damaged by the enemy's fire. The whole number varies according to the urgency of the need, and, at a certain time, often exceeded 4000.

It may be easily imagined how necessary it was to employ a considerable number of workmen, if we reflect upon the results obtained, and the gigantic extent of our trenches from the first to the third parallels; that is to say from the Quarantine, which forms the extreme left, to the English battery, forming the extreme right.

Two companies of the volunteer battalion (composed of six companies) are on duty every night in the quality of scouts. They have no fixed post, and their position varies according to circumstances.

We do not pretend to give here any but the principal arrangements. The general of the trenches modified these arrangements according to the apprehension of attack upon such or such a point, or any unexpected necessity, but without altering their basis.

The guard of the trenches is divided into three commands: the right, the centre, and the left; devolving upon colonels or lieutenant-colonels.

Each day a general of the trenches is named from among the brigades of the siege corps.

The siege works on the side of the French include two attacks—the right and the left. This last extends very nearly from the Quarantine to the Central Bastion. The right attack extends from the Central Bastion to the Barrack Battery. In the interior of this line is the Flagstaff Battery.

In view of the extreme care taken for every thing, and the steady and generous supplies afforded to the French soldier, well might a high authority on the French staff boast—

"The soldier feels his courage and resolution redoubled, in seeing his chiefs at all hours partaking of his perils, inquiring after his wants, and saying to him, in passing, a few kind words, while the bullets whistle around him and the projectiles are bounding over the parapets."

As specimens of the French contests in the front during the bitter nights of January, the following will be sufficient to narrate—all would neither be practicable nor necessary:—

On the 7th a Russian detachment, or as the French reports rather pompously style it, "column" of more than 300 men dashed with sudden impetuosity against the French trenches. There was no warning given from the Clock Tower, no symptom of their approach was observed. A number of the assailants were within the trench works before their occupants could make any resistance. The Commandant Julien, at the head of three companies of the 46th regiment of the line, in a desperate hand to hand encounter, killed, captured, or expelled the intruders. Fresh assailants soon overwhelmed the brave 46th; their Voltigeur company was in reserve, and took the assailants in flank; a young sub-lieutenant, Kerdudo, scarcely twenty-one years of age, was the first to fall upon this section of the enemy, and, sword in hand, he performed prodigies of bravery; he was followed by his little Voltigeurs so promptly and well, that the Russians retreated with precipitation, but not without giving to their gunners the usual signal, who opened a fire of grape upon the pursuing Voltigeurs, compelling them, with severe loss, to re-enter the trenches. Had this feat been performed by a young English ensign, he would be praised and taken no further notice of—as in the case of the gallant young Massey, who, some months later, displayed far more heroism at the storming of the Redan; but not so in the French service—heroism is sought for and fostered. Three days after the exploit of the young French subaltern, the commander-in-chief published an order of the day, thanking the regiment, and appended to it the following:—"In the name of the Emperor, I confer the Cross of the Legion of Honour upon Sub-lieutenant Kerdudo, who, still very young, has shown on this occasion the self-possession and energy of an old soldier, in conducting his Voltigeurs."

On the night of the 11th and 12th a similar attack was defeated in a similar manner by the bravery and presence of mind of Lieutenant Espanet, of the 80th regiment of the line (5th light); and he also, and his brave men, were noticed in the order of the day, and rewards conferred upon him, and Sub-lieutenant de la Jallet, his second in command—both were named Chevaliers of the Legion of Honour.

La Jallet had, on the 8th, rushed to the relief of the pickets on the extreme left of the English in the ravine, or, as the Russians call it, "valley." He had only forty men, but, anticipating the Russians, who were creeping up upon the English, he attacked them with the bayonet; the enemy were three to one, and a furious fight ensued, the French, *à l'Anglais*, using the but-end of their muskets until the foe was precipitated to the bottom of the ravine, where some fell under the random fire of the French, and the rest skulked back to their lines as best they could.

On the night of the 14th and 15th a very sanguinary combat was maintained by the 74th French regiment of the line. Some noises were heard before midnight of the 14th, and the picket was on the alert; these noises continued to advance and recede until about two o'clock on the morning of the 15th, when the pickets of both armies were scarcely able to hold their muskets, so severe was the cold. The wind was north, and blew one of those cutting gales which in January sweep along from the Arctic regions over Southern Russia. The snow descended in thick broad flakes, as though it would soon wrap city and camp, invaders and invaded, in one white burial. At two o'clock the noises which had puzzled and disturbed the pickets ceased, and all was silent except the artillery, which reverberated among the glens and rocks in a manner to which the hour and the season lent a peculiar awe. The wind now rose higher and blew in gusts, sweeping with a shrill noise down from the plateau over the French trenches. The Russians, taking advantage of this new chance of approaching without being heard, crept along in a crouching posture, and came in front in an imposing column, as their dark figures appeared, looming and gigantic, amidst the whiteness which covered the earth, and partly covered, and for a time concealed, the column. Two more columns (as our French neighbours style large detachments) issued forth from the ravine where the extreme of the second French parallel rested. Fortunately the "scouts" who, bad as the weather was, were lying upon the ground in front and amidst the stunted brushwood of the ravine, discovered the approach of the enemy in time to raise the alarm. As the scouts fell back upon the trenches the enemy were close upon them, and ascended the parapets with them. The French were well on the watch, every one musket in hand and the trigger already touched, so that the first line of assailants fell under a fire murderously close, but the Russians pressed on, bayoneting the defenders of a small lateral trench which they entered in great force. Every Frenchman fell there, except three grenadiers and a corporal who

headed them, named Guillemin. The corporal and his three men fought with desperate tenacity against a host; but this side trench was so narrow that a few men could hold it against the attempts of many, and on this spot the gallant Guillemin made a miniature Thermopylæ. The strongest portion of the column threw itself into another branch of the trench, defended by Captain Castleman (an Irish officer in the French service), who fell pierced with thirteen bayonet wounds; having killed with his own hand a number of the Russians, he literally fell dead upon a pile of enemies sacrificed to his swordsmanship and valour. He was a great favourite with his company, who, made furious by his loss, precipitated themselves on the enemy led by Lieutenant Regaud, who cried, "Avenge our captain!" and setting the example, seconded by Commandant Roumé-Joux, in ten minutes cleared the trench. Poor Roumé-Joux fell mortally wounded by a bayonet thrust below the heart. The trench and the glacis were literally piled with dead. The French, as customary, pursued the foe too hotly; the Russians, as usual, left nothing to chance, but had a grand reserve of nearly 1200 men—a force with which they might have speedily recaptured the trench, and done innumerable mischief. This reserve opened a well-directed fire of musketry upon the pursuers, by which many fell, and which completely covered the retreat of the vanquished. Several brave officers fell on both sides. Of almost the first shots fired by the assaulting force two entered the heart of Captain Bouton, who had the honour of being the first officer to receive the enemy and the first to fall. One Russian officer showed great courage and capacity to handle his sword; he encountered Sub-lieutenant Brochet in a narrow trench, wounding him in the sword-arm and bringing him to his knee, but recovering himself speedily, Brochet gave point, and pierced his enemy's heart. The loss on both sides was heavy, especially in officers and non-commissioned officers. One Russian officer carried no weapon but a hammer, he had the other hand filled with nails; his object was to spike the cannon; he fell dead into the trench under the first fire from its defenders, and the next morning his hands were stiffened upon the hammer and nails he had carried with so eager a purpose. The loss inflicted upon our allies by the cannonade on the works and by these nightly sorties and combats was very heavy. In three months 23 officers were killed, 171 wounded, 3 were missing; 464 men were killed, 128 missing, and 3392 wounded. This was independent of contusions, accidents from tools, magazines, and shells, and exclusive of all cases of sickness. Thus, on an average, every night two or three officers and about 50 men were put *hors de combat*.

It was observed that the column which attacked the works on the 14th was attended by platoons of sailors and workmen, who carried boat-hooks and drag-hooks. These men literally harpooned many of the French soldiers, sometimes dragging away only their knapsacks or caps, sometimes lacerating them, and in several instances making them prisoners. Long ropes were ingeniously stretched across in certain directions, to trip up the French soldiers in pursuit. These means of offence had been employed before on a very limited scale, but on the night of the 14th and 15th they were extensively and effectually used. A curious correspondence arose out of this circumstance between Generals Canrobert and Osten-Sacken:—

"Permit me, Monsieur le Gouverneur, to direct your attention to a fact of which you are doubtless not aware. It has been reported to me that in the combats which have taken place before our trenches, officers and soldiers have been dragged down by means of ropes or hooked poles. Our soldiers have no other arms than the musket, the bayonet, and the sword; and without wishing to affirm that the employment of these means is contrary to the rules of war, I may be allowed to say, in the words of an old French expression, 'that those are certainly not the arms of courtesy.' It is for you to judge of this. "CANROBERT."

To this rather puerile effusion the Russian made the following artful rejoinder:—

"Our soldiers are recommended to make prisoners rather than to kill unnecessarily. As to the instruments which you mention, it is very possible that the labourers who usually accompany the sorties have employed their tools to defend themselves. Beyond this, the letters which I have forwarded to the staff of the French army, from your own officers who are now prisoners with us, must sufficiently attest the manner in which they are treated in their captivity. It is for *you*, in turn, to judge of this. "OSTEN SACKEN."

On the 19th and 20th the French parallels were attacked on two different points. One of these attacks was on the left of the most advanced trench of circumvallation, which descended to the Quarantine Bay; the other on that part of the left of the French works called the "T" from its shape. On both points the enemy, in spite of "scouts," reached the trenches, and on both points were at once driven out by the bayonet with considerable slaughter, pursued hotly by the French, who, as in other combats, fell fast under the fire of the Russian guns and of the musketry of their reserve infantry detachments. These hot pursuits, although causing sacrifices to the French,

compelled the enemy to send out strong reserves to support the assailing parties, and thus increased the harassing effect of service upon their own troops. On occasion of the attack of the 19th and 20th the snow was very heavy in the front; the Russians, who lay on the ground a long time watching for a favourable moment of attack, suffered intensely—some never rose again, the cold sleep of the benumbed crept over them, and they answered the bugle-call no more; many could not fire off their muskets, their hands were rendered incapable by the frost—hence the attack was one of bayonets. The loss of the Muscovites was sore. Although hardier than either the French or the English, they did not bear the cold as well as might be expected from the severity of the climate in which they were born, and to which it was expected they would have been sufficiently inured. Notwithstanding the frigid weather, night after night the “Muscovs” crouched like leopards waiting for the spring. On one occasion they entered the French works so stealthily that not a shot was fired—the bayonet decided the contest against them after a short and decisive trial of battle at its point; the traverse of the trench assailed was choked with the slain. Generally the “volunteer scouts” descried the couchant enemy before they came on to the assault, the eyes of these watchers became preternaturally capable of seeing objects in deep shadow. Their painful vigilance through long dark nights gave them an experience which the Russians found it difficult to elude.

On the 21st the troops in front observed many demonstrations of some unusual excitement in the city. The bells were rung, guns were fired—not this time at the allies, but on the northern heights; musketry repeatedly gave a *feu de joie*; blue lights were burned; and rockets startled the quiet and sullen air. A deserter coming in before daylight circulated a report that the czar had arrived, which, however, was soon found to have no foundation; another of the same class diffused the joyful intelligence that a treaty of peace was signed, and Sebastopol was to be delivered up to the allies—news too good to be so soon true. The excitement in the city remained unaccounted for. On the 22nd the correspondent of the *Daily News* gave the following sketch of affairs:—

*Balaklava, January 22nd.*

“On the evening of Friday, the 19th inst., we had another intimation that we are not in the midst of peace. For a newcomer might imagine we were at peace, if he landed at Balaklava in the dark, on one of the usual nights, when nothing is heard but the occasional ‘All’s well,’ or the challenge of a sentinel. On Friday evening the inhabitants

of Balaklava, and the early sleepers in the camps around, were alarmed by what appeared to be a heavy cannonade, and a near one too, followed by loud, frequent, and heavy volleys of musketry. The day had been mild and muddy beyond all imaginings; and so peculiar was the state of the air that even old soldiers, grown grey in the wars of India, believed that the firing was from our Marine Battery, which commands the plain close to Balaklava. Each shot was heard with a distinctness which made the most experienced campaigners swear that the piece must have gone off within a mile or two from the place where they stood. Windows rattled, and the motion of the air was plainly felt by all who, in hot haste, rushed to the stables and picketing grounds to saddle their nags and be off to the scene of the contest. But those who rode out in the darkest night I ever saw, or rather in which I could not see, got nothing but a few ugly tumbles and splashes for their pains,—for the firing, though seemingly so near, was far off, and the whole affair was in fact a sortie against the French lines, which some time ago were so frequent that one hardly thought of mentioning them. And the more so as, thanks to the vigilance and gallantry of our allies, the Russians have always to go back fewer in numbers and in worse condition than when they came out. In all the attacks upon the French lines, it always comes to the same result. The Russians, rather the worse for liquor, come out and meet with a very hot reception; and, not liking this, and thoroughly sobered down, they go back.

“Our allies, who have long felt that our numbers are too small for the extent of ground we occupy, and that our men are overworked, have for the last few days come to relieve us in part of our lines. The edge of Sebastopol plateau overlooking the plain has been occupied by them, and they now furnish the pickets which guard the rear of our Sebastopol front. In this manner they relieve a considerable number of our men, whom we were hitherto obliged to lay out in our rear. French troops are also preparing to occupy the Inkerman position on our extreme right, thus relieving the second division, who are to remove their camp to the rear of the third division. This relief too will do much to lighten the work of our troops in the trenches, for the second division, instead of guarding the extreme right, will now assist the third and fourth divisions in furnishing guards for the trenches. The whole of our army will benefit by the change, and the greatest satisfaction is felt at this very timely and friendly relief. The French, too, are again making strenuous efforts to improve the condition of the roads between Balaklava and the front. For the last two or

three days large fatigue parties have been at work, and the roads, which were out of all condition, are soon likely to be, if not good, at least tolerable. General Bosquet mustered our light division on the 19th inst. Both men and officers were highly elated with the interest the French general took in their condition and prospects.

"On the 20th a council of war was held at Lord Raglan's quarters, in consequence, it was said, of important despatches which had arrived from home. Nothing whatever is known of the subject of the despatches, or the result of the council of war, but, as usual, the camp is full of the wildest rumours. A change in the chief command of the army, an armistice, a resumption of active operations, and the donation of a year's pay to the troops, have been successively mentioned—and all, I make bold to say, with equal truth and reason. Dark whispers fly about the camp, that Sir Edmund Lyons is going to attempt something wonderful and unheard-of, and general officers have been known to say that marvels will come to light in the next few days. In short, curiosity is on the alert—invention is active, and begets the most monstrous reports. In the meantime the mild weather is reviving our troops, who suffered severely from the late frosts. Now that their work is lighter, if they could be but properly rationed, even the 'seedy' among them might possibly pull through. But what with the heaviness of the roads, and the want of sufficient transport, and the disorder in Balaklava harbour, provisions in camp are still scarce, nor is their quality of such a kind as to restore and strengthen the suffering. A ration of tea has however, with some corps, been substituted for that of coffee, which, in the green berry, is almost useless to the troops in front. Another supply of fresh vegetables too came lately in the *Albatross*, to be given away to such of the troops as could manage to send down for them. Great was the joy in the camp when the good news became known. There is really no reason why every vessel sent down to Constantinople should not bring up a supply of vegetables for our men. They want them, and as they can be got, they should have them.

"Among the goods lately unshipped from the harbour is an enormous wooden house, the property of Mr. Oppenheim, a merchant from Paris, who for a long time past has conferred a great boon on the army, and who, between October and December, cleared a sum of about £10,000 by keeping a store of necessities and luxuries in Balaklava. Mr. Oppenheim's wooden house is to be put up in Kadikoi, and the rumour goes that it will contain a store, a hotel, and a coffee and reading-room for officers. Mr. Oppenheim deserves public thanks for his well-timed enterprise.

"Some days ago an incident came to my notice which strongly illustrates the difficulty of gaining information in a camp where, as in ours, each corps is very hard worked, while there is but very little communication between the various branches of the service. Captain Mitchell, of the Grenadier Guards, and some brother officers, saw one day in the commencement of last week a Russian steamer leaving the harbour and standing out for the open sea. One of the allied ships—whether French or English Captain Mitchell could not tell—went in chase, and after some hard steaming came within range of the Russian. A cannonade ensued, the Russian all the while endeavouring to escape. The chase was watched with intense interest, but the result remained a mystery, for the two ships, steaming hard and exchanging shots, disappeared at last on the verge of the horizon. The officers who saw the affair made all inquiries as to the facts and the final result of the engagement, but to no purpose. I too have since endeavoured to learn the particulars of the matter, but I too could gain no positive information. The fact is, we have all got so accustomed to hard knocks, that a partial affair makes no impression and usually excites no curiosity whatever, and it is only by chancing to fall in with one of the men actually engaged that a vague account of particulars can be obtained. The fact is, our troops are precociously *blasé* as to the general incidents of the campaign, and the final result alone is what is steadily and hopefully looked for. Whether that final result be the capture of Sebastopol, or the very doubtful adhesion of the German powers to the alliance against Russia, it is sure to excite interest, and to be canvassed with all the warmth and the smashing phrases natural to people who do the roughest of work in the roughest of weathers. But all minor details are looked upon with profound indifference."

It will be seen from the above that the coffee was still distributed to the troops in the green berry. It was generally believed that Mr. Commissary Filder was responsible for this; but the Chelsea Commission (referred to in a previous page), in its decision or report published after the war terminated, exonerated Mr. Filder, and most justly; for on the evidence it was palpable that the pedantic meddling of certain officials at home connected with the Treasury caused that mischievous error. The secretary of one office, the clerk of another, *et id genus omne*, interfered perpetually in matters beyond their proper cognisance, while the strict business of their departments was neglected or inadequately performed.

Deserters from the enemy came in pretty numerously the remainder of January, and although these men were generally very igno-

rant, their information was occasionally available. Some of these men made their way from the army in the rear, scrambling along the cliffs from Baidar; they generally arrived cut, bruised, and exhausted, and had to be sent to hospital. They for the most part professed to be Poles, but nearly all Russian soldiers, whether deserters or prisoners, did so, under the impression that they would receive better treatment. The deserters informed our engineers and artillery that the part of Sebastopol built on the ground sloping to the sea had suffered but little from our projectiles, which did not reach the top of the hill whence the slope descended to the water. The houses and works upon the slope descending towards the allies was battered and burned in every direction. The ships found shelter close in, under the former slope, and the sailors and part of the troops found security in the fine strong houses and public edifices by which it was covered.

Mr. Russell for several days successively at this period made what he calls "reconnaissances of the siege," by ascending the heights most convenient for that purpose, and using an excellent glass: the following are extracts from his descriptions of what he saw:—

"The Flagstaff Fort was knocked to atoms long ago, and the large buildings around it are all in ruins; but, on looking towards the ridge behind it, from which the streets of the town descend rapidly towards Fort Nicholas, and which shelters that part of the place from our fire, I could see but little difference between its present appearance and that which it presented on the 26th of September last year. People were walking about the streets, and relief parties were coming up from the sea-side towards the front carrying baskets of provisions. Between the rear of the Flagstaff Battery and this ridge, the presence of earthworks, covered ways, and various defensive works could be detected in the openings along the lines of streets; and immediately behind the first Russian intrenchment is a formidable work armed with guns, which at two o'clock convinced us they had pretty good range and were very well laid, by thundering forth an astounding broadside in answer to some insulting fire from the French lines. The balls tore up the ground in piles of earth and dust, and dashed into the parapets, or, ploughing over their top, went roaring across the works in the rear. In an instant there was a rattling fire of rifles from the French *enfants perdus* directed at the embrasures, and the Russians slackened their fire in a few minutes, and replied to the sharpshooters only. When the smoke cleared away, I could see the enemy and the French carrying away a few bodies on each side to the rear. The Russians not only

use 'cohorns' against the advanced French line, but they annoy our allies very considerably by a constant fire of grenades—a projectile which seems rather neglected in our service, though there are great authorities in favour of its use when the enemy has approached very closely.

"Our own batteries were silent. The Redoubt and Garden Batteries, our old enemies, were silent also. The houses near them, as well as those in front of the right attack and in the rear of the Malakoff, are in ruins. The part of the city beyond them seems untouched. To the rear of the Round Tower of Malakoff, which is still split up and rent from top to bottom, as it was the first day of our fire, there is a perfect miracle of engineering. It is impossible to speak too highly of the apparent solidity, workmanship, and finish of the lines of formidable earthworks, armed with about eighty heavy guns, which the Russians have thrown up to enfilade our attack and to defend this position, which is, indeed, the key of their works in front of us. One line of battery is neatly revetted with tin boxes, supposed to be empty powder-cases. This is mere wantonness and surplusage of abundant labour. Behind this work I could see about 2000 soldiers and workmen labouring with the greatest zeal at a new line of batteries, and labouring undisturbedly.

"There is a camp at the rear of Malakoff, and another camp is visible at the other side of the creek, close to the citadel, on the north side. Most of the men-of-war and steamers were lying with topgallantmasts and yards down, under the spot of land inside Fort Constantine. Our third parallel, which is within a few hundred yards of the enemy's advanced works, seems unoccupied, except by riflemen and sharpshooters, who keep up a constant fire in the place, but from my position over the British lines, I could not see so well into our approaches as I could look upon those of the French from the mounds in front of their picket-house. On the whole the suburbs are destroyed, though still susceptible of being used by the enemy to check our advance."

On the 22nd and 24th, General Canrobert directed despatches to Marshal Vaillant, informing him of the repulse given to the enemy's sortie on the 19th, and expressing his hope in the future. The first of these shows how particular the commander-in-chief of our ally was, to record every action of the brave:—

*Head-quarters before Sebastopol, Jan. 22, 1855.*

During the night of the 19th the enemy assailed our parallels on two different points. On the left the attack was received by the 2nd battalion of the 2nd regiment of the Foreign Legion, vigorously commanded by the Chef de Bataillon l'Herillier. The impetuosity of the attack, favoured by the bad weather, was broken by the energy displayed by the Grenadiers of the 1st company, the Voltigeurs, and the 5th company. Captain Arnoux and Rousseau, Lieutenants Chare and Saussier, Sergeant Devallo,

Grenadiers Hogelucht and Seigmund, Voltigeur Rischard, Fusilier Deglin, conducted themselves very valiantly, and the colours of the 2nd regiment of the Foreign Legion figured with honour in this lively and brilliant combat. On the right was the 46th, which I found facing the enemy with its accustomed energy. At the call of its commander, Captain Thomas, the 2nd battalion of the 46th cast itself impetuously on the enemy, and repulsed them to a considerable distance. Captain Dufour, the Sub-lieutenant Comboud, the Voltigeurs Antexier, Commel, and Bruscan, the Fusiliers Monnés, Bénzet, and Boyer, gave the most honourable proof of their valour.

The general commanding-in-chief,  
CANROBERT.

*Before Sebastopol, Jan. 24.*

The weather has become much milder and finer. The troops have supported the trying days we have just gone through with admirable courage. Their confidence was never shaken for one moment by the extreme severity of the temperature. We have reason to hope that the depth of winter in the Crimea is passed. We resume our work before the town with renewed activity.

CANROBERT.

The *Courier de Marseille* (which often contained important and early intelligence from the East), published a letter from a French officer in the Crimea, dated the 25th, who thus narrates events then passing:—"I have only one fact worth communicating to you: General Canrobert is going to lend our friends, the English, two of our divisions to strengthen them in their positions. It is an excellent measure, which will have the double effect of reinforcing our allies and augmenting the general security. Our regiments of Chasseurs d'Afrique are already installed on the right of the English intrenchments. I have not yet heard where the regiments of infantry are to be stationed. On the morning of the 21st the weather was so mild that the bands of the Chasseurs played several French airs, which seemed greatly to please the English, who had been a long time deprived of that recreation. The sound of our instruments must have been heard in Sebastopol. The Russians were, no doubt, surprised to find us so merry, and replying to their infernal uproar by melodious symphonies. Our regiment has suffered little. We are lodged in subterranean excavations, from which we contrive to keep out the cold. We sleep little, but smoke a great deal. Our cookery fills with its vapours our uncivilised and primitive abode, and our physical appearance is quite in keeping with it. Our beards have grown freely, and acquired a development calculated to excite the envy of the oldest *capour*. As for our accoutrements, thanks to the distribution of furs, they have become as comfortable as possible. Cleanliness, however, is out of the question. One of our sergeants, who had received the military medal for his first exploits in the Crimea, has been named Chevalier of the Legion of Honour. This brave soldier has been wounded thirteen times, and is as ready as ever to meet the Cossacks. He will soon have that satisfaction, for we occupy

the most advanced position. The plan of our generals evidently tends to invest the city as completely as possible. It is indispensable, if we wish to obtain at last a result, to isolate the garrison, which has hitherto been able to renew its *personnel* and supplies of every description."

To the same source we are indebted for a letter written from the French camp a day later:—"General Canrobert visited yesterday the works thrown up by the navy along the coast. He appeared greatly satisfied with the promptitude and skill with which those works were constructed, and addressed to our men his warmest congratulations for the devotedness and activity they displayed there, and on every other point where their services were required. Our seamen were electrified by the soul-stirring language of the general-in-chief, and loudly cheered him. I must do Canrobert the justice to say that he takes every opportunity of rendering justice to our navy, whose immense services he duly appreciates. On that account, whenever he gives an order it is immediately executed by our sailors with inconceivable alacrity. I have just returned from a visit to the camps, where I felt quite overpowered by the inexpressible feeling of pride and emotion excited in me by the manner in which our soldiers supported their sufferings. At the first ray of the magnificent sun we have enjoyed during the last day, all seemed to have forgotten the past misery, and, like the swans shaking off the rain that has fallen on their feathers, our brave fellows shook off the cold, the rain, and the snow, and they now laugh, sing, and await with eagerness an opportunity to cross bayonets with the enemy. Everybody will tell you also that if Admiral Bruat watches day and night with the utmost solicitude over the welfare of his seamen, General Canrobert exercises the same vigilance, and attends with equal care to the health and comfort of his soldiers. Those two men wish to see everything with their own eyes, and nothing escapes them. Thus, General Canrobert issued an order on the 23rd, expelling from the coast of Kamiesch, and sending back to France, the sutlers who had the infamy to sell to our men adulterated and unwholesome beverages. Everybody lauded that wise measure, which was instantly carried into effect."

The extreme concern for his troops, and the active personal superintendence of everything by the French general, is borne out by the testimony of the imperial agent in attendance upon his army, who describes General Canrobert and his lieutenants as often distributing apparel and various comforts with their own hands. He thus writes of the French commander-in-chief assembling his soldiers to bestow upon them the rewards and honours

decreed by the emperor for their good conduct and valour:—"It was a grand and noble solemnity. The troops in their dress of every day, stained and sullied, but not unworthily, by their life in the trenches, were assembled upon that soil, torn up by balls, amid the wrecks of battle, and close beside the ground where those whom death had struck down slept their last sleep. General Canrobert passed them in review, to the roar of cannon and of musketry; pausing frequently before the soldiers, speaking with them, and smiling upon them gratefully and kindly. The review ended, the officers formed in circle, and the general addressed them with that manly energy and sincere feeling which are proper to his character. He told them, that which was his belief and hope—that success would soon crown courage so noble and so persistent. He spoke of their absent country, of the justifiable pride of their return, of the grand spectacle presented by the army of the Crimea to the world; and, raising his voice that his words might reach the listening soldiers, he said—"I thank you all, in the name of France and of the emperor!"

It will be perceived that a great change took place in the weather towards the latter end of January, which was favourable to the troops in every way, and to the progress of the siege. The enemy also profited by the change; they had been greatly impeded by the frost, snow, and all-penetrating north winds, but as soon as the sun exercised some genial power, they set to work with their accustomed industry and promptitude upon the defence. It was a singular circumstance, that deserters to the enemy rather increased in number when the weather improved. On the 20th, one of these showed singular hardihood. Leading a bāt-horse, he coolly went over to the Russian lines. He was perceived by the men in No. 4 battery, who fired several musket shots at him without effect. At last a gun was "laid on," and a ball bounding near him drove the earth about his person. He then altered his slow pace to a trot; another shot went equally near to him, but he escaped, amidst the cheers of the enemy who looked on. Among the grievances of the army, the irregularities of the post-office were very harassing. The passion of the men to hear from home was intense, but the disgraceful neglect of the letters by the post-office officials tried the officers and men, as well as their relations at home, to the quick. Remonstrances were useless; the most respectable persons were subjected to the coarsest insult, as is so commonly the case at home, by these post-office magnates. Mr. M'Cormick, Mr. Russell, Mr. Woods, and many other civilians then in the Crimea, bear a bitter testimony against the whole post-office

management. Remonstrances to the home authorities were as useless as to those on the spot.

The warm weather which characterised the close of January, not only revived the exertions of the besiegers and besieged, but infused activity also into the Russian field force, and the troops of Bosquet and Sir Colin Campbell, by whom they were so vigilantly watched and skilfully thwarted. The Russians brought vast quantities of stores into the beleaguered place. Lord Raglan thus described the efforts of the English:—

*Before Sebastopol, Jan. 27, 1855.*

MY LORD DUKE,—I have the satisfaction to acquaint your grace that the weather continues fine. There are severe frosts at night; but the sun shines brightly through the day, and there is an absence of wind, which, whilst it continued, added considerably to the sufferings of the troops.

Every exertion is making by public transport, and individually, in getting huts up; but this is a most difficult operation, and the ground is still so rotten that it is a most arduous labour to pass along it.

The extremely confined space of Balaklava, and the vast accumulation of stores, has obliged me to erect huts at some distance outside the town for their reception.

I enclose the list of casualties to the 25th instant inclusive.

I have, &c.,  
RAGLAN.

*His Grace the Duke of Newcastle, &c., &c.*

At the same date Admiral Lyons sent home a despatch, which, relating to the state of the army, is appropriate here:—

*Agamemnon, off Sebastopol, Jan. 27, 1855.*

SIR,—I have the honour to report, for the information of the lords commissioners of the Admiralty, that since my last general letter of the 23rd inst. (No. 60) the weather has been particularly fine. The health of the army has been much benefited by the change. A good deal of progress has been made in hutting the troops and distributing the clothing which has been so liberally sent out from England—so that the men express themselves as being comfortable.

2. The health of the Fleet and of the Naval Brigade is excellent. The men are well supplied with fresh meat and vegetables, and also with oranges sent from Malta by Rear-admiral Stewart.

3. The fire from the batteries of the allies has increased during the last week, and that of the enemy has not slackened. New guns have been mounted in our batteries during the last four days.

4. On the 24th instant I passed the day at Balaklava, to make inquiries and examine into matters connected with the duties of the port and the transport service. I met Lord Raglan there, by appointment, and we made some arrangements which will, I trust, have a beneficial effect.

I have, &c.,  
E. C. LYONS,

*Rear-Admiral and Commander-in-Chief.*

*To the Secretary of the Admiralty.*

In the renewed toil of the trenches, the English, always labouring under some impediment which the least order or foresight might have prevented, were much hindered by want of tools, and by the inferior quality of those they possessed. In one company, Mr. Russell declares there were but three "pick heads," no handles; two spades, "one broken in two;" no bill-hooks; and that requisitions for these essential matters were returned scratched

out! No wonder that slow progress was made in the English trenches. It was a joyful announcement to the men at this time that the coffee would be served to them roasted—how much greater the boon had they received it in this condition during the cold weather, which for a time had passed away! The following curious story was related by Mr. Russell, as illustrating the tales current in the camp at this period:—"Some time ago an English officer, who is now a prisoner at Simpheropol, received letters from his friends in England, who were at that time ignorant of his fate. It is a rule to forward all letters to prisoners after they have been opened and read. One of those sent to the gentleman in question was from a young lady. She requested the officer to take Sebastopol as soon as possible, and to be sure and capture Prince Menschikoff in person, adding that she expected to receive a button off the prince's coat, as a proof of the young gentleman's prowess. When this letter was delivered to the officer, it was accompanied by another from the prince, enclosing a button, and stating that he had read the young lady's letter, and regretted he could not accede to her views as regarded the taking of Sebastopol or himself, but that he was happy to be enabled to meet her wishes on a third point, and that he begged to enclose a button from his coat, which he requested the gentleman to forward to the lady who was so anxious to possess it."

Although the British authorities discouraged the presence of the soldiers' wives, some of them had been of great service not only to their husbands, but to the corps with which their husbands were connected. In the Crimea they had a better opportunity of rendering useful aid, which was not afforded them when the troops were quartered at Scutari, and they were free from the temptations which abounded in the latter place. There were very few who went to the Crimea, but their good conduct justified the predictions which under such circumstances were written concerning them in a smart little book by the wife of a field-officer:—"Mrs. Wilding, wife of a corporal of the Royal Artillery, was one of three women who were allowed to land with her husband's corps at Old Fort, in the Crimea. She was present with her husband at the battle of the Alma, marched by his side across the country to Balaklava, and was present at the battle of Balaklava, where she took a horse from a Russian officer. During her residence in the camp she earned by washing an average amount of 20s. per diem, and saved a considerable sum. Her invariable companion during the war was an excellent revolver, which she much prizes. Corporal Wilding, with his brave wife, survived the chances of disease and battle, and after the war were in

garrison together in England." The lady of an officer of cavalry showed equal spirit and as devoted affection. Alas! how often is the devotion of woman, even by the gallant soldier, too little prized! Fidelity and affection under all circumstances, however adverse, are expected from her as a matter of course, and her virtues and her endurance receive not the honour and reverence they deserve. The virtues of man are paraded forth before the world, and the trumpet summons its attention to his glory; but woman, unnoticed, offers her little strength a willing sacrifice, and lives and dies, stricken at home by disconsolate loss, or falling in the brave attempt—beyond her powers—to share the loved one's bitterest fortunes. She too often suffers unknown, unnoticed, and almost forgot.

On the 28th there was another desperate sortie against the French works. The fighting in the trenches was long and furious, but too much like the encounters previously recorded to require a particular account. Among the dead was an officer of the Russian navy, splendidly attired, and his breast glittering with many orders. His body was sent back to the town. A deserter announced that the ringing of bells, and firing of rockets, which took place some nights before, was caused by the return of the grand dukes.

On the heights of the Tchernaya the increasing numbers of watchfires which lit up the whole heavens, proved that reinforcements had arrived to the enemy, and that fresh operations in the field might be expected if the weather allowed. No one who knew the climate of the Crimea hoped for a continuance of the mild season. "General February" was regarded by the czar as one of his most reliable auxiliaries; and he might have considered March as no enemy, if characterised by his usual roughness in that climate.

The last day of January was signalled by a desperate attempt to spike the French cannon. A body of men volunteered for this service to the amount of 400. They were all men of many combats, and their leader, Captain Birulleff, of the navy, was a bold and enterprising man. They came along a track which had been recently opened by their engineers close to the third French parallel. A body of "volunteer scouts" had taken possession of an ambuscade which the Russians had abandoned a few nights before, and this spot gave an excellent opportunity to its occupants for firing upon the attacking party by surprise. Accordingly, as the men of the assault came on, a prompt and galling fire met them when they least expected it; reinforced from their reserves, they pushed boldly on at the charge—the scouts fell back, the French trumpets brayed the alarm, the signal rockets shot up

in columns of fire, and fell in sparkling showers over the dark camp, and the tramp of men hurrying to the defence shook the earth. On came the Russians again and again, supported by fresh troops, the intrepid Biruleff at their head; he knew every inch of the ground, having repeatedly stolen up alone to reconnoitre the French lines. His influence over the men, many of whom were sailors, was great; he urged them on with eloquent words, and his own sword waved in the van. Before they reached the trenches the French, shoulder to shoulder, were drawn up to receive them, their muskets double-cartridged, and shot and slugs shaken in upon the double charge. The volley from their muskets was terrible; the enemy went down in crowds before it. The parapet, however, was low, and Biruleff, unharmed, cleared it sword in hand, bravely followed by his volunteers—those who could not get in hurled heavy pieces of rock upon the French, for they came on with unloaded muskets, trusting to the bayonet for their work. Biruleff and his immediate followers drove back the defenders. Captain Fourcade, of the French engineers, had by this time collected his workmen, and led them on, sword in hand, against the flank of the assailants; but at that moment his thigh was broken by a ball from his retreating friends. The major of the night attack, Sarlat, of the engineers, placed himself at the head of the workmen, and shouting "*Vive l'Empereur!*"—the cry which had so often rallied Frenchmen to victory—he hurled his party upon the enemy. He was fortunately sup-

ported by several companies of the first battalion of the 42nd, and the foe was swept from the trenches upon their reserves. Instead of pursuing them in the usual way, and being decimated by grape from the Russian batteries, they fell back upon the trenches firing, while two fieldpieces coming up, opened upon the Russian reserves, scattering death among the column, and changing the retreat into precipitate flight. A stray shot from the retreating foe entered the brain of the gallant Sarlat, who fell dead across the parapet of the trench he had so skilfully and bravely won. Many French officers fell that night, but none more regretted than Fourcade. He was a veteran in experience, although but thirty-five years of age. He had distinguished himself at the Polytechnic as a student, and in Africa as a warrior, especially under "*Chef de bataillon*" Pelissier, at the caves of Héah. His thigh was amputated on the night he was wounded, but the blow was mortal.

Thus terminated the first month of 1855 before Sebastopol. The men of the British army rejoiced in returning sunshine, but they did not then know that fickle climate. February was at hand with its cold, snows, sudden penetrating thaws, and bleak winds sweeping over steppe and hill to the desolated plateau. Before the brave invading armies there yet remained an herculean task—labours, perils, privations, still awaited them; there was work for the most vigorous to conquer, and dangers for the bravest to dare. In the gallant armies of the allies were found the men for all that was to be endured or attempted.

## CHAPTER LX.

HOME EVENTS IN ENGLAND AND FRANCE BEARING UPON THE WAR DURING THE EARLIEST MONTHS OF 1855.—RUMOURS OF NEGOTIATIONS, AND JEALOUSY OF THE ENGLISH PEOPLE IN REGARD TO THEM.—PUBLIC INDIGNATION IN ENGLAND AGAINST THE ABERDEEN MINISTRY.—ITS FALL.—INQUIRIES CONCERNING THE SUFFERING OF THE TROOPS IN THE CRIMEA.

"On all sides, from innumerable tongues,  
A dismal, universal hiss, the sound  
Of public scorn."

MILTON.

THE year 1855 opened upon the Western nations gloomily. A deep distrust of their government had sunk into the heart of the English people, and the expressions of discontent were loud and universal. Rumours of negotiations about to be opened at Vienna filled the public mind; and it was suspected that the government was about to make peace at any price. Everything published concerning the peace and the designs of Russia was eagerly bought up by the multitude; and a desire to prosecute the war, despite the government, animated all ranks, except perhaps the very highest. Negotiations were indeed about to

open in Vienna, superior in gravity to any that had yet taken place in that capital of protocols and procrastination; and, notwithstanding ministerial revolutions at home, and treaties of warlike alliance all over Europe, speculation upon the prospects of peace were naturally rife in London, Paris, Vienna, and Berlin. There were formidable obstacles in the way of such a hope; but still peace was more likely in the existing conjuncture of affairs than it had been at any past period of diplomatic labour, since the haughty demands of Prince Menschikoff led the Turk to stroke his beard and touch his scimitar, and call on Allah to

aid him in the conflict. Looking at other signs of the times, War seemed still likely to stand proudly in his chariot, and cast his bolt, and wing the arrow of his vengeance around the confines of that strange empire which had invoked the demon from his sleep of years. The czar had summoned the whole population to arms; he was erecting fortifications of great strength upon the Volga, along the shores of the Baltic, and in certain other positions judiciously selected for the obstruction of invading forces from Southern and Western Europe. Wherever an assailing army might push its way, either from the Austrian frontier, across the Turkish line of the Danube, or through Prussia, in case of a Western alliance with that kingdom, or even in spite of its resistance, every point was made as secure as engineering skill and vast military means could effect.

Whatever might be the naval preparations of England and France for the Baltic, Russia was also preparing for defence. From Tornea to Abo, around the Gulf of Finland to Revel, and to the Prussian frontier, fortifications bristled; new works were also erected to meet our gunboats in the shallow waters, where their effect, during the last naval expedition, would have been decisive, but where they would now be met by well adapted and formidable means of resistance.

Watchful of what might be expected from our Austrian alliance, Russia was well prepared to resist an invasion from that frontier, from Cracow to Galatz and Reni on the Danube; while from Galatz to the mouth of the Danube no Turkish force, such as the sultan was able to send, could penetrate to that line of attack; and as long as Odessa remained a *point d'appui* for the defence of her frontier upon the principalities, she could resist any aggression which it was possible for the allies to direct against her in that quarter. From Tornea, in the Gulf of Bothnia, to the entrance to the Sea of Azoff, her whole European frontier was in a condition of defence; and on the line of the Caucasus, and on her entire Asiatic frontier, she was protected by well-provisioned forts and garrisons, or by partizan tribes attached to her by pay or fanaticism. Add to all this that her people were as one man: not indeed the newly-conquered provinces, but all Russia proper, comprising a population of fifty millions of persons, was as one body, of which the czar was the vigorous and directing head. The decision which the English press helped to propagate at the beginning of the war, and against which we have protested in this History, that the Russian people were dissatisfied with their condition, and would revolt, had been dispelled, and England at last knew that she had to fight against an empire of zealots, by whom the czar himself was

quickened to the energy he displayed. It had often been said "the finance of Russia will not hold out, it is not to be compared to that of the allies." This is true, but the resources of Russia had been husbanded during forty years, for such an occasion as at length offered for their employment. While England had been spending in works of peace and the extravagance of bad government—while Austria had been wasting herself in financial folly and provincial oppression—while France had been squandering her supplies upon revolutions, and a false commercial policy,—Russia had gathered all her disposable productions for this struggle. We had to contend against all her ordinary resources, such as they were, and forty years of her accumulated military strength, aided by that of every nation that she had within that time conquered and drained of its wealth. Mr. Cobden was not so far wrong in saying that we could "crumple up" Russia, in the sense in which he used the expression; but it was not the Russia of one year's growth, nor of two, with which we waged this contest—but one having the treasures of forty years stored up in the forms most available for her purpose. Even with all these advantages, it was plain to the thinking public she could be repelled, unless some great revolution took place in Europe, or a disagreement among the allies, or some other unaccountable disaster, should give her a chance, by a sudden swoop, to strike Eastern Europe down before help could be mustered by her disconcerted and temporarily defeated allies. Upon some such chance the emperor calculated; he thought not at that time of making the conquest of Europe, but he did think, ere the vast stores of so many laborious years were expended, to seize a great prey, give up some portion as the price of peace, and hold the rest until fresh stores of material and strength of men enabled him to play over again the same game. Russia cannot expend men so freely as other powers; she can call out a greater number for an emergency, but at a heavier ultimate expense. In the recent ukase for embodying a militia of the whole population, the emperor declared that he had no desire for bloodshed! Likely enough, unless it be as at Sinope, that of a defenceless fleet, or of some vanquished province overrun by his savage hordes. Such bloodshed as that of Alma, Inkerman, and Balaklava, and within Sebastopol itself, was not welcome to him: neither had he a desire to see his forces carried off captives by thousands, as at Bomarsund, or as they would be if Sebastopol should be invested or stormed. Spring too was approaching, when he must cover with troops his whole frontier, which, strong as it was, if attacked on all points by the covenanted nations, would

require such an amount of men, munitions, and provisions, as would speedily draw out the heart of Russian strength and resources.

Prussia had not wholly slipped through the fingers of the diplomatist. Brought more immediately into negotiations with the Western powers, she soon found it a different thing from playing fast and loose with Austria at rival German capitals. If Prussia failed to fulfil her newly-incurred obligations, she would incur the risk of having to stand to her arms on the Rhine—and she knew well that her whole Rhenish provinces would declare for France; while in the Baltic she must suffer, whether Riga, Revel, or Cronstadt stood or fell. It was the hope of sanguine politicians, that by engaging the alliance of Prussia and the minor German states, the allies would menace the Russian frontier, from Memel on the Baltic to the southern point of Silesia, and thus complete the circle of steel and fire by which vengeance would flash upon the robber of neighbouring nations, and the disturber of the world.

If recruits were slowly obtained at home, England could get men—Turks, Sardinians, and Swiss, recruited on the French and Sardinian frontiers, in spite of government prohibitions in Switzerland; and ultimately Portuguese, if she insisted upon them, and all, under her auspices, equal at least to Russian soldiers. France, Austria, and Prussia, could pour upon the Russian confines swarming legions, to which she might indeed offer a protracted resistance, because everywhere so well prepared; but the more protracted that resistance, the more prostrated must be her power in the inevitable result. Thus numbers reasoned in England, and the whole people felt that if this war should foster a public opinion that to invade the territories of other nations is not glory but plunder—that conquest has no prerogatives, and is a crime—that every nation has a right to arrange its own government, and the relations of its sects and citizens, as it pleases,—there would be a great achievement wrought for the cause of human liberty, of which national independence is an important element. The war was regarded throughout Great Britain as a war of freedom, even though despots waged it, or professed alliance with the powers actually in the contest. The French and Austrian despotic governments were, by a mysterious providential force, constrained to give expression to this great first principle of national relationship, and free nations hailed the sign. It was as plainly a war of national independence, founded in necessity and right, as if it were so written upon the clouds, and the awakened nations, looking up to heaven, beheld it and rejoiced. Hence every diplomatic movement was closely watched by

the people, and the mind of the nation was prepared to insist upon the firm policy pursued in reference to the Vienna conferences. These hopes and views, and the jealousy excited by the rumours of a disposition on the part of the Western governments to make peace too cheaply, entered with other elements into the force of public opinion, which was so soon to overwhelm the Aberdeen government.

Such was the state of feeling in England, when, on the 23rd of January, the parliament reassembled after the Christmas recess. Mr. Layard questioned the government as to the state of the peace negotiations, about which the mind of the nation was so much disturbed. Lord John Russell replied in the name of the cabinet, referring to the conduct of Austria in very peculiar terms, which were quoted in our last chapter on diplomacy. Mr. Roebuck gave notice of a motion for inquiry into the number and condition of the army before Sebastopol, and into the conduct of those departments of government which were responsible for the efficiency of that army. This notice produced the gravest consequences; the house was thrown into a high state of excitement, and the treasury benches especially partook of it. It is marvellous that the government did not prepare itself for some such occurrence, but, as in the management of the war, so in the management of the house, they were always “too late”—so that the nickname of “the late ministry” was bestowed upon them while yet they held, with whatever firmness they at any time possessed, the reins of power.

On Monday evening, the 25th of January, it was announced in both houses that Lord John Russell had resigned his connection with the ministry. Both houses adjourned to the next evening, in order to learn the grounds upon which Lord John had come to that determination. Rumours on Thursday evening prevailed extensively that Lord John Russell had resigned his connection with the ministry, and on grounds of the most startling and alarming nature. The evening papers came out earlier than usual, acknowledging the fact, and commenting upon it according to the spirit of their respective party bias. Having the *entrée* of the houses, the author of this History hurried to the Palace at Westminster. Vast crowds surrounded it, and public excitement and expectation were at a very high pitch. It will no doubt interest the distant readers of this History to have a peep, as it were, into both houses, as far as a sketch of what the author saw and heard on those two eventful evenings can afford it. Even the mannerisms of the place, and its frequenters, must to those remote from the metropolis have a certain interest, especially as they are brought out by remarkable occasions. It will not therefore be con-

sidered beneath the dignity of history to glance at what we witnessed, and the mode in which the events passed off, while we record the grave issues of the scene. The first notability that caught our eye on the Monday evening was the Earl of Shaftesbury. He sauntered carelessly in front of the reporters' entrance, and seemed, from the expression of his countenance, to be more busied with some theological or moral reflection than with the fate of empires, the conduct of war, and the downfall of a ministry. Upon entering the House of Commons, we observed that Mr. Brotherton, the member for Salford, was by far the most fussey gentleman on the ministerial benches, although many members were fidgetty and restless. Mr. Brotherton's rubicund face was whirling about like a globe on fire, as if all his wonted placidity was turned into inextinguishable excitement. He popped up and down between the Speaker and the secretary of the Treasury; now whispering to the one, and anon to the other, as though he were the connecting medium between them, and between the ministry and the house. Be it known to our readers, that no member of the House of Commons out of the ministry—we had almost said out of the cabinet—has more influence with the secretary of the Treasury than Mr. Brotherton; his influence with the Speaker too is very potent. With all his apparent plainness of mind and manners he is, like the rest of human nature, a little vain. To be seen dodging about the Speaker's chair, and in familiar converse with "Hayter," is his great ambition, and he is very useful to both; he assists in arranging private bills—proposes them in a sort of offhand wholesale way; and as his enunciation has a muffled sound, and he speaks in a somewhat broad Lancashire accent, few can hear what bill it is that is on the tapis, which is often a great convenience to the ministry, to the managers of private bills, and to quiet transactions in general. Mr. Brotherton is less indisposed to a little manoeuvring than is generally thought. "Honest Joe," as his constituents very sincerely and very justly call him, has with an assumption of directness which is rather bluntly maintained, a cautious, knowing look, which is a true index to his inner man—for he is up to every little scrap of ministerial management which in a small way may be required. Not that the idea of government patronising him ever occurs to the honourable member—he patronises them. On the memorable evening of our visit he was in his glory; he fussed as if the business of the country was left to him, while all the rest of the house was engaged in the mere work of looking after the fragments of a broken cabinet. Mr. Hayter, the repository of so much substantial patronage, looked most rueful, especially when he rose and made

the announcement of Lord John's resignation. The muster of members was not as great as was expected; and not maintaining their usual strictness in the order of sitting, some droll juxtapositions took place. Amongst these was one in the gallery on the opposition side of the house. Mr. Wilson Patten, of Warrington, the respected conservative member for North Lancashire, got somehow seated alone by the side of "King Hudson," who looked as jolly and simple as if he had never learned anything but the old song,—

"I prythee begone dull care,  
I prythee begone from me."

He was in this respect a great contrast to his neighbour, Mr. Patten. One would think that Wilson Patten had managed all the railway boards, and cooked all the railway accounts, and that such things lay heavy upon his conscience; while his neighbour appeared as if an angel—one of those chubby cherubs in the pictures, grown old—had been sent down to keep watch over him, lest he should commit suicide. The house was soon "up," and the M.P.'s crowded to the Lords, but the chancellor not having taken his place upon the woolsack, the lobby was a lounge for awhile, and many eager and animated discussions took place there, under the influence of the general excitement. Here a reporter and an M.P. were engaged in confidential converse, the senator evidently making a request which he did not want to be overheard. There Colonel Forrester is resisting the hopeless appeals of a clerical-looking gentleman for a pass to enter the House of Lords. In that corner, Captain Gossett assures somebody that Lord Charles Russell, the sergeant-at-arms, will do no such thing. Close by the passage leading to one of the rooms for the reporters, a notable member of the press is laying down matters in a vein of fun and wit, which greatly delights an old conservative member, and a judge of an insolvent debtors' court. He leaves that group, and tells an ex-editor of the *Leader* some news, which the other communicates to a barrister, and an honourable Mr.—we could not catch either names. There by the door leading to "the house" is Mr. Knox, the editor of the *Herald*, standing with the chief reporter of the *Times*, who has lately succeeded Mr. Dodd, the leader of the reporters' gallery, and the author of *Dodd's Peerage*, &c.; they converse very eagerly, and Mr. Knox, with a grave and gentlemanly air, disposes of the matter. That large man, evidently from Yorkshire, says its the "hoit of impudence for their member to do it," and the member's friend is using his best persuasives to appease the indignant Yorkshireman; the member's friend is an occupant himself of the liberal benches, and

has a fellow-feeling. Amongst all the excited throng who crowded the lobby, there was one very conspicuous for his uneasy bearing; he moved to and fro, as if eager to force an entrance to the lords. This unhappy wight was her majesty's solicitor-general. He afforded some amusement to a commoner, the most gentlemanly-looking man we observed amongst the wanderers of the lobby, Fitzstephen French, the member for Roscommon. While observing some young men from Westminster School, apparently bent upon mischief, and who were fluttering their caps and gowns about, the deputy sergeant-at-arms keeping an eye on them, our time came for entering the House of Lords. The chancellor took his place on the woolsack, and the House of Lords, with a dull gravity, began its business. The proceedings were important, from the announcement made and the explanation given by the Duke of Newcastle, the minister of war. His bearing was gentlemanly, and there was an air of conciliation about it which bespoke the thoroughbred gentleman. His voice was low, and his manner in speaking ungainly; an awkward and finicking gesture with the right hand below the table, to which he advanced when speaking, gave an idea of pettiness of thought, which his manner in other respects aided. The Earls of Winchelsea and Fitzwilliam seemed very desirous to have something to say; no one seemed willing to listen, and at last, by Lord Derby's interposition, they were "quieted down." Lord Ellenborough manifested most activity on the opposition side of the house, and what he said was spoken with energy, self-confidence, and commanding manner. Lord Lansdowne was the most active person on the ministerial benches, he moved about with a grace and affability which account for his great popularity in the house. His mode of putting down the pertinacity of Lord Fitzwilliam and Lord Winchelsea was authoritative, yet courteous, and in a few epigrammatic sentences he disposed of them. The most interesting sight was, however, old Lord Lyndhurst, who rose to give notice of his already famous motion concerning the conduct of the war. The house was very full of spectators. When his lordship rose, the silence was profound, and his venerable years, the magnitude of the question which his notice involved, his vast reputation, and his dignified and judicial manner, inspired a respect which manifestly pervaded every part of the house. The crowd around the throne seemed especially solicitous to observe his lordship when he rose. We could not avoid contrasting the intellectual features of the old ex-chancellor with the contracted expression of the present occupant of the woolsack, and wondering what the latter would be like at the age of eighty-four, to

which Lord Lyndhurst has arrived. The important event of Lord John Russell's resignation, announced by the Duke of Newcastle, prevented the discussion of Lord Lyndhurst's motion, and caused the house to break up early.

On the next evening, Lord Aberdeen's statement in the peers was almost as eagerly looked for as Lord John Russell's statement in the commons. The earl declared that he hardly knew why the noble president of the council retired from his colleagues, on the eve of a discussion concerning events in connection with which he fully shared their responsibility. He read to the house a letter which he had received a few days before from the noble lord:—

*Chesham Place, Jan. 23, 1855.*

"MY DEAR LORD ABERDEEN,—Mr. Roebuck has given notice of a motion for a committee to inquire into the conduct of the war. I do not see how this motion is to be resisted; but, as it involves a censure upon the war departments conducted by my colleagues, my only course is to tender my resignation. I have therefore to request that you will lay my humble resignation of the office which I have the honour to hold before the queen, with the expression of my gratitude for her majesty's kindness for many years past.

"I remain, my dear Lord Aberdeen,

"Yours very truly,

"J. RUSSELL."

The premier admitted that he had been aware that the noble president of the council had been dissatisfied with the conduct of the war; that he had expressed that dissatisfaction, and had made certain proposals concerning the occupation of the War-office, with which he (Lord Aberdeen) did not think it his duty to comply; that he, and the government of which he was the head, would resist Mr. Roebuck's motion, which he considered a vote of censure upon the ministry. The premier's address was cold, stiff, haughty, and quietly defiant, but did not appear to make the least impression upon the peers, who were, like the rest of the public, burning with impatience to know the terms and result of Lord John's explanation in the commons. We did not remain in the House of Peers, being more anxious, like their lordships, about what was announced to occur in the other house. A chance business gave us an opportunity of speaking with Lord William Russell, "the sergeant," and his deputy, Colonel Forrester. The former is a thorough gentleman, with many years upon his head, and a quiet but rather aristocratic manner. Colonel Forrester is the *beau idéal* of an off-hand, gentlemanly, agreeable man, and does his part of deputy to admiration. There was a great crowd assembled, so as to almost obstruct the Speaker's passage—the mace-bearer was certainly interrupted in

his course. The Speaker is a fine specimen of a man, and of the chairman of a popular assembly. His personal appearance, his urbane manner, and his apparent interest in all that goes on, are much to his advantage. After the preliminary business of Mr. Brotherton's attentions to the Speaker, and Mr. Hayter's routine, Lord John Russell made his famous statement. Perhaps no statement was ever made in parliament which excited so profound an interest. Every nook in the house was full, except a small portion of the ministerial gallery. The most conspicuous persons were two Parsee merchants, dressed in a showy oriental costume, who occupied the first bench in the Speaker's gallery, and who, the previous evening, were admitted behind the throne in the lords. Lord John was nearly inaudible at first, his elocution throughout the speech was inferior, and utterly unworthy of his great name as a speaker. He was listened to with evident partiality, and every period which told at all against the conduct of the war elicited cheers from the opposition, and the ministerial benches were far from silent on these occasions. After his lordship sat down, Lord Palmerston arose, on behalf of the government, amidst breathless expectations. His adroitness was extraordinary, and his intellectual superiority to his notable compeer obvious; but it was equally obvious that Lord John's moral influence was in the ascendant, and the latter part of Lord Palmerston's statement was heard with impatience, which extended to the galleries, although the order of the house was more than once invaded by expressions of approbation to the anti-ministerial remarks of Lord John. It became evident from Lord Palmerston's address, that his lordship would be installed in the War-office, if the motion of Mr. Roebuck failed. Mr. Roebuck did not speak with his usual energy, but although illness incapacitated him, his voice rang out as clear as a bell, and every tone told upon the whole house. His speech was devoid of that acrimony which pervades so generally the matter and the manner of the honourable member for Sheffield. The government seemed indisposed to reply; but loud calls from all sides for Sidney Herbert, provoked the right honourable secretary to one of his best elocutionary efforts. We were certainly most unfavourably impressed with his deportment all through the evening. There was a bitterness of expression in his countenance while Lord John was speaking, and a sneer and a whisper to his colleagues whenever Lord John made a good hit, which argued a consciousness of error, and a bad spirit with it. His speech was mere clap-trap, and was torn to shreds by Mr. Drummond, who, with that strange mixture of common sense, apt repartee, classical taste, sound argument, and irresistible fun, for which the

speeches of this gentleman have obtained celebrity, confuted and ridiculed, by turns, all that Sidney Herbert, with so much self-sufficiency and red-tapist mannerism, advanced. But Mr. Layard utterly demolished the case of Mr. Herbert, and with a gravity of purpose, fulness of information, discreet distribution of subject, and logical cogency, which mark that gentleman as one of the most rising men in the commons, and in the country. The government were literally overwhelmed with his speech. The impressions of the oldest observers of parliamentary proceedings whom we met, declared that they had never witnessed such a moral defeat.

Of course, the first interest of the proceedings in the House of Commons turned upon the validity of Lord John Russell's explanations. A few passages from his speech are essential to a proper understanding of the gist of his lordship's conduct, and of the character of the impression produced upon the house and the country. "On Tuesday last," said the noble lord, "when I was present in this house, the honourable and learned gentleman, the member for Sheffield, gave notice of a motion for 'a select committee to inquire into the condition of our army before Sebastopol, and into the conduct of those departments of the government whose duty it has been to minister to the wants of that army.' Sir, I of course thought that it would be probable some member might move for an inquiry of this kind. I had not, however, fully made up my mind what course to pursue." His lordship then entered into an examination and statement of the various kinds of procedure open under such circumstances to a person in his situation. He thought that either the government should be prepared with a bold and honest denial of the allegations concerning the sufferings of the army, or admitting them, they should be prepared to account for them in a way honourable to the administration. His lordship, being unable to do either of these things, had only the alternative of resigning his office of president of the council. He then used the following remarkable words:—"No one can deny the melancholy condition of our army before Sebastopol. The accounts which arrive from that quarter every week are not only painful, but horrible and heart-rending; and I am sure no one would oppose for a moment any measure that would be likely not only to cure, but to do anything to mitigate those evils. Sir, I must say that there is something, with all the official knowledge to which I have had access, that to me is inexplicable in the state of our army. If I had been told as a reason against the expedition to the Crimea last year that your troops would be seven miles from the sea, seven miles from a secure port—which at that time, when we had

in contemplation the expedition, we hardly hoped to possess—and that at that seven miles' distance they would be in want of food, of clothes, and of shelter, to such a degree that they would perish at the rate of from ninety to a hundred a day, I should have considered such a prediction as utterly preposterous, and such a picture of the expedition as entirely fanciful and absurd. We are all, however, free to confess the notoriety of that melancholy state of things. It was not, therefore, by denying the existence of the evils that I could hope to induce this house to reject the proposition of the honourable and learned gentleman; but I had further to reflect that I was in a position not to give a faint 'No' to the proposal, not to express in vague and equivocal language a wish that the motion should not be carried, or to use any evasion with respect to the letter of its terms with a view to defeat it."

The two sentences printed in italics in the foregoing extract produced an extraordinary sensation in the house. The elocution and delivery of his lordship were very inferior, but there was a tone of seriousness and deep emotion in his enunciation of the words "horrible and heart-rending" which thrilled through the house. But when with obvious sincerity, and in a manner expressive of his own surprise and indignation, he added the other sentence given in italic letters, a murmur of amazement and sympathy with the speaker floated around the benches, both ministerial and opposition. His lordship, after dwelling upon various matters more interesting to himself personally, and to the party concerns of the hour, than to history, gave the following account of the cabinet movements and discussions which, step by step, placed him at last in the position which he then occupied:—"When the office of secretary of state for war was separated from the office of secretary of state for the colonies, Lord Aberdeen thought it right to propose to the Duke of Newcastle to keep which of the two offices he should most desire. The Duke of Newcastle, with a commendable ambition, as I think, replied that having exerted himself in fitting out a very large expedition, he should, of course, like to remain at the head of the department which should have the direction of the orders for that expedition and the general management of the war. Lord Aberdeen consented to that arrangement, and I was a consenting party to the appointment. At the end of the session the various members of the government, especially those who are members of this house, dispersed, as they usually do; and it appears to me that that dispersion, after the excessive labours of this house, is necessary to the due performance of their duties; and no one, unless he has to discharge very urgent duties,

is to blame for resorting, for purposes of health, to distant parts of the country. I was not in any office which obliged me to take any part in the conduct of the war; but, during my absence, there was scarcely a day in which I did not both receive from and write a letter to my noble friend the secretary of state for foreign affairs with respect to the occurrences that were daily taking place."

Having digressed to explain various matters, personal to himself as to the way his time had been occupied while holding the presidency of the council, he resumed his narrative of cabinet transactions, from which it appeared that during the parliamentary recess the whole cabinet was dispersed throughout the country (excepting the minister of war), and that Lord John Russell urged their reassembling to consider the affairs of the campaign, the premier interposing some delay. On the 17th of October, however, a cabinet meeting was at last held. During October misgiving gradually crept over the mind of the noble lord as to the war management, and from the beginning of November he was apprehensive and uneasy. A correspondence ensued between the premier and the president as to whether the Duke of Newcastle was suitable for the office of secretary of war. In this correspondence the noble commoner urged upon the premier the appointment of a person with the rank of a privy councillor, upon whom should devolve the duty of proposing the war estimates, and who should be an authority when difficult questions should be put in the commons as to the expenditure, and as to the supplies of all the materials of war to the army in the field. The noble lord then addressed the house as follows, reading the correspondence which took place between him and the Earl of Aberdeen, which is essential to a clear comprehension by the reader of the state of the cabinet, and their utter incompetency to conduct the vast undertaking upon which they had entered, and to which they had committed the country:—

"In a letter addressed to the Earl of Aberdeen on the 17th of November, 1854, I said, 'From the other point of view the prospect is equally clear. We are in the midst of a great war. In order to carry on that war with efficiency, either the prime-minister must be constantly urging, hastening, completing the military preparations, or the minister of war must be strong enough to control other departments. Every objection of other ministers—the plea of foreign interests to be attended to, of naval preparations not yet complete, and a thousand others, justifiable in the separate heads of departments, must be forced to yield to the paramount necessity of carrying on the war with efficiency of each service, and completeness of means to the end in view. . . .

If, therefore, the first considerations here presented lead to the conclusion that the secretary of state for the war department must be in the House of Commons, the latter considerations point to the necessity of having in that office a man who, from experience of military details, from inherent vigour of mind, and from weight with the House of Commons, can be expected to guide the great operations of war with authority and success. There is only one person belonging to the government who combines these advantages—my conclusion is, that before parliament meets Lord Palmerston should be intrusted with the seals of the war department.' That is the opinion I gave, confidentially, to the Earl of Aberdeen. Before I read the Earl of Aberdeen's answer, I have to say that, the Earl of Aberdeen having requested some days to consider a matter of such importance, I wrote to him again on the 18th of November, stating that I concurred in that delay, adding—I wish however that, before you decide, you would show my letter to the Duke of Newcastle. It was my intention in writing the letter to avoid throwing any blame upon him. Indeed, I think he deserves very great credit for the exertions he has made. But he has not had the authority requisite for so great a sphere, and has not been able to do all that might have been done with larger powers of control.' To my letter Lord Aberdeen replied—misstating my proposition I must say—that he could not acquiesce in the proposal I had made. On the 21st of November he writes thus:—'Your proposal being founded on the supposed impropriety of Herbert moving the estimates, and the consequent necessity of the secretary of state for war being in the House of Commons, renders the removal of the Duke of Newcastle from his present office unavoidable. But, although you would regard this as the inevitable result of an official arrangement, it is not to be supposed that it would be considered in this light by the public, or indeed by any impartial person. The dislocation of the government would be so great, and the reason assigned for it apparently so inadequate, that it could only be considered as a mode of substituting one man for another. Although you may be far from entertaining any such desire, the transaction could receive no other interpretation. In justice to the duke, I do not think that his colleagues, without very strong grounds, would wish to place him in such a position.' In the other parts of his letter, Lord Aberdeen stated that he did not think any man would undertake the duties which I proposed should be undertaken by one person—viz., those of secretary of state for the war department, and, at the same time, secretary at war. He considered it to be necessary that a privy councillor's office should be maintained, and that

that office should be held in connection with the finances of the army, independently of the secretary of state for the war department. He stated also—a consideration well deserving of attention—that it might be desirable that hereafter some military chief who was in the House of Lords should have the office, and therefore it could not be always held by a member of the House of Commons. I considered the various objections of Lord Aberdeen, and on the 28th of November I wrote as follows:—'I come, therefore, having cleared the ground of all these obstructions, to the real question—What are the requirements of the great war in which we are engaged? Setting aside all historical references, both on your part and mine, I think it is clear either that the prime-minister must be himself the active and moving spirit of the whole machine, or the minister of war must have delegated authority to control other departments. Neither is the case under the present arrangement.' I went on to give some instances of errors that had been committed owing to that want of power and control. I then said, 'The cabinet has, it is true, in its recent meetings, done much to repair omissions; but a cabinet is a cumbrous and unwieldy instrument for carrying on war. It can furnish suggestions, or make a decision upon a measure submitted to it, but it cannot administer. What you want, therefore, I repeat, is a minister of war of vigour and authority. As the welfare of the empire and the success of our present conflict are concerned, I have no scruple in saying so. Keep up, if you think right, as a temporary arrangement, a secretary at war. Make it clear that it is temporary—that is to say, only to last till more complete consolidation can take place; but let parliament and the country be assured that you have placed the conduct of the war in the hands of the fittest man who can be found for that duty.' In answer to this, I received a long letter from Lord Aberdeen, which I shall read to the house. It is dated November 30th, 1854, and is as follows:—'After all, I think your letter plainly reduces the question to the simple issue of a personal preference, and the substitution of one man for another. In answer to my suggestion that some consideration was due to the duke on the part of his colleagues, you say that you understood the administration was founded on the principle of doing what was best for the public service, without regard to the self-love or even the acquired position of individuals. Undoubtedly this was the case; and I fully agree in thinking that the Duke of Newcastle would be the last man to wish for any exception to this rule in his favour. But I must observe that at the formation of the government, no such office as the war department was contemplated; and when, subse-

quently, the Colonial-office was divided, no objection whatever was made to the choice of the war department by the duke; nor, as far as I am aware up to this moment, to his management of the office. Now, I think you will admit that, although another person might perhaps have been preferred on the first constitution of an office, it is a very different thing to displace a man who has discharged its duties ably and honourably, merely in the belief that another might be found still more efficient. Undoubtedly the public service must be the first object; but, in the absence of any proved defect, or alleged incapacity, I can see no sufficient reason for such a change, which, indeed, I think is forbidden by a sense of justice and good faith. . . . On the whole, then, believing that any change like that proposed would be of doubtful advantage to the public, feeling very strongly that it would be an act of unfairness and injustice towards a colleague, and thinking, also, that all such changes, unless absolutely necessary, only tend to weaken a government, I must repeat that I could not honestly recommend it to the queen.' Lord Aberdeen spoke to me afterwards on this subject, and asked me when I intended to bring the question before the cabinet; and I, certainly after a good deal of hesitation, told him that, as he had said he could not honestly recommend that change to the queen, and as I did not wish to do anything which might tend to disturb his government and remove him from office, I should not press the matter further. I should say that my hesitation arose very much in consequence of the opinion of other high authorities, with whom I for years—during the whole of my political life perhaps—have been living in the closest intimacy, who told me they thought the change unadvisable, and that it would weaken that which I meant to strengthen, and who advised that I should not press it. Now, when I stand here to justify my resignation, and when I am told, as I have been, that I have acted prematurely, I own that the doubt that presses on my mind is whether I ought not, at that time, to have brought the question of this change to an issue. But among those who urged me not to do so was the noble lord himself, the secretary of state for the home department, who at the time when the correspondence took place was absent, and to whom I afterwards read it. He urged me, considering the objection which had been made, not to press the matter any further. However, that being the case with respect to men, I have further to consider what was the case with respect to measures. I have reminded the house that last year a pledge was given that a new arrangement would be made of the military departments, with a view of rendering them more efficient.

I myself had the honour of serving on two commissions having for their object the consolidation and improvement of those departments. Various commissions reported from time to time, and it is now, I think, twenty-two years since the first of them was appointed. At the commencement of the war then, that which before had been expedient, became urgent and necessary, and that consideration to which I have referred was due to the interests of the public and to the expectations of this house. The only change I was able to announce in the session before Christmas was, that the commissariat was placed under the war minister. With respect to any further change, I heard no mention, until a proposal was made in the cabinet—I think on Saturday last. I reflected on that proposal, and then I went to my noble friend at the head of the government, and told him that, after considering the proposal, I thought it incomplete and inefficient. I gave him also a paper containing my own views on the subject. This, the house will observe, was very lately; but I had no reason to expect that my views would be adopted. I had therefore to consider, when I came to reflect upon the Tuesday evening, on the course to be taken on the following Thursday, whether I could fairly and honestly say, 'It is true that evils have arisen; it is true that the brave men who fought at the Alma, at Inkerman, and at Balaklava, are perishing many of them from neglect; it is true that the heart of the whole of England throbs with anxiety and sympathy on this subject; but I can tell you that such arrangements have been made—that a man of such vigour and efficiency has taken the conduct of the war department, with such a consolidation of offices as enable him to have the entire and instant control of the whole of the war-offices, so that any supply may be immediately furnished, and any abuse instantly remedied.' I felt I could not honestly make such a declaration. I could not say, after what I had written, that there was a person with such power and control, and of sufficient energy of mind and acquaintance with details, at the head of the war department. I could not say either that the arrangement which had been proposed on Saturday last—that the consolidation of the military departments had either been carried into effect, or was in prospect in such a way that I could pledge the faith of government to the efficiency of the arrangement. Well, feeling this—giving the matter the most painful attention—feeling also, as I have already said, that I could give no faint or faltering opposition to the proposition of the honourable and learned member for Sheffield, and that I must get up, if I opposed it at all, and stand in the way of that which many would think might afford a remedy for those sufferings and distresses which

had been complained of, or, at least, if it failed in doing that, might point out a way for their correction and remedy—feeling, too, that many members of this house would look for an assurance on my part which they would be ready to act upon, as they did so far honour me with their confidence, that efficient alterations had been made, I was conscious that I should be repaying that confidence with treachery if I gave an assurance of the kind, knowing it not to be true. Well, it appeared to me, no doubt, that the members of the government could hardly remain in office if such a committee as the one proposed were appointed; that it would not be, I will not say dignified, but consistent with the practical good working of our institutions, that there should be a minister sitting on that bench to govern the war, and that the military departments should be at the same time constantly overlooked and checked by a committee sitting upstairs; and that the minister for war should have not only to consider what he was to do in order to provide for the ordinary necessities of the war, and to attend to applications from day to day, but must also consider the evidence to be adduced with respect to his conduct five or six months ago. Such a state of things could not be consistent with the efficiency of our administrative system. I therefore felt that I could come only to one conclusion, and that, as I could not resist inquiry, by giving the only assurances which I thought sufficient to prevent it, my duty was not to remain any longer a member of the government. It would be competent for others, if they thought either that everything necessary had already been done, or would be done, consistently to oppose the motion for inquiry; but for my own part I felt that I could not do so, and I therefore wrote in very short terms, not quite accurately stating the terms of Mr. Roebuck's motion, a note to the following effect"—(the note read by Lord Aberdeen in the House of Lords was then read). His lordship then gave his opinions upon the prospects of the war in a very protracted speech. There was nothing original or remarkable in the views expressed by his lordship.

The general impression in the house was undoubtedly in favour of Lord John after his explanation, but out of doors it was otherwise. He was regarded by many as having slyly abandoned his colleagues, when he saw, from his knowledge of the state of feeling in the house as a parliamentary leader, that the government was doomed. By another large class his whole conduct was considered an intrigue for the premiership. It may be that there was truth in both surmises; there was certainly sufficient in Lord John's conduct to justify either. It cannot be denied, however, that

there was a sense of responsibility displayed by him as to the way in which the war was carried on, which did not appear in the conduct of any of his colleagues. Lord Aberdeen was plainly told by his correspondent, that either the war minister must have more power, energy, and experience, or the War-office have a different occupant; or Lord Aberdeen, as chief of the government, must bestir himself to control all the departments, and wield the nation's instrumentalities for conducting war with a prompt and firm hand. The easy-going earl would not propose measures in the cabinet or in the parliament, to enable the minister of war to exercise the authority demanded for him by Lord John, nor would he hand over the War-office to any more competent person than the Duke of Newcastle. He refused either arrangement, and any modification of either arrangement. He took no notice of Lord John's hints, suggestions, and even entreaties, that he would, as premier, look more after matters himself. Inert, haughty, indisposed to change—jealous of the whig section of the cabinet, and anxious to keep the whole management of the war in the hands of his own—the Peelite section of it—he did nothing; and it must be plain to every observant man that he was not likely to do anything but temporise, trim, and patch up in a way unworthy of a statesman, and still more unworthy of a statesman occupying the most responsible post known to the British constitution. What the duty of Lord John Russell was in October or November, is not so easily determined as his censurers supposed. The ministry did not act like the ministry of a country engaged in a vast and complicated war. They resorted to their marine lodges and country seats; never meeting for cabinet councils, but literally abandoning the war to chance. Lord Aberdeen, it is true, did not go to a distance from London, but satisfied himself with a breezy residence at Blackheath, so that he might be at hand if wanted. His lordship might as well have been in the Black Hole of Calcutta, as at Blackheath, for any use he was—unless to sign a public document, or play the part of a courtier. The truth is, he was a victim, and made the country a victim, to the *doctrinaire* conceit of the little clique of Peelite red-tapists—the petty satellites of the late Sir Robert Peel, who believed that they only could govern the country; that they alone understood the principles of government; and that all governments looked to them as at once practical reformers and conservatives of order—the teachers of politics and political economy to all nations. The fact that these men held many enlightened views, and had acquired under Sir Robert the habit of dextrously copying and appropriating the practical views of more enlightened,

liberal, and experienced men, only exasperated their self-esteem, and made them more intolerably arrogant, without being proportionately useful. Lord Aberdeen was quite sure that his Peelite lieutenants were equal to the duties of their departments; that they were the chief men of their school; and that the school, narrow as its circle was, comprehended the political philosophers of the age—the English *juste milieu* party—the small but enlightened section of politicians, without whose support no government could conduct the business of the country. He felt quite sure that his friend, the Emperor Nicholas, and all other foreign potentates whatsoever—unless indeed the incorrigible King of Naples—kept their eye upon Lord Aberdeen's sage circle, to study their policy, and to profit by it as far as circumstances would admit; and that by-and-by, when he had gained a great battle or two, and his dignity would admit of the like, the czar would return to the intellectual loyalty which he owed to the great English party, to whom it was reserved to solve the problem of government, which required that as little as possible should be conceded to the public good, and yet as much as was necessary to keep the public quiet. This party had, undoubtedly, the merit of profiting under the guidance of their astute founder, and they had the folly of mistaking their attainments in this direction for great political capacity and high statesmanship.

While Lord Aberdeen thus leaned upon the broken reed of the philosophical and practical aptitude of his Peelite coadjutors, none of them was much occupied about what was going on except the Duke of Newcastle. He laboured with assiduity at the War-office, in work of which he had no experience; for which, although possessed of both industry and business capacity, he was not qualified—at a juncture when energies and endowments were required by a man in his position to which he had no pretension; and to all these difficulties was added a profound ignorance on his part of what was required, and what was amiss. The army in the Crimea was commanded so lazily, and such reserve was practised by all at head-quarters, that the minister of war was not duly informed of what took place; he could not, therefore, inform Lord Aberdeen of the destitution and misery of the army; and so little did either know about the condition of camp or hospitals, that the latter confessed, in his examination before the Sebastopol Committee, that his first intimation of the awful condition of affairs was obtained through the newspapers!

Had Lord John resigned earlier he would have served his country better; but it is doubtful whether in doing so in October or Novem-

ber, he would have received such support from the country as would enable him to rectify the abuses of which he complained. At all events he had not faith in the country. He resorted naturally enough to old colleagues for advice. Lord Panmure agreed with him in the main but advised him to do nothing rashly; Lord Palmerston advised him to do nothing at all. Whether that sagacious man suspected the purity of Lord John's motives, or looked forward with certainty to the defeat of the Aberdeen ministry, and foresaw his own advent to power, it is impossible to determine; but he had no ambition to direct Lord John's movements, and evidently thought the "pear was not ripe" for any action of his own. It is difficult to account for Lord Palmerston's acquiescence in the conduct of the Aberdeen cabinet, and the spirit of the Aberdeen policy,—except upon the ground, that as it was professedly a coalition cabinet, with the consent of parliament and the country, he confined himself to his own ministerial department, the Home-office, and knew still less of the condition of the army than either the president of the council, the minister of war, the secretary at war, or the premier. Many believed, and with good reason, that while Lord John Russell and Lord Palmerston were dissatisfied with the management of the war, they saw no hope of remedying the mischief until events should strengthen their hands, and no prospect of receiving support in parliament, or in the country, by which they could form a government on their own views if the Aberdeen cabinet were overthrown. The well-known jealousy of the two whig magnates themselves formed a further obstacle to any consentaneous action.

It may be readily believed that Lord John Russell's speech prepared the way for Mr. Roebuck's motion. The "honourable and learned member" was in bad health, but although unable to express all he had intended to lay before the commons, he produced a decided impression upon the house. The fact of being unable to continue his speech from weakness rather added to the effect; so that Mr. Disraeli truly said that, were not the house aware of the learned member's illness, the abrupt termination of his address on such a plea, and at such a moment, might appear an ingenious and rhetorical artifice. In his argument, Mr. Roebuck charged the government the officials at home, and those in command abroad, with incapacity, conceit, and indifference to the welfare of the soldiery. When at last the house divided, the motion was supported by 305 members, and opposed by only 148, leaving a majority of 157—one of the largest, on a great public question involving the fate of a government, ever known in the House of Commons. The announcement was

received with exultant cheers from both sides of the house. The extinction of the ministry was decided; the house and the country accepted the vote, not merely as an expression of want of confidence politically, but as a vote of censure morally and politically. Yet in this grave emergency the house adjourned, in order to observe the anniversary of "King Charles the Martyr!" Incredible as this may appear, while the country was in the most imminent peril, such was the fact.

A cabinet council was called, and the ministry, of course, resolved to resign. The queen and court were in great suspense and excitement, being very unwilling to accept the resignation of the cabinet. They were the prince's friends and favourites, and her majesty therefore was disinclined to their forfeiture of office, and was prepared for any constitutional measure, which would give back to them the possession of place and power. When the noble earl at the head of the government resigned the seals of office, he recommended her majesty to seek advice from the Earl of Derby. This noble earl had made some of the best speeches he had ever delivered, during the war debates, and his views on the subject showed superior information and superior judgment to what the ministry, in their aggregate capacity, possessed in connection with foreign politics and war. When the lords again assembled, the premier, in a poor and vapid speech, informed them of the occurrences recorded above. The Duke of Newcastle, in a speech of some vehemence, but more dignity, assailed Lord John Russell, and replied generally to "the break up speech" (as it was called) of the illustrious commoner. The duke had asked and obtained her majesty's permission to make known the state secrets of the occasion; but nothing very particular was elicited from his grace's explication, except a statement as to the cabinet plan for aiding the War-office. He, however, gave most satisfactory proof to the house and to the country that, to the uttermost extent of his capacity and power, he had laboured indefatigably in the performance of his duty. There appeared in the speech of the duke a desire to fix a personal quarrel upon Lord John, and to brand him with motives and inconsistencies, which the facts of the case did not warrant. The courtesy of Lord Russell was not preserved in the oration of Lord Newcastle. He endeavoured to convince the peers that the leader of the commons was actuated by ambition, by party spirit, by envy of the duke himself, and other probable feelings, but of which there was really no evidence. Lord John wanted, according to his grace's representations, to get rid of him, and therefore was so urgent upon the premier: *si possis naviter; si non, quocunque modo.*

In the course of the duke's speech, however, the nature of the proposed measures for correcting the disorder of the departments was communicated to the house and the country, and when our readers attentively peruse it, they will, from all it makes known and all it implies, be at no loss to account for the confusion and impromptitude which pervaded all our martial procedure:—"Now, my lords, having thus disposed of the personal part of the question, the noble lord proceeded to discuss in his place in the house the question of measures, and he said that he should have been glad to have opposed the motion of the honourable member for Sheffield, but that he was unable to do so, because he could not say that 'measures had been taken, or that arrangements were in progress by which those evils would be remedied, and by which the administration of the war would be vigorously prosecuted.' I think that the fair and just inference from that statement is, that the noble lord had proposed to his colleagues measures and arrangements which we had been unwilling to adopt. My lords, I know of no measures ever proposed by the noble lord which were rejected; I know of no proposals which he made which were not accepted, unless it be one. That proposal he refers to himself, in this form. He said that, at a cabinet which was held on the Saturday before the day of Mr. Roebuck's notice and the noble lord's resignation, arrangements were made by which the mode in which the business of the war department had been for some time conducted, viz., by calling together the heads of the military departments to my office, and conducting the business somewhat in the form of a board, though not with the formalities and strict rules of a board, was to be altered. A discussion having taken place in the cabinet that day, and an agreement having been made that greater formality should be given to those boards, and that they should be regularly constituted, either by a minute or by an order in council, I stated that I differed from the noble lord as to the propriety of such boards. His opinion, however, prevailed, and it was agreed that, either by a minute or an order in council, those boards should be constituted, consisting of the secretary of state for war, the secretary at war, the commander-in-chief, and the master-general of the ordnance. The noble lord said that that question had been brought before the cabinet, and he implied that it had been decided upon adversely to his opinion. That was not exactly expressed by the noble lord, but it is, I think, the inference which is to be drawn. Instead of that, however, the proposal was brought forward by the noble lord himself, it was agreed to after a discussion, and I had every reason to believe that the noble lord was entirely a consenting

party; but in the course of that meeting he sent to my noble friend at the head of the government a proposal to which he also referred, but which he did not quote. As it is of some importance to my case, however, I fear that I must read it. It is as follows:—

ARMY DEPARTMENTS.

*January 22nd, 1855.*

“The committee of the House of Commons on army and navy expenditure recommended that the army departments should be simplified and consolidated. What is now proposed is, that there should be a board consisting of—1, secretary of state; 2, secretary at war; 3, master-general of ordnance; 4, commander-in-chief; 5, inspector-general of fortifications.

“It is contemplated that there shall exist at the same time a board of ordnance, consisting of—1, the master-general; 2, the storekeeper-general; 3, the surveyor-general; 4, the clerk of the ordnance; under whose directions the inspector-general of fortifications will remain. It seems obvious that these two boards, acting at one and the same time, instead of consolidation and simplification, would produce complication, disorder, and delay. There are but two modes by which unity of direction and rapidity of action can be procured. The one is to give the secretary of state the entire direction of all existing offices and boards connected with the army; the other is to make a board, with the secretary of state at the head, absorbing the board of ordnance, and controlling the whole civil management of our military force. The constitution of this board and its functions would be—

“1. The secretary of state, to preside over the board and be responsible to parliament.

“2. The secretary at war, to pay the army and control its finances.

“3. The master-general of the ordnance, to arm the army and the navy.

“4. The commander-in-chief, to command the army.

“5. The clerk, storekeeper, and surveyor of the ordnance, all in one, to lodge the army.

“6. The commissary-general, to clothe and feed the army.

“This is nearly the Duke of Richmond’s plan.

“J. RUSSELL.”

The noble lord said in his statement in the other house that he had no reason to think that his views would be adopted. Now, I can only say most positively, in answer to that statement from the noble lord, that I had no reason to think that his views would be rejected; because the first step which my noble friend took, upon receiving the communication which I have read, accompanied by an intimation from the noble lord that he should propose it on a subse-

quent day—on the evening of which he eventually resigned—was, after having shown it, I think, to the secretary at war, to send it to me for my opinion. My answer was, that there were but two proposals in that paper which differed from the arrangements in the cabinet of Saturday—one was to do away with the board of ordnance, in consequence of the constitution of a superior board; and the other was to add two more members to the board beyond those which were proposed in the cabinet. I said, as regarded the first proposal, that I thought that it was manifestly right. It was in accordance with my own views, and I added that, if it were proposed to constitute a superior board for the purpose of doing away with an inferior one, I would support it. With regard to the second proposal, for placing two additional members on the board, I said that I thought that it would be unadvisable. I did not think two of the officers named to be necessary; and, as regarded the sixth member—the commissary-general—no such officer existed, the office having been abolished some years ago. Therefore, so far as the main and principal portion of the noble lord’s proposition was concerned, it met with entire approval; and, as regarded the second portion, the only reason against its being carried into effect with respect to one of the appointments was, that it was impracticable. My lords, upon such an important question as the conduct of the war, differences of opinion on incidental matters of course took place; but if I were to point out that member of the cabinet from whom I have received the most general assent to my views, it would be the noble lord. I received the most kind and generous support from all my colleagues upon all occasions; but, as regards identity of views, I should be inclined to say that upon all questions which were raised there was a more complete identity between the noble lord and myself than between any other members of the cabinet.”

At the close of his speech the duke admitted that he had come to the conclusion, previous to the propositions of Mr. Roebuck, that the war department of the government had lost the public confidence; and he had in consequence resolved, whether the government succeeded in resisting an adverse vote, or were covered with censure and obloquy, to resign the post which, to the best of his ability, he had occupied. At length the parliamentary debates came to an end, and public interest was concentrated upon the efforts to form a ministry which various parties were exerting. The Earl of Derby was obliged to decline the task, as he had no hope of commanding a majority in the commons. Lord Derby, it was represented, and generally believed, advised her majesty to send for Lord Palmerston as the most likely person to secure the confidence of

the country. To this her majesty, it was alleged, was energetically opposed; her own will, and the influence of the prince, being alike adverse to his lordship's direction of public affairs. The reasons assigned for this were various, but they all resolved themselves into this, that the prince consort, and Lord Palmerston, when foreign minister, gave the queen the most opposite advice on foreign policy, and her majesty preferred that of the prince. On all questions connected with Austria, and the relations of that power—more especially to Italy—their opinions were said to be diverse. His royal highness sympathised with Austria, and the conservative foreign policy so well represented by Lord Aberdeen; while Lord Palmerston regarded that power with distrust, and considered its proceedings inimical to English influence in Europe, to Europe itself, and to constitutional liberty everywhere. In regard to Russia, also, it was said that the court disagreed with the noble viscount; the imperial Nicholas being personally regarded by the queen as “a marvellously proper man,” and being the object of cordial esteem and respect by the prince. It was supposed that the premier in perspective was desirous to abridge the czar's power, and was troubled by a sort of Russophobia; while the English court had no wish to see that of Russia humbled, nor to abridge substantially Russian influence. It was also represented that the court feared; in case of the advent of Lord Palmerston to power, that a rupture would take place between England and the German governments, who might be driven by the too energetic Englishman into hostilities on the side of Russia. All these apprehensions, if entertained, were groundless; but they existed to some extent there can be but little doubt—at all events, such was the universal impression of the public. The prince was said to be very favourable to a Derby administration, if only the noble earl would pledge himself to a free-trade policy—Sir Robert Peel, when in office, having thoroughly inoculated the mind of the prince with his free-trade opinions. Her majesty was said to have a decided preference for the old whig party—that of her august sire; of her uncle, the Duke of Sussex; and of her faithful friend and servant, Lord Melbourne, under whose auspicious ministry government affairs were conducted during the early years of her reign; and who safely guided the bark of her majesty's royal interests through troubled waters, steering clear of many rocks, and doubling many a dangerous cape. She, accordingly, of her own judgment it was alleged, sent for Lord Lansdowne, who most fitly represented the whig party on this occasion. After many exertions and much fruitless delay, during which the country was passing through a perilous crisis, Lord Lansdowne recommended

her majesty to send for Lord John Russell. It had been well known that Lord Lansdowne sympathised with him through the complications which brought the marquis into her majesty's presence as an especial adviser. His opinion was that Lord John should have the opportunity of forming a ministry—an opinion which did not meet with public favour, but which was represented to be not unacceptable to the court, although the news of Lord John's recent conduct had not been well received there. His lordship soon found that none of his previous colleagues would co-operate with him, and he abandoned the attempt. Her majesty then sent for Lord Palmerston, who undertook the onerous task of constructing a ministry. Her majesty's mode of procedure was regarded as strictly constitutional in every step of these difficult proceedings; and, whatever her private feelings, she acted to the new premier with her well-known honour and good faith. Lord Palmerston, after some difficulty, succeeded in forming a government, which was in fact but a reconstruction of the old one. Lord Aberdeen, the Duke of Newcastle, and Lord John Russell, were left out; and the only accession was Lord Panmure, who was nominated secretary of war. This nobleman was better known to the country, and perhaps to other countries, as the Honourable Fox Maule. He had considerable experience in ministerial matters, and was regarded both by statesmen and by the public as an upright and amiable man. From 1846 to 1852 he served in the Russell administration as secretary *at war*; he afterwards served as president of the Board of Control, until the breaking up of the Russell ministry. On Tuesday, the 8th of February, the new ministry was completed, and was thus arranged:—

First Lord of the Treasury . . .	Viscount Palmerston.
Lord Chancellor . . . . .	Lord Cranworth.
President of the Council . . . .	Earl Granville.
Privy Seal . . . . .	Duke of Argyle.
Foreign Secretary . . . . .	Earl of Clarendon.
Home Secretary . . . . .	Rt. Hon. S. Herbert.
Colonial Secretary . . . . .	Sir George Grey.
Minister of War . . . . .	Lord Panmure.
Chancellor of the Exchequer . .	Rt. Hon. W. E. Gladstone.
First Lord of the Admiralty . .	Sir James Graham.
Public Works . . . . .	Sir W. Molesworth.
In the Cabinet, but without office	The Marquis of Lansdowne.
President of the Board of Control	Sir Charles Wood.

On the 16th of February the house met for the transaction of business, and very eager was the public ear for the words that should fall from the lips of the new premier. He informed the house, with brevity and clearness, of the circumstances which placed him in the situation he then held; and bespoke in energetic, self-reliant, and courteous terms, the confidence of the commons of England. The *suaviter in*

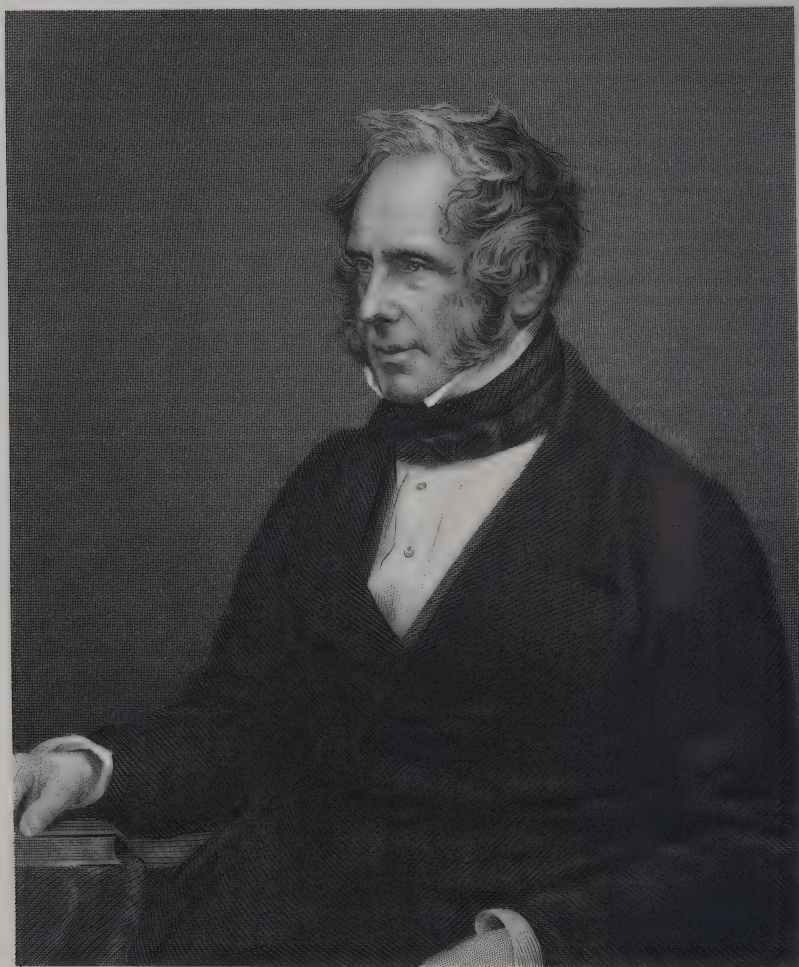

*modo* and the *fortiter in re* were blended in the tone, style, and substance of the premier's speech, as they are in his character. The house and the public were solicitous to hear his opinion and purpose concerning the appointment of Mr. Roebuck's committee, the resolution for the necessity of which had been so triumphantly carried. On this subject his lordship's words were—"I will not attempt to disguise that I feel the same objection to the appointment of the committee of which he has given notice as I expressed when the subject was first under discussion. My opinion is, that such a committee would, in its action, not be in accordance with the true and just principles of the constitution, and that it would not be, for the effectual accomplishment of its purpose, a sufficient instrument." He proposed to institute a strict government investigation, which, under the new *régime*, he concluded would satisfy the country. But it did not satisfy the country; and all the efforts of the premier and the cabinet to evade the searching and public scrutiny of a select committee of the people's representatives were in vain. The premier presented a long list of contemplated improvements in the management of warlike matters; among others, he announced the commission of Sir John McNeil and Colonel Tulloch, to which anticipatory reference has been made in this book. His lordship declared that this commission should have not only the right to inquire into the facts and causes of commissariat deficiencies, but also the power to apply remedies. Faith was hardly kept with the public in this particular, for no power to correct abuses was delegated, and the right to inquire was so vaguely given, that the commissioners were met with an undisguised disrespect by the quartermaster-general's department. It was also stated that Major-general Simpson would be sent out as chief of the staff, and in the exercise of the functions of that office relieve Lord Raglan of multiform inconveniences connected with detail,—from which the French general-in-chief was exempt, and from which every general-in-chief ought to be exempt. The selection of General Simpson was, however, so well understood to be a matter of favouritism on the part of Lord Panmure, that unpleasant impressions about the new administration of the War-office were prevalent. Lord Panmure was, however, incapable of selecting an incompetent man, notwithstanding any prepossession he might have for him; and there could be no doubt that General Simpson was a man of integrity and diligence, whatever his military parts might prove to be on so extensive a field of operations. Many of the improvements, indeed most of them, which redeemed the position and gave efficiency to the army in the Crimea, were

shadowed forth in the military programme of the new premier.

It was generally known that negotiations were about to be opened in Vienna, with a view to a treaty of peace. Lord Palmerston took the country, if not the house, by surprise in announcing that he had chosen Lord John Russell as the representative of England at the conference about to ensue. This gave public satisfaction, as Lord John Russell's recent conduct, and the general disclosure upon the breaking up of the cabinet, showed that his lordship had been a very warlike member of it. It was also well known that Lord John had chosen the appointment of president of the council when he was designated to that office, because he was dissatisfied with the Peelite section of the cabinet as to their war policy, or, at all events, as to their war practice; and that he might have an opportunity, such as no other office could give him, of expressing freely his opinion as to the conduct of the War-office. The speeches of Lord John were also the most martial delivered by any civilian of the day, reminding people of Sidney Smith's remark about him, that he would not hesitate to take the command of the channel fleet. It seemed also wise of Lord Palmerston to neutralise the opposition of (perhaps to enlist) the section of the liberal party that adhered to Lord John Russell *per fas et nefas*. On the whole, therefore, the appointment was well received. Yet men of intelligence had great misgivings. These arose from two causes: one was the inexperience of Lord John in diplomatic engagements; the other, the tendency which appeared so constantly in his conduct to "out-general" himself. That he meant well by his country was not doubted, but that he would take the most direct way to attain her objects was doubted; while any other, with a man not a professed diplomatist, was not likely to be successful in the presence of the faithless and well-practised agents of Russia and Austria. Thus in the more reflecting circles of English society the feeling about Lord John's appointment was chequered. The premier concluded his statements by the following appeal, which was received by the house, and by the people, with hope:—

"If we succeed in obtaining peace on terms which afford security for the future against the recurrence of those disturbances of the peace of Europe which have led to the war, we shall feel that our first desire in undertaking the government at this moment has been accomplished in a manner as satisfactory to the country as to ourselves. But if, on the other hand, we fail, then the country will feel that we have no alternative but to go on with the war; and I am convinced that the country will, with greater zeal than ever, give its support to a government which, having made

ROBERT BUNSEN, VISCOUNT PALMERSTON, K.G.

*From a Photograph by Mayall, taken expressly for this Work*

every possible attempt to obtain peace, and having failed in doing so, has been compelled to carry on the war for the purpose of obtaining those results which the sense and judgment of the country have approved. We shall, then, throw ourselves upon the generous support of parliament and the country, and that generous support I am confident we shall not ask in vain. I feel sure, that in such a state of things all minor differences, all mere party shades of distinction, will vanish; and that men of all sides will feel that they ought to support the government of this country, and show the world the noble and glorious spectacle that a free people and a constitutional government can exhibit a life, a spirit, and an energy, a power of endurance, and a vigour of action, that would be vainly sought for under despotic rule and arbitrary sway."

Never was political speculation so rife in reference to the probable fortunes of a new ministry. At no period, hitherto, was public confidence in the capacity of a minister more complete; it was never more the interest of the nation to be unanimous, and to strengthen the hands of a competent minister; mere party was never so much out of fashion, and never before altogether impracticable; and yet doubts, misgivings, and forebodings in reference to the intentions of the minister, the stability of the ministry, and the management of the public business, haunted the heart of the whole people. This was a state of things which ought to have been speedily removed by him, who, humanly speaking, alone could remove it—Henry John Temple, Viscount Palmerston. Let us analyse this state of mingled hesitancy, faith, and expectation. It is evident that the basis of it all was the view universally taken by men of the premier. His intellectual reputation was higher than his moral. No one can be surprised at that who is acquainted with his political history, or even watches him in a party debate. During the ministerial crisis, when he rose, on the part of the ministry, to reply to Lord John Russell, there was a *sang froid* about his air and demeanour very peculiar, and calculated to leave the impression that he "knew all about it;" that what had happened was only what he had expected; that it had all entered into his calculations, and he knew how to turn it to account. He seemed to regard Lord John as a very clever little thing, who was able to outwit himself; and who, without any sort of acknowledgment from the noble viscount, was to be allowed latitude enough to serve the expectant premier's purposes. The author of these pages listened earnestly to that debate, and he felt that there was a want of serious intent, and of earnest belief of things, in all Lord Palmerston's speech, which it appeared to him the house perceived. Yet this air of

nonchalance vanishes, and the smile of intelligent and light intrigue which plays upon his face disappears, as soon as he takes a part in any great question where the national dignity is to be maintained in the face of foreign insolence or assumption. Only let the subject of his speech be England and her greatness and her glory, and he rises to the dignity of a glowing patriotism and an epic eloquence. If he have to act as well as speak, his deeds are as prompt as his words are heroic, and the bolt of English power flies from his hand with true aim and terrible certainty. There is no escape from his piercing perception of the emergency, and of the thing that ought to be done; and no way of diplomatic wriggling from his masterly *exposé* of motive and object, however subtle the antagonist with whom he has to deal. No aristocratic sympathies, or diplomatic confraternity, will tempt him aside from a manly expression of opinion, and a direct English action, when the honour or interests of an English subject is invaded by a foreign state. This creates for him two classes of opponents at home—one is "the-peace-at-all-price" people. Messrs. Cobden and Bright, and all their immediate party, preach down and write down Lord Palmerston as a reckless politician, with a passion for war. They know that if an Englishman be injured in Austria, or Russia, or elsewhere, with the speed of lightning Lord Palmerston searches out the real character of the aggression, and demands redress; whereas this party is for handing over such matters to the ordinary tribunals of the country where they occur, or of hushing them up altogether, leaving the individual to suffer, or at most to receive a money settlement of the matter. In this the Peelites agree with the Brightites, and both are heart and soul opposed to the foreign policy of Lord Palmerston in matters of individual redress, as well as where great principles of national honour and character are at stake. The other party opposed to him in these respects is the high tory. The Derbyites will never inconvenience an absolute government to redress the wrongs of a British subject. The minister and consuls chosen from among that party are too pleasantly situated at absolute courts to disturb themselves, or allow the embroilment of their despotic friends—with whom in heart they sympathise—because of any Bible-distributing young lady, or liberty-loving Englishman—at all events if their rank be beneath that of the aristocracy. With Lord Palmerston it matters not who offers the insult, or how insignificant the object of it, or in what remote portion of British territory he was born—the affront must be atoned for, and the honour of England, in the humblest of her subjects, be maintained. With a party who regards no British subject unless he be rich or well

born, such a mode of dealing with incidents and questions of that order is "dangerous to the interests of peace," and of good fellowship with foreign tyrants. We have had of late years some striking exemplifications of the opposite mode of dealing in these matters—of Lord Palmerston on the one hand, and both the Peelite and Derbyite sections of the conservatives on the other. Contrast the energy, justice, and national spirit of Lord Palmerston, in the case of Don Pacifico, with the tameness, timidity, and indifference to national honour of Lord Aberdeen in his transactions with M. Guizot, the French foreign minister of Louis Philippe, in the case of Mr. Pritchard, our consul at Tahiti. Never, in a time of peace, did one nation offer such gross outrage to another as did France through her minister, M. Guizot, offer to England then; and never did a great nation peddle and cringe to avoid a resort to arms as did England, through her then minister for foreign affairs, Lord Aberdeen. Probably Lord Aberdeen was influenced by his religious peculiarities, in the indifference he then displayed to the wrongs of Mr. Pritchard, the murder of the Rev. Mr. M'Kean, and the invasion of a country whose only offence was loving England, and looking to her for religious instruction and protection. With Lord Palmerston it makes no difference what the religion of the wronged Englishman may be—an Irish Roman Catholic, a Hindoo Brahmin, or an English bishop, would be protected with the same spirit. Again, contrast the conduct of Lords Palmerston and Malmesbury in the case of the Austrian outrage which was perpetrated a few years ago in Florence. A young gentleman, named Mather, was cut down in the streets by the sabre of an Austrian officer, because he was an Englishman—as Englishmen were then presumed to favour Italian liberty. Mr. Mather was a youth of some seventeen years of age, perfectly inoffensive, and, as was afterwards admitted on all hands, offering in no way the slightest grounds for suspicion that he meddled with anything, or mixed with any persons, or did any action calculated to give umbrage to Austria. He was a peaceable English gentleman, and was an object of Austrian revenge and resentment, because his country sympathised with the nationalities which Austria oppressed. Mr. Mather's father, a gentleman known to the writer of these pages to be a man of unblemished honour, a patriot, a philanthropist, and a most public-spirited, useful English citizen, hastened to the scene of the outrage; and instead of finding Mr. Scarlett, our *chargé d'affaires*, protecting the English youth and affirming English honour, he was using his best exertions to induce young Mr. Mather to surrender his national rights and dignity, and attempting to suppress the

whole case by transferring it to the local tribunals, where he knew no redress would be obtained. So sure was he of effecting this, that he wrote so to Lord Malmesbury, and it was triumphantly announced by the ministry in parliament that the matter was taken out of their hands. This of course had to be contradicted. Mr. Mather demanded investigation and redress on behalf of his son, and that the honour of his country should be vindicated. Pecuniary compensation was offered him, which he refused to accept, unless an apology on the part of the Austrian government, and the punishment of the officer, were ensured. The result was that Lord Malmesbury, who was more the minister of Austria than of England in the transaction, informed parliament that an apology was made, but of what sort, or in what terms, no information was given. The Austrian officer who perpetrated the cowardly outrage *was never punished, but petted and supported by his government, while Mr. Mather was deserted by his*. The wounded youth, as he slowly recovered, might see any day the epauletted ruffian who aimed at his life, swaggering about Florence in the uniform he dishonoured, but to the more open dishonour of the English name. As this occurred just upon the change of government at home, Lord Palmerston had to do with a part of the transaction, and, as usual, his part was full of English spirit and honour. He expressed, in terms of unmistakeable censure, his views of the conduct of our Foreign-office and our minister in Tuscany. To use his own words, the "Messrs. Mather were the only persons who acted properly in the whole transaction." Finally, Mr. Mather was again offered a money compensation, which he indignantly spurned, on the principle that the outrage was upon his country, and unless her honour was vindicated, he could not accept a personal amend of any sort.

Such instances of the superiority of Lord Palmerston to the usual school of foreign ministers, secretaries, and *employées* accounted for the confidence entertained in his vigour and patriotism. But there was an impression that he would be hampered by his colleagues, and that he would trust too much to time-serving and expertness in managing them himself. The employment of Mr. Frederick Peel was generally regarded as boding no good. Already Lord Palmerston's colleagues had overruled him in several matters; and there were not wanting symptoms of officialism, routine, and delay, calculated to damage his ministry at the very outset. The country was involved in a conflict of terrible omen, and surrounded by perils that met not the popular eye, and it required all the vigilance and activity on her part, possessed by her foe, to come with safety and honour through the crisis. Unless Lord Palmer-

ston overruled the obstructions of his cabinet, and the pro-Russian feeling that lingered there, it was feared that his government must perish, or the nation stand upon the verge of ruin. His selection of Lord John Russell as her majesty's plenipotentiary at Vienna, was considered at all events adroit, as a piece of government and parliamentary address; but his resistance of Mr. Roebuck's motion, how-

ever necessary to the protection of the members of his cabinet, and therefore necessary to his position, weakened public confidence. The expectation of the people was that he would trust to them; and borne to power already by their moral force, they were able to bear him back again in case of his dismission, if he would only be true to them, and surround himself by men entitled to the esteem of the country.

## CHAPTER LXI.

HOME EVENTS CONTINUED.—CLASS JEALOUSIES IN ENGLAND.—SECESSION OF THE PEELITES FROM THE PALMERSTON CABINET.—AGITATION BY THE PEACE PARTY.—EFFORTS OF KOSSUTH, MAZZINI, AND THE FRIENDS OF THE NATIONALITIES TO INDUCE ENGLAND TO WIDEN THE OBJECTS OF THE WAR.—DISPATCH OF REINFORCEMENTS TO THE ARMIES OF THE ALLIES, ETC.

"There is a secret socialism—a good, a pure, a sacred thing—constantly at work for the advantage of the nation, and its recognition by all would speedily destroy that anti-social error which has split society into fragments, and diffused the pernicious fallacy that the degradation and bondage of one class are necessary to the elevation and freedom of another."—REV. WM. LEASK, D.D.

How happy would it be for our England, if the truth of this motto were felt and understood throughout her empire! It was not so during the opening months of the year 1855. The populace in England were intensely jealous of the influence of the aristocracy; and the latter were alarmed lest the mismanagement of the war should set the people upon depriving them of the almost exclusive possession of the government. There was a general disposition to merge *mere party* for the public good, but the spirit of class would make no concession.

Dr. Leask has eloquently written:—"Visible socialism—a confederacy which should destroy the natural and artificial classifications of society, would do violence to the very idea of the social compact. This kind of socialism has failed wherever it has been tried. It deserved to fail. It was chaotic. It sought the world's suffrage without maturing its claims. It bounded to conclusions without an examination of the intermediate steps. It pretended to renovate society before it had tested the influences at its disposal. It assumed the existence of a material in human nature which experience said was not forthcoming. It propounded doctrines which had no practical counterpart. It announced a path through the dark forests of habit, custom, and tradition, whilst it rejected the clearest light within the reach of man to guide it to the poetic paradise on the other side. With the light of Christianity, which is the best exponent of humanity as it is, we may go far to develop the true ideas of socialism, to see what are our individual and what are our social interests, to what extent they are identified and where they are separable, wherein they take shape and colouring from the great community, and

wherein they are sacred and individual. But without this light we shall fail, and go back to the age of feudalism, and confound might with right, and powerlessness with criminality. A community whose members look upon each other as equally privileged citizens of a free state, and hail each other as partakers of the same humanity, whilst the honestly reached successes of one imply no injury to the interests of another, comes up to the idea of this true theory. But a community demanding uniformity as one of its leading characteristics, in the position of men differently endowed and of diverse character, has to contend with difficulties, both mental and moral, which it cannot surmount."

The spirit commended and the policy proclaimed to be necessary in these words did not animate the governing septs in England; they regarded the war from a selfish, home point of view. Their constant apprehension was, how far its course would bring the middle and lower classes into power. On the other hand, every unhappy circumstance which occurred in the Crimea, or in connection with the expedition—if it were ever so plainly attributable to individual failing, or unforeseen and fortuitous antecedents—was set down to the influence of the aristocracy; although none could deny that they were prodigal alike of their blood and treasure for the nation's glory. It cannot be matter of surprise if, with such a pulse in the public heart, the motion of Mr. Roebuck, referred to in the last chapter, should affect all the exigencies of party, and fire all the jealousy of class. The efforts of the Palmerston government to stave off the inquiry, to humour the house, and cajole Mr. Roebuck, were all futile. He would have his committee appointed, and the house would appoint it; and Lord Palmer-

ston had no alternative to submission to the fiat of the commons, except resignation of office. He was too patriotic, and yet too ambitious, to adopt that alternative. He resolved to fall in with the appointment of a committee, but at the same time to modify its composition, so as to avert, if possible, any strong resolutions or report against his late and present colleagues. He was himself exempt from danger, as every one knew that Lord Aberdeen and his clique had studiously kept Lord Palmerston from all active connection, either with the management of foreign affairs or of the war.

On the 22nd February the House of Commons was astounded to learn from the premier that several of the leading members of his cabinet had resigned: these were Sir James Graham, Mr. Gladstone, and Mr. Sidney Herbert, and it was announced that the next evening they would assign their reasons for that step. On the 23rd, accordingly, these gentlemen again appeared before the house as ex-ministers, offering explanations which were in substance, that they supposed their joining a new ministry cancelled the old responsibility; that the committee of inquiry was unconstitutional; it was the business of the queen and her government to look into abuses, and not the representatives of the people, who were thus impinging upon the rights of the crown and the dignity of office. Sir James Graham threw out something like a menace that the French emperor would be offended, as no inquiry could take place which would not bring out certain matters connected with our ally tending to disturb the *entente cordiale*. The speech of Sir James Graham was cunning and clear; that of Mr. Sidney Herbert, proud and impudent; that of Mr. Gladstone, casuistical and sophistical: all failed to produce any moral influence upon the house. The committee was appointed; the original list of Mr. Roebuck having been opposed by the premier as *ex parte*, another was substituted, which consisted of Mr. Roebuck, Mr. Drummond, Sir J. Pakington, Mr. Layard, Colonel Lindsay, Mr. Ellice, Lord Seymour, Sir G. C. Lewis, Mr. Ball, and Mr. Branston.

Lord Palmerston obtained Sir Charles Wood in place of Sir G. Graham, a man of inferior talents, but superior moral weight. Sir G. Cornwall Lewis became chancellor of the exchequer, who was much inferior to Mr. Gladstone in that post, but a man of more direct mind and reliable opinions. Mr. Vernon Smith was made president of the Board of Control. Lord John Russell, who was (as before noticed) nominated to the Vienna conference, accepted the Colonial-office, which Sir George Grey occupied *ad interim*, as well as the Home-office, which he accepted *en permanence*. The secession of those men from the cabinet, to whom our military disasters were mainly attributable, was a

great moral gain to the administration, and in the long run saved the premiership of Lord Palmerston. We admit to a certain extent the administrative abilities of Sir James Graham, but he is not the man in this respect which he formerly was; he never merited all the eulogy for his administration of the navy which, by common consent, was conceded to him. He was showy and dextrous as an administrator, just as he is in debate and in the cabinet; but his agility, like that of the elephant, is counterbalanced by a certain heaviness. In the cabinet he is more crafty than wise, more to be consulted in reference to party tactics than the fate of nations. In parliament his oratory is flowery, and has a certain specious persuasiveness and trick of debate; while his manner is heavy, his features dull, and no lofty conception, or original thought, or sound and settled principle, ever characterises his displays. At the Admiralty his administration was in character with the man elsewhere. There was a want of principle in his promotions, a want of farsightedness in his plans, and of late there had been a want of general efficiency; while all that he did was very showy, and with a certain slight-of-hand air of performance which has gained him credit for other qualities—such as promptitude and readiness, to which he never had much claim. With all his cunning, he is a rash man—rash often in his parliamentary and party speeches, and in his administrative capacity. The imprudence of his celebrated Education Bill, which he brought forward with such ostentatious vigour, and which, after disturbing the whole country by its means, he was obliged ignominiously to withdraw, is an exemplification. In character with this was his speech at the dinner of the Reform Club, when Sir C. Napier was entertained previous to taking command of the Baltic fleet—a speech as imprudent as ever was delivered by any English statesman, excepting Sir James Graham himself. If the charges of Sir Charles Napier be true, the secession of Sir James Graham was no loss to the cabinet or the Admiralty. No man was more addicted to official insolence than Sir James (unless it be Mr. Herbert), and we believe him, therefore, quite capable of the affronts and the tyranny attributed to him by Sir C. Napier. No reliance can be placed on Sir James. During the discussion of the corn laws, the provost of a certain city, whom he professed greatly to respect, received from him a letter in which he admitted that the city and town population of Great Britain were in favour of the repeal, but that he did not recognise theirs as public opinion; when, however, he advocated the entire abolition of the corn duties, one of the arguments most insisted upon by him was, the opinion of the great

cities, as the public opinion of the nation. He has been in politics a radical, a whig, a conservative whig, radical whig, conservative, democrat, and an aristocrat, and spoke with the same invidious and rancorous personality as the advocate of each. In political economy he has been a free-trader and a protectionist, a whig fixed-duty man, a Peelite sliding-scale man, and an absolute repealer of all taxes on corn. Who can forget his descriptions of rural life and of rustic happiness in England, in his speeches for the "country party," at the very time he was plotting to undermine their monopoly? His monetary schemes comprehend all systems, and the destruction of every system. He was a champion of the Birmingham school, and of its antagonist the Manchester school; has defended bank monopoly, and thundered for free-banking; has denounced "rag-money," and pleaded for an extension of the free system. In religion his versatility has been equally evident. He has favoured free-thinking, and denounced infidelity; has made speeches against the high church party, and yet drew up a plan for placing the system of education entirely in their hands; has spoken for the rights of dissent, and put a clause in his Education Bill empowering a policeman to enter the educational premises of dissenters, and report concerning them. Mr. Herbert was too pert an official, and his insolent defiance of the House of Commons was the most contemptuous and insulting thing ever offered to that house. Instead of bemoaning the fact which he alleged, that the mismanagement of the war was beyond investigation, he, in a tone of triumph, "defied" the house to find it out. The house was at last on its mettle, and its prestige must have followed that of the military and civil departments, if the aristocratic insolence of Mr. Herbert had not failed to rouse its members to a sense of their dignity and power as the people's representatives.

Mr. Gladstone was, with all his peculiarities, a loss to the government. He was not a bad chancellor of the exchequer, and although he shared with Sir James Graham and Mr. Hayter the odium of the wretched transport mismanagement,—the Treasury, and the chancellor of the exchequer, partaking with the Admiralty in that matter,—yet he had attended with ability to that which was more properly his own department. Lord Palmerston had a high opinion of Mr. Gladstone's parts; yet after all he went on better without his aid, for the country no longer trusted him. The premier took a wise course. He knew well when forming his cabinet that it would be weeded from him by Mr. Roebuck's motion, and with his usual foresight and inimitable tact he acted accordingly. The country now had a more homogeneous ministry, while the seceders

could have no just excuse for opposing Lord Palmerston. To get rid of them on such terms was the very perfection of management, and the noble premier stood before the country in a more popular position, associated with more popular men.

These ministerial changes, and the discussions to which they led, greatly disturbed the country, and injured its moral influence abroad. The reputations of public men in England, both as to capacity and integrity, became much impaired, both at home, in our extensive colonies, and beyond the limits of the empire. It would have been strange if the two parties at home opposed to the war did not take advantage of the ministerial interregnum, and the difficulties of forming a cabinet, to press their views upon the public; possibly expecting that the political tinge of the new administration, before quite settled down in office, might be taken from their light, in which they exhibited the national interests and honour. The peace party made excessive exertions to show that the real evil was the war itself, that for its existence we were as a nation responsible, and that whatever ministry obtained peace for us ought to be supported.

The other party was that which was influenced by Kossuth, Mazzini, and their English copyists. They did not denounce a war with Russia, but rather the object for which it was waged. They would have the British people forget altogether the original cause of the quarrel, and to wage battle on new moral and political grounds, demanding the recognition of the nationalities from all invaders and despots, and allowing of no peace until Poland, Hungary, and Italy, were independent. The result of these agitations was that a confused notion began to creep among the lower orders of the people that the contest was without definite aim, and it was no uncommon thing to hear the inquiry among thinking men among the working classes, "Why have we gone to war?" It is necessary to notice the operation of these parties, because all through the conflict they tried to embarrass the government, and those by whom the government was morally and politically sustained; and their action will explain the course which debates frequently took in the House of Commons, which would otherwise be scarcely intelligible to persons abroad, or in the colonies.

It was not surprising that much ignorance and delusion existed, when the nonsense talked at public meetings by men who considered themselves politicians, and the absurdities propounded by a portion of the press—from which better sense might be expected—concerning the nationalities, were taken into account. Russia is a despotic state; her ruler is an autocrat; her people are slaves; and the orators and

writers we refer to, imagined that our object ought to have been to abridge the power of Russia because of her despotism. As well might we go to war with the Pope, because there is an absolute ecclesiastical authority represented by the triple crown; or with the United States, because one-seventh of her population are slaves. Every state has a right to regulate its own social and political condition, irrespective of other states; and it would be as much a violation of the true principles of freedom to force upon any country our ideas of government, as it would to enslave a portion of our own citizens. If the principle of interference with the internal regulations of independent states be allowed at all, the absolute governments of Europe have clearly as good a relative right to interfere for absolutism as the American Union for republicanism, or the United Kingdom for constitutionalism. Our only justification for interference is, where some other foreign state lends force to one of the parties in an internecine struggle, and we, justly jealous for the security of our own principles of government, prove by arms our friendship for the other contending party, or prevent the aid of the foreign element opposed to our own sympathies. It was the violation of this clear rule of national relations, on the part of both Russia and France towards Turkey, that constrained our interposition after every method conceivable was used to avoid the *dernier resort*. We had nothing to do with the forms of government or religious belief of our enemies or allies in the war. It was not the less just, because we were allied with despots, heretics, or infidels; nor the more just, because our opponent governed with a ruthless tyranny the nations ranged beneath his sway.

It has become popular of late years, through the exertions of the peace party, to sneer at the "balance of power," as if it were one of the exploded motives of national conflict, or only existed in the used-up brains of jaded diplomatists, and English foreign secretaries. But if war can be justified on any ground, the preservation of this balance must ever be the concern of nations, even with the alternative of the sword. England was herself the object of European jealousy, because of her great maritime ascendancy, until the loss of her American provinces reassured the mind of Europe—it being (erroneously) supposed that the independence of those provinces would be a deadly blow to England's empire of the seas. Rude a state as is Persia, and barbarous as are the petty despotisms of Central Asia, they have all sagacity enough to see that the adjustment of this very balance, where England, through her Indian empire, or Russia, may kick the beam, must be the all-influencing consideration of their national existence. All the vacillations

of Persia, during this war and this century, were attributable to a cunning perception of this fact, and a feeble dealing with it, and not to the mere ignorance and fickleness which it is the fashion of many political writers to ascribe to her. Tippoo Saib perished in daring attempt to turn the scale against England; and no thoughtful man can judge otherwise than in favour of the sagacity, as well as courage, of that politic and powerful prince. He foresaw that French influence in India must retire step by step before the superior resources of England, and it was more to his interest to aid the former—for if with his assistance the greater force were expelled, he might ultimately assail the weaker in turn with better prospect of success. In the conduct and spirit of the Americans, we see how even free nations will be jealous of one another, with a rational and well-founded jealousy, which identity of language, religion, and blood can only mollify, but not heal. The United States sympathised to some extent with Russia in the war, and necessarily. The union of the great naval powers for the regulation of political boundary on this continent, may be followed by a similar action on that. In the union of these two proud and potent powers, one of them an American as well as a European power, the United States must see danger, and she would strengthen herself as she best can against any prospect of dictation to herself from such source. Were the United States forced into war with allied England and France, her whole sea-board would be crushed by the thunder of their fleets, her coasts ravaged, her commerce destroyed, and her progress immensely retarded. That these so great rivals as she deems them, should be occupied near home, secures her from such peril. Would that we could say that her government did not, in a selfish and ambitious policy, desire the occupation of France and England in European war, that she might have freer scope for the designs of aggrandisement entertained by a certain portion of her citizens. If the our statesmen armed the country against the encroachments of a formidable military and naval nation, they did not plunge into an unnecessary or even avoidable conflict—unless all the motives for war, even self defence, be unchristian. Assuming, for argument's sake at least, that defensive war is defensible, then it was politic to conduct it rather on the banks of the Pruth than of the Thames, on the shores of the Crimea rather than in the Channel.

Allowing that here there was a general concurrence, yet the popular feeling as to the objects that should be held in view needed correction. It was urged that, being at war with Russia, we ought to settle every question, pr

sent and possible, before we concede a peace—the liberation of Poland, the surrender of Finland to Sweden, the abrogation of the Russo-Danish treaty, the cession of the provinces lately torn from Persia, the surrender of all the conquests made within this century from Turkey, and that Russia should retire a thousand miles along her eastern boundaries, so that she might be placed far remote from the possible invasion at any time of our Eastern dominions. Such arguments were urged with the more vehemence as it was supposed that Lord John Russell ought to receive from the premier such directions in reference to the conference at Vienna as conform to this spirit. The Kossuth and Mazzini agitators forgot that although all these things might be admitted to be *desiderati* by our statesmen, they were not all possible. If all the powers in Europe should stand by, and leave us to fight it out with Russia, we could not hope to effect such changes unaided in this generation, if the like could ever be effected by us. If the other powers of Europe would not be mere spectators, it is plain that they would take a part in common with their own interest, and perhaps their sense of justice in some cases. Had we demanded the liberation of Poland, the demand would have been tantamount to a declaration of war against Austria and Prussia as well as Russia; and however well able to defeat all three, if our assailants, we could never accomplish such an object as their assailants. For defence, we can defy a world in arms; for attack our power is limited by the nature of our demand, and the vulnerability of that which is attacked. We could not have conquered Poland from the Northern powers—Louis Kossuth's own speeches furnished proof of this; and it was hardly considerate of that noble and generous man to look at such a question from a Hungarian point of view only or chiefly. We must, when so loudly called upon to act, regard it both from a British point of view, and in the comprehensiveness of European policy and universal principles. We cannot demand the cession of Finland, while the Swede hesitates to join us in the demand; we cannot proclaim the independence of a people who cannot maintain it; we cannot make Finland a province of our own empire without war with Northern Europe. As to the Russo-Danish treaty of dynasty, the most we could in justice attempt would be the protection of the people of Denmark in repudiating, or attack Russia whenever she essays to enter upon possession. As to the limitation of Russian power in the East, our demands should be measured by the will of the countries which Russia has plundered, by the disposition of the provinces she has appropriated, by the relative strength this war might reveal, and by the policy of our allies. We cannot do everything

everywhere just as we like, from Petropaulovski to St. Petersburg; and it is unfortunate that the egotism of our people expends so much time upon such injurious bravado.

What our statesmen and allies really aimed at in this war should have been understood by our people from the beginning. The independence of Turkey, as far as Russian protection and special treaties were concerned, and the free navigation of the Danube and the Euxine, comprised the objects of the contest on our part. Upon these the unanimity of allies and the good wishes of the governments and citizens of Europe were secured. If our demands had been widened before new events clearly and indisputably required, division among the allies would have resulted, and among such parties at home as, for the purpose of the war actually waged, were united. The great duty was to prosecute the enterprise upon which the nation had set out with singleness of eye, until Russia was made to feel that the day of her encroachments was over, and that upon any attempt to widen her bounds, confederated Europe would demand fresh guarantees, by contracting her territory, or permanently weakening her offensive position.

During the early part of March some further changes took place in the ministry. Sir Robert Peel, Bart., accepted the office of a lord of the Admiralty, rendered vacant by the Hon. W. Cooper, who was appointed to the under-secretaryship of the Home department. The other appointments were subsidiary to these. It was very gratifying to the country that Sir Robert Peel accepted office. He was regarded as the most able man of the Peel family, and not a mere copyist of his father, or an adherent to the Peelite faction, but an independent thinker and a liberal politician.

One of the last acts of the Aberdeen ministry was very popular, but it was not followed up zealously and generously by the new administration. It was the institution of a cross for military merit, and the badge was to be bestowed upon the judgment of the peers of the candidate for the honour.

Having described the political and parliamentary agitations, and the ministerial changes by which the mode of carrying on the war was undoubtedly affected, the reader's attention can be more easily directed to various other home matters influencing the war, or arising out of it. Very warm discussions arose in connection with the religious views of Miss Nightingale and "the sisters." While all admired their self-denial, there was a numerous class who supposed them to be influenced by what is called Puseyite opinions, in their zeal for spreading which in the army they were led to incur so many hardships, privations, and risks. A lady under these apprehensions having written

to Mrs. Herbert on the subject, received from her the following reply:—

"MADAM,—By this post I send you a *Christian Times* of Friday week last, by which you will see how cruel and unjust are the reports you mention about Miss Nightingale and her noble work. Since then we have sent forty-seven more nurses, of which I enclose you a list.

"It is melancholy to think that in Christian England no one can undertake anything without these most uncharitable and sectarian attacks; and, had you not told me so, I should scarcely have believed that a clergyman of the Established Church could have been the mouth-piece of slander.

"Miss Nightingale is a member of the Established Church of England, and what is called Low-Church. But ever since she went to Scutari her religious opinions and character have been assailed on all points; one person writes to upbraid us for having sent her, 'understanding she is a Unitarian,' another, 'that she is a Roman Catholic,' and so on. It is a cruel return to make towards one to whom all England owes so much.

"As to the charge of no Protestant nurses being sent, the subjoined list will convince you of its fallacy. We made no distinctions of creed; any one who was a good and skilful nurse, and understood the practice in surgical wards, was accepted—provided, of course, that we had their friends' consent, and that in other respects, as far as one could judge, they were of unexceptionable character.

"A large proportion of the wounded being Roman Catholics, we accepted the services of some of the Sisters of Charity from St. Stephen's Hospital, in Dublin.

"I have now told you all, and feel sure that you will do your utmost to set these facts plainly before those whose minds have been disquieted by these unfair and false accusations.

"I should have thought that the names of Mr. and Mrs. Bracebridge, who accompanied and are remaining with Miss Nightingale, would have been sufficient guarantees of the evangelical nature of the work. But it seems nothing can stop the stream of sectarian bitterness. I remain, madam, yours very faithful,

"ELIZABETH HERBERT."

"If you wish for any more numbers of the *Christian Times*, I can send them to you.

#### LIST.

"The first party of nurses sent out on the 23rd of October, were Miss Nightingale and 38, viz.:—

From St. John's House . . . . .	6
From Miss Sellon's . . . . .	8
Selected hospital nurses . . . . .	14
Roman Catholic Sisters of Charity	10

—38

"The second party of nurses, sent out on the 2nd of December, were 47, viz.:—

From St. John's House . . . . .	2
Protestant ladies . . . . .	10
Selected hospital nurses (Protestant)	20
Roman Catholic Sisters of Charity	15

—47

"Total, 86 nurses; of whom 60 are Protestants, and 26 Roman Catholics."

Another of the discussions which engaged the public mind at home was one raised by the Earl of Dundonald. His lordship professed to be in possession of a secret, by which he could blow up the fortresses of Sebastopol, Cronstadt, or any other, however stupendous. It would be impossible to lay the merits of his lordship's proposals before the reader except in his own words. The following communication of the gallant and noble sailor was made to a London daily journal:—

March 10, 1855.

"SIR,—Peace being desirable not only for the interests of our country, but for those of the world at large, and the negotiations now pending being doubtless injuriously influenced by the obstinate resistance of Sebastopol (which could be overcome in a day), and by the impossibility of successfully attacking Cronstadt by naval means (which might be as speedily reduced), I have drawn up a petition to parliament, in order that secrecy and silence on my part, and deficiency of information on that of the public, may no longer prove injurious to the success of our arms. Hostilities having proceeded so far, assuredly it is more expedient to reduce a restless nation to a third or fourth-rate power than be ourselves reduced.

"Let not my motive be mistaken. I have no wish to command a fleet of 100-gun ships, or to attack first-rate fortresses by encased batteries or steam gun-boats; that which I desire is, first, secretly to demonstrate to competent persons the efficiency of my plans, and then to obtain authority (during eight or ten days of fine weather) to put them in execution.

"The means I contemplate are simple, cheap, and safe in execution. They would spare thousands of lives, millions of money, great havoc, and uncertainty of results. Their consequences might, and probably would, effect the emancipation of Poland and give freedom to the usurped territories of Sweden.

"Those who judge unfavourably of all aged naval commanders assuredly do not reflect that the useful employment of the energies of thousands and tens of thousands of men can best be developed and directed by a mind instructed by long observation, matured by reflection; an advantage to which physical power—that could clear its way by a broadsword—can bear no comparison. My unsupported opinion,

in regard to a naval enterprise in 1809, proved to be correct. Every other undertaking in the British service, in which I was concerned, and as commander-in-chief in Chili, Peru, Brazil, and Greece, was successful, and so would the protracted and unaccomplished undertaking, so injurious to the result of negotiation, have succeeded, had I possessed sufficient influence to be patiently listened to.

"I am, sir,  
"Your obliged and obedient servant,  
"DUNDONALD."

[Presented March 9, 1855.]

TO THE HON. THE COMMONS IN PARLIAMENT  
ASSEMBLED.

*The Petition of Thomas Earl of Dundonald, Admiral of the White,*

HUMBLY sheweth,—That in the year 1811 your petitioner discovered, and after deliberate consideration had the honour, in the year 1812, to disclose to his Royal Highness the Prince Regent a simple, yet irresistible means, whereby ordinary implements in war might be dispensed with, and speedy and successful results ensured.

That his royal highness was pleased to appoint a commission to investigate the subject, consisting of the most competent persons of that period, whose report was so favourable that his royal highness ordered the attendance of your petitioner, and commanded secrecy, which had been imposed on Lord Keith, Lord Exmouth, and on General and Colonel Congreve, his Royal Highness the Duke of York being president of the commission.

That with this injunction your petitioner faithfully complied, although he could have put his plans in execution in foreign service to his own great personal advantage. That after your petitioner's return from abroad, and when an apprehension of war had again arisen at home, your petitioner presented his plans to his majesty King William (who had honoured your petitioner in early life with favour), and whose professional knowledge enabled him to judge of their applicability.

That his majesty, satisfied therewith, was pleased, in the most flattering manner, to manifest the high estimation in which he held the loyalty and disinterested conduct of your petitioner.

That on a subsequent threat of war since the accession of her present majesty, the question of the merits of your petitioner's plan was on a similar occasion submitted to the most honourable the cabinet council, wherein ingenious and expanded minds, impressed with sentiments similar to those which actuated his late majesty, recommended and obtained a gracious manifestation of royal justice.

That in February and in July, last year, your petitioner again offered his said plans, and sanctioned their reference to a secret commission of naval officers, in order that a professional report might be made as to their practicability and efficiency, which report, however, was confined to an opinion as to their expediency, perhaps originating in an erroneous impression as to the endurance of iron-bound floating batteries, all of which your petitioner will engage to subdue, even were they added to the defences of Cronstadt.

That your petitioner, foreseeing the impracticability of capturing numerous and powerful fortifications by the means now in preparation, again most respectfully offers his plans and his services to accomplish these objects, reserving the encased batteries and steam gun-boats entire, and ready for the brief and easy task of destroying the hostile fleet.

That your petitioner begs that, should these premises and the prayer hereunto annexed seem to your honourable house exaggerated or unreasonable, you will be pleased to take into your consideration that, had electric communication and photographic delineation been privately known and publicly announced, these incontestable realities would have been received as an insult to the understanding.

Therefore your petitioner humbly prays, that your

VOL. II.

honourable house will be pleased, by a searching inquiry, to ascertain whether the aforesaid secret plans are capable, speedily, certainly, and cheaply to surmount obstacles which our gallant, persevering, and costly armies and fleets have failed to accomplish.

DUNDONALD.

Another discussion, which produced considerable excitement, was as to the state of our fortifications. Some years before, the Duke of Wellington and Sir John Burgoyne had called attention to the fact, that our country was almost defenceless against any sudden invasion by a great military power such as France. These distinguished men were opposed vehemently by the peace party, as urging upon the nation an unnecessary cost, and provoking a spirit of aggression on the part of France by the disposition to distrust her. Parliament also received coldly these propositions. The disasters in the Crimea awakened the national anxiety, and the discussion assumed new force. Earl Grey brought the subject before the House of Lords, and strongly urged upon the government that all works of fortification should be suspended until a general committee of scientific and military men should inspect them, and pronounce upon their efficiency. A remarkable letter was published by Mr. Fergusson, whose writings on earthworks in fortifications had attracted so much attention. This letter startled the public, and gave a new stimulus to the discussions prevailing on the subject:—

*Langham Place, March 17.*

" . . . . The Royal Engineers have the privilege of keeping their works secret till it is too late to remedy them, and even then no documents are published which would enable the general public to judge for itself of the correctness of any assertion, or to refute or support any argument which may be adduced.

"It is probable that Earl Grey, from his position, is fully aware of the facts of the case, and spoke from intimate knowledge of the subject, at least from personal inspection of nearly all the works now being erected for the defence of our coasts; I can vouch for the accuracy of every word he said. With scarcely an exception, they are masonry buildings, and in plan and profile belong to the antiquated systems of the seventeenth and eighteenth centuries.

"The fort, for instance, recently erected for the defence of Liverpool is a little stone castle, with a battery of ten or twelve guns, so closely jammed together in masonry embrasures, that one broadside from a line-of-battle ship would dismount the whole; or, if the ship chose to pass the fort—which she could easily do at the distance of 1200 or 1500 yards—at the rate of ten or twelve knots an hour, the chances are very much against a single shot striking her. Our recent experience in the Black Sea and Baltic, has proved that she might safely calculate on doing this with scarcely the loss of a

single man, and, having done it, Liverpool is at her mercy; yet, for a very small sum of money, properly applied, this town might be made perfectly secure against such attacks. The forts recently erected in the Isle of Wight are even worse than this. Fort Victoria is so placed that a ship may easily pass it out of effective range of its guns, or, if attacking it, there is deep water within 150 yards of its guns, and they are so badly placed that only one out of its principal battery of twenty-one guns can see, or fire at, the attacking vessel. Like another small fort erecting at the cliff's end, it is wholly of brickwork, and both are so constructed that they would crumble to pieces far more rapidly than the towers of Bomarsund. Yet this is not the worst. These forts are utterly incapable of defence on the land side, and, in consequence, a strong redoubt is now being erected at Freshwater to protect their rear, and every bay in the Isle of Wight must have its redoubt, or all our pains will be thrown away—for the enemy would certainly choose those places which are undefended in preference to those which are more or less fortified. The same system is being pursued at Portsmouth and along the Sussex coast. Small forts incapable of defending themselves are erected on certain spots, and then other forts are erected to protect them, and these must be multiplied *ad infinitum* before we get to the end of the chain.

"If these forts were merely 'shell-traps,' as Earl Grey most properly termed them, it would be a small evil; but they are also, unfortunately, 'man-traps,' and as each will require scientific and thoroughly trained soldiers to defend it, we shall find when they are all garrisoned, as they must be, that nearly the whole available strength of the regiment of artillery is parcelled out into bodies of 50, 100, or 200 men, and when once they are safely locked up in these innumerable fortlets the country is open to the enemy.

"If the military history of Europe has proved one thing during the last three centuries, it is that this parcelling out of an army into small detached garrisons is the surest way of facilitating the invasion of a country; yet we are pursuing this course on a more Lilliputian scale than ever was adopted before, and if we continue in the same path, we shall render the invasion of this country one of the easiest problems imaginable.

"It is only by works on the scale of intrenched camps, which your correspondent asserts have never been taken since the Thirty Years' war, that such a country as this can be defended.

"It is certainly incorrect, however, to call Sebastopol an intrenched camp, unless we apply the same term to Portsmouth, Devonport,

Chatham, or any other fortified town of the same extent. The fortifications of Sebastopol are drawn as closely round the houses as in any of these places, and are, in fact, both in form and extent, very similar to those of Portsmouth and its dependencies; yet if the armies now engaged in the defence and attack of Sebastopol were playing the same parts at Portsmouth, nothing could have saved that town after three weeks or a month of open trenches, notwithstanding the enormous sums spent on its fortifications. After five months of open trenches the unfortified town of Sebastopol still resists, and, though it may fall by assault, it cannot be taken by all the boasted resources of the science of attack before which every regular fortification inevitably falls within its prescribed time.

"The truth is, and it cannot be known and appreciated too soon, that the Russian engineers have adopted a new system of defence; they have thrown aside routine, and all the antiquated systems of the schools, and have applied to the defence of places all those principles which have been hitherto so invariably successful for the attack; and they have done this with such success as to prove beyond the shadow of doubt the possibility of rendering the science of defence superior to that of attack, especially when the defence is carefully prepared for beforehand, in time of peace.

"The one question that remains is,—Will our engineers admit this view of the case, and are they prepared to act upon it? I fear not; at least I can assert from my own personal experience how unwillingly this will be done—inasmuch as for the last ten years I have been earnestly endeavouring, by every means in my power, to press these identical views on their attention, with singularly little success. And now that the Russians have proved by experience all that I said or wrote, will they confess their error and be content to be taught by their enemies? If the public and the press take up the subject they must do so; but if they do not, it is to be feared that routine will still sleep on in happy ignorance of the existence of the nineteenth century.

"At all events, they have not shown any appreciation of the facts hitherto, but every Royal Engineer has, probably, something to say in defence of the old system; and while the Russians are pulling down with their own hands the Malakoff Tower, the last remnant of their masonry defences, to replace it with earthworks, our engineers are building expensive masonry forts whenever they can find money and a site—and this in spite of all the experience and information daily arriving from the seat of war.

"Until these new discoveries are thoroughly investigated by the light of the experience we

are gaining, I would earnestly pray, with Lord Grey, that all works of fortification be suspended—feeling convinced that the whole system must be altered; and not only that all new works will have to be designed on totally different principles, but all that has been done lately must be undone again, and immense delay and expense be incurred in consequence.

“Your obedient servant,

“JAMES FERGUSSON.”

The navy and army estimates for the year 1855, showed that the cabinet was alive to the importance of the crisis; but still the proposed strength of both the navy and army was beneath the requirements of the country. It is to be regretted that the amount of men thus proposed was never raised for the military branch of the service. In peace and war the number of men actually engaged for the service is always greatly beneath that authorised by the votes. The estimates proposed this year, as compared with those previous to the war for many years, were very large; and showed the country the cost of real active warfare. The naval and military estimates were usually, in the aggregate, between 15,000,000*l.* and 16,000,000*l.* The proportion was about equal to the army and navy, 6,000,000*l.* to each, and about half the amount of either for the ordnance. Yet in the beginning of February, after a twelvemonth's war only, the increase was from 6,000,000 to 15,897,803*l.* for the navy, and from the same amount to 13,721,158*l.* for the army, amounting together to 29,618,961*l.* The excess of expenditure above estimates in government outlay is always, as in the case of architects and builders, very considerable. It was generally calculated that the excess on both services would not be much less than 20,000,000*l.* The increase of expenditure from the peace to the war estimates, may best be seen by a comparison of the years 1854 and 1855. In the former year the land force cost 4,723,288*l.*; for the latter it was estimated at 7,353,804*l.* In 1854 the troops provided were 142,776; in 1855, 193,595. There were likewise 136,323 of the militia force, making a total increase in our military strength numerically of about 200,000 men. The force maintained in India at the expense of the Company was 29,629, constituting a grand total of 359,547 men. If to this number the amount of native and European troops in the service of the Company, and of certain colonial regiments, be added, it will bring the numerical force of the army available for the honour and interests of England to an amount considerably exceeding half a million. The mode in which the English government had proceeded in the augmentation of its forces, showed the want of earnest-

ness on the part of the Aberdeen government in conducting the war. The first vote in the palmy days of the Aberdeen government, in answer to the Russian invasion of the Danubian provinces, was for 10,000 men, the next was for 15,000. Then the militia was called out, and ultimately foreign enlistment was resorted to, with jealousy and reluctance on the part of the nation. It was but too truly said at the time:—“We have neither been going too far nor too fast in this increase; on the contrary, we now see by the light of experience, that these additions would have been wisely made this time last year, and that a good reserve might have saved us more than its cost, both in men and money. It cannot be said indeed, that, like the foolish king, we did not count the cost before going to war, for we made our reckoning accurately enough; but we altogether miscalculated the dimensions and exigencies of the struggle. We were not crippled for means or for men; there was both a will and a way if *we had turned them to account*, but the true nature of the emergency was not discerned.” It was the business of the government to have discerned it—perhaps even to have foreseen its approach, and to have been prepared to meet it. They had been well warned. All persons conversant with Russian policy and principles, and with the signs of the times in Russia, had predicted what happened, and many persons of influence besought the government to prepare, but in vain: nursed in their own pride and self-sufficiency, and having confidence in a government with whose principles they sympathised, they were blind to every movement of Russia, and duped by even her most transparent artifices.

The minor items of the votes were very instructive. For the staff of the army in the field, a large portion of which had proved itself to be so little competent, there was a vote of 76,226*l.* For the public departments connected with the army at home, 153,588*l.* For the military college, 17,795*l.* A leading journal which did much for military reform, made the following comment upon these minor votes:—“Now, what, we beg to inquire, is to be the return to the country for this outlay? We presume the estimates are liberally framed, and we are sure that if more was wanted it would be cheerfully given. But what is the use of our military school or our staff allowances? On paper, and in the public accounts, we are represented as possessing those very things of which we so acutely feel the want, and which we regard with envy when we see them in the possession of others. Why should our army not have a good staff at this moment? We are paying for it—paying not only for the men themselves, but for the means of making

them. What can be the meaning of a minister rising in his place and regretting that the army wanted officers acquainted with something more than mere routine and regimental duties, when votes like these are brought before parliament? What becomes of the '180 gentlemen cadets' maintained under the special care and instruction of an able staff of governors and instructors."

The votes for the ordnance were proposed in order soon after the foregoing. The total amount for the effective service required was 7,610,385*l.* The total amount for the non-effective service, 197,657*l.* The increase upon the previous year was 1,822,380*l.*

The items of the estimates of the sum required for the effective service were as follows, viz.:—1,117,833*l.* for the pay allowances, and contingencies of 22,346 officers, non-commissioned officers, and men, composing the several ordnance military corps; 1,406,883*l.* for commissariat and barrack supplies for her majesty's forces, greatcoats for the army, and clothing for the militia; 75,604*l.* for the Ordnance-office; 303,149*l.* for ordnance establishments at home and abroad; 368,872*l.* for the wages of artificers, &c., at home and abroad; 2,792,348*l.* for ordnance stores for land and sea services; 1,387,500*l.* for works, buildings, and repairs at home and abroad; and 158,196*l.* for the scientific branch. The item of 1,117,833*l.* for pay and allowances is thus subdivided, viz.:—776,240*l.* for pay; 97,535*l.* for additional pay (for length of service and good conduct); 37,716*l.* for allowances; 54,028*l.* for clothing; 3204*l.* for hospital expenses; 751*l.* for divine service; 1632*l.* for libraries and schools; 20,637*l.* for movement of troops; 116,32*l.* for recruiting; 8326*l.* for agency; 500*l.* for regimental savings-banks; and 1232*l.* for miscellaneous charges. The charge for each corp, exclusive of heads of service, which cannot be apportioned, is as follows, viz.:—Royal Engineers, 123,007*l.*; Royal Sappers and Miners, 81,170*l.*; Regiment of Artillery, 684,803*l.*; Royal Horse Artillery, 58,884*l.*; Riding-house Troop, 2107*l.*; master gunners, 4102*l.*; field-train department, 9167*l.*; and medical department, 12,737*l.*

The charge for clothing amounts to 523,030*l.*, and includes the following items, viz., 215,000*l.* for greatcoats for the army; 80,000*l.* for "fatigue" clothing for militia; 90,000*l.* for the clothing of the "Foreign Legion;" and 120,000*l.* for warm and waterproof clothing, and articles for the troops, and for summer clothing.

The charges for commissariat and barrack supplies amounted to 123,093*l.* and 760,760*l.* respectively.

The charge of 2,792,348*l.* for "stores" in-

cluded 800,000 for the supply and repair of small arms; 40,000*l.* for the small arm factory at Enfield; 235,134*l.* for iron ordnance, shot and shell; 1,448,247*l.* for the purchase of ordnance stores of all kinds at the Tower and Woolwich; 125,000*l.* to complete the huts for 50,000 men to be erected in garrisons at Aldershot; 36,270*l.* for accoutrements and colours for militia; 50,000*l.* for accoutrements and knapsacks for the Foreign Legion; 42,300*l.* for packing, freight, and carriage of arms and stores, &c.; and 11,234*l.* for the building and repair of ordnance vessels, boats, and the supply of sails.

The charge for works and buildings included an item of 30,000*l.* for the defences of Dover and the coast of Kent; 60,000*l.* for a new barrack at the western heights of Dover; 48,170*l.* for improving the fortifications of the Channel Islands; 24,163*l.* for new barracks at Devonport; 39,047*l.* for additional barracks at Cambridge; 61,000*l.* for barracks at Gosport; 10,000*l.* for the defences of the coast of Sussex; 48,597*l.* for the defence of commercial harbours; and 250,000*l.* for new barracks at Aldershot. These sums were only those required for the year. There were numerous items of sums required for the erection of forts and batteries.

The amount required for works and buildings at home is thus divided, viz.:—295,215*l.* for fortifications, 109,999*l.* for civil buildings, and 623,624*l.* for barracks.

The charge for the scientific branch includes 122,000*l.* for surveys in the United Kingdom; 27,975*l.* for the Military Academy at Woolwich; and 6109*l.* for the establishment at Chatham for instructing engineers, &c.

The expense of unforeseen and urgent services unprovided by parliament, but authorised by the Treasury, up to the 31st of December last, amounted to 100,819*l.*

It will now be seen that the grand total amount of the army, navy, ordnance, and transport estimates for the ensuing year was estimated at 37,427,003*l.*, viz.:—13,721,158*l.* for the army, 10,716,388*l.* for the navy, 5,181,465*l.* for the transport service, and 7,808,042*l.* for the ordnance department.

The navy estimates offered many details interesting to the nation. The augmentation of our sea forces proposed was 6000 seamen and 500 marines. This was much too small for the requirements of the service, especially as to marines—a force which, from their capacity to serve by sea or land, may be made especially valuable to a country like England, which maintains a comparatively small standing army. Sir James Graham, however, stated the important fact, in explanation, that while steam-ships were more costly than sailing ships, they were worked by fewer hands, and consequently at less expense. At the close

of the previous war there had been 100 ships of the line in commission, manned by 147,000 seamen. One third the number could now man a fleet of greater power. It appeared that the expenses of the navy were greatly augmented by the high price of provisions and clothing, and that more wages must in future be paid. A new rating was also instituted; a class of "leading seamen" were to be selected on higher pay. Men were to be employed for ten years' service at an increased allowance, instead of the short service system, caused by the plan of "paying off" ships.

Sir James informed the house that the fleet for the Baltic would consist entirely of steamers, and that 100 vessels should be speedily in the waters of the czar.

A debate arose, on presenting the naval estimates, concerning the sparing of Odessa, which evoked from Mr. Layard one of his most able and severe addresses. Sir James Graham's replies were equivocating and deceptive on the subject of Odessa, as events ultimately proved. The house and the country were indignant with the tone which the "first lord" adopted concerning the Baltic expedition. His gratulations as to what was accomplished were immeasurably impudent, when it was recollected that vessels of a character calculated to inflict damage upon the fortifications of the czar were not sent out in 1854, nor were any adequate preparations then making to send out in 1855 the sort of vessels, without which the proud fleet of England could merely sail in sight of the enemy's batteries.

While the estimates were under discussion in the commons, and in society, a very remarkable letter was addressed to the *Times* by Sir Francis Head, which excited some attention:—

*Oxendon, Northampton.*

"In 1834, on my return to England from the Brunns of Nassau, I called on Lord Fitzroy Somerset at the Horse Guards with some notes I had just made in the camp of instruction of the Prussian army, and although as an officer of Engineers I did not belong to his department, he nevertheless, apparently with great interest, listened to the brief account I gave him of the mode in which the Prussian army was studying the art of war in cantonments, *en bivouac*, and under canvas; how their artillery and pontoon-train were learning to transport guns and boats across rough country, ravines, streams, &c.; how the cavalry were learning to swim their horses, with other accomplishments equally useful on active service; how the infantry were instructed in making fascines, gabions, &c., and in rapidly throwing up field-works of various sorts, the defensive advantages of which they were made clearly to understand; how officers

and soldiers of every service, not only, as in real war, were practised in field-of-battle manœuvres, but, under the direction of a well-educated staff and of admirably appointed field departments, were taught the far more important acquirements necessary for moving large masses of cavalry, infantry, and artillery many miles across a country, so as to reach given points at given times with the whole force, and in proper order. After having given the above outline of the system under which the great nations of Europe scientifically and at great cost provide themselves not only with young skilful generals, but with subordinate officers, non-commissioned officers, and privates, all more or less proficient in the higher branches of their profession, as well as in the minutest details necessary for the subsistence and movement of an army in the field, I emphatically asked Lord Fitzroy Somerset (with whom I was but very little acquainted) what objection could possibly exist to the British army, by a similar course of instruction, learning the practical duties of their profession? For some seconds he appeared either unwilling or unable to answer my plain question; at last, calmly shrugging up his left shoulder and the stump of his right arm, he replied, with a look of dutiful submission, 'Joseph Hume.'

"Twenty-one years afterwards—namely, on Saturday last—you inserted in the *Times* the following paragraph:—

"'We are concerned to learn that Mr. Hume is so seriously indisposed as to be unable to leave his seat in Norfolk. The absence of Mr. Hume is the more to be regretted when army reform is under consideration. Few men have given so much attention to the subject, and his practical experience would now be invaluable.'

"Now, Lord Raglan and the Duke of Newcastle may be guilty of the numerous acts of omission which in your columns have been so graphically described. Lord Raglan may be destitute of forethought and contrivance, and in every way incompetent to contend with the extraordinary difficulties that have assailed him; but, as it is undeniable, first, that Mr. Hume's well-intentioned measures of economy, which have been enforced by the House of Commons, have, bit by bit, and limb by limb, gradually dismembered the British army of all its field-departments; and, secondly, that it has been for want of a well-educated staff and of well organised field departments that our army in the Crimea of 54,000 brave men have, by hunger and cold, been starved down to about 12,000 effective bayonets. I submit to the judgment of the country that it is unjust to shield the House of Commons from, and to

place wholly upon the Duke of Newcastle and Lord Raglan, the consequences of those fatal parliamentary measures of retrenchment which Lord Raglan and the Duke of Wellington obediently but most seriously disapproved.

"Confident that the nation will, sooner or later, come to a just conclusion on this lamentable subject,

"I am, sir, your obedient servant,

"F. B. HEAD."

If Lord Raglan spoke and acted as Sir Francis represents, it is only another proof that he was never fit for the position to which he was selected. The country actually did vote vast sums annually, which were seldom put to an economical or efficient use. That circumstance gave to Mr. Hume his power; but the commons were always ready to vote what was required, if only convinced that the object for which the vote was demanded was really of value. Mr. Hume himself, with all his stringent lectures on the necessity of economy, did not resist estimates when the government showed a disposition to employ the money for the necessary requisites of efficient forces. Both Lord Raglan and Sir F. Head ought to have known that had not the country resisted the extravagant outlay which it was the interest of the officials to promote, and which the Horse Guards never restrained, the nation would not have been able to sustain the career of improvement and retrenchment it was able to pursue during the peace, nor to bear with such ease the strains and pressure of war. To be prepared for war, it is necessary to remit taxes, remove the fetters from industry which taxes impose, and husband the national wealth, while peace admits of such economical processes. It was not Joseph Hume, as Lord Raglan ignorantly alleged, or alleged under the influence of a party spirit, who caused the public service to be inefficient; but it was the want of confidence which the nation felt in the government, the heads of the army, the whole tribe of officials, and the whole system of management in military affairs, which in any degree restrained the liberality of the commons. Enough was always voted to have provided an efficient army; and Lord Raglan, and Sir F. Head, were the calumniators of the people, and abettors of abuse and extravagance, in thus reflecting upon the men who struggled to save the country from the consequences of the reckless extravagance into which the chiefs of military departments were always ready to plunge it.

While all these votes were prepared and passed, and all these discussions were sifting the public mind, supplies and reinforcements were directed to the seats of war. Mr. Maclean, of Manchester, built iron vessels of the

order commonly called lighters, of a new and useful type, for the purpose of landing commissariat stores in the Black Sea. Troops were ordered from India to the Crimea, via Egypt. The 10th Hussars, and the 80th regiment of infantry proceeded from Bombay to Suez, marched from Suez to Cairo, and proceeded down the Nile, remaining some weeks at Alexandria. The efforts to send out supplies, especially where those efforts depended on individual enterprise, were very great; but the want of good organisation in the department continually exposed the country to loss. The following appeared in the papers at that time—"On Saturday the *Pioneer*, a handsome new clipper-built screw-steamer, of about 80 tons burthen, and fitted with an engine of 120-horse power, took her departure from the Irongate Wharf near the Tower of London freighted with a cargo of almost inestimable value, consisting of warm clothing, comforts and conveniences of almost every description intended to mitigate the privations and to sustain the courage and spirit of our brave army before Sebastopol, and collected or purchased under the auspices of the committee for managing the Crimean Army Fund, of which the Earl of Ellesmere is at the head. The donations presented to them for this object by a grateful and a generous country, including all ranks of the people, from royalty to the peasant, in addition to their own, have gone on accumulating in the short period which has since elapsed, until they amount to £20,000 exclusive of other acts of munificence, the worth of which is scarcely to be estimated in money. It may be interesting to our readers and still more to the intended recipients in the Crimea, to note some of the principal articles of which the *Pioneer's* cargo is composed. There are, first of all, 400 cases of potted provisions, including venison and other articles and a quantity of ale, generously presented by his grace the Duke of Portland; 37 cases of potted deer from Taymouth, and 800 gallons of whisky, the equally munificent gift of the Marquis of Breadalbane; a hogshead of whisky from each of the distillers of Campbeltown packed in cases of two dozen each, for easy transit from Balaklava to the camp, and a hogshead of port wine from each of the principal distillers in London, similarly packed 400 patent stoves, peculiarly adapted for use in the Crimea, and an immense quantity of candles and lamps—in all about 740 cases—the handsome donation of Price's Patent Candle Company, whose workmen, by the way, have given £150 to the fund, being one-half of a day's pay; great quantities of Gloucestershire cheese, the gift of residents in that county and other donations, amounting to several hundred bales of woollen goods, blankets, jerseys

drawers, shirts, stockings, together with as many muffatees as will furnish two or three pairs to each officer and soldier in the army; and contributions of game preserved at Gunter's and Batty's. Besides these donations, the committee themselves have purchased a large quantity of provisions, comforts, and useful implements and utensils, which also form part of the freight. These include, among other things, regimental boots, shoes, leather, and shoemakers' tools; £150 worth of tobacco and clay pipes, cocoa-nut fibre matting for the floors of tents, blankets, railway-rugs, Australian jackets, waterproof clothing, stationery, oatmeal, pearl-barley, half-salt butter, essence of coffee, cocoa, chocolate, Parmesan cheese, turnery, brushes and combs, gridirons, sauce-pans, frying-pans, conical beer-warmers, milkmen's pails and yokes for carrying water, water-filters, saws, hatchets, hammers, six gross of iron spoons, 200 tea-pots, Welsh wigs, portable fuel, a great number of interesting books, 250,000 rations of patent, compressed vegetable soup (French), an exceedingly agreeable and nutritious article; a large quantity of preserved vegetables, and last, but perhaps not least useful, one street baked-potato machine, more of which would have been sent, but the idea of forwarding them did not occur to the committee until the eve of the vessel's sailing, when time did not permit of their being procured. The ship, on touching at Malta, will also take on board a number of oranges and lemons.—Such are the principal articles, weighing in the aggregate between 600 and 700 tons.

"We have since learned that on going down the river, off Cuckold's Point, the *Pioneer* came in contact with a large barque, with such force that her foremast went by the board, her bowsprit and jib-boom were carried away, and she was obliged to be taken into the East India Dock for repair, which will have the effect of delaying the vessel's departure for several days."

Courtesies between France and England tended to strengthen the alliance by fostering a good spirit. The ambassador of France at London, having communicated to Lord Clarendon the speech of the president of the Legislative Corps to the emperor, on the occasion of the vote of the bill on the loan, as also the reply of his majesty, the following letter from the principal secretary of state of her Britannic majesty was addressed to the ambassador:—

*Foreign Office, Jan. 2.*

MONSIEUR L'AMBAassadeUR.—I have received the letter which your excellency did me the honour to address to me on the 30th of December last, transmitting to me, by the order of his majesty the Emperor of the French, a copy of the *Moniteur*, containing the speech pronounced by the president of the Legislative Corps on the occasion of

the unanimous vote of that assembly on the Loan Bill, as well as the reply of his majesty.

I have placed your excellency's communication before the queen, and her majesty orders me to make known to you how much she appreciates the terms, full of cordiality, in which the speech of the president of the Legislative Corps, and the reply of his imperial majesty express themselves on the concurrence of the English land and sea forces, who share the hardships and dangers of the soldiers and sailors of France.

May I also be allowed to address to your excellency the thanks of the members of the government of her majesty for the communication of which you have been the interpreter? Your excellency knows with what perfect reciprocity the British parliament and nation entertain towards the French army and navy the sentiments of sympathy and gratitude which the speech of the president of the Legislative Corps, and the reply of the emperor, have so happily expressed towards the land and sea forces of the queen.

I have the honour, &c.

CLARENDON.

The French Canadians, who, like other inhabitants of the British colonies, contributed liberally to the Patriotic Fund, desired one-half of their contribution to be appropriated to the aid of the soldiers of France. When the English minister communicated this to the French emperor, it excited in the French court and in France most pleasurable feelings, and was responded to in the following manner. The letter was addressed to the Earl of Clarendon:—

*Palace of the Tuilleries, Feb. 27.*

MY LORD,—I thank you for having communicated to me the address of the legislative council and legislative assembly of Canada to the queen of England. It would be difficult for them to associate themselves in a more patriotic or touching manner with the success of our arms in the East, and with the disasters inseparable from this great struggle. Moved like myself, believe me, by the eloquent testimony of so vivid a sympathy, our country will not see without gratitude that to the memory of its French origin the population of Canada has not wished to separate, in its congratulations and in its offerings, those who are so nobly united by a community of danger. I beg of you to be the interpreter to the legislative council, and to the legislative assembly of Canada of my sentiments, as I believe I am of those of France.

Receive, my lord, the assurance of my high esteem.

NAPOLEON.

During February, immediately after the change of government, much solicitude was manifested concerning the more rapid communications of intelligence from the seat of war. The government was mortified by the circumstance that they were so frequently indebted to the correspondents of the press for their first intelligence of the most important events, and they determined upon establishing a telegraphic communication. The screw steamer *Black Sea*, which had been detained in the South Dock of Sunderland harbour by the heavy sea caused by a strong north-east wind, which blew for a considerable time in the early spring, left the Wear with "the Balaklava and Varna submarine telegraph cable" on board, and Messrs. Newall and Co.'s staff of workpeople, who were employed to submerge it. She had every prospect of a quick run out. She was ordered to call at Malta to take up Mr. Liddell, C.E., and Captain Dun-

can of the Royal Engineers, and then to proceed to the Crimea, or Varna, as might be most convenient, to submerge the cable. The managers made due precaution not to be delayed by government officials, as they took everything out with them—carts, huts, &c., for their use while laying down the land portion of their work, and had four non-commissioned officers of the Sappers and Miners with them aboard the steamer, who were instructed how to work the apparatus when completed. The weight of the 400 miles of cable was 100 tons, and the contract was stated to be £20,000. The system upon which the Black Sea telegraph was intended to be wrought was Morse's, but with an important modification by Mr. Carl Frischen, of Hanover, which was patented by Messrs. Newall and Co. Morse's apparatus prints messages upon long slips of paper as they are received into the office, and thus avoids the slow process of copying by pencil into slips; Mr. Frischen's invention further extends the usefulness of the system, by making it possible for messages to be sent along one wire from both ends at the same instant of time. Thus a clerk telegraphing at Varna can be receiving by the same wire by which he is sending his communication, and at the same instant, a message from Balaklava. The single wire by Mr. Frischen's process conveys several messages from either end at the same moment; and a clerk can be engaged telegraphing at the time that he is receiving a message. Messrs. Newall and Co., the contractors for the Black Sea telegraph, have laid down every submarine telegraph in service in the world. The Mediterranean telegraph, which remains incomplete, was not made by them. The more important lines of submarine cables manufactured by this firm are—the Dover and Calais, the Belgian, the Hague, the Portpatrick, the Holyhead and Queenstown, the Zuyder Zee, the Great and Little Belt, the Cronstadt, the Perth and Dundee, the New Brunswick and Prince Edward Island, the Funen and Zealand, the St. Lawrence, and the Mississippi, which are all now at work. The circumstances under which the Black Sea telegraph was put on board a first-class steam-vessel, in its passage out, are strikingly illustrative of the energy of the English character when under wise and able direction. The contractors only received final instructions from the government to make the 400 miles of cable on the 15th of December. The vessel that received it on board was on the stocks at Yarrow, in February, not half finished; but by the middle of the week previous to sailing she had been launched, her engines put on board, and she had steamed round to Sunderland, and before the Saturday night's bell had rung in the Monkwearmouth

Works, for closing the week, she had her coal and stores on board, her crew shipped and ready for sea, and 400 miles of telegraph cable stowed away in her hold; with a vast number of packages and bales of clothing, thrust into every available corner, for the use of the soldier in the Crimea; and was in time to be swung for the purpose of having her compasses adjusted.

It is to be regretted, for the honour of our country, that a practice which in the early months of the war required official notice, and finally, official interference, was resorted to in 1855 also, by which private advantage was sought at the expense of the public good. Machinery adapted to navigation was fitted out for the enemy in English ports. The authors of this crime alleged that they designed the work for certain neutral powers; there was no doubt, however, that it was intended ultimately for the service of the enemy. The following proclamation at once checked the proceeding, and awed the perpetrators.

BY THE QUEEN.

#### A PROCLAMATION.

VICTORIA R.

Whereas information has been received that certain acts of a highly treasonable nature have been, or are about to be done or attempted by certain British subjects adhering to the queen's enemies, either within her majesty's dominions, or in parts beyond the seas; such as building, or aiding or assisting in building or equipping ships of war, providing stores or tackling, arms and ammunition, for such ships, or manufacturing, or fitting, or aiding or assisting in manufacturing or fitting steam machinery, either for such ships or for other warlike purposes; or by entering into contracts, engagements or agreements for some of the aforesaid purposes, or otherwise adhering to, aiding, assisting, or abetting the queen's enemies in parts beyond seas, in levying or carrying on war against her majesty; now her majesty, by this her royal proclamation, doth warn all such persons engaging in any such treasonable designs or attempts as aforesaid, or otherwise adhering to, assisting, aiding or abetting the queen's enemies, that they will be liable to be apprehended and dealt with as traitors, and will be proceeded against with the utmost rigour of the law.

Given at our court, at Windsor, this eighth day of February, in the year of our Lord one thousand eight hundred and fifty-five, and in the eighteenth year of our reign.

GOD SAVE THE QUEEN.

During the first three months of 1855, invalids and wounded soldiers from the Crimea and Scutari returned in considerable numbers, and, so far as depended upon the generosity of the public, they were most kindly received; but however bitter the confession when made by an English citizen, it is unhappily true that in the government hospitals to which they were consigned, their treatment was thorough and utterly discreditable. Her majesty took deep interest in the wounded soldiers, and visited the hospitals repeatedly. For these occasions matters were got up, so that her majesty might be satisfied with the treatment of her brave troops. The state of things:

Chatham, in this respect, was such as to merit public reprobation in some departments, although in others too much praise to the hospital authorities could hardly be accorded. The following communication places the whole matter in a light more instructive than agreeable:—

“The Queen of England has lately paid a visit of womanly solicitude and maternal sympathy to the brave men whose mutilated limbs, and shattered but still noble frames, show with melancholy clearness how they have fought and suffered for their country and her crown. To most, if not all, of them, from her woman’s heart, and with her winning voice, were spoken—for so they love to tell—words which are now repeated with honest pride in the sick-ward to the listening stranger, and will be told again and again to wife and children for many a year in many a cottage home of England. Nay, on returning to her palace her thoughts were still on the brave she had left, and her order was forthwith dispatched for a nominal return of all the wounded in the Chatham hospitals, with details, so far as possible, of each case. Nor were the medical authorities forgotten, for not only did her majesty personally express, as well she might, her satisfaction at all she saw, but they were further honoured, as indeed they deserved, with a written communication, expressing how much the queen was gratified by the care bestowed upon their patients, and the condition of the hospitals in Fort Pitt and the Brompton barracks.

“It is simply an act of justice to add, that the state in which her majesty found these hospitals was their every-day condition, and that one of the surgeons at Fort Pitt may well congratulate himself on not having lost a man in his numerous charge. But here is an obituary, if not a dark, side to this picture, as well as a bright one. Her majesty did not see all; she did not see what she ought to have seen above all. She did not see what she could not have seen with any other feeling than sorrow, if not indignation; and yet she was within eight minutes’ drive of the buildings where it may be seen! There, sir, are the Gemate, or St. Mary’s Barracks, about a mile from the Brompton, at the south-east extremity of a marshy level on the banks of the Medway, significantly called ‘Tom-all-alones.’ Their atmospheric fitness for invalids may be judged of from the fact that the cold on the upper story, with boarded floors, is so great that the clerks of the pay-office petitioned to be removed from it, and had their request granted. For water, it is supplied to the officers there from cisterns which serve a twofold purpose in the cheapest and shortest, but filthiest, and foullest way possible. For the men there is, indeed,

a pump near, but then ‘it is no good,’ and so with their weak bodies and disabled limbs they had to fetch all they wanted in the late frost and snow from another pump or well some 300 yards off. It is asserted, too, that these barracks have already been condemned by more than one board as altogether unfit for invalids, and men of ordinary humanity would declare that the vaults—rooms they cannot be called—which are now occupied by the Crimean convalescents are not fit habitations even for robust health. Indeed, it is not at all improbable that the cells of the military prison at Fort Clarence are much more comfortable and wholesome than the lodgings of the men whom the queen delights to honour; for the latter are from sixty to seventy feet long by about thirteen broad, banked up at the back with earth above the level of the ceiling, with only one fireplace in each, and this not in the middle, but at the extreme end, and no ventilation at all except by the door and windows, conveniently fronting the north-west, for the exhalations from the mud of the Medway. The floors are paved with Yorkshire stone up the middle, and bricks at the sides, laid on the natural earth, on which stand the iron bedsteads about thirteen inches high, with straw mattresses to match, and not a bit of straw or matting anywhere else. Into these cold clammy caves are put invalids—convalescents perhaps they are called—men, women, and children, from Gibraltar, or even a warmer climate. In them may now be found men pierced and cut all over, who have escaped with life from Alma, Balaklava, and Inkerman, and are fresh from the exhaustions of Scutari, or just recovering from wounds and fever through the care and comfort which they had enjoyed in the hospitals of Fort Pitt and Brompton. In one of them especially may be found, by night and by day, five or six families of married couples with their children. All this her majesty *should* have seen; and a local reply to an observation to this effect was, ‘They would not let her!’ Whether this be true or not, it is impossible to say, although it is a fact that the inmates of these places were removed from them for inspection elsewhere; but whatever ‘the reason why,’ the public may be unanimous in thinking that the nation is disgraced by such a state of things, and that if humanity and gratitude are of no avail to prevent such treatment of her bravest sons in their ‘hour of need,’ still the health and the lives of her soldiers are far too precious and costly to be endangered, if not destroyed, in the miserable caves of a bombproof powder magazine.”

As public attention and indignation were roused these matters were rectified. It was the desire of Lord Palmerston, and, in some measure, of his government, to satisfy the demands of the country, and to do justice for

its own sake. All these things, in the home events which bore upon the war, confirm the sentiments of an able public writer:—"The country must be governed not only *for*, but *by* the public; and that not merely at certain crises, by outbreaks of national feeling, having the character almost of an insurrection, but constantly, regularly, and in detail." Among the efforts for the more satisfactory treatment of the wounded and invalids was the mission of Mr. W. S. Lindsay, M.P., to the East. In February he visited France, and held frequent communications with the French government, the object of which was to obtain its co-operation for the organisation of a regular service of transports for the sick from the Crimea direct to Marseilles, and to establish hospitals along the coast. The French ministers of marine and foreign affairs lent a very favourable ear to his projects. From some cause these excellent ideas did not find the practical application intended.

The return of the Duke of Cambridge was prominent among the home incidents connected with the war which interested the English people. His gallant conduct gave great satisfaction to the country; and his arrival at home, after so many perils and such distinguished services, was met with acclaim. He landed at Dover on the 30th of January, and proceeded to the Ship Hotel, the populace cheering with hearty enthusiasm. He was soon waited upon by the mayor and corporation, for the purpose of presenting him with an address congratulating him on his safe return. The address was frank and pertinent, and received from his royal highness a reply of a very remarkable character, in which some notable opinions were expressed of the generalship under which the army suffered so much, notwithstanding the courage and skill of the generals of division and brigade. His royal highness also expressed himself concerning the common soldiery in a way which the army and the country felt to be as true as it was tersely and strikingly expressed:—"Mr. Mayor and Gentlemen,—I thank you for the gratification you have rendered me in presenting me with the present address. I assure you that any inconvenience or discomfort which I have experienced in the Crimea has been amply repaid by the bravery of the troops. All a general can do is to lead, and my humble services have been given cheerfully; but it has not been a war of generalship—the campaign has been a soldier's, and nothing but a soldier's, campaign. Led on as they have been by their indomitable courage, these troops have performed prodigies of valour; and I can assure you a finer set of fellows do not exist in the world than the men who are fighting the battles of Britain in the Crimea, and who have done everything in their power to

sustain the honour of their country. Mr. Mayor and gentlemen, I again thank you." The same evening his royal highness arrived in London, where there were but few persons aware of his having landed in England, but nevertheless a considerable crowd collected at the terminus, and welcomed him with lively demonstrations of satisfaction. When the knowledge of his safe arrival at Kew Lodge spread through London and its vicinity, public addresses to him and to her Royal Highness the Duchess of Cambridge (his mother), were very loyally and promptly presented. The reception met with by the royal duke from her majesty and the court, was most grateful to his feelings.

The exertions of our neighbours and allies were on a scale commensurate with the great undertaking. Men and arms were sent away during January and February for the Crimea, and preparations during the first three months of the year were put forth for the ensuing naval campaign in the Baltic, which showed the earnestness of the emperor in prosecuting the war.

In France there was but little popular enthusiasm for the contest as compared with England, but there was nevertheless a resolute will to bring down the pride of the foe. In the early part of January the port of the Joliette (Marseilles) was crowded with ships of war and large English steamers awaiting men and munitions; by the end of January the port was nearly empty: all these naval leviathans had departed laden with soldiers' stores, ammunition, &c. Among the troops sailed Generals Pelissier, Rivet, and Desvilliers. The first of these officers was destined to play a brilliant part in the great drama before Sebastopol. A letter written from Marseilles at the time, thus described the *personnel* of that remarkable man:—"General Pelissier landed here from Oran on the preceding Monday. He is of the middle size, with broad shoulders, a rather care-worn countenance, and appears to be about sixty years of age. He is remarkably neat in his dress, and expects his officers to imitate his example. He has passed the greater part of his life in Algeria and has earned there a reputation of extraordinary energy. His friends say that his appointment to a command in the army in the Crimea was communicated to him by the minister of war in the most flattering terms. He was told that the command offered to him was not equal to his merits, but that, by his acceptance of it, he will have imposed an additional debt on his country, of which the government will not be forgetful. He looks like a man who will either bring back a marshal's baton from the Crimea, or find a soldier's grave there. General Rivet is chief of the staff

of the first division, and General Desvilliers is to command a brigade in the ninth division of the army of the East. Some of the letters received here from the French camp before Sebastopol, dated the 12th instant, speak of the condition of the French army in terms almost as discouraging as those published in the London papers with regard to the English."

Some idea may be formed of the activity in the French arsenals in January, by the following paragraph from the *Sentinelle Toulonnaise*:—"The loading of *matériel* of war, a moment suspended, recommenced to-day with considerable activity. On the 1st and 2nd the artillery-waggons brought to the arsenal of the navy upwards of 1100 shells, which were immediately conveyed on board the liner, *Duperré*. The *Labrador*, steam-frigate, is now undergoing repair. The construction of the gun-boats on the new system is progressing rapidly. They will be launched in February, and completely armed and ready to put to sea towards the 5th of April. A portion of them will join the squadron in the Black Sea, and another part of the Baltic, next May, when grand and definite operations by sea and land will recommence with redoubled vigour, should peace not be concluded."

Amongst other troops dispatched during that month, were 1200 men of the Imperial Guard. To these the emperor delivered an address characteristic of the war and of the epoch:—"The French nation, by its sovereign will, has resuscitated many things which they thought for ever dead, and to-day the empire is reconstituted; an intimate alliance exists with our ancient enemies; the flag of France waves with honour on those distant shores where the bold flight of our eagles had not before ventured; the Imperial Guard, the heroic representation of military glory and honour, is now before me, surrounding the emperor as formerly, wearing the same uniform, carrying the same standards, and having specially in their hearts the same sentiments of devotion to their country. Receive then these standards, which will lead you to victory they led your fathers, as they have just led your comrades. Go, and take your share of that still remains of danger to be overcome and glory to be earned; you will soon have received the noble baptism which is your ambition, and you will have lent your assistance to plant our eagles upon the walls of Sebastopol."

During February these exertions continued if not such vast transactions had taken place the previous month. The *Moniteur* of February 4th thus describes the opening of the month in this particular:—"Within the last few days there have been forwarded to the Crimea, for the army of the East, 150 officers'

huts and 950 privates' huts, for 30,000 men, made at Toulon and Marseilles; 450 officers' huts and 1500 privates' huts, for 39,000 men, ordered from England; and 210 hut-stables, for 10,000 horses, ordered in Paris." The activity of the French dockyard arsenals for a month after were of the same character: ships, stores, men, munitions of war, were sent out; and addresses were delivered to the soldiers by persons of eminence, calling on them, in the name of French glory, to terminate the war by victory.

The monetary exertions of the people were on a scale proportional to these military enterprises. A loan of great magnitude was raised, and so rapid were the offers, that the only difficulty was, how to receive the proffered sums. The credit of the French government, and the resources of the French people, were greatly elevated in Europe; and the tidings of the ready and abundant supply of such vast funds by the people of France carried dismay to the court of St. Petersburg, while they were hailed in England with triumph. A Paris correspondent thus describes the issue of this financial victory:—"The subscription to the new loan terminated yesterday at five in the afternoon. The anxiety to subscribe was, if possible, greater during the last few days than previously. At the Treasury, in the Rue de Rivoli, many persons passed the night under the arcades, and before daybreak they were *queues* at all the Mairies, at the Recette Centrale, Rue Neuve des Mathurins, and at the Caisse d'Amortissement. It was deemed necessary to send detachments of infantry to all these places to preserve order. A number of persons, despairing of having their subscriptions accepted at Paris, went by railway to different towns in the provinces. But in all parts of the country the desire to subscribe was just as great as at Paris. In fact, the eagerness of the public to take part in this national operation was far greater than on the preceding occasion in March last. Fifteen hundred millions have already been subscribed, and it is estimated that four times that amount could be provided if it were required. If it be necessary, therefore, to continue the war, the sinews will not be wanting."

Besides this indication of the prosperity of France, there was another also very decisive—the increase of the ordinary revenue, over the expenditure of the year, was several millions of francs. The loan and the budget alike showed that France was able to go to war, and even if she had not counted the cost was able to meet it.

It was remarkable how every incident which took place in England relating to military things was noticed by the French press. General Evans having been received in the British

parliament with the homage due to his bravery and military genius, the *Siccle*, so often accustomed to find fault with England, thus commented upon the scene:—"England, indeed, has a right to be proud of a man who, entitled to such homage, receives it from his fellow-citizens in the full plenitude of their constitutional prerogative. General Evans neither gave way to a sentiment of extravagant pride, nor to expressions of satisfaction confined to himself. Covered with honour himself, he vindicated the right of his division—the second—to a still greater share of the national gratitude, from the fact of its having lost one half of its number in repulsing the Russians in three different engagements. He called to the recollection of the house that at Inkerman this heroic division had supported alone, for several hours, the united attack of 50,000 of the enemy. And if it be permitted to us to mingle our humble voice in so magnificent a scene, we would say that even in the misfortunes it has undergone, the English army has proved itself as worthy as ever to share the crown of glory with the army of France."

The spirit of France to her enemy was as worthy as that which she cherished to her ally. There was an absence of all animosity to Russia in the national spirit, and the prisoners were treated not only with kindness but with hospitality. The following is an extract from a letter on this subject in February:—"There are at present 300 Russian prisoners confined in Fort La Malgue; sixty of them are now employed in constructing huts for the army in the East. Amongst the prisoners is a sergeant-major, decorated with a Russian order, whom they treat with great respect, and blindly obey. The prisoners receive daily a ration of bread and twopence for their food, which they are allowed to purchase in town, under the surveillance of some French soldiers. They appear to be well pleased with their treatment, and not to regret their position. The Poles would willingly enter the French service."

In the St. Petersburg press, and in that of Germany and Belgium under the influence of Russian pay, it was alleged that the Turks treated the Russian prisoners more generously than the French; and that the latter refused to the poor prisoners the consolations of the religion, while the former provided Greek chaplains to attend them. The *Moniteur* replied to these calumnies in the following terms:—"As far as regards their spiritual affairs, the Russian prisoners, since their arrival at Aix, have been allowed—those of the Greek communion—the visits of the Archpriest Wassilleff; and the Catholics, those of the Abbé Jeloweki. These two ministers exercised their mission without any impediment, until it was ascertained that they attended less to religion than to politics. The minister of war, in order to secure the comfort of the Russian prisoners, decided that in addition to their pay they should have a complete ration of provisions, as given to the French soldier, namely, white bread, 100 grammes; fresh meat, 250 grammes; dried vegetables, 60 grammes; and salt, 16 grammes. These arrangements extended to all the Russian prisoners, both in France and at Constantinople. The pay of the officers has been increased nearly one-half more than regulated by former ordinances, and is now 333f. 3s. per month for a general of division, 250f. for a general of brigade, 200f. for superior officers, captains, lieutenants, and sub-lieutenants, 100f.; the wife of an officer, 50f. By order of the emperor, the officers have been allowed to retain their arms, and to choose their place of residence. Tours has been chosen by them, and they are authorised to remove thither at the 2nd instant. They are allowed to take their orderlies with them."

Thus France stood beside her great ally, great also for this contest; great in skill, resources, valour, and magnanimity. Such was the attitude of the Western nations at home in the first months of 1855.

## CHAPTER LXII.

RUSSIA AT THE COMMENCEMENT OF 1855—HER POWERFUL POSITION—INCREASED INFLENCE, AND ACCESSION OF TERRITORY IN ASIA—UNSUBDUED BY THE EVENTS OF 1854—PREPARATIONS TO RESIST THE ALLIES—ARROGANT AND FANATICAL SPIRIT OF THE PEOPLE INCREASED BY THE WAR.

"Sic volo sic jubeo."

MUCH as public alarm had been awakened, and public effort stimulated by that alarm, previous to the war, in the contemplation of Russian aggression, and by her dogged and stubborn resistance to the allies, a very vague notion was all that existed in the general mind in Europe as to the terrible extent of her

military preparations and resources, and of the advantageous military position she had acquired. We call it terrible for no purpose of "strong writing," and for no party project of peace or war, but because that such was the actual fact, as proved by her resistance to a coalition of such magnitude and power, and because

her aggressive facilities were to a great extent unnoticed in England. Russia had been developing herself upon all contiguous territory, and with an energy, vigilance, and intrigue never surpassed—never equalled—in the history of the world. If Russia had encouraged the arts of peace, it was only to subserve the purposes of war; if she had welcomed science, it was only that the military art might flourish; if she had brought out her own natural resources, the main object was to store up appliances of strength for arsenals the most colossal. For this the labour of her serfs, the timber of her forests, the corn, and flax, and hemp, the products of her fields, the arms, and cordage, and clothing of her foundries and her factories, and the gold of the Ural mountains had, since the peace of 1815, been collecting. In this way her wars with the Persians, Circassians, Georgians, Daghestans, Turks, Poles, had been sustained, and still from the resources of so vast an empire these armouries and depositories of strength were replenished with an energy and prodigality that spared nothing. Proud of her enormous military means, she had frequently displayed her strength by magnificent reviews, dazzling even to the other first-rate military governments, and adopted a haughty and unknown to diplomacy even in seasons of triumphant conquest. *Sic volo sic jubeo* had been the spirit of all Russia's dealings with Austria, Prussia, Turkey, Persia, the nations of Central Asia, and the once proud and fearless Scandinavian states. Even now, when resisted by the greatest empires, she was an assailant in some directions, and preparing, by vast arrangements and numbers, to resist on other theatres of action the powerful assaults directed against her. In the Crimea she had held her own with tenacity, and drawn upon her resources of men and material like an empire that did not fear to spend itself profusely in the outpourings of war. Through fogs of mud, over steppes covered with snow, and fingered, frost-struck, and way-worn, legions flowed legions to the field of her defeat around Sebastopol; and as they fell in numbers on its ramparts they were succeeded by others, as if from without men were innumerable, while within munitions were exhaustless. Such was the attitude of Russia at the beginning of 1855. It became evident that if, beneath the bursting shell, the red-hot ball, and the heavy shock, the beleaguered city should be rent, consumed, and broken, and for the piles of her slaughtered defenders and soldiers of England and France should pass to the conquest, it would be at an expense of blood and money which was appalling to contemplate. Without noticing here the progress of this, or the result of former wars as affected Turkey, it may be with cer-

tainty said, that, end how this war might for Russia as to her relation with the allies, Turkey must be permanently weakened, and Russia relatively strengthened, unless the allies should deprive her of a Turkish boundary, and raise between the two empires the ramparts of independent states. The Asiatic scene of the war especially exemplified this: Georgia had already become Russian; Circassia and Daghestan had been all but subjugated; from Persia a territory as large as England had been torn; from the Black Sea, and the Caspian, Russia had pushed on her influence and her armies, until the King of Bokhara in his remote regions became either a trembling ally or a submissive tributary. The Khan of Khiva was forced into reluctant treaties; victories were gained by a handful of Russian troops over the irregular forces of Kohan, and the khan of that country was actually recruiting at Peshawur, with the consent of the East India Company. No person acquainted with the public sentiment in India, and the fears and feelings upon its frontier, had any doubt that a Russian force had penetrated far into Central Asia, and was forming alliances and attaching to it large bodies of irregular troops. Her ascendancy was again felt in the Persian capital, and Cabul heard, as it were, the footsteps of her approach. Numbers in England and India thought it not impossible that the forces of the Company and the czar might measure swords at last.

Perhaps the most gigantic preparations of Russia were those which she directed to the Baltic. She organised in that direction the best equipped army she ever produced, and its morale was as much above the average of her armies as its material. Finland, that so lately had been a Swedish province, was studded with Russian fortresses; and Denmark, which had so often sent its sea-kings as conquerors to these islands, and which has kept a name of independence and renown ever since, became a piece of reversionary property which, by a treaty England recognises, may one day fall to the house of Romanoff. But beyond all these fields of action, Russia, with ever-widening circle, had spread her presence and her power. The repulse of the allied squadron at Petropaulovski, and in the Arctic Sea, filled her with hope and pride. On every frontier, from every shore to which her confines reach, she had stretched out the arm of grasping ambition and vigorous attack. Within the last year she had appropriated the Northern Manchou Province, a territory larger than New England, and watered by the Seghalian, a river scarcely inferior in extent and volume to the Mississippi. By this means she had not only secured a rich country but new resources in men. She can pour from thence hordes of Tartars into China, and when opportunity

allows, carry her conquests to Pekin. She, in this appropriation, obtained a military and naval position on the eastern shores of the Pacific, which will be felt by English commerce over a vast extent where our trade prospers, and our power is respected and feared.

After nine months of war with the Western powers, Russia was not humbled, she had even gained territory. Her influence seemed felt everywhere—her eagle was planted upon the snows of the frigid zones, and it basked in the light of the sunniest lands. It spreads its wings over the sandy plains where the Tartar and the Cossack roam wildly through endless solitudes, and it looked forth, from the mast and the arsenal, over many and far-spreading seas. It became obvious to all men that the time had come when England must step back from her foremost position of power, or Russia must recede before the brave old flag which for a thousand years had floated over the breeze and the battle, the ensign of civilisation, freedom, and victory.

Some recent publications have revealed in minute detail the territorial accessions of Russia, even since the offensive mission of Prince Menschikoff to Constantinople, and represent them as increasing her power to a vast extent. In the sixth number of Dr. Petermann's *Mittheilungen über wichtige neue Erforschungen auf dem Gesamtgebiete der Geographie*, there is an interesting article on West Siberia, its physical nature, industrial products, and geographico-political importance. According to this description, the Siberia of now-a-days, in consequence of the constant advance of the Russians towards the south, contains regions that may be called the Italy of Siberia, and in climatic respects do in fact equal the Italy of Europe. The territory that the Russians have taken possession of during the last ten years, between the Caspian Sea and the empire of China, in the direction of our Indian possessions, is more extensive than Great Britain, France, Turkey, and all Germany, including Prussia and Austria, put together, and gives into their hands the keys of the fluvial territory of the Jaxartes and the Oxus, within the confines of which the ancient realms of Bokhara and Kokan lie. Petermann's description of the extent, population, and political importance of West Siberia is rendered more graphic by two maps of the seven *gubernia*, or governments, into which it is divided. The first exhibits the density of the population by a systematic gradation of the colouring of the maps; the second divides West Siberia, also by its varied colouring, into four separate regions, which he distinguishes as the regions of agriculture, of mining, of fishing, or the chase, and of cattle-breeding, or the region of steppes: to these is added a fifth region—that of the salt lakes.

The czar's determination to prosecute the war with vigour animated all Russia. At the beginning of the year 1855, the people of Western Europe were made acquainted with a manifesto published by the autocrat, in an extraordinary supplement of the *Journal of St. Petersburg* shortly before, and quoted in p. 69 of our first volume. It is characterised by the usual assumption of piety, and the usual pride and arrogance of such documents. Its real object was to preserve the courage of the people by pretending to thank God for successes not vouchsafed, and by exaggerating even in the expressions of gratitude to the Almighty any advantages really gained.

When the combats of January had caused heavy losses to the defenders of Sebastopol, the ire of the czar was intensely roused, and his determination to drive the allies into the sea was expressed with passionate energy to those most immediately in his confidence. Accordingly, all Russia was called to arms, and the court expected that this would fill the allies with dismay. At the close of January the emperor put forth a new manifesto, demanding the armed services of all Russians:—

Our loyal and beloved subjects well know how ardently we desired and desire to obtain, without force of arms and without farther effusion of blood, the end we have constantly proposed: namely, to defend the rights of our co-religionists, indeed those of Christians throughout the East. That wish is known to all who have impartially watched the march of events, and the invariable tendency of our acts. We remain, as ever, stranger to every other motive than this, and to any other view in the matter of faith and conscience. Faithful to these principles, we announced our assent to the opening of negotiations with the Western powers, who had formed with the Ottoman government a hostile alliance against us. We believe that our moderation and justice entitle us to expect from them the same sincerity and disinterested intentions. We have not yet lost hope of restoration of that peace which is so desirable and valuable to the whole Christian world. However, in the face of the forces they themselves have gathered, other preparations are making for the struggle against us, which, despite pending negotiations, are not suspended, daily acquire more vast proportions. We are constrained to think that the increase of means which God has given us to defend our native country, will oppose impassable barrier to hostile attempts against Russia, projects threatening her security and greatness. We fulfil the first of our duties by invoking the support of the Almighty, with entire faith in his grace, and full confidence in the love of our subjects, animated by the same feelings of devotion to our creed, to our orthodox church and to our dear country. We, therefore, address this new appeal to all classes of our subjects, ordaining that the formation of the general arming of the population of the empire be proceeded with.

More than once have we experienced painful trials. Yet, menaced Russia always found her salvation in her humble reliance on Heaven, in the ties uniting her sovereign to his beloved subjects; and, as formerly, it will be now. God, who reads hearts, blesses your intention, and will grant you his aid.

NICHOLAS

Given at St. Petersburg, Jan. 29 (Feb. 9), 1855.

The following ukase was addressed to the directing senate, requiring it to proceed with the general arming ordered in the manifesto:

WHEREAS, by our proclamation of this day, we have called out all ranks of the empire for the defence of the orthodox faith, the throne, and the country, we command you firstly, to carry out and organise the general arming of the country according to the accompanying regulation confirmed by us; and secondly, to take steps for completing the equipment and arming of the combatants in the governments, that will be designated by us to that end in special ukases. The directing senate will not fail to make the necessary arrangements for carrying the above into execution.

St. Petersburg, Jan. 29, 1855.

NICHOLAS.

Shortly after the issue of these documents, the *Invalide Russe* published the regulation, prepared by the directing senate, and ratified by the czar, for the organisation of "the Imperial Mobile Militia," as the new corps decreed in the recent manifesto was called. The ordinance was divided into nine sections and ninety-two paragraphs; and in the original filled seven folio columns. The first clause declared that the corps was raised for the immediate necessities of the defence of the empire, of the throne, and of the faith. It enacted that military exemptions allowed formerly should not apply in the present case; but that all men liable to the capitation tax, or its equivalent, should be liable to be called upon to serve. Yet there were these especial exemptions appended: merchants, Jews, and foreign colonists, who had been invited to settle on Russian territory, and had consequently received grants of land. The new corps were ordered to be divided into battalions of *druschines*, each consisting of four companies. Each *druschine* was to be commanded by a staff-officer, and to comprise four captains, a staff-captain, a proportionate number of subalterns, eighteen musicians, and 100 rank and file.

In order to hasten the formation of these battalions, a governing militia committee was formed in every government, and within fourteen days after the receipt of the manifesto the battalions were to assemble and appoint the rendezvous of the several battalions, and to make arrangements for their supply and equipment. The expenses of raising, arming, and equipping the new corps, were to be defrayed by voluntary subscriptions, and all persons were called upon to contribute, in terms that admitted of no doubt that the subscription was to be made *volens volens*. The prescribed age of the soldiers was to be within twenty and forty-five, but on no account to be under the former age. This was a wise provision, as it was found by the English in the Crimea, that all youths under twenty-one or twenty-two years of age died off very fast from the effects of the climate, and the sudden change in their manner of living. Inhabitants of the same village were as much as possible to be kept together in the formation of companies. The men were requested to procure each a share of arms at their own cost. The employ-

ment of this militia was to be primarily to defend the soil of Russia; but, at the pleasure of the czar, they were to be launched across the boundaries of the empire to attack its enemies. At the termination of the war all persons were to be allowed to go back to their homes. Should any fall in battle, their families would obtain a certificate absolving them from the obligation to furnish a recruit at the next levy. Every conceivable effort was made that the levies, new and old, should be supplied with the materials of war. Nor were these efforts unsuccessful: uniforms, accoutrements, and arms, were manufactured on a vast scale, and distributed throughout the empire.

The correspondent of the *Berlin National* wrote as follows from St. Petersburg, under date of the 19th of January:—"The military administration has ordered enormous quantities of warlike stores. The arsenals, workshops, and depots, have received fresh orders, and the commissariat has been directed to proceed with rigour against all contractors and purveyors who are not punctual. The severity with which some authorities have proceeded against such persons has rather damped their spirit of enterprise, and thus raised prices for want of competition. The dockyard administration has made a demand for 50,000 pud of hemp for rigging, and 1000 tons of suet. The arsenal of Briansk has furnished 22,000 pud of artillery stores; and 45,000 pud of cannon have been sent from Dubow to Rostoff, on the Don, as the frost facilitates the transport. Tula has furnished about 300,000 pud of arms, which have been conveyed to different depots. Enormous quantities of hospital stores have been sent to Brjesc-Liteffski, on the Bug, to Kiyeff, Wilna, Minsk, Grodno, &c. In short, the most restless military activity prevails throughout the whole empire."

A letter from St. Petersburg of the 3rd of February, published in the *Constitutionnel*, made the following statements:—"The preparations for defence which are being made on all the strategical points of our frontiers show that, up to the present time, the Russian cabinet does not flatter itself with the hope of obtaining a pacific solution at Vienna. I can assure you that at Gatschina the court is convinced that the attitude of Austria towards Russia is less the result of necessity than the consequence of the warlike sentiments which animate the young emperor, Francis Joseph. The government continues to do all it can to render the war popular. The czar himself does not allow any opportunity to escape of encouraging voluntary contributions, and of making himself agreeable to the donors. Only ten days ago, he addressed the following rescript of thanks to the community of Riga:—

## TO OUR WELL-BELOVED COMMUNITY OF RIGA.

The governor-general, Prince Suwaroff, has announced to us that the community of Riga offered him, on the 18th of December last, a sum of 50,000 roubles (the rouble is upwards of 4*fr.*) towards the expenses of the war. In accepting this gift as a proof of the devotedness of the community of Riga, it is extremely agreeable to us to express to it on this occasion our warm and sincere gratitude.

NICHOLAS.

A Prussian subject, who has long been established here as a jeweller, has, in his love for Russia, placed at the disposal of the empress jewels to the value of 2768 roubles. The empress gave that sum to her sons, charging them to distribute it to the garrison of Sebastopol. Addresses expressive of devotedness have been received from Smolonsko and Kharkoff. The minister of the interior has just issued two decrees, which are not without importance; the first is for the improvement of the navigation of the Volga, from Astracan to the Caspian Sea, and the second forms a new joint-stock company, under the name of the Golden Fleece, for working the gold mines of Siberia."

Early in January three Belgian manufacturers undertook to found a rifle manufactory at Warsaw. The Belgians throughout the war showed a marked sympathy with Russia against the allies, arising from the favour in which despotic principles is held by a large and bigoted section of the Belgian people. The activity of the emperor during this month was extraordinary. Attended by Prince Paskiewitch, he made a tour of inspection, which was intended to include all the head-quarters of the active army corps, and which did comprise many. General von Dehn was deputed to inspect all the fortifications of the kingdom of Poland, and to make an especial report. The emperor and his suite, as well as the engineer-general, Von Dehn, were checked in their progress by the heavy snowstorms which, during January and part of February, fell all over Russia, and which was felt in the south of that empire with unusual severity.

The Finns and Volhynians received very especial attentions from the imperial court, in order to animate their zeal against the allied fleets, expected in the spring to appear once more in the Baltic. The emperor formed regiments of reserve for his Life Guards from the Volhynians and Finns, and at their head attended divine worship, having personally inspected them in the minutest manner, thanked officers and men for their attention and discipline, and bestowed a silver rouble upon every private soldier.

The emperor not only showed the greatest activity and industry, he also preserved the most imperturbed coolness and courage on all public occasions, although he was frequently irritable to the last degree in private. When called upon to transact public business, he

especially manifested self-possession. On a despatch arriving from Vienna, announcing that an Austrian general had been sent to Paris on a military mission, he was engaged with his private secretary and Prince Paskiewitch. The emperor ordered the aide-de-camp who brought the despatch to read it—a very unusual proceeding, and in this case probably intended to show his coolness, and set an example to his officers. As the aide-de-camp read, the prince manifested considerable uneasiness, when the emperor turned to him (as the reading of the despatch closed), and asked, "Is that all?—there is nothing changed in the situation." The imperial impassibility produced great surprise in those present. All this, however self-possessed and resolute it appeared, must have been assumed, for the worm of remorse and disappointment already preyed upon his heart. The most absurd falsehoods were resorted to by the pro-Russian press in Europe to magnify the new levies. One of these organs of despotism made known that the crown serfs had offered the emperor a contingent of 60,000 men, to be employed as sharp-shooters, "among them all the ermine hunters, estimated at 20,000, who pass their whole lives on the banks of the Oura, or the Oby, in the chase of the fox and the beaver as well as the ermine; they must be skilful marksmen, as this animal (the ermine) can only be aimed at from a considerable distance, and must be hit on the nose to avoid injuring the skin. The whole of these are to be immediately organised, and sent to the Crimea, armed with the Minié rifle." It is needless to say the ermine hunters never made their appearance—the contingent of 60,000 sharp-shooters only existing in the form of the falsehood in which the story was couched. These bravadoes were disregarded by Europe, and when the emperor, himself their chief author and abettor, perceived that they were laughed at, he was filled with mortification and chagrin.

All the gigantic efforts put forth by Russia were necessary to make up for the drain of men. A report in the *Journal of St. Petersburg*, published in January, 1855, stated that from the 5th of October to the 17th of November, the naval loss sustained in Sebastopol was—killed 4 superior officers, 14 subalterns, 789 sub-officers and sailors; wounded, 24 superior officers, 104 subalterns, and 2934 sub-officers and sailors. At the same period the *Cologne Gazette* published a letter written from Warsaw alleging that "the grand active army engaged upon the Danube and in Bessarabia in 1854 lost in killed, 29,204 men; wounded, 55,300; deserters, 6420; disease, 16,156; making a total of 111,132 men." The letter gave no information whether these numbers included officers, which it is most probable they did not. If the

computation be correct, it will be seen that the Russian army of Prince Paskiewitch lost heavily by desertion: only a small number of these joined the allied armies, they must, therefore, have mingled with the people of Bulgaria, Wallachia, and Moldavia, and have been sheltered and concealed by them. Sickness also must have pressed heavily upon the ranks of the army of the material guarantee, while within the confines of the territory usurped. This account did not include the numbers lost in the repeated razzias across the borders after the Austrian occupation.

The Russians kept to the end of the war a very firm front on the Danubian frontier of Bessarabia. Thus, on the 13th of January, this state of things was thus described:—"The *Danube* learns from Akerman that Prince Gortschakoff was at this place on the 13th, in the course of a tour of inspection. The Russians retain possession of the *tête de pont* at the Kilia arms, and have two batteries there. The Russian steamers cruise uninterruptedly on the river near Isatchka and Tultscha."

On the 23rd of the same month the *Journal of St. Petersburg* gave an account of a reconnaissance by Russian troops across the Danube:—"The troops were commanded by General Ouschakoff, and consisted of four battalions, two squadrons, six sotnias of Don Cossacks, four pieces of cannon, and a Cossack battery of horse artillery. The Turkish detachment was driven out of Babadagh, with a loss of 263 killed, and 83 prisoners. A flag and an ammunition train were also captured. 'On our side,' continues the report, 'one Cossack was wounded!'" Of course no person believed the perpetually recurring story of the "one Cossack" killed or wounded. The Russian loss on these predatory excursions was frequently severe. It is likely that the accounts given above of the numbers sacrificed in the Danubian warfare are much below the truth.

The January number of the *Russian Marine Magazine* contained a report drawn up by the *état-major* of the Russian Baltic fleet, which reveals a sacrifice of human life, and an occurrence of human suffering, which could not have been believed in England on any but a Russian authority:—"The fitting out of the first and second division of the fleet commenced in March, and lasted till the end of April, at which time there was still one foot deep of ice in every ship's hold; the weather had been extremely wretched the whole time of getting ready for sea, accompanied by violent E. and N.W. winds. On the 5th of May, the *Emperor Peter I.* got under weigh, and was followed within the next three days by all the rest of the vessels, but their evolutions were confined in all to two reconnaissances. Nevertheless, in spite of careful treatment, such as

fresh meat and vegetables, new bread and warm tea three times a week, the severities of the weather and the exhalations from the frozen bilge-water thawing in the hold, produced inflamed eyes, cholera, typhus, diarrhœa, catarrhal and gastric fevers. Scrofula showed itself in very few vessels, but inflammation of the eyes forma twenty per cent. of the whole number of cases, and they were almost exclusively on board ships that remained in the harbour: on board the sailing vessels the cases of illness, in proportion to the number of the crew, were as follows, viz.:—on board the *Smolensk*, 206 per cent.; *Krasnoi*, 108 per cent.; *Empress Alexandra*, 104 per cent.; *Valagos*, 103 per cent.; *Beresina* and *Netron Mena*, 102 per cent.; with the rest the proportion gradually decreased to 40 per cent., which was the rate of sickness on board a vessel that was only eight weeks altogether at sea. On board the steamers the proportion was, on board the *Craton*, 202 per cent.; *Grosaschtschi*, 170 per cent.; *Owaschni*, 140 per cent.; *Rurick*, 149 per cent.; *Palkan*, 98 per cent.; and *Kamtschatka*, 60 per cent. The cases of inflammation of the eyes amounted, on board the *Smolensk* alone, to 104 per cent. of the crew; the whole number of cases of sickness amounted to 60 per cent. of the whole force. And yet the one squadron was only at sea from the 9th to the 15th of July; the other from the 21st to the 27th of August (o.s.) The author of the report recommends that in future the vessels shall not be fitted out so early, nor manned until they are quite free from ice; it is suggested also that the new hands should not be put on board until they have been a little acclimatized. The newly organised marine force, which did not, properly speaking, come into active service, lost 7 per cent. by death during the summer."

Throughout January, February, and part of March, the reliable intelligence from nearly every province of the Russian empire exhibited an amount of hardship and suffering shocking to humanity. The Russian army in the field in the Crimea shivered under threadbare tents, and were often tentless, and sorely stricken with disease. The recruiting, or rather conscription, was felt all over the empire; but more particularly in Poland, from which more than 60,000 men had been torn away from their families to serve in the Crimea, in Asia, or on the shores of the Baltic. The streets of the towns and villages of Poland were filled with lamentation and woe—mothers weeping, and beyond all comfort, ran shrieking through the streets, until dragged to prison or struck down by the Russian soldiery; fathers selling everything they possessed to buy off their sons were robbed of their "smart money," and of their children as well. In the neigh-

bourhood of Kielcé, a man of respectable position was deprived by the conscription of his eldest son, who was engaged that day to be married; a younger brother nobly volunteered to serve in his stead. The father brought the lad to the chief authority, and offered him as the substitute of the betrothed one: being a fine healthy young man, he was the fitter of the two for the severities of a soldier's life, so the authorities thought—they *accepted him and retained the other*, robbing the altar and the parental home at one stroke. The father died in three days, and was speedily followed by the bereaved mother. The accounts furnish no intelligence of her agonies, or her fate, who was widowed on the altar's steps. No feeling, no compassion was shown by the ruthless authorities who wielded the conscription in Poland—they delighted to be barbarous. The conscripts were treated with the uttermost contumely and severity at Kielcé; while the glass was below zero, these poor fellows were placed quite naked in rows in the streets to be examined by the medical men.

The requisitions for supplies of all kinds were grinding and oppressive to the last degree, particularly in Poland, Podolia, and the Ukraine. Podolia suffered exactions to the amount of four millions of silver roubles, while several thousands of vehicles were provided upon requisition, besides horses and drivers for the conveyance of troops, luggage, and stores: many of these never returned—the carts were broken up for fire-wood, the horses seized for the artillery, the men drawn into the conscription. In every frontier-town, several hundreds of vehicles were constantly kept in readiness to carry, at a moment's notice into the interior, the public treasures, garrison, stores, *employés*, &c. One of the greatest hardships was connected with the military colleges; these were drained of their students, who were sent to join various corps of the army garrisoning the interior, and their places were supplied to a great extent by Jewish children, torn from their parents at the tender age of ten and even of eight years. Sometimes a large ransom, or a considerable bribe to the officials, enabled the poor Jew to gain exemption for his children; but generally this resort was useless, as another swoop was made by the hand of power to bear their offspring from them. No honour, honesty, sympathy, or compassion, guided the conduct of the Russian authorities, or even mollified the stern discipline of their official acts.

The spirit manifested by the Russian government and nation, in reference to the war, was unworthy of any civilised people. Early in January it was resolved, by a decree at Warsaw, that every Frenchman and Englishman who had taken service with Russia during the peace, within the kingdom of Poland, should

be forthwith dismissed from his employment, and conducted with contumely to the Austrian and French frontiers. All natives of France or England engaged in any forge, factory, workshop, or domestic service, were to be brought under this proscription. The grooms employed by Russians of rank were generally English; these were all to be dismissed, to the great inconvenience of their owners. It was intended to extend the decree to all Russia; circumstances arose, however, to modify this proscription; but there was no modification of the angry spirit of czar, soldier, priest, or peasant—all united in grim hatred against whatever thwarted in the least the designs of Russian bigotry and ambition.

The government stimulated the military spirit of the nation by liberal rewards to all by whom any martial service was rendered. Rear-admiral Savoyko received the order of St. George, third class, for the defence of Petropaulovski. Rewards in the Crimean army, and to the navy quartered there, were lavish, and scarcely less so upon the shores of the Baltic. Even the army of reserve, which had no opportunity of winning laurels, partook of the promotions and honours so profusely scattered. General Sauskoi, in command of the cavalry of reserve formed at the beginning of the year, and Generals Paweiskoff, Golowine, Germer, and Krause, commanding divisions or brigades, were promoted as an encouragement to the reserve troops to desire removal to the active armies on the frontiers. Hope was also held out to the friends of soldiers in the active armies that communication with them by letter would be made more cheap and frequent; a service of *malles-postes* from St. Petersburg to Simpheropol was organised in January, and commenced running as soon as the weather allowed.

The animosity cherished to England throughout the Russian empire would pass all belief, if not so well authenticated. Some pretence was made of a better feeling to France, although in reality the hostile *animus* was little less to that country. England was, however, believed by the government to be the more powerful antagonist, and hence the attempts to excite a fanatical enthusiasm against her were the more constant. The efforts of the press in this way are very amusing to an English reader, revealing the extreme ignorance and credulity of even the newspaper-reading population of Russia. The following is a specimen from a paper professing to be an authority on commercial matters—in fact, a journal of commerce. It affords some indication from its remarks, where France is concerned, of being wiser than it cared to appear to its readers:—“The crop of corn has been insufficient throughout all the states of Europe, and 8,000,000 of

quarters of wheat not being forthcoming in consequence of its export being prohibited—a prohibition which appears to threaten the Prussian government itself—no doubt can be entertained that England must sue for peace in order to obtain bread. But if Europe is to feel difficulties and sufferings, we in our turn shall have to support the privation of all articles of luxuries, particularly French wines, which we have been in the habit of purchasing with the proceeds of our corn. It is true that a Russian writer, M. Boulgarine, has endeavoured to prove that the wines of the Crimea are at least as valuable as those of France, Spain, Hungary, and the Rhine. That, however, will not prevent foreign wines from holding the first rank on the tables of St. Petersburg and Moscow. Even at Tobolsk, the wines of the Crimea will not replace champagne or claret. Notwithstanding the efforts of persons in office to revive our hatred against France, it was seen that, during the *fêtes* of Christmas, the productions of that country were so sought after that the dealers completely exhausted all their various stocks of French articles. How can it be reasonably expected that M. Boulgarine should ever succeed in causing the wines of the Crimea to replace those of France?"

A correspondent of a Paris paper, writing from Russia, remarked:—"Among the other extravagancies of the Russian press, I will mention the publication of a kind of dialogue between the shade of Napoleon I. and France. The illustrious shade asks France whether she madly flatters herself that she can dictate conditions to Russia, now so differently situated as regards her power from what she was in 1812? As to England, she is represented as being irresistibly led away on the tracks of the followers of Kossuth and Mazzini, and as having entered into an alliance with France with a view to commercial speculations."

The general tone of the Russian people towards England during the war has been admirably sketched in a work entitled the *Englishwoman in Russia*. This lady seems to have been introduced to the *élite* of St. Petersburg society, and she represents the English—even ladies—as the objects of rage and hatred on the part of persons who held with them close intimacies, and of long standing:—"I was well acquainted," says the *Englishwoman*, with a lady who resided in one of the institutes in St. Petersburg, and I was in the habit of frequently calling to see her. Before the declaration of war I was always met with smiles, and, according to the established custom, the young persons used to bow as they passed us; but as soon as they knew the war had commenced, we heard them continually make the remark one to another, '*Ne la saluez pas, ma chère, c'est une Anglaise.*'"

The following were some of the common expressions used by persons in the best society:—"There will be plenty of English blood shed this year, thank God!" "We must have some new hospitals built for the wounded when the British fleet is destroyed!" "Count Besborodku has made a present of cannon to the emperor, to shoot those swine when they approach us!" "There won't be many of the British fleet that will ever return home again!"

The real design of Russia in her conduct to Turkey was often candidly admitted in the hearing of the *Englishwoman*, and even boastingly avowed. They would say:—" '*Quant à Constantinople nous l'avons, soyez tranquille.*' " 'Turkey is ours.' " 'There is no such country as Turkey now, and no longer a sultan; for, henceforward, the game will be played by France and England.' " . . . "They will never," says the authoress, "forgive us for the check they have received."

The spirit of idle gasconade in which the nobility and officers of the army indulged she thus depicts. While at Odessa she met a select company on one occasion,—"During the whole dinner (at which were some generals, other officers, and ladies of rank), nothing was talked of but the wonderful triumph of the Russian arms. I am convinced that there was not one single person there who believed it; but who could venture to doubt the imperial words? Evil would have befallen him who had dared to do so."

The following curious exemplification of the mixed feeling to England which the populace entertained is given by this lady:—"The Russians expressed great friendship for Lord Aberdeen, and intense hatred of Lord Palmerston, whom they blamed as the prime mover of public affairs, and as the author indirectly of all their misfortunes. I may mention, *en passant*, that the names of Napier and Palmerston inspired the lower classes with so great a terror, that the women used to frighten the children by saying that the English admiral was coming! And among the common men, after exhausting all the opprobrious terms they could think of (and the Russian language is singularly rich in that respect), one would turn to the other and say, 'You are an English dog!' Then followed a few more civilities, which they would finish by calling each other 'Palmerston!' without having the remotest idea of what the word meant; but, as the climax of hatred and revenge, they would bawl out 'Napier!' as if he were fifty times worse than Satan himself. From being favourites in St. Petersburg, the English are now especial objects of hatred, and from our stupid bombardment of Odessa, also of contempt. Notwithstanding their antipathy to us, it appears that

the lower classes of Russia have an idea that if we take St. Petersburg they will be no longer slaves, and will have no more poll-tax to pay. This is an opinion that ought to be encouraged, as it might be turned to good account."

The main hope of the Russian government, for sustaining the enthusiasm of the people, was in religious fanaticism. Never was the religious feeling of a people made so basely the subject of political speculation. The following letter, dated the 6th of January, 1855, will throw some light upon this conduct:—"The festivities have taken their customary physiognomy, and religious ceremonies, visits, *gulfanie*, and dinner-parties, are the order of the day and night. A Christmas tree of unusual magnificence has been dispatched to Prince Menschikoff. The town of Sebastopol has also received a gift. Scarfs, embroidered with laurels, are at present the fashion, and even children's playthings show the prevailing warlike mania. In these games, all representing military scenes, the English and French, as you may imagine, get much the worst of it—a Cossack is, for instance, represented in full charge, with half-a-dozen red-coats and Frenchmen transfixed by his lance! Can what is reported to-day be true—that the court is inclined towards peace? Or is it a brilliant but hollow glass bubble, to be hung on the Christmas tree of the people? If we merely obtain time by peace conferences, whereby Austria is of course prevented from action, and must for months sacrifice her pecuniary resources to the support of the army, the gain for us will be immense. Both here and in Gatchina church parades have taken place. In the following year a universal war tax is to be collected, but in what manner has not been decided in the ministry of war."

The members of the royal family seldom visited any government or garrison without making a present of religious relics or pictures: the following brief announcement in a St. Petersburg paper illustrates this:—"The Commandant of Woronege, Rubzoff, made a present to the Grand-dukes Nicholas and Michael of two images of saints for Fort Alexander, at Sebastopol."

The insurrections in Greece, the discontents in Servia, and the marauding expeditions of Montenegro, were all kept up in a similar manner: bells, pictures, and baubles, associated with religion, were profusely bestowed; and the emperor of all the Russias was made to appear as a tender and watchful father over the interests of the only orthodox church (the Greek), destined by heaven to fill the earth, and erect Constantinople as the capital of its holy and glorious empire. This is the secret of the Russian soldier's dogged indifference to life or death in the service of the czar whom

he believes to be the minister of heaven, and the avenger of the one, true, holy, orthodox and catholic church—the Greek. The condition and spirit of the Russian soldiery, in this respect, and of the masses of the Russian people from among whom they are taken, may be judged of by an incident among the prisoners captured at Bomarsund, and held in custody in England. The Rev. Mr. Stallybrass, a native of Siberia, of English parents, visited the prisoners at Plymouth. He gave this account of his visit:—"I proceeded to some of the wards, and held conversation with many of the men, all of whom seemed pleased to see me. I felt the advantage of having spent twenty-four years in Russia, and endeavoured to speak to their hearts, and hope that in some good measure I succeeded. I found that all who can read have copies of the New Testament, either in Russ, or in some other language which they know, and that they received these on their first arrival at Sheerness. This afforded me an opportunity for speaking of the privilege of possessing the New Testament, and their duty and interest in making themselves acquainted with its contents, and obtaining an interest in the blessings it reveals. One man wished to raise a discussion as to the cause of the war, asserting that whereas the English rely on the French, the French on the English, and the Turks on both, their czar relies on God alone, and is fighting only in the cause of religion—a delusion into which these poor fellows have been cheated. I declined to discuss the point with them, but reminded them of the fact that, by the providence of God, they are here, and have important time and opportunities afforded them, which I besought them diligently and faithfully to improve. I repeated my visit to them in the afternoon, with similar results."

This little narrative strikingly portrays the temper of the Russian army and people. These soldiers, although possessing the New Testament, and men of a much superior class to the average soldiery of Russia, yet clung to the idea of the divine mission of their czar; lost sight of their own sufferings and wrongs in loyalty to that mission; and regarded the oceans of blood shed, and the countless horrors perpetrated, as only accidents to the great process of making the world orthodox by the sword of St. Petersburg, and as too trivial to be taken into account when the glorious conquest of the world by the Greek church—through the arms of its chief and representative, the czar—was the object to be attained. The will of the autocrat was the law and the religion of the people, reminding one of the indignant and awful language of the prophet of old—"The prophets prophesy falsely, and the priests bear rule by their means, and my people will have it so, saith the Lord of Hosts."

CHAPTER LXIII.

TURKEY DURING THE EARLY MONTHS OF 1855.—SUFFERINGS FROM SCARCITY OF FOOD, AND FROM SICKNESS IN THE CAPITAL.—BAD CONDUCT OF THE SAILORS ASHORE.—ASSASSINATIONS OF ENGLISH AND FRENCHMEN BY GREEKS.—THE TURKISH CONTINGENT.—SKIRMISHES ON THE DANUBE.—EARTHQUAKE AT BROUSSA.—RELUCTANCE OF THE TURKISH GOVERNMENT TO NEGOTIATE.

"Alack! what mischief might be set abroad  
In shadow of such greatness."—SHAKESPEARE. *Henry IV.*

THE winter of 1854-5 pressed heavily on Turkey, European and Asiatic; the waste of war was universally felt. Corn, which was six piastres a measure on the northern shores of the Danube, was sixty at Constantinople. There was scarcity of food in the capital of the great empire of the sultan, and hunger began to pinch both Osmanli and Christians. The Russians were unaccountably permitted to hold the frontier fortresses, and the Bessarabian bank of the Danube; and they would not permit the exportation of corn, which became a drug in the provinces, while the inhabitants of the sultan's capital were in peril of starvation. The winter, too, was a severe one—much like that in the Crimea; alternate snow and mud tormented the lazy dwellers in Stamboul, and offered no small obstacles to the transaction of business by the officers and agents of the allies. One who experienced the winter of 1854-5 on the Bosphorus, thus wrote in January:—"The dreary winter at Constantinople has at length set in, and the streets are a mass of snow and mud. From the crowds of strangers who have lately been collected from all parts of the world within the limits of the European quarter, there is an air of animation in the narrow and dirty streets, but an animation without gaiety, and more resembling the bustle of some dingy and populous neighbourhood of London. The great street of Pera is a dirty lane, formed by high irregular houses, and destitute of all pavement for foot passengers, who must clamber and slip over the pointed blocks of stone, among horses and asses, porters carrying heavy weights by means of long poles, and crowds of the rabble of the Levant smelling of garlic, and meditating theft. Without large boots or goloshes no one ventures to quit his home, and as rain may be expected at intervals of about two hours, each traveller is armed with an umbrella. When the whole of these are extended at the approach of a shower, the collisions are incessant, and the pathway almost choked. The most conspicuous figures are the French officers, who are met at every turn. The British are almost entirely confined to the Asiatic shore of the Bosphorus."

It will surprise none, that with a variable and severe winter, scarcity of food, and an

over-crowded state of the population, Constantinople was unhealthy. A new and very fatal disease made its appearance, which it was generally believed was imported from the Crimea. The body of the patient after death, and even before death, became livid; this led many to call it cholera, but it was proved to be a different disease, although at Balaklava many who died of it were said to have been struck down by cholera. The suddenness of decease was another resemblance to that disease, which led to the mistake. Many of the Turkish and Greek population of the capital were carried away during the winter by this mysterious complaint.

The state of society at Constantinople was not the best during this period. The French and English naval and military officers who happened to be there on their way to the Crimea, or with the reserves, or in charge of stores and *matériel* of war, no doubt found opportunities of agreeable intercourse; but the general condition of the place, physically, morally, and socially, was utterly bad. The English and French sailors contributed, by their intemperance, to disturb the tranquillity of the city; and the lower classes of the Greeks—a vile herd of robbers and assassins, yet desperately bigoted in religion—lost no chance that was afforded them of assassinating and plundering the rude mariners, or indeed whoever exposed himself to the chance of insult, personal injury, or depredation.

The special correspondent of the *Daily News*, a gentleman of candour and ability, thus describes the state of things as he witnessed it:—"It is to be hoped that the authorities here will take some means for the protection of our men-of-warships while on shore, otherwise I fear something very fearful will be the result. There are now a great many vessels—in fact, I believe all the sailing vessels from the fleet—lying here, or within a few miles. Occasionally these men get leave of absence, and, when on shore, scarcely a day passes without some serious disturbance. Many of the men have been stabbed by the Greeks, and I fear many more will share the same fate unless something is done to check these rows. There are a number of low drinking shops kept by the Greeks in and about Galata, where they sell the worst

description of intoxicating beverages. These fellows entice the sailors in, getting them to drink till they become in a state of helpless intoxication. They are then turned out into the street, these rascals having taken care to clear their pockets first of all their money. The consequence is, that when they come to their senses, they accuse the man of having robbed them; this he indignantly denies; however, Jack is not to be put off in that way, so away he goes and collects a number of his companions, and they make a fearful assault upon the house, breaking the windows and trying to force the doors. The Greeks watch their opportunity and sally out in large numbers with clubs and knives, and make a furious attack on the sailors. The consequence is, that these men being unprovided with any weapons are literally mowed down, and when on the ground three or four of these cowardly ruffians set upon one man. Last Sunday night there were three of these men killed just opposite to the house in which I was. A representation of the fact was made to the consul here by some civilians; but whether he has reported to the admiral of the port I am not aware. There is scarcely a day passes without a similar disturbance. It is said, and I believe with some truth, that these fellows drug the drink, in order to afford them a better opportunity to rob their victims. Another instance of this kind occurred on Saturday last. A sailor from the *Britannia* came on shore and went into one of these low Greek houses. He was a man described as being a most sober, steady fellow. After he had been there a short time, and partaken of two or three glasses of grog, he fell down dead. His companions arriving, suspicion naturally arose that he had been poisoned; one of the officers of the ship came, and the Greeks were taken into custody by the Turkish police. Everybody thought that under such circumstances there would be a *post-mortem* examination; but this morning I learnt that, instead of such being the case, they merely buried the man without any inquiry whatever. One very suspicious fact was that the man had received a month's pay the day before, and on searching his pockets not a shilling was to be found. These or similar affairs are almost of daily occurrence. If the men are to be allowed leave there ought undoubtedly to be some means adopted for securing their safety from these fellows while on shore. It may be said that if a man gets intoxicated he must pay the penalty of his folly; but one would imagine that it would be very easy to have a patrol of half English and half French in these streets to preserve order when these men were on shore, and this would operate as a safeguard against the designs of these harpies, and protect the men; as to placing any reliance on the

Turkish police, that is out of the question. If they were to take a man into custody charged with any offence, no matter how serious the charges are, he would be at large in a few days. I have heard several instances, from captains of sailing transports, of the men, after having been on shore, coming off to the vessels in a state of insensibility, evidently produced by drugging."

The correspondent of the *Morning Chronicle* describes the outrages of the English in such terms, that it is marvellous the Turks did not fly to arms to resent such insult. When it is recollected the sacredness with which Turks, and all orientals, invest the decorum of females, and the sternness with which they insist upon a deferential and modest deportment to them, no person can wonder that the presence of the "infidels," as they might well call us, was hateful to them:—"Just at present the local interest here is limited to the daily and nightly brawls of British and French sailors, amongst themselves and with the peaceable inhabitants. These freaks have frightened away the Turkish women from the Christian portions of Constantinople. Formerly they might be seen, especially on Fridays (the Turkish Sunday), in great numbers, crowding about the shops at Pera, or gathering in groups round any object that by its novelty excited their curiosity; whilst those of the upper classes used to make a drive through Pera streets quite the Sunday excursion. They have now almost wholly disappeared from the Christian suburbs—and no wonder. It was only last week that four sailors hoisted an unfortunate Turkish lady upon their brawny shoulders, and carried her in great glee and triumph from the centre of Galata to the great wooden bridge that spans the Golden Horn, in spite of her most earnest entreaties to be released. Finally, they let her fall, and fortunately she was not hurt. These kind of practical jokes are not relished. The Turks are furious at these proceedings, but swallow their wrath, in the knowledge of their helpless position. There is some talk of establishing a European police at Pera; it would be very well, as the Turkish *cavassos* do not much like interfering with their allies when the worse for liquor. There was a row at the theatre the other night, and several heads were broken."

As the winter advanced, the pranks of the Western sailors, and assassinations by Greeks increased; although the French, always superior to us in organisation, made arrangements to check excesses, and to bring to light the criminals whose daggers were so often steeped in the blood of the rough brave hearts that trusted to the treacherous race. Even when considerably repressed, the evils existed sufficiently to endanger life, disturb the tranquillity

of the city, and shock every principle and prejudice of the Osman race. A gentleman, whose mission to Turkey was of a religious nature, thus describes the moral aspect of the place when winter was expiring, and there was hope that the dark nights would not much longer afford obscurity to the wrong-doers:—"Our intemperate habits are procuring contempt and hatred for us in the Turkish capital. British and French war vessels are there under repair, and the English and French sailors are drunken and riotous to such a degree, as proves not merely horrifying but dangerous to the sober and peaceful Turks. In their drunken quarrels heads are broken and windows smashed, and every feeling of decent propriety completely outraged. The Turkish women have been frightened away by their mad freaks from every quarter where the Christian populations abound. The old men shake their heads, and invoke explanations from Allah. The Turks are goaded to fury by their conduct, but are unwilling to deal hardly by their allies. The French and English authorities ought instantly to interfere. How dreadful! The Cross, as represented by our blue jackets, must be execrated by the men of the Crescent."

These things contributed much to the loss of that respect which had undoubtedly attended the English name in the capital of the Turkish empire. The blunders and disorganisation which occurred before the eyes of the Turks, the treatment of the wounded and sick, the irreverent burial of the dead, the sufferings of the troops in the Crimea, the condition of neglect and misery in which British ships brought the invalided thence to the Bosphorus, the tidings of government abuse in England, and, finally, of the fall of the Aberdeen cabinet amidst the execrations of the English people, led the inhabitants of Stamboul to believe that the days of England's greatness were numbered, and the last struggling light of her glory fast fading away. All eyes were turned to France; the war was called the battle of the two emperors—Napoleon and Nicholas: the Turks had ceased to hope for any advantage for themselves; whichever won—French or Russ, Latin or Greek—there seemed in their eyes only humiliation for the faith and the land of the prophet. England was considered as drawn into the war by the superior skill and power of the French emperor, who needed the assistance of her fleet. The prestige of her ambassador still continued, because his official power had become something like an institution of the country; but his misconduct in reference to the Asiatic campaign, and his neglect of the sick in the hospitals of Scutari, lowered his personal influence. The Turks could not understand how, after such things, he could continue to represent the majesty of Great Britain,

unless there were some new and inexplicable evil working at the root of English government and English greatness.

The proposal for a Turkish contingent to increase the British army acted in opposite ways upon English influence. On the one hand, it was accepted as a proof of cordiality; and as the soldiers of England occupied the first place in the lists of valour in the esteem of the Turk, he felt honoured by the proposal to rank with such. On the other hand, it was asked how could England be a great nation, and men be scarce? Were not men the pride and wealth of an empire? How could England be rich if poor in warriors? France had not to resort to such means of gaining numbers for her legions; was she not then greater than England? Throughout all Asiatic, as well as European, Turkey, this train of reflection presented itself to the minds of the Osmans. Whatever the feelings excited, the sultan's government entered into a convention with that of Great Britain, empowering it to raise a military force of 20,000 men, to be employed in conjunction with the British army in the Crimea, or elsewhere, in the prosecution of the war to which the sultan was committed. It was intended to officer these troops to some extent with experienced foreigners, and to a greater extent with gentlemen holding the commission of the Hon. East India Company. The work of raising these troops was not prosecuted with good order, or an energetic spirit. Difficulties, some of which were foreseen, impeded the object; but these were slowly but finally overcome, and the Turkish contingent was at last organised. The troops, however, were not, as at first proposed, entirely Turkish: Poles, Hungarians, Italians, and men of other nations joined the force; and in England it was openly recruited for, and a regular depot for recruits established at Woolwich. The writer of these pages visited Woolwich, from the interest he took in the undertaking, and felt in every respect disappointed in the character of the accessions there embodied. Mere "raw lads," taken from the lowest possible condition in life, and without much physical vigour, constituted the bulk of the gathering for the contingent at Woolwich. Their conduct there was such as their appearance would lead a visitor to expect—brawls and outrages abounded, and some cowardly assaults were perpetrated by the stronger and bolder of the party upon the others. The foreign recruits for the contingent were generally morally and physically superior, although many of these also were not to be made a subject of boasting. On other pages of this History further notices of the Turkish contingent will be appropriately made.

While England was enlisting the Mohammedan subjects of the sultan, Russia was enlist-

ing his Christian subjects. A Greek contingent was much more eagerly sought by Russia than the Mussulman corps by Great Britain. Many Greeks found their way to Russia, and entered the czar's service. Most of these were drafted off to the Crimea, according to their own desire—as they almost to a man volunteered to be led at once against “the allies of Mohammed;” they could see the war only as one for their faith. About 4000 of these Greek volunteers were numbered among the reinforcements which arrived for the defence of Sebastopol, during the severe weather which marked the opening of the year 1855. At Sebastopol they fought bravely. Among the volunteers for the sorties, Greeks were always prominent; and many fell, both in the French and English trenches, fighting with all the desperation of a fanatical contempt of death. Armenians also entered into the czar's service, especially in Asia; but they were for the most part serviceable as spies, commissaries, and civil agents, rather than soldiers,—seldom exhibiting the Greek alacrity to meet the enemy.

A deep depression marked the minds of the more thoughtful Turks, while rage and a burning desire for revenge animated the more fanatical followers of “the prophet”—in consequence of the efforts made by the ministers of the Western powers to obtain concessions for the Christians, whose tone was insolent and offensive to the last degree. Nor could it be said that the Christians of any creed felt grateful to the West for interposition in their favour. They attributed any advantages which they derived, or were likely to derive, to Russia; because, had not Russia gone to war for the disenthralment of the Greek church from the Mohammedan yoke, the Western nations would have made no efforts for their redemption. The French were especially urgent that “the Greek Catholics,” and Franks, and Armenian proselytes to “the Western church,” should have certain liberties guaranteed; and our allies did not appear to be very particular as to the tone and temper in which their requests, or rather requisitions, were urged. A leading paper in Constantinople surprised and scandalised the adherents of “the prophet,” by the following announcement in one of its issues:—“It is known that the construction of a new Christian church at Scutari, in Albania, has been authorised by a recent resolution of the Ottoman Porte. The following are the principal passages of the firman addressed on this occasion to the Mussulman functionaries of the pashalic:—‘The Catholic population of the town of Scutari having implored my imperial permission to build a church in the interior of the city, in which they might perform divine service, I have issued in writing this sacred order granting

that permission. It is useless to call to mind that the tranquillity and welfare of the subjects of my sublime Porte are one of the dearest objects of my imperial solicitude. I have, therefore, issued an order emanating from my imperial grace to all concerned, to afford due help and assistance in this work.’”

It was not only on the subject of concession to the Christians that the Porte manifested an unwillingness to negotiate—this reluctance extended to the proposed conferences at Vienna for a treaty of peace. The Turks felt that all negotiations had somehow ended, of late years, in new concessions to the enemies of their religious ascendancy in their own empire, and territorial loss to the encroaching power which now waged a causeless war upon them. They also constantly referred to the case of the celebrated Vienna note, when France and England fell into the Austrian trap, or else united with Austria to ensnare Turkey. They cherished vividly the recollection, that to the firmness of their own divan was to be attributed the escape of the empire from what would have proved a virtual surrender to Russia. These memories and feelings so worked upon the mind of the Ottoman people, that public opinion was very adverse to any negotiations at all. They desired the allies not to interfere with the internal affairs of the empire in any way; and they expected that if the integrity of the Turkish empire was an affair of European policy, that the war should be urged on, until Russia, baffled and beaten, should sue for peace on the conditions which the allies were willing to vouchsafe.

That these feelings should prevail was the more to be expected as the Danubian frontier was still in an unsatisfactory condition. Austria held an armed occupation of Moldavia and Wallachia, but oppressed and plundered the people, and did not prevent the Russian troops from making infamous razzias across the Pruth. The Turkish troops had been prevented by Austria from pursuing the fugitive Russians and capturing, as they then would have been able to do, the strong positions on the Danube, where that river separates Bessarabia and the Dobrudscha. The Russians made incursions across the Danube as well as the Pruth, and the Turkish territory of Bulgaria was harassed; while the sultan's provinces of Wallachia and Moldavia were harried by Russian bands, and plundered in legal form, and under pretence of protection, by Austrian generals. The Turkish authorities, meanwhile, took measures for maintaining a line of observation along the banks of the Danube. Troops were quartered at Suteha, Matschin, Silistria, Rustchuk, Giurgevo, and Widdin, amounting to twenty-three battalions of infantry, while twenty-eight battalions were held in reserve

at Shumla; eleven batteries of artillery, and eight regiments of cavalry were allotted to this observation. Ismail Pasha, the hero of Kalafat, received the command of the army in Roumelia, assisted by Merze Said Pasha and Kel Hassan Pasha. Yaya Pasha and Achmet Pasha held the command in Bulgaria, at Shumla, and on the river frontier of Bessarabia. These arrangements were very effectual, as the Russians were severely punished in several of their forays, called by themselves reconnaissances. The *Journal de Constantinople* published early in February several paragraphs similar to the following, showing the penalty paid by the Russians for their temerity on the Danube, and proving the loyalty of the Danubian provinces to the sultan's throne:—"News has reached us by way of Matschin and Braila, that the Russian expeditionary corps in the Dobrudscha, wishing to force the passage of a river, has been beaten, with heavy loss, after a combat of some hours, by the rearguard of Yaya Pasha, and that it has already crossed the Danube at Tultscha and Ismail. For the last four or five days all the Turkish forces at Braila and the neighbourhood, under the command of Achmet Pasha, have been leaving, in order to cross the Danube at Gouva-Valonitzza over to the right bank. At the very pressing request of Yaya Pasha, Prince Stirbey has caused to be purchased and sent on to Rustchuk and Silistria 650 draught oxen and buffaloes for conveying the baggage of the Turkish army. This is a great sacrifice in the present exhausted state of the country, which has lost 100,000 head of horned cattle through the forced exactions of the Russians. Prince Stirbey, desirous as ever of proving his devotion to the cause of his sovereign, acceded without the least hesitation to the demand of Yaya Pasha."

The Turkish expedition to Eupatoria, under the command of Omar Pasha, produced a good effect upon the military spirit of the country. The insults to which the Tunisian and other slam soldiery were subjected in the Crimea, ever since the battle of Balaklava, had stung the heart of the whole people; for the strangest exaggerations of the ill-usage visited upon them by the Giaours, were circulated through European and Asiatic Turkey. General expectation was now entertained, that, under the auspices of Omar, in the new expedition, feats of arms redounding to the glory of the old Osmanli name would be performed.

Among the incidents which created much uneasiness at Constantinople, was the fire at the French hospital. Some of the patients, it was alleged, were buried or suffocated; and the French authorities, by hushing the matter up, stimulated public curiosity, and caused many exaggerated rumours to be put into circulation. The truth was, no loss of life took

place, although severe injuries were received. It was an exciting scene when the flames, gaining ascendancy, enveloped the building, and the Turkish and French soldiers exposed themselves bravely to danger in order to secure the invalids, who had to be borne away during a night of piercing cold, and deep darkness, to the asylums opened to receive them.\* The Turks, ever mindful of the dead, bent their way fearlessly through the flames, and carried off some bodies of French soldiers who had recently died. This circumstance gave rise to the report of more than twenty invalids having been burned in their beds. There were 500 sick unable to do anything for their own removal when the fire burst forth—a knowledge of this fact carried a thrill of horror through the whole population, Turk and Frank, and stimulated the energies of all who took part in the rescue. It was very generally remarked as singular, that the French, so orderly and accustomed to precise method in their organisations, should have been the cause and the chief victims of three great fires since the landing at Gallipoli: namely, the fire at Varna, which nearly destroyed the town where were the allied head-quarters; that at the arsenal, in which a vast store of provisions for the French army were consumed; and this at the hospital. Our allies did not allow these losses to incommode them, their habits of organisation and dispatch in all military matters came to their aid: wherever an open space could be found at Constantinople sheds were run up, and converted into stores or hospitals, and the strictest economy was united with perfect subordination and extensive efficiency. In these respects the English suffered in Constantinople, as everywhere else during the campaign; a correspondent of the *Times*, writing at the beginning of March, observes:—"This capital has few large buildings, except those belonging to the government, and those are required more than ever by the Turks themselves. We have had for months a ship of 1100 tons in harbour used as a naval store, at a cost of nearly 30s. per ton per month, or about £16,000 a-year. This sum would pay for the erection of iron stores large enough to contain a hundred times as much beef and pork as can be held by the *Canterbury*. The ground might easily be obtained from the Turks, and the materials used, after serving all purposes during the war, would be worth nearly their original price after it is over. Constantinople must be the heart of the great system of warfare in the East, and, unless preparations be made for the convenient and effective transaction of business and reception of troops and supplies here, it cannot be doubted but that confusion will prevail at every spot where the war may be actually carried on."

The French obtained better sites for their stores, hospitals, and camps throughout the war. This seems especially to have been the case in reference to hospitals. A writer, cognisant of the facts, thus discussed it in a leading London periodical:—"The two stations of Scutari and Kulali are most conveniently situate for the transport of wounded and sick from the vessels to the hospital, and are also far removed from the close and tobacco-laden atmosphere of Pera. But the inconvenience which results from their being placed on the opposite shore of an arm of the sea, liable to sudden squalls at all times, and in winter almost impassable, is more than equivalent to these advantages. The officers who have the management of our hospitals are obliged to have recourse to a miserable caique whenever they wish to consult with the authorities on this side of the water; for, though a steamer has been established to ply across, it is not suited to the necessities of men who may be detained for an unlimited time, or summoned at a moment's notice to make the journey. The consequence is, that the British authorities are accustomed to do as much business as possible in a single visit, and, with the exception of the naval officers and a few belonging to regiments just arrived, very few of our countrymen are to be met with within the limits of the capital. The French, however, are to be found everywhere, and their tasteful uniforms add much to the liveliness of the streets on a fine day, which, in this changeable climate, may be expected occasionally even in the depth of winter."

As it is necessary to give some information concerning our hospitals, in addition to what our last chapters on that subject contained, it can no where be more appropriately introduced than in a chapter on Turkey. The following letter was written by a medical officer, and it is interesting, as affording not only additional light as to the state of the sick and wounded, but as to the spirit subsisting in the early months of 1855 between the Turks and British. The letter is dated Constantinople, the 14th of February, 1855:—"I came down here with sick and wounded. I was asked to take charge of some of them. I consented, and 110 cases of fever, cholera, and dysentery, in every stage of weakness or prostration, were placed in my hands. You have no conception of the horrors of a ship full of such cases. We throw overboard daily three or four dead bodies. We have sick and dead in every regiment, particularly the unfortunate 63rd. I recognised many of them as Dublin carmen. Often have I given them sixpence for a set down, or threepence to bring me to Sandymount. 'Do you want a car, your honour?' and 'One seat here, sir,' are to them now for-

gotten words. The regiment is quite broken up. Nine hundred came to the Crimea, but when we left only forty could muster—660 gone forever—fine brave fellows! These forty have been ordered to leave the camp, and it is said that the officers will be drafted into other regiments. It is extraordinary how one becomes accustomed to horrid sights and dreadful stories. Everywhere one goes dead or dying horses offend the eyes and nose. Such also is the case at Varna, where the camp was. The dogs and vultures are busy at work, tearing away at the carcasses, revelling in their revolting carnival; but I wish we had more of them with sharp appetites, that they might eat up the horses as quickly as they die. I saw William Russell, the *Times'* correspondent; he is a very agreeable fellow, full of fun wit, and manliness. We brought here some Turks and some Russians who had deserted; our men could not endure the Turks. They would not allow them to sleep in the room in which they slept; but they at once fraternise with the Russians. This feeling against the Turk is countenanced by the officers, many of whom act in a very unkind manner to the poor creatures. I saw Omar Pasha at Varna. When he came to Balaklava he was greatly enraged at seeing the Turkish soldiers compelled by the allies to act as beasts of burden. I have always found the Turks civil and obliging. Do not credit the opinion that they are not brave. The crescent has waved as boldly and triumphantly in the battle as the banner of France or England."

A week later Miss Nightingale wrote to the London *Times*, and Mrs. Bracebridge to the Messrs. Cuthbert, in connection with the supplies sent to the hospitals. Both letters are dated Scutari.

"Miss Nightingale presents her compliments to the editor of the *Times*, and begs that he will allow her to acknowledge, in its columns a few of the presents from the benevolence which she has received. The greater number have been sent anonymously, or referred to letters which it is not possible to connect with letters received months previously. Messrs. Cuthbert have announced sixty-eight tons of goods by the *Harlequin*, not yet arrived, and goods are invoiced by the *Cæsus*, *Karnac*, *Labanon*, *Chester*, *Snowdon*, *Hollander*, *Amistately*, &c.—vessels not yet in the harbour Constantinople.

"Packages have been received from Mr. Portal, 3, Wilton Place; Mrs. Rice, High Street, Croydon, shirts and old linen; Mr. Williams, Rue de Pont Neuf, Nice Maritime list shoes and linen; Mrs. Findley, Easterhill and Mrs. Maclath, Daldon, Lanarkshire; Lady Manners, Dowager Lady Napier, Mr.

odsell, Mrs. Gundry, of Hyde; collection—Miss Capell, Floore, near Weedon; friends of Captain May, of the brig *Star* of Sunderland; the ladies round Wakefield, and Mr. Smyth, Teath Hall; Eaton Rectory; Colleshill, Warwickshire; Atherstone, Warwickshire; Colonel Napier, Portsmouth; H. Baker & Co., 11, New Bond Street; Mrs. De Berfor and Mrs. Billings, 16, St. Germain's Place, Blackheath; collected by Captain and Mrs. Balfour, Blackheath, books, linen, shirts, stockings, and bandages; ladies of Needham Market, collected by Miss E. Diggins, linen, tracts, sundries; Brighton, one piece of flannel, pillows, jerseys, linen, &c.; Mrs. Dennett, Worthing, shirts and sheets, fifty pocket-handkerchiefs, books, tapes, thread and pins, &c.; Richmond, Surrey; Mr. Bullar, warm clothing, contributed by the ladies of Southampton, thirty-six pillows, cambric, and five parcels of lozenges; Edward May, Esq., Mrs. William White, Newport; Mrs. Pennington, books; J. Danks, Esq., Sherwood Hall, Nottingham; Dr. Beddingfield, bandages; Mrs. Rawlinsón; Royal Hotel, Bodmin, Cornwall; Miss Catt, West Street, Brighton; D. G. Douglass, Southampton, a tin of arrowroot; collection by Mr. H. and Mrs. Baillie; two dozen old Marsala, London, anonymous; Mrs. Foot, Alderbury House, Salisbury; two bales from Bonchurch; Y. Z., 45, Baker Street, Portman Square, box containing shirts, stockings, a cheese, preserves, potatoes, onions, stationery, books, sulphur, &c.; Shurmacher, pillows, preserves, flannel shirts, sheets, shirts, comforters, &c."

*Scutari Hospital, Feb. 22.*

"DEAR SIRS,—Will you be so kind as to announce that the *Eagle*, *Army and Navy*, *Orham*, *Teneriffe*, and other ships have arrived here, with numerous packages and gifts of the most valuable for Scutari?"

"Her majesty's gifts came in the *Eagle*. Mr. Gamble sent a large assortment of potted meat. A celebrated wine-merchant (name concealed) thirty dozen of port. Messrs. Gardener & Co., of Palermo, fifty boxes of lemons and fifty boxes of oranges, for the sick and wounded, the same to the French.

"We must tax our friends' patience as to acknowledging particular cases. Many have already been found by Mr. Barber in Custom House and merchants' stores, and sent over, some are gone to Bordeaux, and some are here."

"By another post I will acknowledge a number. Many cannot be acknowledged, as we have no means of comparing packages with letters received long ago.

"Yours obediently,

"H. BRACEBRIDGE."

"Messrs. Cuthbert."

In a publication written by one of the lady nurses, the state of the hospitals in Turkey is given at a still later period. This lady acknowledges the services and ability of Mr. Stowe, who succeeded Mr. Macdonald in the administration of the *Times'* Fund. Mr. Stowe went to the Crimea for the reasons assigned by this lady, and perished there, a victim to the cruelty of the medical staff of the army. His loss at that juncture was a serious one to the army, and brands with barbarity and selfishness the men and the measures by which he met with so deplorable an end. The lady nurse writes:—"We applied to Mr. Stowe, the *Times'* commissioner, for brushes and combs, and many other articles we required for the men. He sent them immediately. We gladly availed ourselves of his offer to give us any help we required from the *Times'* Fund, and we can thankfully bear witness to numberless comforts and necessities supplied by the fund to the sick. Mr. Stowe appeared a person admirably suited for his post. He visited the hospital constantly and thoroughly, gaining a complete insight into its working. There were other visitors to the hospital, who paid their visits once a fortnight or so, attended by a long train of authorities; and though doubtless it was meant for the best, yet it seemed impossible for these to gain such a knowledge of the real wants of the hospitals as a man who came and went at any hour and without observation. Great was my astonishment on being told one day by a distinguished person, that the *Times'* commissioner was a 'dangerous person.' I made no answer to the remark. Living, as we then were, amid scenes of sickness and death, tending the wasted forms of those whom want and neglect had brought to this dire extremity—seeing, as we hourly did, the flower of the British army cut down in the prime of their youth and strength, my heart was too sick and weary to enter into any controversy about the authorities and the *Times'* commissioner. I only knew, one let the men die for want of things—the other provided them; the one *talked*, and the other *acted*. I could not help thinking that I cared not where the things came from, so that they did come somehow. So I went straight to the 'dangerous person,' who was pacing up and down the barrack-yard, with an air as if he cared very little what people thought of him, and laid a list of our present wants before him. 'These things are promised,' I said, 'but we shall have to wait very long for them, even if we do get them at all.' Mr. Stowe wrote them down in his note-book, and by that time the next day they were on the spot. This energy was one of Mr. Stowe's characteristics. A thing once mentioned to him he never forgot, and never rested till it was done. He was particularly anxious on the subject of washing.

It was a great evil, but at that time there was no remedy. Mr. Stowe asked if we thought washing-machines from England would be useful; but we told him there would be no place to put them in, and then the plan would require much superintendence, for which we had no time to spare. We had not even time to search into the full extent of the abuse itself. However, his attention having been once called to it, he never lost sight of it. If Mr. Stowe had lived to return to Constantinople, he would have found Kulali much improved in that as well as in all other respects. The last visit Mr. Stowe paid us was when the fruit was just coming into season, strawberries especially. We told him how the men longed for them, and he gave us leave to gather as many as we wanted. The new purveyor-in-chief being then in office, Mr. Stowe seemed to feel his services were no longer wanted to the same extent. He said he knew Mr. Robertson would see that every requisite was furnished, and that matters would soon be on a different footing. He went to the camp, and among the many who regretted the untimely death of one so talented were some at Kulali, who will ever remember his untiring exertions in his country's cause, his extreme courtesy, and the kind and friendly manner in which he cheered on the sinking hearts that had struggled through that time of misfortune."

The earthquake at Broussa, by which such physical injury was inflicted, produced a great sensation in the Turkish empire. Both Turks and Christians regarded it as an omen. The superstitious of every creed are apt to connect great national calamities as portents of war, and the downfall of states and empires. It was so in the present case: the Mohammedans revived every faded prophecy of the ultimate downfall of their dominion which had ever gained currency among them; and the Christians considered the event as the indication of the speedy and violent dissolution of the Turkish empire. Events which produce these strong moral impressions among a people should never be overlooked by the historian, even if trivial in themselves. The earthquake at Broussa was, however, a terrible calamity, although exaggerated by the reports which reached Western Europe. At the instant the first great shock was felt at Constantinople, Broussa was shaken to its foundations; in a few seconds after a portion of the town was demolished, and 300 inhabitants buried beneath the ruins. The shock lasted about forty seconds; the oscillations came from the south-east, and were rapid and short. The city was partly surrounded by a wall which was erected by the early Ottoman princes, who held their court there "before Adrianople had been raised to an equality with the old capital." This

wall was thick and solid, and many of the poorer classes built their houses against it for economy and support. It swayed to and fro for several seconds, like a tree bending to the storm, during which the weaker portions of the upper part gave way, falling through the miserable dwellings beneath it; but when the last oscillation came, which ended the shock a great portion of the wall all round fell at once, and scores of houses, and their inhabitants, were instantly crushed. The houses of the more opulent classes were much dilapidated, and many of these persons were bruised and mutilated, but the loss of life was wholly, or nearly so, among the poor. The mosques 125 in number, were to a considerable extent demolished; of those not totally destroyed scarcely a minaret remained; and not a single public building of any sort entirely escaped. A silk factory fell at the first shock, in which sixty females were working—all were killed. The people of the Turkish capital were in great trepidation after the sensation of the shocks there, as the universal expectation was that the hour for its downfall had come, and that with it the glory of the once proud empire of Othman would sink for ever. The Turks besought Allah and the prophet that it should not be so, and that any visitation of their anger should be confined to the infidels; the Christians were suppliant to the Virgin, and all the saints, that the ruin might be speedy to the followers of the false prophet, and to heretics; but that the orthodox believers might be spared. Several shocks were felt at Constantinople two days after the fearful visitation at Broussa, and the apprehensions and devotions of the inhabitants, both believers and unbelievers, were both very much enlivened. Whatever might be thought by the superstitious, the Turkish empire, in Asia more especially, was everywhere disturbed, and the British government did not seem aware of the magnitude of the peril, or of the well-concatenated efforts in Russia.

It was bitterly remarked by an able reviewer of public affairs in the columns of the *Christian Weekly News*—"Whilst our oligarchy look with monstrous fatuity upon the break-down of our military organisation, and the shortcomings of our representative institutions—whilst, in the midst of unprecedented perils, the government of this country is carrying on the jogtrot of routine and red-tape policy, the autocrat displays a feverish activity, and prepares for a giant effort, which Turkey and the whole East must feel. Untrammelled by bureaucratic pedantry he throws to the winds all scruples in the choice of means. At home, in holy Russia he brings into action the rudest fanaticism, his orthodox serfs. Around the frontiers his empire he prepares the materials for

universal Eastern commotion. He works with unremitting activity for a convulsion of all the countries in the vicinity of the Caspian, the ranges, and the Danube. On the banks of the Tigris the flame of revolt, lighted by Russian hands, has already burst forth against Turkish rule. In Independent Tartary, Muscovite influence grows apace. The seditions of Cabul and Candahar appear to be the prelude only of pro-Russian movements against the adjacent British territory. In European Turkey the surprising activity of Greco-Sclavonian emissaries prepares a resumption of the Hellenist disturbances of last year. And, in the presence of these vast machinations of the czar, we still allow ourselves to be amused with idle diplomatic gossip respecting the four points, and their hollow schemes of peace! Looking to Asia we find, at this moment, invasion and

revolt. In Kurdistan, those nomadic tribes inhabiting the territory between the south-eastern slopes of the Armenian highlands, the Tigris, and the Zagros mountains, have ever been unmanageable subjects of the Porte. Though confessors of Islamism, they never scruple to disavow the sovereignty of Turkey. The diplomacy of St. Petersburg has taken advantage of this disposition at the present juncture; for the Russian high road to Bagdad lies through the land of the Kurds. Commanding this position, the czar could outflank the Turkish force in Asia, and interpose his own armies between it and the Dardanelles. Armenia is at the czar's mercy, or nearly so; and everywhere in Asiatic Turkey his name is feared, and the authority of the sultan slighted. A great moral earthquake upheaves the still vast and once mighty empire of the sultan and padishaw."

## CHAPTER LXIV.

### ALLIANCE OF SARDINIA WITH THE COALITION AGAINST RUSSIA.

" 'Tis sweet  
When the voice of man lies hush'd, subdued,  
To hear thy mountain voice, so rude,  
Break silence."—*Ballads of Ireland.*

THE diplomacy of the early months of 1855 was particularly dry and uninteresting, except to those who love to study human nature in the intrigues of the governments of states. The conduct and policy of Sardinia was not marked by the tricks to which Russia and the German powers resorted. There was a frankness and nobleness about it to the lasting honour of that gallant little kingdom. Immediately upon the opening of the new year, the desire of Sardinia to enter the alliance against Russia assumed a practical shape, and it was proclaimed to the world that her army would be united to the armies of the allies against the common foe. On the 26th of January, "the act of acceptance," on the accession of his majesty the king of Sardinia to the convention of the 10th of April, 1854, was signed and ratified on the 4th of March. The basis of the alliance of the Western powers with Sardinia was not the treaty of the 2nd of December, in which Austria principally figured, but the convention of the 10th of the preceding April, which appeared in our columns in its appropriate place.\* In the *Moniteur* of the 13th of March the following appeared:—"His majesty

the King of Sardinia having acceded to the convention concluded at London on the 10th of April, 1854, and our envoy extraordinary and minister plenipotentiary to his said majesty having, in virtue of our full powers and in our name, accepted the said accession, the respective ratifications were exchanged at Turin on the 4th of the present month of March; and, in consequence, the said act of acceptance of the accession and the military convention concluded between France and Great Britain and Sardinia will receive full and entire execution."

The minister of the French marine addressed at the same time the following circular to all the commanders-in-chief of the French naval forces, and to the captains of ships of war at sea:—"Sardinia, by a treaty signed on the 26th ult., having acceded to the treaty of alliance concluded on the 10th of April, 1854, between France and Great Britain for the protection of the Ottoman empire, now finds herself at war with Russia. You will, consequently, have to extend in future to the Sardinian navy the support and kind offices you are bound to render the French and English navies; and when you chance to meet ships of war of his majesty the king of Sardinia, you will concert measures, and establish with their commanders the same relations of intimacy as with the commanders of the ships of war of her majesty the queen of the United Kingdom of Great Britain. Please to acknowledge the receipt of this circular."

The fifth article of the convention is so short, and so necessary to the clearness of the narrative, that it is here joined:—"Their majesties the queen of the United Kingdom of Great Britain and Ireland, and the emperor of the French, will readily admit into their alliance, in order to co-operate for the proposed object, such of the powers of Europe as may be desirous of becoming parties to it."

The English government published documents so similar that their quotation is unnecessary. The Sardinian government issued two state papers in connection with these transactions remarkable for their perspicacity, and a certain exalted tone of feeling. On the 4th of March the *Piedmontese Gazette*, in an extraordinary number of the day, published the manifesto of His Majesty Victor Emanuel II:—

*Turin, March 4, 1855.*

For a long time Europe has regarded with just and jealous suspicion the continual aggrandisement of Russia, the progressive application of that system which Peter the Great inaugurated, more naturalised in the nation perhaps than in the Muscovite sovereigns, and tending with all the forces, visible and invisible, to the conquest of Constantinople, not as a final end, but as a beginning and step to new and more unmeasured ambitions.

These projects of Russia, subversive of the equilibrium of Europe, threatening to the liberties of peoples and the independence of nations, never revealed themselves, perhaps, so clearly as in the unjust invasion of the Danubian provinces, and in the diplomatic acts preceding and following it. It was with good right, then, that France and England, after a long and useless attempt at means of conciliation, had recourse to arms to support the Ottoman empire against the aggressions of its powerful neighbour.

On the solution of the oriental question depend the destinies, not immediate, but future, of Europe, and of Asia, and, more directly and proximately, of those states bordering the Mediterranean Sea, which cannot therefore remain indifferent spectators of a struggle in which their own vital interests are concerned, which will determine whether they remain free and independent, or become vassals, in fact if not in name, of the colossal Russian empire.

The justice of the cause espoused by the generous defenders of the Sublime Porte, the considerations which tell so powerfully always on the heart of the king, of the dignity and of the national independence, have determined his majesty the King of Sardinia, after the formal invitation which he has received from the two great Western powers, to accede, by the act of the 12th of last January, to the alliance, offensive and defensive, stipulated on the 10th of April, 1854, between their majesties the Emperor of the French and the Queen of the United Kingdom of Great Britain and Ireland. But before that act received the indispensable completion by the exchange of ratifications—before, therefore, it could in any way be put in execution, the Emperor Nicholas, lamenting, with language not devoid of bitterness, that the rights of nations had been violated by us by having (as he supposed) without previous declaration of war sent an expedition to the Crimea—accusing the king, besides, of ingratitude in having forgotten the ancient proofs of friendship and sympathy given by Russia to Sardinia—hastens himself to declare war.

Without stopping at the supposed violation of the rights of nations, which could only be an error of the Chancery, we will observe that, with the ancient memories of friendly correspondence passed between the predecessors of his imperial majesty and those of his Sardinian majesty, the emperor might have compared other more recent and personal recollections of his own behaviour for the last eight years towards the kings Carlo Alberto and Vittorio Emanuele Secondo. But, first of all, he should have persuaded himself that his majesty approached this alliance not through forgetfulness of ancient friendships, nor through resentment for recent offences, but from the firm conviction of being imperiously driven to it, both by the general interests of Europe and the particular interests of that nation whose destinies Divine Providence has committed to him; and it is therefore that, in taking part in a serious war, the king never doubts the answer to his appeal from the old faith of his beloved people, the bravery of his soldiers, confiding, as he confides, in the protection of that God who in the course of eight centuries has so often supported the monarchy of Savoy in

severe trials, and guided it to glorious successes. His majesty is secure in the conviction of having done his duty, nor will so many severe and cruel afflictions diminish his resolution and constancy in the defence, with his power, against all aggressions whatsoever on sacred interests of the people and the imprescriptible rights of the crown.

While the king desires that the negotiations for already initiated in the city of Vienna may be successful in fulfilment, however, of the obligations contracted towards France, England, and Turkey, he has ordered the undersigned minister to declare, in virtue of the abovementioned act of accession, his land and sea forces to be in a state of war with the Russian empire.

The undersigned declares, besides, the orders of his majesty that the *exequatur* accorded to the Russian consuls in the royal states should be revoked; the persons and persons of Russian subjects nevertheless to be as before respectfully respected, and a competent term accorded to Russian ships to leave Sardinian ports.

C. CAVOUR, the President of the Council,  
Minister of Foreign Affairs.

At the same time, the Sardinian government issued the following circular to the foreign ministers accredited to its own court, and to its own agents abroad:—

SIR,—I have the honour to transmit herewith copies of the manifesto by which the government of his majesty the King of Sardinia, in the name of the undersigned minister, declares war to his majesty the Emperor of Russia.

When the treaty of alliance of the 10th of April, 1854, between France and England was officially communicated to Sardinia, the government of the king, recognising the right and duty of the great Western powers to oppose the invasions of Russia, and to demand the Ottoman empire against unjust aggression—openly declaring that its most lively sympathies were with the cause which France and England had generously undertaken to defend—thought it right, nevertheless, to abstain for the moment from availing itself of the stipulated reserve in the 5th article of the treaty.

Now, however, the war has taken such considerable proportions in the East and in the Baltic, and the world has been able to convince itself that the question which agitates the East is a European question, all recognising that if the great powers have a more direct interest in it, the states of the second order are more menaced in their commerce, and, what is more, in their independence, by the ambitious projects of Russia. The moment is arrived, then, to oppose to those vast means of action of which she can dispose, and to the enormous advantages of her geographical position, the united efforts of the powers who, devoid of all ambitious thoughts, only aspire to ward off dangers which later might be undesirable, and to assure the triumph of the eternal principles of justice and equity.

These considerations have determined his majesty the King of Sardinia to accept the invitation addressed to him by their majesties the Emperor of the French and the Queen of the United Kingdom of Great Britain and Ireland, to accede to the treaty of the 10th of April, 1854. The act of accession, as well as the two conventions referring to it, having been signed on the 26th of January last, and ratified this day, his majesty, in consequence of the stipulations therein contained, now declares war to Russia.

His majesty has not seen without painful surprise that while the act of accession, unratified, had not yet any absolute legal value, and was in no ways executory, the Emperor Nicholas, by a note of Count Nesselrode's, published in language full of bitterness, taking the initiative of hostilities, has accused him of violating the rights of nations, by sending an expedition to the Crimea without a previous declaration of war, and reproached him with the forgetfulness of the marks of friendship shown in common by Russia to Sardinia.

Concerning the pretended violation of the rights of nations, it is sufficient to compare the date of Count Nesselrode's circular (5th (17th) of January last) with that of the ratification of the act of accession (4th of March).

to be convinced of the astonishing flippancy with which the chancellor of the Russian empire has advanced so grave an accusation, and which is so inappropriate to the princes of Savoy, and, above all, to a monarch to whom the voice of the whole people has accorded the title of loyal.

As to the reproach of ingratitude, the Emperor Nicholas, instead of recalling the marks of friendship which two of his predecessors formerly showed towards Sardinia, ought to have recollected that in 1848, without any personal motive, he withdrew his minister from the court of Turin, and hastily sent the Sardinian representative at St. Petersburg his passports; that in 1849 he refused to receive the letter of notification of the accession to the throne of King Victor Emanuel II., a refusal highly injurious, which finds few precedents in the history of diplomacy, and which appears to indicate, on the part of the czar, the strange pretension to interfere in our interior affairs, affecting not to recognise the transformation, not revolutionary, but legal, which had been made in our political institutions.

After having added these short explanations, in order to place the conduct of the king our august sovereign in its true light, and on referring to the motives exhibited in the accompanying manifesto, I beg you to transmit a copy of the present despatch to the minister of foreign affairs of the government to which you are accredited; and I beg you to receive, sir, the renewed assurances of my very distinguished consideration.

C. CAVOUR.

Almost contemporaneous with those publications by the cabinet of Turin, the court of Russia issued the following declaration of war in the form of a circular to other courts:—

*St. Petersburg, Feb. 17.*

THE court of — will, we doubt not, share the opinion of the emperor upon the policy of his majesty the King of Sardinia, at a moment when that sovereign, without any extensible motive, without any legitimate cause of complaint, and without even the shadow of the smallest infringement upon the direct interests of his country, has placed at the disposal of England a *corps d'armée* of 5,000 men for the invasion of the Crimea. In taking this step the Sardinian government appears to have left to the care of the public journals to warn us of an aggression which it has not thought fit to justify by a declaration of war. We understand the motive of this defence.

The court of Turin, we admit it, would have had some difficulty in conciliating its policy with the national sentiment of its country; it would have experienced equal difficulty in making its present conduct harmonise with the ancient *souvenirs* of the house of Savoy. In consulting the annals of its history, it might cite the incident of a Russian army crossing the Alps; but, it is true, it was to defend Piedmont, and not to invade it. In the councils of the cabinets of Europe, in the reign of the emperor Alexander, of glorious memory, it is again Russia who lent her faithful support to the independence of Sardinia, when the house of Savoy was reinstated on the throne of its ancestors. Must we finally recall to mind that, at the same period, if Genoa was re-united to the kingdom of Sardinia, it is because the imperial cabinet recognised the necessity of assuring at the same time the commercial prosperity and the greatness of the country which the arms of Russia had contributed to deliver from foreign yoke? To-day, sinking in oblivion the lessons of the past, the court of Turin is about to direct against us, from that self-same port of Genoa, a hostile enterprise, which Russia has the conscientious satisfaction of knowing was not provoked by her.

The attitude thus assumed by Sardinia, without a formal declaration of war, as we have stated, would make us doubt what name we ought to give to the auxiliary troops destined to invade our frontiers under the flag of a country with which we have hitherto been living in peace. However, if the court of Turin loses sight of the principles and customs consecrated by the law of nations, as the immutable rule of the international relations of states,

the emperor, for his part, is resolved to observe them. With this intention, his imperial majesty feels it incumbent upon him to declare that peace is *de jure* and *de facto* broken by this flagrant act of hostility, the whole blame of which recoils upon the Sardinian government. We leave it to bear the entire responsibility thereof, in the face of the opinion of its country, and of all Europe.

It behoves especially the allied powers to appreciate the conduct of the court of Sardinia, when it has deemed it opportune and loyal to turn its arms against us at the very moment when the imperial cabinet entered into a deliberation at Vienna, destined to open the path to the re-establishment of peace.

The wishes which tend towards the accomplishment of that work of pacification seem to have been strangely misunderstood by the cabinet of Turin. In fact, whilst the governments of Central Europe wisely interposed their legitimate authority to prevent one of the belligerent powers from recruiting its legions in the states who insist on having their neutrality respected, the Sardinian government, less chary of the blood of Italy, consents to pour it out for a cause foreign to the political and religious interests of its nation. For, in good faith, it cannot be pretended that by unfolding her banner by the side of the Crescent, Sardinia fancies she at all serves the cause of Christianity. Nor can it be affirmed that she seeks to defend the weak against the strong when she joins her arms to those of France and England.

It is this latter power, if we are rightly informed, which takes the Sardinian troops under its command—we will not say in its pay, as we wish to abstain from wounding the national feelings of a country with which, to our regret, we are about to be at war.

Notwithstanding this necessity, the emperor will still afford protection to the private interests of Sardinian subjects, who entertain ancient commercial relations with Russia. They shall not suffer from the errors of their government. They are at liberty to remain in the empire in all security, under the protection of our laws, as long as they do not infringe them. But the Sardinian flag will henceforth cease to enjoy the prerogatives accorded solely to the mercantile navy of neutral states. A term shall be fixed for the departure of Sardinian vessels that may be actually in Russian ports. The *exequatur* will be at once withdrawn from Sardinian consuls in Russia. The Russian agents at Genoa and Nice will also receive orders to suspend the exercise of their functions, peace between the two countries having been broken by the court of Sardinia from the moment it acceded to the treaty of alliance concluded on the 10th of April, 1854, between Great Britain and France.

The emperor has deigned to charge me to communicate these determinations to all friendly powers.

NESSELRODE.

The motive of Sardinia in entering into the anti-Russian alliance, there is every reason to believe, was unselfish. The character of Victor Emanuel and of Count Cavour prove as much. The men by whom the prince and his chief minister surrounded themselves were of a similar stamp. Throne and ministry sympathised on principle with liberal government, and equitable international relations. Yet it admirably suited the policy of Sardinia to join the coalition. Austria and France had been gradually drawing closer, and it was rumoured all over Europe that a secret treaty was concluded between the emperor and the kaiser on the 24th of December, by which the former pledged himself to the integrity of the Austrian dominions in Italy, and, in alliance with Austria, to preserve the then existing territorial circumscription of all the Italian states. That the French policy was misled by a strong pro-Austrian bias could not be concealed from

Victor Emanuel, nor be a subject of indifference to him. This was the more alarming as the policy of the Buonapartists in Italy from 1848 up to 1853, and even up to the time when the convention with England was signed in the spring of 1854, was bitterly anti-Austrian. It had necessarily been so, for Austria did her best to thwart and humiliate Louis Napoleon. She prevented his recognition by Russia, and his forming a German marriage alliance; while the press of Vienna was perpetually repeating the epithet *parvenu*, which Louis Napoleon, by a happy audacity, had applied to himself. Accordingly, French agents had been at work all through Italy abusing Austria, forming French connections, proclaiming that France was the natural protector of Italian liberty, and the natural avenger of Italian wrongs, and that between the two empires there could be no alliance. The name of Murat was evoked in Naples; the king of Rome was talked of in Romagna; and the kingdom of Italy was a pet phrase at Milan in the mouth of every Frenchman. Italy was assured by every form of persuasive that she had no hope but in France, and that she must look to the magnanimity of a Buonaparte, whose heart was filled from Italian fountains, for her rescue and her future glory. All this suddenly ceased when the English alliance came into being. The Aberdeen ministry was Austrian in its sympathies as much as the pure whig ministry that preceded it was the reverse. Lord Aberdeen was just what he described, in the House of Lords, as being very amusing, that he should be thought "a sort of an Austro-Russian." Louis Napoleon followed the track of the English policy in his pro-Austrian proceedings, but he went further than the Aberdeen government, *as a whole*, intended—the whig portion of it being adverse to the *degree* of favour shown by the Peelites to Austria. The game played by the French emperor obviously was, to adopt only such a line of policy as England would initiate, or at least approve, but to cut out a path for himself in that road, and work with agency peculiar to his own aims and objects—the establishment of his dynasty, the conciliation of the despotic courts, and the consolidation of his influence in Europe. It was therefore wise for the Sardinian king not to look on quietly while the bonds of Austrian amity were drawn tighter by the hands of France, feeling, as Sardinia ever must feel, that Austria is the deadly enemy of her independence and prosperity. To anticipate Austria, and step further into the alliance, was a wise and bold policy, and was crowned with success. She agreed to keep up a force of 15,000 men in the field, under the command of the British chief; and a loan of one million sterling was to be afforded to her by the allies,

to enable her to keep up that army. She vigorously carried out her obligations, and the allies honourably executed theirs; while Austria was enraged to perceive, as a consequence of this movement, that the allies guarantee the independence of Sardinia while the war continued, making it clearly impossible for Austria to take any advantage of the occupation of the Western powers, to precipitate herself as a spoiler upon the Piedmontese kingdom.

Some details concerning the Sardinian arm are desirable, in order that our readers may understand the exact value of the alliance. As to the *morale* of the troops it is excellent. There are no better or braver soldiers in continental Europe than those of Piedmont. In the struggle of 1848 against Austria, which cost Charles Albert his throne, and indirectly his life, this gallant army did not perform what was expected from it, especially in Italy; but that arose from the inexperience of its generals and the necessary dependence therefore upon certain soldiers of fortune, principally Poles who had little knowledge of the people of Piedmont, and less sympathy with their military or general character. The battle of Novara illustrated these remarks; Radetzky carried all before him, despite the heroism of the Piedmontese, because the latter were not well officered. Since that event, so deplorable to Sardinia, every effort has been put forth by its government to reform the military system and to do so on the principle of preserving a small standing army, capable of great expansion in an emergency. The grand source of deficiency in the officers arose from the fact that the military profession was fashionable and the aristocracy crowded into it, swallowing up promotions and patronage, and leaving to a poor man of merit no chance of competing for rank or honour. The result was, that it became an army of generals who could not command, to whom the gay uniforms and decorations were objects of petty ambition, but who were utterly ignorant of the military art. Turin glittered with decorations and plumes worn by officers who could not "place a square," or "set a squadron in the field," if the salvation of Italy depended upon their attempts. So long as Sardinia was governed absolutely, the system answered her objects—the aristocracy were armed against the people and ever ready, in the name of the prince, to put down a popular *émeute*; but when liberal ideas entered the cabinet, and the people exercised a popular control, and especially when foreign war tested the comparative worth of plumes and stars, heads and hearts, it was deemed that genius and enthusiasm were worth more than all the insignia of royal or aristocratic glory. *Men* were then wanted, not

lords—swords, not coronets—talent, not *haut ton*.

The peace standard of the army was 41,647 soldiers, classed in this way:—

	Men.
10 brigades of Infantry of the Line . . .	26,470
10 battalions of Rifles . . . . .	3,637
10 regiments of Cavalry . . . . .	5,221
3 regiments of Artillery . . . . .	4,162
1 battalion of Sappers and Miners . . .	1,049
1 Waggon-train Corps . . . . .	464
1 battalion of Chasseurs Francs . . . .	644
	41,647
To which must be added Gens-d'armes . .	3,904
Making in all . . . . .	45,551

In time of peace the Gens-d'armes, or Carabineers as they are called here, are employed as police, but in war they form a royal body-guard, and in that capacity a portion served with Charles Albert in the last war. The war establishment of the Sardinian army is 45,000 men, but this may easily be increased to 100,000 by an extraordinary levy.

Under the influence of the reforms which of late years have been carried out by the enlightened supervision of the premier and the war minister, professional education is provided for the officers. At Turin there is a military college, where boys are admitted from fourteen to sixteen years of age upon passing an examination in reading, writing, arithmetic, Italian, and the principles of religion. The standard of admission is miserably beneath what it ought to be, nor is the curriculum such as to make up for that defect. The term of study is five years. The examinations are in modern languages, but only French and German are studied, except in exceptional cases; in history, which is very imperfectly pursued; and in mathematics and fortification, which are studied within narrow limits. If, however, a student desires to enter the staff corps, engineers, or artillery, he must remain two years more, during which he has to read hard, and make very respectable progress in chemistry and gunnery. The former is studied more extensively than in English military colleges, but in every other respect the English and French standards of acquisition, especially the latter, are superior. There is a college at Areua (established 1850), which tends to make up for the deficiencies of the military colleges, where there subalterns must pass a year, and stand important examinations before they can obtain ordinary promotion. There is a college of cavalry at Pinerolo (established 1849), where every pupil who has studied at Turin must remain for two years, before being gazetted (as we say) to a cavalry regiment. This institution is in principle similar to the other Italian and Austrian schools for cavalry instruction, and they are well fitted to turn out

good cavalry officers. The late Captain Nolan, whose death at the battle of Balaklava was so much regretted by the British army,—to the cavalry service of which he was so useful,—received the elements of his knowledge of cavalry tactics in an Italian school.

The poor are not neglected in the means adopted for military education in Sardinia. At Raccrigi there is a school for the education of soldiers' sons: boys enter at twelve, and remain four years, when, if they pass their examination, they join the line with the rank of sergeant or corporal, according to the progress they have made at school. This supplies the army with intelligent non-commissioned officers, who have all the buoyancy of youth—unlike the British system, which necessarily takes the non-commissioned officers for the most part from among the old soldiers. The Sardinian plan has the disadvantage of impeding the promotion of soldiers from the ranks. This system is borrowed from the Russians. At Asti there is a school of military music, which may account for the superiority of the bands of the Sardinian regiments. Besides all these means of instruction, there are regimental, and even brigade schools, where the elements of geography, topography, geometry, and algebra are taught; and where such of the privates as cannot read or write are instructed in these educational preliminaries. Probably more progress is made in these schools than in the colleges. It is singular that, with so elaborate a system of military colleges, there is no school of military surgery; but the government affords many facilities for improvement during the practice of the profession. Promotion goes by seniority, and this is as rigid as in the service of the Hon. East India Company; but there is a reserve of a certain proportion, amounting practically to nearly one third, for merit. A tenth of the sub-lieutenancies are reserved for non-commissioned officers. It is on the whole a more liberal system of promotion than that of the army of England, but not so liberal as that of France. On service, when an officer falls, his next in regimental service takes his place, and all regimental promotion is made in the regiment—this promotes a fine *esprit de corps*.

The army is under the immediate command of the minister of war, who is always a military man; he is assisted by a board of superior officers, forming what is called "the permanent consultative council of war." To this all important business is referred; this board performs all the duties of what we call the quartermaster-general's and adjutant-general's departments. The late Duke of Genoa, and the minister of war (Marmora), used great exertions to bring the artillery service up to the standards of England and France. Per-

haps those and the Prussian are alone superior to that of Sardinia. The gun-carriages are, for lightness and solidity, better than any other in the world, and they have this peculiarity, that the same carriage will suit a gun of six pound or sixteen pound metal, or a howitzer of thirty-two pound. The whole *matériel* of the artillery is unsurpassed, perhaps unequalled by that of any other army. The defect is slowness of movement in everything; there is too much of the German element in the system; the horses are heavy German, strong in draught, and hardy, but slow. The rapidity of the British or French artillery movements could not be performed by the Sardinian. There are twenty field batteries in that arm of the service, each containing eight guns, of which two are served as flying artillery, and these in the field are most useful.

The light cavalry are armed with carbine and sword like our own, but they also carry pistols similar to our old "horse pistols," now disused. The heavy cavalry are also armed with carbine, pistols, and sword, but carry lances, contrary to our practice of arming with that weapon only the light cavalry. The light horse carry their carbines slung across the shoulder, the heavy, whose carbine is of shorter range, sling it across the saddle in front of the rider. The cavalry horses are nearly all German, and nearly all too heavy; the *island* of Sardinia furnishes a few, they are lighter and better adapted to light cavalry. The Sardinian rifles are very superior, it was upon their model the French Chasseurs de Vincennes were formed. The country is indebted to General la Marmora (not the war minister) for the organisation of these troops. "No light troops can excel the Bersaglieri for quickness, precision, and endurance, but they have not had such advantages in arms as the Chasseurs de Vincennes, though new rifles are now being made for them. The ten battalions are composed of four companies each." The infantry is divided into brigades of two regiments each; each regiment into four battalions; and each battalion into four companies. They are short, thickset men, resembling the Dutch in form, but not in countenance, and are far more active, hardy, and enduring. They are patient, laborious, and brave, and remarkable for strength. The transport and commissariat is imperfect, but both were improved when the army took the field in the Crimea.

The war was popular both with troops and people, and the Sardinian soldiers longed to fight side by side with the British, for whom they entertain a boundless respect. Such was the military state of the little kingdom which so boldly threw down the glove into the arena of war, forming a military connection with England and France. To this guarantee of

Sardinian earnestness, a treaty was added between her and Turkey on the 15th of March, in which the King of Sardinia declared his adhesion to the treaty of the 12th of March, 1854, by which England and France undertook to defend Turkey against Russia, and announced the intended embarkation of a Sardinian army to participate in the conflict. The sultan undertook to see the troops of his majesty of Savoy treated like those of England and France.

England hailed the alliance of Piedmont with enthusiasm, and engaged to find transports to conduct her levies to the seat of war. But it was not England only that regarded with admiration the spectacle of this third-rate kingdom coming forth so bravely to the contest of national independence.

The eyes and hearts of all who were free and all who were fettered and loved freedom were turned to Sardinia. This noble little nation rose above difficulties that might well be deemed insurmountable, and asserted its place, and that a high and honourable one among the nations. Its prince and people had of late years shown more courage, consistency and enlightened statesmanship than any other nation in continental Europe during the present century, if we except Norway. It is upon the tented field only that a nation may display its courage, although even there Piedmont, betrayed by its allies, and confronted by an overwhelming force, vindicated its old heroism in 1849. Some nations are characterised by physical courage which is constitutional in the race, while they are far removed from every noble aspiration, and destitute of all capacity for appreciating, even upon the field of battle, that order of courage which is inspired by the imagination and the heart—which springs at every generous impulse to dare even the impossible, and which, with a clear principle sustains the effort, the ardour, the passion, the sacrifice for which the occasion calls. Thus, the Russian soldier will walk in military column to a battery at his master's bidding, remain in square or battery under a crushing cannonade; but he knows nothing of the heroism of soldierhood of the truly brave—he can form no fellowship with chivalry, and has no sympathy for actions, the gallantry of which shows enthusiasm, principle, and love. But in the memories of old Piedmont what a true hero survives! How her valleys have replied to the music of religious fervour and ardent patriotism, as in them the old psalmody of the Vaudois—

"Sounded the dirge of the brave and the free,  
And echoed the heart with calamity wrung,"

there have never been feats of arms—no, not within the sacred circle of Palestine, that land of conflict and courage—superior to those which

have been achieved within the vales of Piedmont, upon her mountain slopes, and beyond their precincts, by the children of these hills and valleys, when freedom to worship God summoned their honour and their energy to the deed. While Spain, for which England shed so much blood and spent so much treasure, shrunk with her characteristic cowardice from even an expression of sympathy with the sister nations of Western Europe,—while Portugal, bound to England as her oldest ally, and whom, in case of any aggression upon her, we are bound by treaty to protect, skulked from the duty and obligation which fairly rested upon her, of garrisoning our military stations in the Mediterranean,—while even Northern Europe, having so much to gain by our alliance, and so much to apprehend from the continued encroachments of Russia, would not strike a blow nor man a gunboat in her own defence,—Sardinia signed the protest against invasion and plunder, which we, with our allies, have published to the world, and threw down her gauntlet beside ours against the gigantic champion of modern despotism.

While the admiration of Europe was directed to these events, and to the chief actors in them, there was also much gratulation at the indication given by these circumstances of the working of principles and feelings in the heart of Italian society, which were likely to produce still greater things for rejoicing and hope. Although Sardinia was in advance of Italy generally, yet her voice was that of the great majority of the Italian people. Lombardy burned to be free. At Milan, the city of the Iron Crown, there were hearts true and stern as that emblem, and who hailed what was done at Turin as the mariner beholds the star which guides his bark when the storm and the cloud are passing away. Florence was not a city of willing slaves; for the petty despot of Tuscany sits upon a throne built of Austrian bullets, and encircled by Austrian bayonets. The people of the Tuscan state neither sympathised with the native tyrant, nor the foreign masters to whom that tyrant was himself a slave. Naples, with her *lazzaroni*, her Swiss guards (volunteers from the cantons of the *Sonderbund*), the truest tools of royal oppression, is not a city of unaspiring bondsmen; her people did not forget the struggle of '48, nor the treachery which rebounded their yet heaving breasts, filled with the first fresh inspirations of liberty. All above the police agents and street vagabonds ghed to be free. Their mournful hope was, at some day the bright sun of their beloved Italy would "rise and give them light to die," liberty was not to be their inheritance. From the smouldering ruins of Brescia, where the bloody captain of despotism, the Austrian

O'Donnel, paid the penalty of his oppression, the chain was clanked by hands ready, at the first hour of hope, to bear the brand or wield the sword.

And Venice, fair queen of the Adriatic, though still sleeping in thy fetters, thy dream was of liberty! Beautiful captive! for thee, too, as for all Italy, there is hope. There is one prince beneath the azure skies of the classic realm who scorns to be chained to a pontiff's chair or a kaiser's throne. There is one free nation within the confines of long-lost but glorious Italy which has the opportunity, without which even the brave must stand in silence and in gloom. And Rome, although thou art not eternal, as thy parasites proclaim thee, thy people are worthy of a better destiny. While from thy half-buried temples, and from beneath the shadows of those broken columns which tell of a glory which cannot be revived, thou hearest the edicts of oppression, and lookest upon the blood of persecution, thy love of freedom is not quenched; for "one bleeding moment" thy sons were free, and used well their liberty, and again long for the hour when slaves may snap their manacles. Thy Romans are Romans still—the lineaments of their proud race linger on their manly countenance; sons of fathers who, as heroes, conquered the world, and as martyrs to a purer cause conquered death and torment, they only need the dawn of the "good time coming," the sound of the glad trumpet which shall soon speak to the nations that their time to be men has once more returned, and they will rather see the monuments of thy fame broken by bombardment, and piled up in the ramparts of popular defence, than linger among those monuments as shadows of what Romans were. Even the Roman, with his strength of will and still indomitable courage, may look to Piedmont as the schoolmaster of Italian liberty, as in the dark centuries of the middle ages Piedmont was a light to the nations. Great was the mission of the little kingdom of Sardinia. Countrymen of Cromwell and of Milton, who sympathised and protected the fathers of those who now inhabit a portion of that realm, welcome this new ally, and stand by her, although Austria fulminates and intrigues, until Piedmont is the centre of a wider dominion and the glory of a regenerated Italy.

Such were the hopes and feelings with which England and all free nations regarded the Sardinian enterprise, and this hope and these feelings were intensified when the expedition actually set sail for the land of contest. A considerable number of the officers departed before the bulk of the little army set sail. These officers embarked at Genoa during the month of March. Early in April a fleet of British steamers arrived at Genoa, but the

accommodation afforded by it only extended to about half the expeditionary army. The king, being desirous to see the whole of the troops assembled before any embarked, detained the transports, so that a fresh accession of vessels arrived, and the entire transport fleet became so large that the harbour of Genoa was not extensive enough for their accommodation, and some found shelter in Spezzio. It was on the 14th of April that Victor Emanuel reviewed his troops, and none that witnessed the interesting ceremonial can forget its impressiveness. It was looked upon as significant that the place of review was the plain of Marengo, immortal in history as the site of Napoleon's hardest fought and least likely victory over the Austrians. The troops were arranged in the form of a crescent; altars were erected for the benediction of the flags; a vast concourse assembled to witness the scene, and an amphitheatre of seats accommodated an immense number of the notabilities and gentry of the provinces now subject to the old dukedom of Savoy. The appearance of the king was welcomed by a loud shout from the great concourse of citizens and soldiers. He was attended by a *cortège* of the principal officers and nobility of his realm. As he passed each regiment, the band played the Sardinian national tune. Immediately by his side were the two brothers Marmora, one of whom had served him so well as minister of war, and had resigned his post to command the expeditionary force. It was the first time the king had made any public appearance since his overwhelming domestic afflictions had nearly borne him to the earth—wife, father, mother, and brothers, had all, since the fatal battle of Novara, and some of them recently, been carried to the tomb. Within three months the two dearest of all—his wife and mother—had been torn from him by him whom the old Latin poet tells us “knocks with equal foot at the palaces of the great and the cottages of the poor.” The Archbishop of Tortona appeared, to give the sanction of the church to the policy of the king. Mass was celebrated along the lines, the troops presenting arms, and the spectators uncovering. As soon as the religious ceremony terminated, the profound and solemn silence which rested upon the multitude was succeeded by the roar of cannon, and the huzzas of excited patriotism and loyalty, while, rising above all the sounds of enthusiasm, the fine military bands of the Piedmontese regiments could be heard pouring forth their martial strains. The king presented personally the flags to the regiments appointed to receive them, while he assured the officers in brief, pithy, and feeling addresses, that nothing but the stern necessities of the state prevented him from leading his army. As the personal courage of the king was well

known, and it was also well known how important his presence was in his kingdom, considering its relations to Austria, Rome, and the various Italian states, this assurance was received with loud acclamations of sympathy—the army and the people felt that his words were true. The close of this eventful day was attended by military and civil pageant, and every heart felt the glow of a patriotic fire destined, we trust, long to burn for the light and glory of Sardinia and of Italy.

The 23rd of April witnessed the departure of the first division of the expeditionary army. Seven thousand men, with all the necessary material of war, embarked. The embarkation was delayed by the defective state of the Sardinian commissariat, and a painful accident added to that delay. The Screw Steam-ship Company's vessel *Cræsus* sailed from Genoa on the 24th of April, with 400 men on board, and a heavy freight of provisions, having in tow a sailing transport loaded with guns, munitions, and stores. She had not been many hours at sea when fire was discovered in the hold, all efforts to extinguish which proved abortive. When taking to the boats the Sardinians, brave although they are in battle, did not show the steadiness and discipline which the English have always shown in like circumstances; a rush was made for the boats, some of which were soon upset, and many men perished. The soldiers of the expedition betrayed more superstitious feeling in connection with this accident than would have been expected among so free and gallant a people, and a feeling of depression fell upon the whole force.

Previous to the embarkation of the division, General Alfonsa Della Marmora, the commander-in-chief, delivered an address to the soldiers, which was received by them with pleasure, patriotic feeling, and military pride:—“We shall have before us a strong and powerful enemy; but by our side will stand brave armies, which have already consigned to history the celebrated names of Silistria, Alma, Balaklava, and Inkerman. We shall arrive in a few days at the seat of war, and vieing with our allies in courage, firmness, and discipline, we will endeavour to imitate the constancy of which they have given such heroic proofs. . . . A cruel and premature death has deprived us of a prince who was to guide us in that glorious enterprise. You followed him with alacrity in the fields of Lombardy, and admired him at the fatal battle of Novara. He expired, regretting his inability to lead you to victory. May the name of the Duke of Genoa remain engraved on our hearts. . . . Soldiers! let us swear not to disappoint those expectations, and pledge ourselves to demonstrate that an Italian army is worthy to co-operate in this gigantic struggle.”

Some of the officers had occasion to travel by way of Naples, where the authorities treated them with the most pointed incivilities. It did not need Austrian instigation to induce "King Bomba" to act in this spirit of mean and petty malevolence; but it was currently believed, and not without foundation, that these discourtesies received additional venom from the sting of that power. At Constantinople the Turkish government gave a generous reception to their new ally, and the French there made many demonstrations of goodwill and fraternity. At Balaklava and Kamiesch the displays of friendship on the part of English and French were very grateful to the contingent. There was a confidence in it felt by the allies, and the reception was such as the

brave meet from the brave. When they landed, they marched up the Balaklava valley by Kadikoi, and took up their position near the left of the French army. The British and French commanders soon perceived that in General Marmora they acquired an auxiliary of intimate practical acquaintance with all military detail, and scientific acquaintance with the theories of armies and of war. The personal appearance of the men, their picturesque uniform, their polite bearing, and their heartiness to the cause of the allies, soon won for them the respect, good feeling, and good opinion of the whole host. Their future history will be blended with the general narrative of the siege and its attendant actions.

## CHAPTER LXV.

### THE WAR IN ASIA DURING THE EARLY PART OF 1855.

"I am arm'd,  
And dangers are to me indifferent."—SHAKSPEARE. *Julius Cæsar.*

DURING the first months of 1855, Prince Bebutoff retained the chief command of the Russian armies in Asia, but as spring advanced that commission was consigned to a more skilful general named Mouravieff. The reputation of this officer was very considerable, he had the art of command, and all about him promptly respected his authority and revered him. M. Gallet de Kuttare, who was secretary to Prince Demidoff, calls him "the first of tacticians." In the war of the Caucasus Mouravieff distinguished himself greatly, and won the highest commendations from Prince Woronzoff. After making for himself a renown in the war with the Daghestans he returned to St. Petersburg, and was "the lion" of the hour. The Emperor Nicholas was desirous to test in some way the abilities of the great general, and accordingly he one day said to him (we quote a Vienna writer)—"As you play the professor in the Caucasus, I must judge for myself whether your pretensions are well founded. Take the command of a corps, and manœuvre against another which shall act under my directions. Do your best; for I do not intend to spare you." The manœuvres had hardly commenced, when the emperor lost sight of the corps opposed to him. Some hours passed, and no Mouravieff appeared, the imperial force retired towards the Neva; but unfortunately for the military reputation of the sovereign, the corps of his adversary was concealed behind some high ground close to the spot to which he had withdrawn. Mouravieff suddenly appeared, pushed forward a column which overpowered the czar from the gros of his corps, and eventually managed to get the latter be-

tween his artillery and the river. On seeing this, General Yermoloff, who officiated as *juge de camp*, galloped up to Mouravieff, and thus addressed him:—"I congratulate you, *mon cher*, on a victory which will prove to be a defeat." The sequel showed that Yermoloff knew his master. Mouravieff was under a cloud, and nothing more was heard of him until very recently, when he re-appeared on the scene as commander-in-chief of the separate corps in the Caucasus."

During the command of Mouravieff in Asia Minor, in 1855, the reputation of the Russian arms was greatly redeemed, and the moral influence of Russia in Asia effectually restored. The conduct of this general to the English and Turks was nobly generous, and he served the cause of Russia nearly as much by his conciliatory disposition and mild administration, as by the force of his sword and the skill of his arrangements. General Williams and his brave companions in arms, when the war had terminated, bore to this officer's genius, wisdom, humanity, and generosity, the strongest testimony.

During the month of January, Schamyl, the bold chief of the mountains, was not idle. In the snow-covered fortresses of his hills he was safe from Russian surprise, but the land below was not secure from the sudden swoops of the chief, who repeatedly descended upon the plains, seizing convoys, or sweeping off small detachments with the sword. *The Danube* related an instance of this which occurred in the month of January, when the climate is very severe in Georgia. The Russian general (Rede) had charge of the Daghestan prisoners

in Tiflis, but sent them for better security into the interior of Georgia; Schamyl hearing of this from his scouts, intercepted the escort, slew the Russian infantry (Georgian militia), dispersed the cavalry, and brought back the redeemed prisoners in triumph to their highland homes. The accounts from the whole of that district were, however, very conflicting and unreliable. Intelligence of Schamyl's feats travelled by way of Trebizond and Constantinople, and were doubtless often exaggerated. Thus, a letter in the *Porta foglia Maltiese*, gave a very detailed account of the plan of a spring campaign resolved upon by Schamyl, but which was not put into execution, if it ever existed in the prophet warrior's mind:—"Travellers arriving from the Caucasus state that the famous Naib Mohammed Emir Effendi is in Abesch, and keeping up a very active correspondence with Schamyl. The plan of the two mountain chiefs for the next campaign will be to invade the Crimea on the side of Anapa and the Sea of Azoff, and thus to co-operate with the allies in driving the armies of the czar from the peninsula."

The Russian accounts came to Western Europe through the St. Petersburg press, and there were no records in its columns of surprises, defeats, cutting off convoys, &c., such as were received by way of Constantinople. On the contrary, according to the *St. Petersburg Journal*, and other organs of the Russian government, the winter in the Caucasus was one of unprecedented activity by the Russians, and surprise and loss by the Circassians. The following is a specimen of these narratives from the *Invalide Russe*:—"On the 16th of January, Baron Nicolay surrounded the strongest fort held by the Tchetchan, called Schonaih-Capon, and took it by storm. This fort is described as the Gibraltar of the Caucasus, and its capture is represented as the heaviest blow yet dealt at the power of Schamyl."

According to accounts from Constantinople subsequent to this announcement, the Russians experienced a defeat in the attempt, and incurred a heavy slaughter; according to intelligence from Trebizond direct, no such attack had ever been made, and the story in the *Invalide Russe* was merely to keep up the warlike spirit in the Russian capital. Such are the difficulties of determining the course of events in the Caucasus during that period. In like manner stories were put into circulation concerning the progress of the Russians in Central Asia, which would lead Western Europe to suppose that, in spite of all her reverses, Russia could still muster large armies for Asiatic enterprises; and that, while the English withered away before Sebastopol, Russian legions were in triumphant march towards Hindostan! The bombastic announcements to

this effect of the Russian journals, and the pro-Russian journals in other parts of Europe, were amusing throughout the spring and summer of 1855. There was no doubt, however, that the intrigues in Central Asia which Russia had conducted the previous year, and the menacing attitude assumed towards Persia, continued. At the beginning of January, letters received in England from respectable sources at Trebizond, alleged that "the Russians have razed the forts of Bayazid, and were closely watching the frontier of Persia." They further stated, "The heavy falls of snow which have taken place near Kars render it very improbable that hostilities can be resumed until the spring. The Russian garrisons of Schamkoi and Anapa will be, it is said, marched to the Crimea." According to these authorities also, the Russians were marching in force on Khiva, and were using every effort to shake the neutrality of Persia. The result of such communications was resumed discussions in England, and in the English press, as to the practicability of the Russians ever reaching India, and how far a successful issue of the Asiatic campaign of 1855 would prepare the races of central Asia to be Russia's auxiliaries in such an enterprise. "What," it was asked, "are the frontiers of Russia in Asia to be? The Araxes? or the Persian Gulf? or the river Indus?" Elaborate articles appeared in some of our periodicals upon the neutralisation of the Caspian Sea, the protection of Khiva, the re-establishment of British *prestige* in Persia, the subsidising of Schamyl, and the exclusion of Muscovite influence from Kurdistan. It was natural that the latter topic should command attention, for the insurrection there was kept up during the winter and spring by Russian emissaries. On the 18th of January, the Kurdish chief was represented as at the head of 1500 dashing cavalry, and a motley band of infantry, threatening Sachogeziere, and preventing the passage of couriers who traverse Mesopotamia to Constantinople and Bagdad. There could be no doubt that in disturbing Turkish power in Kurdistan, Russia supposed she was clearing for herself the high road to Bagdad. The Russians had officered Kurdish regiments, and obtained detachments of Spahis, once the flower of the Turkish cavalry.

Mr. Richard F. Burton, of the Bombay army, a distinguished oriental traveller, gives the following humorous but instructive summary of the history of these discussions concerning Russian aggression in Asia for a number of years, and which in 1855 were renewed with such fervour in England:—"Early in the present century two great military routes according to Sir J. McDonald, connected Russia with Northern India. The line of least resistance, if we may trust Eldred Pottinger

through Mushed, Herat, Cabul, and Candahar, to Peshawur. The other, passing by Bokhara, Balkh, and the Hindoo Kush, was deemed impracticable until General Harlan's 'aropamisan march with artillery in 1838. This subject engrossed the attention of Stirling, Conolly, Burnes, and Abbott, Mouravieff, Goltz, Zimmermann, and a host of others. Captain Grover complained that the British public believed Bokhara to be in Persia. But in 1836, Mr. M'Neill went to Teheran as minister, and Mr. David Urquhart became secretary of embassy at Constantinople, while Mr. B. Fraser remained as oriental reporter in Downing Street. The Eastern question was written up, skirmishers were thrown out in the daily papers, the monthlies swept the field of serried files, cavalry and artillery succeeded in pamphlets and reports, the heavy quarterlies acted as support, and a huge portfolio the 'Progress and Present Position of Russia in the East.' M'Neill, Chesney, and their followers proved the northern apophthegm—'The road to the English lies through Persia.' They showed that an invasion of India was not only possible but probable. To the frigid apathy of 1828 succeeded the fever fit of 1838, and relapses of xiphophobia through the five subsequent years. Presently the question of Indian invasion via Persia, chameleon-like, changed its colour. In 1839, Perofsky advanced upon Khiva, 'to lengthen in that part of Asia,' said his master's manifesto, 'the lawful influence to which Russia has a right.' *Honneur oblige!* At the same time, England prepared to push a spider's web beyond the Hindoo Kush, for the purpose of entangling Dost Mahommed. It is noted that Baron Brunow then remarked to J. Hobhouse,—'If we go on at this rate, John, the Cossack and the Sepoy will soon meet upon the banks of the Oxus;' and that the president replied with spirit, 'Very probably, baron, but, however much I should regret the collision, I should have no fear of the result.'

During January, February, and March there was skirmishing in the neighbourhood of Barmah, and in one instance a body of Georgian militia were suddenly fallen upon by a detachment of Turkish cavalry from the latter place, and put to the sword.

The chief interest of the contest in Asia is, the British mind, associated with Kars and Erzerum. During the latter part of the winter Colonel Williams and the chief of the medical staff remained at Erzerum, in frequent conference with Consul Brant and the pasha of that province, and busy organising and arranging the opening of the campaign in spring. Teesdale, Colonel Williams' aide-de-camp, during this same period at Kars, in con-

stant communication with the muschir and correspondence with his own chief. The exertions of Mr. Teesdale were very great to secure supplies and effect organisation in the destitute and disorderly garrison. The objects to which Colonel Williams addressed himself were chiefly—the supplies of food to the two garrisons (Kars and Erzerum), the acquisition of military depots, the organisation and discipline of the troops, and arrangements for hospital supplies—as by far the largest portion of the Turks who perished in 1854 were lost for want of medical attendance, appliances, and care. The importance of this last point, so sadly neglected by Lord de Redcliffe on the Bosphorus, and Lord Raglan in the Crimea, was never for a moment lost sight of by Colonel Williams, or his active chief of the medical staff, Dr. Sandwith. More than a year afterwards, when the war was over, Colonel Williams (having acquired higher military rank) was invited to take the chair at an examination of the medical students of the London University, when he showed how strong was his impression of the necessity of judicious medical arrangements for the welfare, efficiency, and success of an army. He delivered on that occasion a remarkable speech, from which the following is extracted:—"He said his reason for taking the chair on this occasion was that he should be enabled to say a few words to his young friends around him, as well those who had received prizes as those who had not, in reference to one of their fellow-students, Dr. Sandwith, who accompanied him during the whole of the recent struggle in Asia Minor, whose zeal and virtues he hoped they would emulate, and when they arrived at his age he trusted they would be held in the same estimation by the British public. It had been hinted that he (General Williams) might bear some testimony to the value and efficacy of the medical profession, from his experience as a soldier in a remote region, and under circumstances with which, he did not doubt, they were all more or less familiar. When he went into Armenia he found the poor Turkish soldiers, amounting to some 400 or 500, stretched on straw, in the most wretched state of filth and degradation, and without comfort or consolation of any kind during sickness, or while suffering from wounds received in battle; but Dr. Sandwith, notwithstanding that he himself was suffering at the same time under a most severe illness, by his zeal and ingenuity completely changed the condition of the hospitals, and when he (General Williams) left, he saw the poor invalid soldiers laid upon clean beds, instead of straw, and surrounded by every comfort that humanity or medical skill could dictate; and, instead of lying on the field of battle after being wounded, by the same tact

and consideration on the part of Dr. Sandwith, ambulances and mules were provided, and every other thing necessary for the accommodation and comfort of the wounded soldier. He (General Williams) would hold that gentleman up to his young friends around him as a pattern, and hoped most sincerely that they would imitate his example. There was another very distinguished member of this hospital with the army in the East, Dr. Parkes, and, although he was not personally known to that gentleman, he had heard from various sources of his great worth from those who had witnessed his efforts, and who esteemed him for his virtues as a medical man. He (General Williams) begged to offer his very sincere congratulations to the young men to whom he had that day distributed medals, which he trusted would operate as an additional incitement to exertion in attaining skill and knowledge in their profession, and be regarded by them as the foundation of their future fame. Those, on the other hand, who had been unsuccessful he counselled to persevere, in the hope that on a future occasion they would be among the competitors who bore away the rewards of merit."

In a former chapter, when recording the events which occurred in Asia in 1854, a correspondence among several great notabilities—Colonel Williams, Lord Clarendon, Lord Raglan, Lord de Redcliffe, Consul Brant, &c.—was given, illustrating the general condition of Turkish interests. In January and February, 1855, the correspondence continued, and was still unsatisfactory; but it is unnecessary to print the voluminous epistles that were interchanged, having already sufficiently shown the spirit in which the whole affair of despatches was conducted. The ambassador saw that the "ferik," as Colonel Williams had now become, was a power; that the government and public at home would support him; that further opposition on his part was hopeless; and that no coldness or neglect would be allowed: still he continued to do nothing for Williams or the army.

The Kurdish insurrection, incited by Russian agents, was quelled early in the spring by the firm conduct of the British commissioner. In February, Vassif Pasha was appointed grand muschir of the army of Kars. Lord de Redcliffe had stated to Lord Clarendon, when the latter urged a change of muschirs, that such changes in Turkey were only from one form of demerit to another; that corruption so prevailed there was no prospect of promoting by such changes the welfare of the army, or the success of any enterprise. This opinion was exemplified in the appointment of Vassif, for although an honest man, he had no knowledge of military affairs. Like the English general in the Crimea, he had never commanded any

large body of men previous to his appointment to the high, responsible, and difficult task of commander-in-chief of an army. Dr. Sandwith describes him as having no more experience of military affairs than a Fleet Street shopkeeper, but this is an exaggeration, and the doctor sometimes sacrifices accuracy to the affectation of an off-hand style of writing. Vassif was a soldier, but his military knowledge had not been gleaned or tested in war, and he had none of the requisites for a great command. The pasha yielded to the firmly-expressed demand of the English commissioner to Shukri Pash, Hussein Pasha, and Ahmed Pasha, to be tried for peculation at Constantinople. So now a procedure struck terror into the hearts of the corrupt pashas, which nearly paralysed the hatred and revenge. Still, throughout January and February, the obstacles raised at Constantinople to Colonel Williams' proceedings severely impeded his usefulness; and at last he wrote to Lord Clarendon, informing him that it was his conviction Rizza Pasha, the minister of foreign affairs, really desired to ruin the army of Asia. Rumours were extended that the wish was not confined to Rizza; that the British embassy was very conversant with Rizza's secrets, and a great deal too lenient to its motives. Several of the pashas at Kars became attached to the commissioner, professing to admire his boldness—at all events they adhered to him in his attempts to correct disorders and root out peculation. Vassif, Tahir, and Kerim, were almost as zealous reformers, to all appearances, as Colonel Williams or Mr. Teesdale. Kerim was a grey-bearded, round, soldierly-looking man, brave as a lion; and was curious to see him with the youthful Teesdale, in close conference about the various reforms in progress. The intrepid old chief did nothing without the opinion of his young friend, to whom he closely attached himself.

When the snows began partially to break up throughout the theatre of approaching strife, the state of the Turkish army and garrisons was still wretched, notwithstanding the labours of Captain Teesdale at Kars, and of Williams and Sandwith at Erzerum. The central government utterly neglected the army of Armenia, and the allied generals in the Crimea had too much work around them, and miseries too numerous and appalling to contend with. Besides, the ambassador at Constantinople was a great man, and it was his proper province to look to such matters. For two years up to the end of February, 1855, the Turkish soldiers quartered in Armenia had no pay; their equipments were worn out, and they were often obliged to mount sentry barefooted in the snow. Their clothes could be no longer distinguished as military uniforms, being tattered and discoloured;

large portion of them were afflicted with curvy, and many suffered from dysentery even in the winter. Dr. Sandwith attributed this to their ill-ventilated huts, long confinement within them in the severe weather, and the want of nutritious food. By the end of February 10,000 deserters were reported, and these did their best to induce the other soldiers to desert. On one occasion a whole battalion revolted, and insulted their officers, to which they were driven by the latter having robbed them of their food and apparel—with this they upbraided them while refusing obedience; yet it does not appear that either the charge was investigated, or the revolt punished.

Of all departments of the service the least fit to open the campaign of 1855 was the cavalry; they looked like beggars on horseback; the worst cab horses that refuse the coaxing, and are invincible to the lash of the London coachman, are dashing-looking animals compared to the chargers which were mounted by the forlorn-looking horsemen of Kars. In spite of the moral authority and vigilance of Williams and Teesdale the pashas carried on systematic plunder on a large scale, so as to destroy the market both for provisions and horses, although for both, Kars and Erzerum ought to be amongst the best marts in the world.

In March three other British officers arrived at Erzerum—Lieutenant-colonel Lake, Major Apherts, and Captain Thompson, all of whom proved themselves worthy of their country and their leader. Captain Teesdale was then ordered to join the commissioner at Erzerum, while Lake and Thompson were dispatched to Kars. General Williams and his aide-de-camp then vigorously applied themselves to the fortification of the garrison. Late in March the snow thawed; and in the beginning of April the warm genial sun of spring began to soothe the country with light and beauty, and to remove, by its genial influence, some of the sufferings of the hapless soldiery of the sultan. General Williams and Captain Teesdale were then oppressed with labour beyond the meanest soldier: from dawn to sunset they were occupied fortifying the heights around the city.

General Williams called together the city council, and requested the bishops and other dignitaries of the Armenian and Greek churches to be present. The general then addressed them, warning them that Mouravieff, at the head of a powerful army, was at Gumri, and could soon assail the Turkish positions. The council did not seem apprehensive of this, they supposed that Mouravieff would do as Kutsoff had done—act upon the defensive; and if he was minded otherwise, why Allah was great, and so was the prophet. General Williams exhorted them to the duty of self-defence and exertion, whatever might be the

prospect of supernatural assistance which they cherished. Having complimented the courage of the true Turks, he turned to the Christians, and expressed his reliance upon them also, assuring them that the Porte had ceded to them equal rights, that they were now citizens of the great empire, and bound in honour to study and to promote its greatness:—the general wisely, however, invited them to try the spade first rather than the sword, and commended to them at that period the milder glory of digging at the batteries, however important it might become for them afterwards to meet the enemy with instruments of defence more martial. The Christians were morally electrified by the appeal; the archbishop rose and said with gravity and deep earnestness:—“O English pasha, we are your sacrifice! we will work—dig—die for you! Are we no longer dogs—no longer Giaours, although Christians? Then, as fellow-citizens, we will fight like free men!” This address was still more effective than the general’s; the Turks heard it with amazement, and considered it an additional reason for exclaiming that “Allah was great,” a piece of philosophy with which all difficulties were resolved. The greatest wonder of all to the Turkish mind was the severe labour to which General Williams addicted himself. Was he not a pasha? and was it meet that a pasha should work? Pipes, coffee, and the harem, were for pashas—work for the poor; but the English seemed to think that the higher they rose in rank the more incumbent it was upon them to work—this was incomprehensible to the Turks, poor or rich, pashas or slaves.

The government at Constantinople had ordered a levy of horses throughout the Turkish Asiatic provinces; the horses were brought forth, but the pashas stole all the barley—so the poor animals arrived lean, lank, spiritless, and often too much exhausted to recover; many of them had to be shot. When, however, it was discovered that the general was willing to give his guarantee for the payment, the country people brought good draught animals for sale—the word of the English pasha was sufficient; in their own pashas they had no confidence, they knew that they were liars and rogues. Mr. Churchill worked hard to lay up stores of rice and corn, and was able to forward considerable quantities to Kars. General Williams, finding that in one form or other everything was plundered which came through the custody of the pashas, became commissary-general himself, and laboured with the same indefatigable industry and observant intelligence in this as in every other department. The general wrote to the British ambassador at Constantinople, craving the removal of the incompetent and dishonest; his despatches

were no longer treated with disrespect, but little practical benefit ever followed. Dr. Sandwith says that but for the encouragement afforded by Lord Clarendon, General Williams, with all his vigour and courage, must have given up his labours in despair.

A speech of General Williams' has been given on a previous page, showing the importance of medical supervision to an army, and in commendation of Dr. Sandwith. The doctor has himself published an account of his difficulties and successes in his department. The following is an interesting picture of his position, and the state of things with which he was more immediately concerned:—"In the month of February, 1855, I had been appointed, at the instance of General Williams, inspector of the hospitals; and, as a brief account of this department of the army may not be uninteresting, I shall endeavour to describe my duties, and state a few collateral circumstances springing out of those duties. In the first place, my staff consisted of about fifty persons, including physicians, surgeons, and apothecaries. These were divided into three classes: the *hekims*, or physicians; the *jerachs*, or surgeons; and the *ezadjees*, or apothecaries. The physicians (*hekims*) were of various nations, French, Hungarians, Poles, and Italians; but the greater part were pure Turks, or Osmanlis, who had been educated at the Galata Serai, or medical school of Constantinople. The hekims were considered the most educated part of our force: the best of them, by far, were the Turks; the Europeans were, for the most part, ignorant pretenders—perfect Sangrados—without diplomas, or with very doubtful ones. I now found myself at the head of a body of officers who were, in truth, the only educated part of the army. Some of the Turkish physicians who had been instructed in Constantinople could speak French fairly. . . . Some few of the Turkish hekims were very fair operators, and were well grounded in the principles of their profession. They were, moreover, most modest and anxious for that improvement which increased facilities, and an enlarged intercourse with more advanced nations, cannot fail to bring within their reach. The surgeons, or *jerachs*, were of quite another class. These were ignorant barbers, who professed to bleed, draw teeth, and dress wounds, but whose surgical knowledge went no further. Nevertheless, among these were many docile and tractable, who, with fitting opportunities, would soon far surpass the old class of Turkish practitioners. The medical department was, in truth, at a very low ebb; less on account of the inefficiency of the staff than because they were, as usual in that land of plots, split up into numerous factions, and intriguing against each other. Moreover, they had been habitually insubordinate to their former chief, and enjoyed

little, if any, consideration from the superior military officers among their own countrymen."

Dr. Sandwith found croton oil sufficient to purge the whole population of Armenia, and linseed sent from Constantinople, at ten times its intrinsic value, which was a product of Armenia. He found sufficient chloroform for 100,000 operations! All these things were supplied by a medical purveyor, who poisoned the sultan's troops by wholesale for a profit which he shared with certain officials about the Porte. The doctor began to form a pharmacopœia for the Turkish army, but found an excellent one which had been thrown aside by the drug purveyor, and had been neglected, and at last forgotten. Dr. Sandwith again thus writes:—"No ambulances, or any means of conveying the wounded, existed indeed, a sort of deathlike inactivity pervaded this department, for the commanders-in-chief had invariably turned a deaf ear to the suggestions and representations of its former inspector general. My appointment was useful, inasmuch as it brought the matter within the sphere of General Williams' influence, who was the terror of pashas, large and small; whose visit would at any time cause a cold perspiration to start from the great officials, and inspire a singular and galvanic simulation of activity in themselves and their myrmidons. I represented to the general that an ambulance corps for the field was essential: ambulances were made, horses and mules were purchased. I ordered such and such individuals to different out-stations, and my authority was at once backed by the terrible English pasha: and although I cannot deny that very serious difficulties did meet me, some of which were insurmountable, yet most of these disappeared under his energy and will. My aim in the management of the medical corps was not to remodel and reconstruct on my own plan, but to build upon old foundations, and to ensure proper discipline and order. I moreover did my utmost to utilize the resources of the country, and render myself independent of Constantinople; since the time required to obtain necessaries from thence was generally extended over months, and the articles received were of the worst description. To General Williams' iron will and determination in all matters of hygiene in the camp must be attributed in a great measure the happy exemption; while to Salish Bey and Yilt Agha, names unknown beyond the scene of their labours, and to several other earnest working men, whose noble qualities shone brighter and brighter as the siege advanced, would I here record my gratitude and admiration."

From the time that General Williams obtained a full recognition of his authority from Constantinople, his power over the pasha

feriks, beys, &c., considerably increased, and he was enabled to make more way in the progress of reform. It was not until the 25th of February that he was invested with full Turkish rank, and he soon proved to the other officers of the sultan that his was not to be worn as mere nominal honour.

During the spring Colonel Lake corresponded with the general, giving him ample information of the state of things at Kars, and the colonel's representations were forwarded to Constantinople and to London, but no help came. On the 20th of April Colonel Lake wrote—"There are only fifteen days' provision for the troops now in garrison." A few days after he wrote again to the same effect, pressing urgently for relief. On receipt of these letters General Williams thus addressed Lord Clarendon:—"Neither land carriage for the army at Kars nor the provisions for that force are to be had in sufficient quantities, and I have this day received intelligence from Colonel Lake drawing my attention to these points, and echoing the prayers I have in vain addressed during the winter to Constantinople." The general then assures Lord Clarendon that he had used every effort to get sufficient food in the neighbourhood, and requests that directions be given to the governors of Diarbekir, Kharoot, and the more remote provinces, to send food, especially grain. Lord Clarendon forwarded these requisitions to the English ambassador, but no good result followed. On the first

of May, before the heat of summer, so oppressive in those regions, supervened, and the inconvenience occasioned by it in transmitting supplies would be experienced, General Williams addressed a strong appeal to Lord Stratford de Redcliffe, it being the third of a similar nature between the first of April and that date:—"Several weeks ago I addressed your lordship on the necessity of my having authority to take an active part in the purchase of provisions for this army; but, although Lord Panmure has expressed his decided sentiments on this vital point, I have not received a line in allusion to it from your excellency, and I have to state that this army cannot be supplied with provision without I can control those who have this matter in their hands. Colonel Lake informs me that the provision has dwindled down to ten or twelve days' supply, and I have not authority to oblige the medjlis to expedite food to our force, which I may soon have to designate as a starving army." If Lord Stratford de Redcliffe acted upon this urgent appeal in any way, there is no record of it in the Blue-books, nor anywhere else accessible to the historian. On the 5th of May, General Williams had sent from Erzerum a considerable supply, and so did the general work, that by the 3rd of June there were four months' provision in the place. To pursue the subject of Kars further in this chapter would be unnecessarily to anticipate events elsewhere to be recorded.

## CHAPTER LXVI.

### DIPLOMACY FROM THE BEGINNING OF 1855 TO THE MEETING OF THE VIENNA CONFERENCE.

"Everybody is mystified, and dreadingly does his best to mystify his neighbour. It must be allowed also that everybody succeeds pretty unsatisfactorily."—ROVING ENGLISHMAN.

WHILE the early months of 1855 were signalised by preparations for war on the part of the belligerent powers, yet each hoped to jolt the other by the various agencies of diplomacy. Austria was the most active in pressing on peace negotiations. There was a certain dignity to be maintained by the powers actually at war that fettered them in any degree they might entertain to stretch out the hand of amity; but Austria had not yet drawn the sword, was unwilling to draw it, and was therefore anxious to save her own honour, by making it appear that recourse to arms on her part was not necessary, and that the time had arrived when those engaged in hostilities might abandon them. She, however, made great show of military preparation in the beginning of 1855. A correspondent from Vienna thus notices them, and the motives of Austria in restraining her armies from any warlike overt act:—"The public has recently heard so much

of the armaments of Russia that some information respecting the Austrian forces may not be out of place. The whole of the fourth army will be concentrated in Galicia by the end of January, but the different corps will be posted in such positions that they may without difficulty be directed to any given point. According to a reliable estimate, some 180,000 men, with 50,000 or 60,000 horses, are now in the Bukovina and Galicia. The Vienna correspondent of the *Augsburg Gazette* writes that not long since 45,000 men were at Cracow, 45,000 at Lemberg, 30,000 in the country lying between those two cities, and about 70,000 in East Galicia and the Bukovina, but such intelligence deserves no great credit, as only the persons employed in the emperor's military chancellerie can speak positively on such matters. The third army, in Transylvania and the eastern part of Hungary, consists of about 130,000 men, while the corps in

Wallachia and Moldavia may be about 50,000 strong. It is supposed the whole active army under the command of Baron Hess may consist of 360,000 men and some 100,000 horses, but the estimate is probably somewhat exaggerated. There never was an army better supplied with all the necessaries of war than the Austrian, and it is well that it is so. The political world, and your Vienna correspondent with it, has often loudly complained that Austria has held back so long, but it must not be forgotten that she has between 1300 and 1400 miles of frontier touching on Russia, and seven fortresses to besiege if she carries the war into the enemy's country."

In keeping with these preparations was the tone adopted by the Austrian ambassador at Constantinople. Baron Bruck gave a diplomatic dinner there, at which he proposed the toast, "The Sultan," and added, "and to the Turkish troops—the conquerors of the Russians, the defenders of their country against Muscovite ambition. With them and their allies Austria will gladly draw the sword for the rights of Turkey, of Europe, and of justice. Russia is not to be feared; she will find that she has suffered defeat, whatever may be the final settlement of the present difficulties."

These words were carried through Europe, and read everywhere with avidity. It was felt that the turning point of the war was the junction of Austria with the allies, and her great military preparations and resources, viewed in connection with this bold speech, greatly excited all Europe. In Russia alone did it appear to take no effect—there Austria was better understood than anywhere else, even in Prussia. The czar had accurately measured the motives and means of the *kasir*. Austria had her own reasons for speaking through Baron Bruck in this defiant way against Russia, and expressing herself so cordially to the Ottoman Porte. The Danubian provinces had not only grown weary of Austrian armies, but so intolerant of their presence that the people would have risen and attacked them had there been the slightest hope that valour could achieve victory. The state of things was ripening, which a few weeks later was thus described:—"A very extraordinary event has taken place at Bucharest. Mr. Colquhoun, the British consul, was seated quietly in his cabinet, when four men, with masked visages, rushed into the room, and laid upon his table a variety of documents, after which they rapidly withdrew. These documents, on examination, proved to be revelations seriously implicating Prince Stirbey, who is said to have been in correspondence with Russia; and other papers revealed the unprincipled atrocities committed by the Austrians during their occupation of the Danubian Principalities. These documents

referred to persons who, it was alleged, could substantiate all the accusations brought against Stirbey and the Austrians. Unfortunately, such proofs were wanting, as the facts are patent to all who are at all conversant with Danubian affairs."

This state of matters in "the provinces" gave much uneasiness in England, and led to many remonstrances at the Porte, that Austria anxious to hold these provinces in an iron grasp thought it good policy to flatter Turkey, and placate Great Britain. The Porte too had, as was believed, resolved upon dismissing the Prince of Wallachia, Stirbey, and appointing Prince Ghika Karmakam as governor in his place. It was also rumoured in Constantinople and in London, that the governor of Moldavia had received from the Porte an official notification of the approaching arrival of French troops. On these subjects great reserve was practised by the Turkish and French governments, and it was observed so closely towards Baron Bruck to give him considerable uneasiness, and cause some foreboding that measures were deliberated which it was known would be unpalatable to his government.

The forward conduct of the gallant little kingdom of Piedmont made Austria at once jealous and apprehensive. She was jealous of her moral power in Europe, and apprehensive lest Sardinia should leave the Western powers under so much obligation to her, as to be a guarantee for her independence against an Austro-Lombard invasion, or any persecution or annoyance which she might be disposed to offer to a kingdom which she hates so much. Prussia was also attempting to open up separate negotiations with the cabinets of London and Paris, the drift of which was not thoroughly comprehended at Vienna; and Austria, always jealous of Prussia, was anxious to forestall her in the supposed offers of some kind of alliance, which, through M. Von Usedom, she was supposed to make. By calculations of this nature the court of Vienna was solely influenced, and there was no sincerity in its warlike words.

Prussia, unwilling to enter into the treaty between Austria and the Western powers, called the treaty of December, sought to accomplish a separate one with France, or failing that, with France and England, which would leave her position to Austria more loose, and not bind her so stringently to take up arms against Russia, as it appeared to her the treaty of the 2nd of December bound the southern German power.

The mission of Von Usedom failed. According to the *Wurtemberg Staate Anzeiger* (an official paper), the French reply to the Prussian despatch proposing a separate treaty struck to the heart the Prussian monarch, and greatly disconcerted his court and cabinet. The French

minister gave M. de Manteuffel, the Prussian minister, to understand, that any despatch or mission having for its object a separate treaty was no longer seasonable. The French foreign minister inquired, in an indignant form of expression, why new negotiations should be opened to effect what could without further loss of time be accomplished, if Prussia intended any military co-operation with the West. M. Drouyn de Lhuys was of opinion that if France consented to enter into a second treaty, in order to attain one and the same end proposed to be accomplished by that of the 2nd of December, the world would be justified in coming to the conclusion that she sought to create a schism in Germany. France, therefore, declined to enter into any separate treaty, seeing that Prussia had been invited earnestly to join in that of the 2nd of December. This put an end to the projects of Von Usedom, at all events for that time, and left Prussia "to chew the cud of bitter disappointment." Her real object was to create a schism between the Western powers, and between the Western powers and Austria, and to play the game of Russia among all the powers of the coalition against her. Austria was not sincere to the allies, and Prussia knew that, but she also knew that neither was Austria sincere to her nor to Russia. The Prussian king might, when he reflected upon the czar's dealings with the czar, and the efforts to entangle Prussia in connections and treaties for Austria's interest solely, address him in the language of Byron's betrayed lover—

"Thou false to him, thou fiend to me!"

Prussia, finding that the Western powers were not to be deceived, showed the most bitter feeling, especially to England; and, indeed, while M. Von Usedom was speaking honeyed words in the ears of M. Drouyn de Lhuys, at Paris, means were taken to woo the smaller German states into sympathies hostile to the Western alliance. It was by her influence that the minor German states forbid the exportation of horses, as it was understood England wished to purchase largely for her augmented cavalry forces. Prohibitions of foreign enlistment were intended to withdraw from England the means of recruiting her foreign legions. Russia was intensely anxious to carry out this object all through northern and central Germany. The governor of the province of Posen issued the following notification:—The criminal code of Prussia prescribes that whoever enlists a Prussian into the military service of foreign states, or introduces him to their recruiting agents, likewise whoever intentionally seduces a Prussian soldier to desert, or knowingly assists his desertion, will be punished with from three months' to three

years' imprisonment. Any attempt at the above will be visited with a similar punishment. As offices are about to be opened in the Netherlands and free towns, for the purpose of enlisting men into foreign service, I take this opportunity of bringing the above penal law to mind, and call upon all the police authorities of the province immediately to arrest any recruiting agent, and hand him over to the state prosecutor, to take from him his papers, and if he is a foreigner, to take measures for his being sent over the frontier after undergoing his punishment. I require to be informed of each separate instance."

In these measures the Prussian king was supported by his cabinet, army, aristocracy, merchants, and by the middle classes of his people to a large extent. The masses sympathised with England, and many Prussians enlisted in her legions in spite of opposition and menace. A Berlin journal declared at this time that the young men of the city flocked to the British embassy anxious to enrol themselves in the English service, while the Russian ambassador could not secure accessions to the medical staff of the Russian army, although the Prussian government gave every encouragement to medical gentlemen to take service in that army. This was not only a proof of the general feeling of the *people* in favour of the allies, but a specimen of the kind of neutrality preserved throughout the war by that power. The policy of Prussia was described with admirable precision in a letter from a Prussian gentleman, in Berlin, at this juncture:—"No doubt the dominant party here is well disposed to 'old' England, but it is better disposed to young Russia. No doubt it entertains the most just respect for her wise and patriotic queen; but it entertains infinitely greater admiration, mingled with a due quantum of fear, for the 'emperor.' (No doubt, also, it would be rejoiced to form a triple alliance with the aforesaid old England; but then the trifolium must be made up with Russia as the centre leaf. This would save Sebastopol, Cronstadt, the Russian navy, and Russian supremacy in every coloured sea, and in every land throughout Europe. This would attach Germany to the Russo-Prussian car. This would neutralise Austria; and then a fig for France, and perhaps a 'third march to Paris,' to re-proclaim the elder Bourbons. All this, and more, exists in the dreams of those who pull the strings of Prussian policy, and will continue so until their hold of the strings be cut asunder."

While Prussia was endeavouring to form a separate treaty with France, or with France and England, she was also coquetting with Austria to draw that power away from the alliance, or to induce it to form conventions with her—

self which would neutralise the treaties with the West against Russia. It will be recollected by the reader that on the 20th of April, 1854, a convention had been entered into between Austria and Prussia, binding them mutually to arm in case of their respective territories being endangered by attack from any of the belligerents. The Austrian government called upon Prussia to fulfil this obligation, as, by virtue of the treaty of December the 2nd with France and England, Austria would soon be at war with Russia. To this the Prussian foreign minister replied. The following is the despatch *in extenso*, transmitted by that functionary to Count Arnim, the Prussian minister at the court of Vienna:—

Jan. 5, 1855.

YOUR excellency will find enclosed a copy of a note addressed on the 24th of December, 1854, to Count Esterhazy, in which the imperial Austrian cabinet more closely defines the military measures which, in its opinion, Prussia and the other German governments ought to take in virtue of the treaty of April 20, and of the additional article of the 26th of November. Count Buol very justly remarks that it is necessary the contending parties should come to an understanding in respect to the exigency which presents itself, and on which the efficacy of the conditional military obligations into which Prussia has entered depends. As your excellency will readily conceive, his majesty has from the same point of view uninterruptedly directed his attention to the course of events, and long before this matter was brought forward, in the way done in the despatch of December 24, his majesty had conscientiously taken into consideration the obligations which he had taken on himself. It does not appear to be my duty now to enter more fully into the dispositions made by his majesty the king—dispositions arising as well from a regard to the interest of his country and people as from the undeviating attention which he has paid to the gravity of the circumstances—in order with noiseless progress to effect an increased preparation for war and a more speedy development of force. By the measures taken, larger bodies of troops can be ready for action within a much shorter period than that conditionally appointed in the Military Convention of April 20, and we might therefore suppose that we should in some degree be able to tranquillise Count Buol in regard to the heavy blow of the Russian military force on the Austrian Empire, could we share his opinion that Russia entertained the idea of proceeding aggressively.

However, after having dispassionately examined the general state of affairs, we should be obliged to do violence to our own conviction before we could arrive at the conclusion that Russia will assume the offensive if she is not attacked. I have more than once had occasion to direct your excellency to make such confidential communications to the imperial Austrian cabinet as in our opinion would most positively refute any such supposition. Besides, our intelligence respecting the movements of the Russian troops is by no means of a nature to justify the apprehensions alluded to. I attach the greater importance to what has above been said, as it appears to be the object of a part of the press to lead public opinion astray in this matter. Indeed, the recent conduct of Russia, in respect to the endeavours made to bring about negotiations for peace, is of such a nature that it would be difficult for a dispassionate observer not to remark her sincere wish to come to an understanding. Russia has unreservedly accepted the four points as they were proposed to her. After the conclusion of the treaty of December 2, she not only did not retract her acceptance, but she gave a fresh instance of her readiness to conclude a peace by granting fuller powers to Prince Gortschakoff. His majesty the king has the satisfactory consciousness of having always so employed his personal and diplomatic influence at St. Petersburg, that the imperial Russian cabinet should declare itself ready to

treat on the basis of the four points, although this basis of peace goes beyond that which the two contracting powers (Prussia and Austria) had considered the object of their alliance when the treaty of April 20 was concluded. A confidential conference has already been held in order more nearly to specify the four points. We do not know the result of that conference, and because we do not know it, and as long as we do not know it, we shall consider it an imperative duty to take the simple and unmistakable conditions of the treaty as our inviolable rule of action, and keep the circle of our obligations free from any extension which we cannot clearly overlook. I respect to the military matters, which are pointed out to us as duties, we shall hold fast to the leading and fundamental principles of the April treaty, which also find their expression at the close of the military convention inasmuch as the object of mutual assistance is stated to be the warding off of an attack. Even the obligation which Prussia took on herself in the additional article of November 26, 1854, bears this defensive character, although they confessedly go beyond the fundamental principles of the treaty of April. They (the obligations) are, besides inseparably connected with the pre-supposition of a mutual endeavour to procure the acceptance of the four points. It is self-evident that there cannot be any mutual commotion as long as Prussia has no share in the interpretation of those points, and exercises no influence on them. The right to such participation, in as far as regards definitive arrangements which, though made with the declared intention of maintaining the balance of power in Europe, change the whole of the international relations of Europe, and seem to modify treaties which Prussia has also signed—this privilege Prussia does not find on her being a sharer in any stipulation connected with the present Eastern complication, but on her quality of a great European power, which, by its own well-earned right, has participated in the treaties that regulate the legal state of things in Europe. The assurance need hardly be given that his majesty the king will, with the utmost tenacity, cling to this view of things, and in order to maintain it, should it be in danger of being disputed, he will not shrink from sacrifices and dangers which his faithful subjects will share in with their well-tested resolution, and with the whole force and perseverance which arise from true patriotism. It is least of all necessary to give such an assurance to his majesty the Emperor Francis Joseph, the illustrious relative and ally of the king. Neither need it be given to the sovereigns and the leading statesmen of the other states, as, in spite of divergent views and interests, Prussia reckons with confidence on the just appreciation of her claims, and is willing to procure their recognition (*anerkenntnis*) of the same by means of explanation and mutual agreement (*vereinbarung*).

From the foregoing remarks on the principles which actuate the king in respect to his own military attitude, your excellency will readily perceive that his most gracious majesty does not consider himself called on to take the initiative in the German Confederation in respect to an immediate arrangement for the preparation of war of a separate contingent. The draught which was specially recommended by us and Austria to the Bund as a firm basis is positively established, both by the proposition of the committee and by the resolution which was taken at the Bund on the 9th, but Prussia, from consideration for her other German allies, believes herself bound not formally to return to the same, as by so doing she would anticipate the duties of the military commission. On the other hand, it is self-understood that the royal military plenipotentiary will always be furnished with the necessary instructions for demanding the activity of the military commission on the basis of that part of the Federal Constitution which makes provision for war, and also for bringing the matter to a conclusion in a proper way. By thus acting according to the Federal Constitution, those objections will be best removed which, as we confess, present themselves to the proposals of the Austrian cabinet, as intimated in its despatch of the 24th of the last month.

Your excellency will be pleased to make to Count Buol a written communication of the present instructions.

Accept, &c.

MANTEUFFEL

This excited, according to some accounts, great indignation at the court of Vienna; others pretended to know that these angry appearances were simulated, and that the Austrian court was really glad to have a pretext for holding back, in the infidelity of Prussia to her engagements. Be this as it may, the despatch was met by the following rejoinder from Count Buol, the Austrian minister:—

*Vienna, Jan. 14.*

AFTER the resolution taken by the German Confederation on the 9th of December, we considered it our bounden duty directly confidentially to confer with the royal court of Prussia on the subject of the practical result to be derived from the decision of the Bund.

The instructions which were given to our minister at Berlin to this effect, your — has learned by my communication of the 26th of December. It is evident from the reply now received, of which I have the honour to enclose a copy, that the views of the cabinets of Vienna and Berlin do not coincide in some essential points.

The whole Confederation acknowledged the threatening state of affairs; but Prussia questions the correctness of the decision of the Bund, on the ground of the reiterated assurance of Russia—for which there is no guarantee—that she will confine herself to the defence of her own territory. We neither undervalue such a promise given by a power involved in the war, nor the effect which it may possibly have on its limitation; but no binding, no securing quality which could exercise any positive influence on the execution of the resolution taken by the German Confederation can be attributed, either by the German governments or by Austria, to a promise which has been accepted by no one. If proof were necessary that Russia herself does not believe that it (the promise) can be made subservient to the necessities of her military position, it could at this very moment be found in the conduct of Russia towards Turkey on the right bank of the Danube.

Even if we do not refuse to share in the hopes which Europe attaches to the concessions recently made by Russia at the conference held on the 7th, the object to be attained is still too distant—the opinions as to the practical accomplishment and the application of the four preliminary points may differ in such manifold ways, and the chances of war may exercise so much influence—for the imperial court to yield to the hope that in the preliminary results which have already been obtained, it has in hand a sure guarantee that peace will really be restored.

We appeal to the good sense of the German governments, and demand whether they can deceive themselves by fancying that the situation of affairs has until now lost anything of that threatening character which the Bund itself recognised. His majesty the emperor, our illustrious master, considers it necessary to remain in a state of complete preparation for all contingencies, and the approaching negotiations for peace will therefore, as long as the certainty of a favourable result is wanting, neither exercise any influence on the military measures of Austria, nor can they, in the opinion of the emperor, be allowed to interfere with the engagements entered into with his majesty's German allies for the attainment of common (mutual) objects. Such an attitude can but serve the interests of peace, and increase the chances of a favourable issue to the negotiations.

It is our most firm conviction that our German allies ought also now to place the whole of Germany in a position calculated to command respect. It appears to us that the interests of the German nation and its princes urgently require that Germany should, as well as ourselves, be sufficiently prepared for all possible contingencies. Whatever expression may in future be given to the resolutions of the Bund in its quality of a political power, we must again propose that whatever is requisite for the development of its military force may be cared for without delay. You will readily conceive that, entertaining such opinions, we could not otherwise reply to the communication of the Prussian cabinet respecting the

armaments of Russia and the German Bund than by those instructions to Count Esterhazy of which a copy is annexed.

The imperial presidial minister to the Bund will accordingly propose to the respective committees that a motion be made in the Diet that at least one-half of the several contingents shall be made *mobile*, unless the opinion should prevail that it would be more advisable to place the whole of the federal army in readiness for operations. The question whether, in the first case, two combined army corps or one complete corps should be formed, which the second half of the contingent would have to follow in case of need, as well as all other matters of a like nature, ought to be made the subject of consultations which should be held as speedily as possible, and of resolutions on the part of the authorities of the Bund.

The election of a federal commander-in-chief will also be necessary, in order that the union of the different parts of the federal army may, agreeably to the act of confederation, be united under one command. We are, therefore, of opinion that the Diet should immediately occupy itself with this matter, and take the necessary steps for electing a commander-in-chief of the military forces of the Bund, while in the several states the necessary measures should be taken for placing the federal corps prepared for war at the disposal of the commander who is to be elected.

Your — will communicate these instructions, as well as the documents which accompany them, to the courts of —, &c., and request of them to have the kindness to make known to us the resolutions to which this communication may give rise, as also the instructions which they may be pleased to give to their representatives at Frankfort, in order that they may co-operate in the accomplishment of the important duty which the organ (the Bund) of the will of the whole of Germany has to fulfil.

Accept the assurance of my perfect esteem.

COUNT BUOL.

Baron Manteuffel's despatch to Vienna was communicated to the cabinets of London and Paris; the result was a despatch to the Prussian government, from the French minister for foreign affairs, refusing to Prussia the right to be represented in the approaching conference at Vienna, unless she joined loyally in the treaty of the 2nd of December. The reply of the French government was peremptory and explicit, and produced in Prussia and in all Germany the greatest excitement. It is as follows:—

THE cabinet of Paris establishes that Prussia explains her refusal to mobilise her army:—1st, because she does not believe in the imminence of an attack upon Austria by Russia; 2ndly, because the support which she would have to give ought to be preceded by an *entente* between the contracting parties upon the feasibility of carrying out the eventual conventions. Prussia adds, moreover, that there can be the less objection to suspend the execution thereof, because if it was really necessary to place the Prussian army on a war footing, it could be done within the period fixed upon. The Prussian government, therefore, is resolved not to change the character of its obligations. The additional article may have extended them, but it has not modified their nature, and Prussia only engaged herself towards Austria to a *defensive* alliance. The two great German powers, moreover, ought to unite their efforts to obtain the adhesion of Russia to the four points specified in the notes of the 8th of August, and it would be necessary for the realisation of that community of action, that Prussia herself should participate in the definition of those first bases of a future peace.

As regards the acts the object of which would be either to consolidate the balance of power in Europe, or to modify existing treaties, and which Prussia had signed, her right to participate therein does not depend upon this or that accidental stipulation; it is due to the rank she

holds in the world. King Frederick William, to maintain it, will not be deterred by dangers and sacrifices, which the nation would share with as much devotion and energy as patriotism.

Another despatch from M. de Manteuffel (the above is the analysis of that of the 5th of January) brings out in more prominent relief the principal points where Prussia establishes that, the more she intrenches herself behind the strict interpretation of her engagements by the resistance to the pretension made to extend them against her will, the more, on the contrary, will she be disposed to enlarge them by means of negotiation, provided her position and her dignity as a great power are respected.

The cabinet of Paris beholds in the *exposé* given in M. de Manteuffel's despatches two distinct orders of ideas:—the one special to the relations of the Prussian government with the court of Vienna; the other concerning the *ensemble* of its position in Europe. On the first point, France is resolved not to interfere in questions which exclusively concern the German Confederation; on the second, the cabinet of Paris is willing to explain itself.

The cabinet of Paris does not pretend to contest to Prussia the rank she holds. Nay more, during the last two years it has often reminded her of the obligations of that high rank of which she is so justly proud. But it feels it a duty to observe that the quality of great power is permanent—it cannot be cast off when it implies onerous duties, and be resumed when it only offers advantages. Privileges and duties of this importance are absolutely correlative. The one is inseparable from the other. It is not to be supposed that England and Austria take a different view of the case from France. But so much is certain—that France will never allow that a power which, from its own free will, took no part in the great events which are taking place in the world, shall afterwards maintain a claim to regulate the consequences thereof. The advantages arising from the war are only for the belligerent powers. And the advantages of the present (essentially moral advantages) consist in the right of participation, in the interests of Europe, in the regulations of peace. Prussia has not done anything as yet for that object. She has refused to proclaim her neutrality. That resolution does her honour. But, in reality, on what side is she? If hostilities continue, will she be with or against the allied powers? This is what no one can tell.

Can Prussia reproach France for her confidence in Austria? The lines of conduct have been so different. By a movement which she declares purely a strategic one, Russia evacuates the principalities; Prussia immediately declares herself satisfied, while Austria, on the very morrow of the day upon which that evacuation is communicated to her, exchanges the notes of the 8th of August with France and England. On the 28th of November, Prince Gortschakoff announces the adhesion of his court to the four points; Prussia congratulates herself on having obtained the object of her efforts, while Austria signs the treaty of alliance of the 2nd of December with the Western powers. On the 7th of January, Russia accepts the interpretation of the four guarantees; Prussia, fancying the success of her policy complete, rejects the appreciation made by Austria of the treaty of the 20th of April, and refuses to call out her contingent; while Austria spontaneously hastens to recognise the case provided for by Art. 5 of the treaty of the 2nd of December is realised, that the re-establishment of peace is not assured, and offers to combine her plans of military operations with the allied powers.

Is there a wish of maintaining that Austria finds in the alliance of the 2nd of December advantages not shared by Prussia? What are they? This observation of Prussia doubtless does not imply an assent; but yet, as a proposition is made to conclude a *Prussian* treaty, beside the *Austrian* treaty, it would be well to explain the exact meaning of the proposition. Was that the object of M. d'Usedom's mission to London? That mission was wrapped up in so much mystery that its real object is not yet known in Paris. But the more endeavours were made to conceal it, the more were made to discover it. All that has been discovered is, that Prussia exerted all her efforts to prevent the allies from waging the war upon the vulnerable point of the enemy, and to prevent the passage of their troops through Germany. What did she offer as

a compensation? To place a *corps d'armée* on the Polish frontier—that is to say, that Prussia with one hand would turn aside the sword of the allied powers, and with the other cover Russia as with a shield. Might one not be authorised to suppose that M. d'Usedom had different treaties in his portfolio, and took out by mistake the wrong one at London—that which was to have been produced at St. Petersburg?

The French government has not the intention, you may be assured, of hurting the feelings of Prussia. It expresses itself thus in a loyal and sincere expression (*épanchement*); and if it desires its language to be heard at Berlin it is in the hope to see Prussia at least give up a position in which, if it had been happy enough to see its efforts crowned with success, she would not have been to-day.

The attention of all Europe was directed to the sittings of the German Diet, and its resolutions to arm on the 8th of February were accepted in such different lights by all the powers concerned, as to form a very curious feature in the aspect of the times, strikingly illustrating the language with which this chapter is headed. When the resolutions of the German Diet came under the consideration of the Austrian cabinet, it ordered a diplomatic circular to its agents at the different German courts, which excited extended discussion in all the cabinets of Germany, especially in that of Prussia, and led to much diplomatic turmoil between the greater and lesser German states, and between the two leading German powers themselves.

Our previous communications do not permit your excellency to doubt that the resolution of the Diet of the 8th, by which all the principal contingents of the federal army are to be ready on the first appeal to enter upon a campaign within a delay of fifteen days, has been received with satisfaction by the government of the emperor. In fact, we see in the resolution of the Diet an event of great importance, if only for the reason that the schism which the question of military preparations threatened to cause in Germany has been fortunately avoided for the moment. Considered in itself, however, this resolution does not appear to us to arise logically from the reflections caused by the present situation of things, or to respond to the indispensable necessity of keeping the federal army completely prepared to take up a strategic position without loss of time. It is true that we have not been able to admit the motives on which the united committees based the proposition which has been converted into a resolution. It will be understood that on our part we could not present our accord with the Western powers in the light of a demonstration directed at the same time against the two belligerent parties; but the confederation itself, which on this question is no longer placed exclusively on the ground of the federal act, but is also placed on that of the offensive and defensive alliance of the 20th of April, and of the resolutions subsequently attached thereto, has in our opinion assumed an attitude much too decided to be accepted as the motive of the measure at present resolved on, as far as regards the generally menacing situation of European affairs. In the meantime we believe that we may expect that these motives, insufficient in our eyes will be corrected by the situation *de facto* and *de jure* of the question, and especially by the nature of the relation with the powers with which we are allied by a solemn treaty. Your excellency will express yourself in a general way as regards the resolution of the Diet on the indications which we have just given. The immediate and as energetic as possible execution of that resolution is now a question of honour for Germany, and we have no doubt that all the governments of the Confederation will endeavour, with the same zeal, to carry into execution the measure resolved on, and that they will do all in their power that the military constitution of Germany

shall, under these circumstances, respond to its object and to the mission of a great federal power. As far as concerns Austria, the emperor our august sovereign has deigned to order that in the delay of fifteen days, given to the different governments to notify the measures which they shall have taken, the statement of all the troops placed on a war footing, and under the superior command of Field-marshal Baron von Hess, shall be communicated to the Diet, and that a proof will be furnished that the preparations for war made by Austria will far exceed what has been demanded by the Diet. It is scarcely necessary for us to formally express on this subject our conviction that the complete inadmissibility of the proposition made during the vote by the representative of Prussia, not supported by any other government, to the effect that the placing of troops on a war footing must take place within the limits of the federal territory, has not escaped the appreciation of the German governments, the said proposition completely losing sight of the fact that the measure now adopted by the Diet is only a consequence of previous resolutions, according to which the common defence with which the Confederation has charged itself, in consideration of the dangers which threaten German interests, is not only to protect the German federal territory, but also all the territory of Austria and of Prussia, and even our position in the Principalities. There will be no impropriety in your excellency communicating this despatch confidentially to the government.

Accept, &amp;c.,

BUL.

In the sittings of the Diet on the 22nd of February these questions occupied that assembly most painfully. A letter dated Frankfort, 9th of March, in the *Nuremberg Correspondent*, says:—

“We are enabled to give almost textually the discussion which took place between the representatives of the two great German powers in the sitting of the Diet of the 22nd of February. M. de Prokesch (the Austrian representative) declared that he was charged by his government to submit to the Diet the state of the troops assembled and ready to take the field to cover the territories placed under the common protection of the confederation, in virtue of the resolutions of the 24th of July and 9th of December, 1854.

“M. de Bismarck (the Prussian representative) replied:—‘The declaration we have just heard from the imperial representative appears to rest upon the supposition that the principal object of the contingents which are to be placed upon a war footing, in virtue of the resolution of the 8th of February, should be to cover the territories which have been placed under the protection of a common defence by treaties to which the confederation acceded by decisions of the 24th of July and the 9th of December last. The Prussian representative does not think that that supposition is in accordance with the contents of the resolution of the 8th of February, nor with the debates which preceded it. He feels himself, on the contrary, obliged to observe, that if an ulterior interpretation of the resolution was necessary, and if the substance was to be found in the motives that dictated it, it would be seen in those very motives that the circumstances that would render necessary the defensive measures provided for by the resolution of the 9th of De-

cember, 1854, had not yet taken place, but that it was the obligation imposed upon the Diet by the second article of the federal pact to watch over the internal and external safety of Germany, the independence and inviolability of German states, which induced the Diet to make preparations to meet that obligation, and that the forces of the confederation might be brought to bear on any quarter.’

“M. Prokesch von Osten replied to this:—

‘The government of the emperor considers doubtless the resolution of the 8th of February, which converted into a resolution the propositions submitted to the Diet by the united committees on the Eastern question, and in execution of the resolution of the Diet of the 9th of December, as an ulterior development of the resolutions of the Diet of the 24th of July and 9th of December. As the representative of Prussia takes another view of the case, it is the more important that Austria should not allow any doubt to exist as to its view of the matter. It will be for the Diet to judge whether it thinks it necessary to reply to the question as to which view is the right one.

“‘The representative of Austria, moreover, thinks it right to observe that not the motives of a proposition of the committees, but that it is the propositions themselves, which form the object of the deliberations, and that in voting a proposition it does not necessarily follow that the motives are accepted. Austria, moreover, thought fit to declare in her vote that she did not appropriate the motives of the committees. As regards the necessity of proceeding to the fulfilment of the defensive obligations contracted by the resolution of the Diet of the 9th of December not being proved according to the mooted of the committees, it does not follow that that necessity does not exist; and certainly it was not the wish of the committees to affirm that fact, as they themselves declared that they were not yet in a position to form a judgment on the question as to whether hopes favourable to the re-establishment of peace could be founded upon to pending negotiations.”’

The effect upon Austria of the Russian manifesto and general call to arms was to increase still more her armaments, and to drive her still nearer to the Western alliance. Baron von Hess, and Generals Letung and Crawford were directed to report upon the military situation; they recommended the augmentation of the Austrian army to 800,000 men. But indications of financial inability to sustain such a tremendous force greatly disturbed the cabinet, and rendered it really solicitous to bring about a peace. The German *Journal of Frankfort* gave a very minute account of the interview of the Russian minister with the Austrian em-

peror, arising out of these new phases of the complication:—"Prince Gortschakoff on Tuesday last demanded an audience from the emperor for the purpose of giving, in the name of the Emperor of Russia, explanations on the new manifesto of the czar. The prince declared that the sovereign had been constrained to take that step by the extension, more and more considerable, of the coalition against Russia, and that the calling out of the whole forces of the empire was only a measure of defence necessitated by the warlike preparations of the West. This measure, added Prince Gortschakoff, was not intended to exercise any influence on the conferences for peace, the czar being disposed now, as before, to treat with the Western powers on the basis of the four points. The Emperor Francis Joseph did not, we are assured, consider this explanation satisfactory, and he frankly stated to Prince Gortschakoff that the proceeding of the czar inspired him with less confidence, from the fact that up to the present moment no other power has had recourse to measures of such gravity. In a word, the manifesto of the Emperor of Russia has produced a very unfavourable impression in our official circles; and it is asserted that our emperor will not leave without replying to this demonstration of the czar."

Hitherto in the progress of the war Russia had no sincere friend but the King of Prussia, and, even irrespective of his monarchical bigotry and dread of ultra-liberalism, his friendship for the czar was disinterested. In her dealings with Turkey, Austria, and the West, Russia had been diplomatically defeated, as well as defeated in the field, except so far as she succeeded in influencing the Aberdeen ministry to doubt her intention to do more than make a demonstration in the provinces. The *Oesterreichische Zeitung*, after the interview between Prince Gortschakoff and the Austrian emperor, observed:—"Russia still holds her own where the contest is one of arms, but her diplomatic defeats have been severe, and it is upon that field she is after all most likely to be beaten. Her moral power is everywhere so entirely broken, that there is not a state in the world which dare declare that it approves of her policy." Although the above was written by a gentleman well informed in German politics, and in Russian policy so far as it is apprehended in Germany, yet it held in too low an estimate the dexterity of the Russian diplomatists, for, notwithstanding her previous diplomatic defeats and the friendlessness of Russia in Europe—except in Germany north of Vienna—she continued to gain her ends in the intrigues which then everywhere prevailed. Finding Austria armed along her whole frontier, and the German states about to call out their federal contingents, she made overtures of

peace so plausible, and in a spirit apparently so conciliatory, that the Vienna conference was entered upon with most sanguine expectations that peace would follow its deliberations.

The British and French ministers at Vienna were authorised to negotiate a peace which it was professed there and at Berlin, and even in London, that Nicholas was willing, with new born moderation, to make. There was, however, good reason to believe that his real object was to throw Austria off her guard, while the Cossacks attempted to make another Sinope at Tultscha—an attempt, which, although defeated by the bravery of the Turks, enabled their aggressors to make considerable slaughter, and to keep up the prestige of the Russian army for alertness and courage. To produce a lulling effect upon Austrian military preparation, and sow discord in Germany by the help of Prussia, was another object to be gained by renewed negotiations. This proved successful. Austria began to talk confidently of peace, and had gone so far as to inform the Thuringian princes that they need not mobilise their contingents as Russia was sincere. Meanwhile Russia redoubled her exertions. From Bessarabia and Southern Russia troops were hurried to the Crimea, which Russia dare not move thither, if she had not made sure of sheathing the sword of Austria by the peace pretences of Prince Gortschakoff. It could hardly be said that in the negotiations which attended the opening months of the year 1855, Russia experienced diplomatic defeat, whatever her previous reverses in this way.

The Western powers made considerable exertions to draw Sweden and Denmark into the alliance. The ministerial press of Stockholm laboured incessantly to show the disadvantage of such a course, while the popular feeling, as in the previous year, was altogether in its favour. The influence of the King of Prussia in the Swedish court was very great, and it prevailed to recommend a temporising policy, and a real neutrality. The Swedish merchants, profiting by the contraband trade, sustained by their influence the ministerial policy. Denmark resolved also upon neutrality, and the king, professing to fear the coercion of the Western powers, ordered a new conscription, and strengthened his small but well-ordered fleet and army.

Amidst this hubbub of diplomatic rumours, negotiations, hurrying to and fro of ambassadors and agents, and general arming of the nations, a publication issued from the Belgian press, professedly written by a French general officer, which took all Europe by surprise, and produced everywhere a great sensation. This work was attributed to Prince Napoleon Buonaparte, cousin of the Emperor of the French. It will be seen by referring to the account

given of the dispatch of the army of the East to its destination, that Prince Napoleon commanded a division. The prince is a quasi-republican, and disapproved, it is alleged, of the *coup d'état*. When in command of his division in Turkey he preserved a severe reserve, and held little intercourse with Marshal St. Arnaud, whom he considered incompetent to the great task he had undertaken. The prince was invalided in the Crimea, and having remained in Constantinople without any material improvement of his health for some time, he was ordered home by the emperor. On his arrival he was the centre of a clique at Paris from which emanated the most contemptuous reflections upon the management of the expedition, and the policy of the war—everything which went wrong being attributed to the self-will and inordinate self-esteem of the emperor, and the incompetency of the generals selected by him to carry out his schemes. At last the pamphlet appeared which produced such a painful impression throughout Europe. It was entitled, *De la Conduite de la Guerre d'Orient — Expédition de Crimée — Mémoire Adressé au Gouvernement S. M. l'Empereur des Français, par un Officier Général*. It contained critiques upon the management of the war, which were as just as they were severe; but it also contained many things which, even if written by a prince of the imperial house, proved that he was not fully acquainted with the facts or the policy arraigned. The policy of the French emperor towards Austria is thus described:—"It was the hope of securing the alliance of Austria, after having secured that of England—it was the desire of forming a coalition of sovereigns against the czar, instead of forming a coalition of peoples against despotism, which misled that artful and circum-spect policy, and which destroyed in one single campaign the forces of the Western powers. Austria could not but be a hindrance, and her alliance an insurmountable obstacle. Austria saw an inevitable danger in the continuation of French uniforms on the Hungarian frontiers, and at a short distance from Poland. That continuation might give hopes to the Hungarian national party, and provoke insurrections powerful enough to shake to its roots the scarcely planted tree of the Austrian monarchy. Already the Hungarian and Polish emigrants were on the move; they formed legions destined to join the allied powers, and to combat the czar, in whom they saw the impersonation of absolutism and tyranny. In the heart of the French army there were Hungarian and Polish refugees. Now, what Austria was anxious to avoid, at any cost, was the appearance of a French flag on those Hungarian frontiers; it was the agitation which might result from that, in provinces ever ready to rebel. Her

adhesion was on that condition, and on that condition, as we have already stated, it could not but be unacceptable. And yet it was accepted. The Emperor Napoleon III. was peculiarly anxious to secure the alliance of Austria; he had particularly at heart to make himself acknowledged and accepted, as a peer and an ally, by the last descendant of the ancient house of Hapsburg."

The treaty between Turkey and Austria signed on the 20th of June, 1854, it will be recollected, enabled the latter to occupy the Moldo-Wallachian territory, and this treaty was cunningly completed by the Austrian minister at Constantinople without, it was alleged, so much as consulting the ambassadors of France and England. According to "the general officer" (who writes of Prince Napoleon as though it was not his hand who held the pen), Marshal St. Arnaud was the real author of the treaty, acting under the secret instructions of the Emperor Napoleon, and that when the army heard of the treaty they were filled with indignation, Bosquet loudly exclaiming, "treason!" At Varna the delay is attributed to the secret influence of Austria, which became so obvious that Prince Napoleon on that ground demanded his recall, which the emperor refused. It appears that "the general officer" forgot that the want of transport, and the prevailing sickness, rendered it quite impossible to move the French army upon the Danube. One division which entered the Dobrudscha was decimated by disease, and hardly a man returned to Varna in health. Still, as the reader may find in the pages of this History recording the transactions there, the inaction of the allies was suspicious, transport might have been—ought to have been provided; and unless some diplomatic end was to have been arrived at, it is unaccountable that two great nations should leave, in summer, armies of no great magnitude, unable to proceed even a few days' march for want of transport. Allowing Silistria to remain so long unrelieved, will ever throw a dark shade of suspicion over the cabinets of the Western powers.

The Crimean expedition was, according to this author, wholly the design of the French emperor, in order to gratify the wish of Austria to remove the forces of France from a field of action by which Poland and Hungary might be excited to revolt. If this be true, the emperor proved himself more far-sighted than his censor, for he succeeded in his enterprise, and conquered a peace by it; while, in selecting such a field of action, he removed all pretext for a junction of the forces of Germany with those of the czar, which would have prolonged the war, and have cost multitudes of lives and many more millions sterling. "The general officer" thus accounts for the expedi-

tion:—"It was in the private apartment at the Tuileries that the idea of that expedition originated: it was conceived in solitude. The emperor, bent over a map, and with eye intent, and a compass in his hand, spent long hours in elaborating the plan, and he sent it to Constantinople entirely written with his own hand, and without having previously communicated it to anybody. The emperor distrusted the observations which Marshal Vaillant would not have failed to proffer, and which he would have listened to only with a sacrifice of judgment."

When the counsel of war at Varna, convened by St. Arnaud, discussed the expedition to the Crimea, the votes of the members were equally divided. Against the expedition were Prince Napoleon and the Duke of Cambridge, Admirals Hamelin and Dundas—the duke being the least opposed. On the other side were St. Arnaud and Canrobert only—but Lord Raglan and Bosquet gave affirmative votes, declaring that it was contrary to their own convictions. These were the timid counsels to which the emperor referred in his celebrated letter to the widow of Marshal St. Arnaud. Lord Raglan and Bosquet were both supposed to be influenced by the urgency of the French marshal, who pleaded the desire and authority of the emperor. Bosquet, suspected of disloyalty, was perhaps actuated by an unwillingness to oppose the emperor's wish, having accepted honours and command at his hands. The decision was referred back to the two cabinets, who were swayed by the desire of Austria to remove French uniforms from the paths to Poland and Hungary. The Crimean expedition sailed, and Austria was conciliated. Such is substantially the story of the French "general officer." According to this writer, also, the army of Omar Pasha was left unsupplied in Bulgaria by Rizza Pasha (through whom the army of Asia was destroyed, and Kars lost), under the influence of Austria; and if the allegations of proof be true, it would appear that the whole policy of Austria at Constantinople was to play upon the corruption of the pashas to leave armies unsupplied, in order to get her own armies thrust upon the provinces; while her influence in Paris was wielded to flatter the dynastic pride of the emperor, and work upon his fear of democracy, to induce him to direct his armies from the provinces of the Danube for the reasons already detailed.

It is of course impossible to confute the statements of the "general officer," when he professes to reveal what were diplomatic secrets, until he revealed them; but if his accuracy in these respects is to be tested by his accounts of the actions in the Crimea, little reliance is to be placed upon any of his revelations. Let the following suffice to illustrate this: in describing

the battle of the Alma he is anxious to detract from the glory of the victory, in order to inveigle the more successfully against the policy of the emperor. He thus describes it:—"On the left the English made their preparations but slowly. They were not in line till ten o'clock when they advanced with their habitual coolness. But they were attacked by cavalry, crushed by the fire of artillery on the heights and compelled to withdraw behind the Alma to re-form their ranks. The position was becoming critical for them, and consequently for us. But the Russians, threatened in front by the Napoleon division, and a brigade of the Forey division, in flank by the divisions of Bosquet and Canrobert, felt a hesitation that decided the day. The Zouaves threw themselves on the Russians with the bayonet. At the same time the divisions of Sir de Lacy Evans and General Brown *re-appeared* on the other side of the Alma, and attacked the Russians in front. The Russian cavalry fell back under the fire of Cathcart's division, and before a brilliant charge of the cavalry, under *Major-general* Lord Lucan."

This whole paragraph is a tissue of inaccuracy and misstatement. The English were not crushed by artillery on the heights; they were not charged by cavalry; they never retired behind the Alma, nor recrossed it again, but as victors; the Russian cavalry did not fall back under a fire of Cathcart's division, nor did the Earl of Lucan and the British cavalry make any charge, brilliant or otherwise. Yet these are only a portion of the errors contained in this absurd passage. It must be no matter of surprise if, with the reputed authorship of the emperor's cousin, the pamphlet obtained a vast circulation, notwithstanding errors so gross as these here exposed. The prince denied any connection with it, but he was not believed, and the production is attributed to his intimacy with the leaders of "the nationalities." There are persons who think that, as in England it was found convenient, in reference to patronage, for the interests of certain noble conservative families, that some noisy member should be a whig, and for whig families of powerful pretensions that a conservative truant should be numbered among the circle—so, in case of changes in France, it is alleged that a democratic as well as an anti-democratic member might subserve the imperial family interests. There are no proofs to sustain such a surmise; but as these speculations largely influence the feelings of men, and shape their political conduct, some account of them is necessary in a narrative of the political and diplomatic intrigues of the period.

As the spring advanced, the plenipotentiaries, for the Vienna conference, to decide on terms of

peace, were definitively nominated; and public attention in England was directed to the antecedents of Lord John Russell, while discussing his fitness for the post. By a careful reference to these, Lord John did not appear to be a man on whom the country might rely in such an emergency. His feelings against Russian policy were not at all so strong as his parliamentary war speeches would lead persons to suppose. His correspondence with Sir Hamilton Seymour establishes this. On the 9th of February, 1853, when minister for foreign affairs, he directed the English ambassador at St. Petersburg to read a despatch to Count Nesselrode, of which the following are extracts:—"Upon the whole, then, her majesty's government are persuaded that no course of policy can be adopted more wise, more disinterested, more beneficial to Europe, than that which his imperial majesty has so long followed, and which will render his name more illustrious than that of the most famous sovereigns who have sought immortality by unprovoked conquest and ephemeral glory." . . . "The more the Turkish government adopts the rules of impartial law and equal administration, the less will the Emperor of Russia find it necessary to apply that exceptional protection which his imperial majesty has found so burthensome and inconvenient, though no doubt prescribed by duty and sanctioned by treaty."

In this trimming, un-English, and unstatesmanlike communication, Lord John recognises the course long followed by the czar as one calculated to shed lustre on the name of his imperial majesty! Was not Lord John aware that the whole career of the man had been one of dissimulation and blood—the invasion of his neighbours' territory, and the suppression of the rights and liberties of nations? Had Lord John never heard of the Caucasus; of the treaty of Adrianople; of the suppression of Polish independence; of the robbery of Persia; of the invasion of Khiva, &c.? Was there ever a prince who "so long followed" a course of more signal rapine and injustice? And why was all this so tolerable to Lord John? Because the great emperor was the patron of order—as monarchical and aristocratical dominion in Europe is pleasantly entitled. Lord John recognises the protection of the Greek Christians as sanctioned by treaty: he ought to have known the treaties between the two powers better than to make such a concession. The foreign minister of England should at least be conversant with that description of lore. His lordship concedes, as a *fait accompli*, that right of protection which the emperor sought to exercise, as prescribed by duty, and therefore maintained although "burthensome" and "inconvenient!" How the wily Nesselrode must have laughed in his sleeve at the simple English

foreign secretary, unless he regarded him as "looking through his fingers," as the Russians say when they wish to describe a thing as very sly and mock innocent. Whether these paragraphs were penned in sincerity or hypocrisy, their writer was not a fit man to deal with the questions pending at Vienna, nor with the power whose minister he thus addressed, unless indeed he had very much improved since he held the seals of the British Foreign-office. How far that was the case will be seen in another chapter.

The most curious episode in the diplomacy of the period was a proposal made in the American legislature to offer the mediation of that power. Mr. Sumner brought forward a resolution, similar to one presented to the House of Representatives by Mr. Clingman, directing inquiry as to the propriety of the United States' government offering to mediate between Russia and the allied powers. Mr. Clingman's resolution, requesting the president to tender the mediation of the United States to the powers engaged in the Eastern war, was worded as follows:—"Whereas, the people of the United States see with regret that several of the great powers of Europe are engaged in a war which threatens to be of long duration, and disastrous in its consequences to the industrial and social interests of a large portion of the civilised world; and being, under the favour of Providence, in the full enjoyment of the blessings of peace, distant from the theatre of conflict, disconnected with the causes of quarrel between the parties belligerent, and as a nation having no immediate interest in the contest, and while, not recognising the right to interfere, either by force or by menace, nevertheless are of opinion that the controversy is susceptible of pacific adjustment through the interposition of a neutral and friendly power. Therefore, be it resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, that the president be requested to tender to the belligerents the mediation of the United States in such manner as, in his judgment, may seem most likely to lead to a pacification."

America was probably the last state in the world which the allies would be likely to accept as an umpire. Russia would in all probability have accepted it, for the impression in Russia that the Western European powers might be thwarted and counteracted by American instrumentality, was very strong. The *Englishwoman in Russia*, whose interesting publication we have already quoted, thus refers to this subject:—"It was extraordinary how the Russians clung to the idea that they had secured the aid of America to save them from their embarrassments. They spoke of the help they were to receive with as much assurance as

if a treaty had already been signed on the subject, and they appeared to regard the president of the United States with as much respect as a sailor does his sheet anchor in a storm. To do the Americans justice, they took all the advances in perfectly good faith, and rather encouraged the hope. They were courted in all companies, feasted, petted, and as they say, 'made much of,' and seemed rather pleased than otherwise. It is odd that citizens of a republican nation, such as that of the States, should have so great a reverence for titles, orders, stars, and the like trumpery; for surely, if a person be a gentleman in the proper sense of the word, it is not necessary that he be ticketed as such, like a prize ox in a cattle-show; and in Russia, above every other country, a glittering star, or a cross suspended by a scarlet riband round the neck, would be a most fallacious criterion that the wearer merited so high an appellation. Indeed, it often happens that the subjects of the czar, the breast of whose coats is like a cushion on which the family jewels are pinned, have the vilest souls and the blackest hearts, together with the most empty heads in his dominions. I do not know if a foreigner would not really form a more correct estimate of their character, if he judged of their baseness by the number of orders they display. The Americans in St. Petersburg did not seem to think so, for the very morning I left it, one of the *attachés* of their embassy showed my friends, with the greatest exultation, the Easter eggs with which the Princess So-and-so, the Countess Such-a-one, and several

officials of high rank about the court had presented him; he also exhibited the portraits of the whole of the imperial family, which he intended to hang up, he said, 'as household treasures, when he returned to New York,' whither he was going 'right away,' as he assured us. The Russians, upon the strength of their hopes, were always threatening us with the American fleet in the Baltic, which would place the allied fleets between two enemies. Is the old adage about extremes meeting really so near the truth? Whether there were any substantial foundations to all these castles in the air, we had no means of knowing."

The cross-purposes, blandishments, intrigues, and treacheries of the various agencies at work in connection with the war thus performed their criminal round during the early months of 1855, until the conference, so anxiously expected, opened its dreary details at Vienna. On another page of our story, the history of that event shall be recorded, and we now once more turn to Sebastopol, and see what occurrences there were likely to quicken negotiations or defeat hopes of peace. The feeling of the English people was, like that of the Turks, unfavourable to negotiation *yet*:—they desired to see justice done to the wronged and plundered ally, by prompt, frank, honest, open treaty, if the enemy were willing to offer or accept righteous terms; but, otherwise, they were ready to welcome continued war and its consequences, however formidable. The spirit of the people was—"Fiat justitia, ruat cælum."

## CHAPTER LXVII.

THE SIEGE IN FEBRUARY TO THE BATTLE OF EUPATORIA.—PRESENCE OF THE RUSSIAN GRAND DUKES WITH THE ARMY ON THE BELBEK.—ARRIVAL OF RUSSIAN REINFORCEMENTS AND MUNITIONS OF WAR.—ARRIVAL OF CROATS AND OTHER LABOURERS TO ASSIST IN MAKING THE RAILWAY.—REINFORCEMENTS FOR THE ALLIES.—CONTINUED SICKNESS, CONTESTS, AND SORTIES.

"And in this seat of peace tumultuous wars  
Shall kin with kin, and kind with kind confound;  
Disorder, horror, fear, and mutiny  
Shall here inhabit, and this land be called  
The field of Golgotha and dead men's skulls."—SHAKSPEARE. *Richard II.*

The first intelligence received in February from the armies in the Crimea was by a telegraphic despatch from Admiral Bruat, which communicated the arrival of 1350 French soldiers, with a large cargo of provisions, camp articles for the French army, and apparel for the sailors. It also announced that at Eupatoria the roads, hardened by the frost, afforded excellent opportunity for action in that neighbourhood. By the same medium intelligence was announced that the Russians had received large reinforcements, and that the grand dukes were in the Crimea, either at Simpheropol or

Sebastopol. From St. Petersburg the news was transmitted to Western Europe that Prince Menschikoff received the grand dukes at Simpheropol, on the 4th, in great military state. Thence they proceeded to the encampment on the Belbek to encourage the troops, who had suffered much from cold and exposure, and were said, notwithstanding the patience and submission of Russian soldiers, to be very discontented and desponding. About 30,000 men were assembled there whose only shelter was the wretched holes they had dug in the earth, behind the works which had been formed at

the close of 1854, between the Belbek and the Katcha. General Osten-Sacken was entrusted with keeping open the communications with Perekop, and Liprandi still threatened Balaklava. Prince Menschikoff, writing on the 8th, informed the emperor that the general situation was unchanged; that he continued to disturb the besiegers; and that the English army was incapable of defending their own trenches, which were now held to a considerable extent by the French.

On the 3rd of February, Lord Raglan sent home the following despatch:—

*Before Sebastopol, Feb. 3, 1855.*

MY LORD DUKE,—Nothing has occurred in front of the British lines since I wrote to your grace on the 27th January.

Before daylight, on the morning of the 1st, the enemy made a vigorous sortie on the most advanced works of the French right; they were repulsed, after a sharp contest, in the most gallant manner by our ally, who, however, sustained some loss.

The weather, which had latterly been fine, broke yesterday; and, after a rainy evening, there was a fall of snow during the night, and there is again a frost, with an exceedingly cold wind.

The materials for the railway continue to arrive, but I fear it will not be possible for me to supply the amount of military labour which Mr. Beatty would seem to require.

Nearly 200 Croatians, who were hired at Constantiople, have arrived, and been handed over to him, and more are expected, and, as a matter of experiment, I have obtained 400 Tartars from Eupatoria.

I have, &c.,

RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

Again, on the 6th of February, his lordship addressed the secretary-of-war in the following despatch:—

*Before Sebastopol, Feb. 6, 1855.*

MY LORD DUKE,—I mentioned to your grace on Saturday that the weather had broken. The frost was very severe on that night, and the thermometer down at 13°, and the wind was very high and piercingly cold.

Sunday was rather milder, and yesterday was fine. Today the glass has fallen, and there is every appearance of rain.

I am happy to state that the medical officers consider that the general condition of the men has improved, although apparently there is no diminution in the number of the sick.

The enemy has made no movement of importance, but great convoys of waggons have been observed to go into Sebastopol laden either with ammunition or provisions. I enclose the casualties to the 4th inst.

Lieutenant-colonel Collingwood Dickson, of the Royal Artillery, an excellent officer, whom I have before had occasion to bring to your notice, was slightly wounded on the 4th inst., when making a reconnaissance in company with some French officers.

I have, &c.,

RAGLAN.

The opening of February was characterised by certain amenities which contrasted happily with the previous asperities of the war—the French leaving little gifts of white bread for the Cossack videttes, who placed a note in Russian in a cleft stick, declaring how acceptable such supplies were.

The preparations for laying down the electric telegraph made satisfactory progress, as did also the railway; and the mild weather cheered the

troops, although clouds and high winds gave sufficient indication that the mild temperature could not be expected to last.

During the first week in February many sick were sent away to Scutari from the British camp; they were brought down to Balaklava in a deplorable condition, literally covered with filth and vermin. There the blankets had to be removed and burned, and the poor invalids were supplied with many comforts from the *Times'* Fund. Hot brandy and water, tea, rice, arrowroot, sago, and other nutritious and gentle diets appropriate to the sick, were provided for them, which had been sent by Mr. Macdonald (the *Times'* commissioner) from Scutari. Mr. Russell records in his journal the following fact in connection with these benefactions:—“An officer said to me yesterday, with tears in his eyes, ‘the things I have got from the *Times'* Fund out of the *Bride*, will save many of my poor fellows’ lives. My God! what would I not have given for them a month ago. Many of our best men would now be alive if I had had them.’”

Although the British troops were in so much need, and large stores of every comfort were in Balaklava or in the harbour, delays were perpetually interposed by the officials, and the men continued to die for want of these comforts. The ship *Sir George Pollock*, heavily freighted with various commodities by the government, remained in the harbour day after day without an effort to unload the cargo and distribute it. “The Crimean Army Fund” was a little less slowly administered, the administrators having opened their stores at the beginning of February. The gifts of the public were, however, not distributed to the soldiers as gifts; it was deemed more proper by the authorities to *sell them*, in order to defray the cost of carriage and administration—a mean and unnecessary policy. The soldiers were entitled to receive gratuitously whatever the fund supplied; whether they were likely to use their pay wisely or otherwise was no affair of the authorities of any description—the men should have been supplied with what the public intended them freely to receive.

The British slowly received reinforcements. On the 4th the *Medway* arrived with the 71st regiment. Lord Rokeby assuming the command of the Guards, inspected them on that day, when it is said he was moved to tears by their wan and wasted appearance, and by the absence of the many brave he had seen pass through the Bosphorus to that scene of desolation and death. Lord Raglan was unusually active, more so than the short and sparse despatches we have just given would encourage the reader to suppose. On the 5th he made a long inspection of matters at Balaklava. Perhaps his lordship deemed this especially neces-

sary as the harbour was full of shipping—and yet orders were given to the harbour-master to prepare for the reception of a portion of the French ships, Balaklava being nearer than Kamiesch to a newly landed French division which had taken ground near to the British right.

The loss of life among the Turks continued to be most appalling. It was at once painful and pleasing to observe how our Ottoman allies cared for their dead, turning the old vineyards into burial-grounds, and finding out retired and picturesque spots among the hills where they might lay their plague-stricken brethren. Laboriously, silently, and solemnly did they toil in the performances of these offices; and every spot where their dead was laid was marked by a decorous respect and sound reverence for the place of the departed.

Great exertions were made to get up the planking for the huts, so that, as an eyewitness described, "miles of men, and of mules and ponies, all struggling along through the mud with boards—nothing but boards—might be daily seen."

Although the days were very sunny and genial through the first week of February, the nights were extremely cold, and the men, not acquainted with the climate, did not take suitable precautions; this may have accounted for the continued mortality. Warm clothes, which had been issued with some show of industry since the third week in January, were still not dispensed to all. Many were obliged to do duty during the long cold nights in thin and tattered garments. A store of warm clothing brought out at the end of December was removed from one ship to another, and remained in the harbour; the time and toil expended in changing it from ship to ship would have been better employed in dispersing it among the men. What was distributed proved generally to be very bad—the shoes parted with their soles after the wear of a week or ten days. The sufferings for want of fuel were felt through the whole month of February. Requisitions were indeed made for charcoal, but the commissariat could not always supply it—and when it could, no transport could be procured. The following remarkable statement is inserted in the journal of the *Times'* correspondent, and will illustrate the general condition of the army at this period:—"The light division, although it has been one of the hardest worked, is one of the healthiest in the camp. The Guards are now reduced to 500 men fit for duty. It must be considered that when the condition of a regiment is noticed to be better than that of another, if they have been an equal length of time in the campaign, it will be found invariably that the result is the work of three men, the colonel, the doctor,

and the quartermaster. Efficiency, zeal, and activity on the part of the last-named class of officers produce the best effects; and I have been a witness of the extraordinary amelioration which one of them can bring about in the state of a regiment by his almost unassisted labours."

At this period a crime was committed upon an English soldier which astonished the whole camp. A man named Cullen, a servant of Lieutenant Harvey, of the 9th regiment, was the unfortunate victim. He was found dead and naked, near the new Turkish camp. The Turks laid the offence to the account of some Spanish muleteers, who in turn shifted the crime upon some Italian sutlers; but the amount of evidence was to the disadvantage of some runaway Greek servants—a class who infested the camp, and were ready for any crime. Among the English bad acts were very rare, perhaps no army was ever so free from offences against order, justice, or morality. The commission sent out by government to inquire into the state of the army in the Crimea thus reported upon its moral condition:—"It has only been a slow degrees that we have been able to form any adequate conception of the distress and misery undergone by the troops, or fully appreciate the unparalleled courage and constancy with which they have endured their sufferings. Great Britain has often had reason to be proud of her army, but it is doubtful whether the whole range of military history furnishes an example of an army exhibiting throughout a campaign, qualities so high as have distinguished the forces under Lord Raglan's command. Suffering and privation have frequently led to crime in armies as in other communities; but offences of a serious character have been unknown to the British forces in the Crimea. Not one capital offence has been committed, or even alleged to have been committed by a soldier, and intemperance has been rare: every one who knows anything of the constitution of the army, must feel, that when troops so conduct themselves throughout a long campaign, the officers must have done their duty and set the example. The conduct of the men, therefore, implies the highest encomiums that can be passed upon their officers. They have not only shared all the danger and the exposure, and most of the privation which the men had to undergo, but we everywhere found indications of their solicitude, and of their constant readiness to employ the private means in promoting the comforts of their men."

The Russians worked with great assiduity their batteries; and especially upon the works at the rear of the Malakoff. On the 7th they had as many as 1200 men employed at the earthworks, and on the slopes and parapets of the

batteries. Mr. Russell, looking down upon Sebastopol on that day from a favourable situation, saw "the small steamers and boats in the harbour particularly active; and one portion of the place, containing some fine buildings, and a large church with a cupola, as seen from the picket-house, put me in mind of Greenwich, from the Park Observatory, seen through a diminishing glass."

Circumstances favourable to the health and convenience of the army followed the demolition of a portion of Balaklava, the active superintendence of Major Hall, Colonel Harding, and Captain Powell, in effecting the expulsion of sutlers and other filthy idlers, and the cleansing of the place. The "navvies," perhaps, did more to put nuisances out of the way than any other agents, however effective.

The allies continued to work at their third parallels, and their redoubts there had been placed with such skill, that, although all the batteries were not mounted, they had already done the exterior works of the place more harm than the firing from the second parallel during the whole winter.

While the Russians were so busy with their works and batteries, they were not unmindful of the progress of their enemies; their cannonade was hot for some portion of every night, and sorties were perpetual: our allies had to bear the brunt of these. Thus, on the early morning of the 1st, before dawn, the Russians, after a heavy cannonade, made a rush upon the French trenches, where they were met with a prompt and bloody repulse, but the fighting for a time was very severe, and our allies lost 400 men, including officers and non-commissioned officers. After this repulse, the Russians again opened a heavy cannonade along the French lines. Soon after dawn, Canrobert moved 16,000 men down the declivities towards Inkerman; the Russians cheered loudly, but did not accept battle. On the 3rd, there was another sortie; but after two volleys of musketry from the French, the Russians declined any attempt upon the trenches, and retired unpursued. On the 5th a severe fire was sustained and returned by the French with considerable loss, and as deserters afterwards informed them, with still heavier loss to the enemy. The French scouts kept up a dropping fire all night; the Russians repeatedly sallied out, but fell back under the heavy roll of the French musketry.

Our allies continued to scarp the Woronzoff Road, and to strengthen all their works; their mortars began to tell upon the masonry of the defence, and to scatter portions of the earth-works. The English guns of this description were considered superior, and Lord Raglan lent our ally ten of our 13-inch mortars. This was one among many instances in which the English aided their coadjutors in *matériel* of

war and artillery; while it is the fashion to magnify such assistance as was afforded to our troops, justice demands that English aid to the French should not be unmentioned.

At the end of January, General Niel, the distinguished French engineer arrived, and immediately inspected the works, and gave a formal opinion to the French chief of the prospects of the siege. This general had a high reputation in France, and was aide-de-camp of the emperor. He was the engineer officer who made the capture of Rome, when the French republic sent an expedition thither to reinstate Pio Nino: the conquest of Bomarsund, under General d'Hillier, in conjunction with the British engineer, General Jones, enhanced his fame. Under his influence, General Canrobert adopted new views in several matters bearing upon the prosecution of the siege. After a council held on the 1st, it was resolved that approaches should be effected in front of the Malakoff Tower, by the engineer corps under the direction of General Bosquet; in order, says Bazancourt, "that by this commanding point we might attack the Karabelnaia at the moment when an assault should be made upon the west of Sebastopol. The basis of the first works was laid; the officers of artillery and engineers who managed them were instructed to confer with the heads of departments in the English army, for the purpose of ensuring their immediate execution." From the "Journal" of the French Siege Corps we extract the following:—"Two batteries shall be constructed: one of eight pieces at the point where our works join those of the English; another, of fifteen pieces at least, on the east slope of the Careening Basin. The batteries must direct a cross fire upon the Tower and the Mamelon situated in front. Under the protection of these two batteries, and the English batteries, there shall be opened approaches leading, on the west to the Central Bastion, and on the east to the parallel which must crown the Mamelon situated to the south of the Malakoff Tower. A battery of fifteen pieces shall be afterwards constructed near this last parallel. After this, there shall be made ways of approach upon the two elevations which enclose the Dock Ravine, in order to reach the Redan and the Tower. For the execution of these works the commander-in-chief appoints Lieutenant-colonel Laboussinière of the artillery, and Major St. Laurent of the engineers."

The concluding passage of General Niel's report was as follows:—"Whatever plans may be adopted as to investment, and despite the danger of extending our lines towards the right (in which direction they are already so far developed), the place *must* be attacked on the side of the Malakoff."

General Canrobert, in his letter to the French

minister of war, under date of the 3rd of February, thus notices the opinions of the newly arrived chief of engineers:—"Since his arrival General Niel has not ceased to observe narrowly the fortress of Sebastopol, which from its immense extent partakes of the nature both of a strong city and an intrenched camp. His experience has enabled him to appreciate the difficulties of the position, and the manner in which these difficulties have contributed to the weakening (so much to be regretted) of the valiant English army, in conjunction with which we have undertaken the half of the siege of Sebastopol."

On the 7th of February 1200 labourers were set to work by our allies to trace the communications, erect epaulments, carry up balls, rockets, and material for a vigorous prosecution of the siege in the new direction. Major Renson, an experienced staff-officer, was appointed as major of the trenches. While the real interest of the siege was transferred to the new attack, the Russians, perceiving the design of the allies, set to work with the most indefatigable labour to strengthen this position. Not that they had ever neglected it, they had all along seen that the Central Bastion, and Flagstaff Bastion, were not the positions where attack brought most peril—they had never mistaken the key of the defence; but now, when menaced upon this point with formidable power, as they saw it begirt with cannon, and the approaches worked with redoubled energy, they met this new danger with commensurate exertion and vigour. Several times the French engineers and sappers and miners were counterworked by the Russians, and blown up or suffocated with smoke balls; but the Russians paid dearly for those attempts, as the French now generally brought up fieldpieces to command the approaches, in such a way that the parties making the sortie were obliged to retire, when repulsed, under showers of grape and other missiles, which made havoc among them. While the French were opening these new arrangements, the original attack was worked with renewed energy, until the numerous batteries which it comprised were all finished and armed. These batteries were thirty-two in number. No. 33 was a field-battery, placed in the line of circumvallation. Indeed, the exertions of the French at this juncture were prodigious, and those of the enemy were equally energetic. The British attack did not, from the nature of the ground, give opportunity for similar displays of engineering, as on the French attack was afforded to both assailants and defenders. One well competent to pronounce an opinion upon the subject, and who examined all the ground after Southern Sebastopol had fallen, and the docks were destroyed, thus graphically sketches the appear-

ance of the works, which were to a considerable extent in existence at the period of which we write, but which afterwards increased to a surprising magnitude:—

"Our approaches to the defences of the place afforded no opportunity to our engineers of developing the use of mines against the enemy and were not assailable by the same agency on their side for the same reason, as it is obvious that where mines can be used by the attacking force, they can also be adopted by the defenders. The French had not the same sort of ground, and the system of French mines in front of the Bastion du Mât presents the most astonishing instance of labour and skill ever witnessed in any siege. To the Russians, however, belongs the credit of the most important and extensive operations of this nature. Our engineers have in their possession plans of both the French and Russian mines and galleries, and the tracings resemble a section of a honeycomb. The enemy's mines consisted of two series of shafts or galleries and magazines, the first being twenty-seven feet below the surface, the second being no less than forty feet below the first. The workmen were supplied with air by means of force pumps, and in one magazine at the end of one of these galleries, there was found no less than 8500 lbs. of powder, all tamped in and ready for firing by electric wires. This magazine would have formed an *étonnoir* far in the rear of the French advance, and its probable effects may be estimated, when it is considered that the destruction of the docks was effected by a smaller quantity of gunpowder than was contained in this one mine. Many of the shafts spring out of the counterscarp, and there are numerous chambers cut into the same portion of the ditch of the bastion, which were used as bombproofs by a portion of the garrison. It has also been discovered that the Russians had cut a subterranean gallery from inside the parapet, under the ditch, to an advance work which they used as a *place d'armes* in making a sortie, and hitherto it had puzzled the French to understand how the men used to collect in this work without being seen. The effect produced by the French mines in their saps can only be conceived by those who have looked down into the yawning craters of the *étonnoirs*, after stumbling over the wild chaos of rocks cast up all round by the explosion, just as though the Titans and the gods had met there in deadly combat. Some of these gulfs resemble the pits of volcanoes. The Russians only intended to fire some of these mines in case of an assault on the Bastion being repulsed under circumstances which gave them a chance of occupying the enemy's advanced saps; others would have been fired only in case of a retreat from the city, in order to destroy as many of

the enemy as possible, and to check pursuit; and the explosion was intended to destroy not only the French parallels, but the works of the Bastion itself, so as to prevent the French turning the guns. There were two or three mines inside the Redan, and there were some extensive galleries and mines in front of the Malakoff, but it was at the Bastion du Mât, or Flagstaff Battery, that the French and Russians put forth their strength in mine and countermine. The galleries are pushed for fifty yards through the solid rock in several instances. These labours are of the most stupendous character, and must have proved very exhausting to the garrison."

In the journal of the French Siege Corps is the following entry under date of January 7:—"Commandant St. Laurent informs General Bosquet that the Russians are actively working at the defences of the lighthouse, where they have raised five epaulments covering seventeen pieces, and three mortars to be directed against the battery at the bottom of the harbour. At the request of Colonel de Laboussinière, the engineers will finish the battery at the bottom of the harbour, in order to check the Russian works, and to silence the fire of the five batteries."

On the same night information was brought to Sir Colin Campbell of a meditated attack by the corps under Liprandi upon Balaklava, and preparations were made to suit the occasion. All the various approaches to the works were covered with artillery, and the troops were ordered to the heights. The steam sloop, *Vesuvius*, landed all her men to guard the town. Admiral Boxer and Captain Christie, with alertness and promptitude, formed a corps of the crews in the harbour, and these were placed in suitable positions in the houses of the town, so as to give the enemy a decisive reception should he conquer an entrance. In this way all stood to their arms during a bright moonlight night, in which musket barrels and bayonets gleamed in long successive lines, until the dawn broke in mist over the cold bleak plateau. Mr. Russell considers that all this apprehension and vigilance was under the influence of that active chief, "General Rumour;" but the pun was not well placed, for on the morning of the 8th, the Russians appeared in force, and took possession of the redoubt No. 1, of which their previous occupation was so memorable. They also endeavoured in the course of the day to bring heavy guns up to Canrobert's Hill, during which operation they perceived the preparations made to receive them, and converted the intended attack into a reconnaissance.

While all this preparation was going on at Balaklava, Sir Colin and his troops taking up their position upon the heights, and Admiral

Boxer and Captain Christie displaying skill and energy in the town and harbour, a cannonade boomed heavily from the French attack, and the Russian defence opposed to it, over the silent hills. At Balaklava suspense reigned over the watchers, who listened every moment for the sound of the enemy, and peered through the vivid moonlight for the sheen of their bayonets. At Sebastopol the rage of a fierce artillery battle filled the air with violent concussions, and sent the sounds of the conflict far out upon the calm bright sea.

On the night of the 8th and 9th another awful cannonade shook the earth around Sebastopol. A feint was made against the English lines, which found their guardians too vigilant to be surprised. A sortie was directed against the French, much in the usual way, and, as usual, repulsed. During the day masses of Russian infantry were seen moving along the Tchernaya heights, in the direction of Sebastopol and northward, while a large force hung upon the British rear, and the whole force at Balaklava was again turned out to repel the expected foe. The British watched under the drizzling mist of a chill and miserable morning, until all chance of an attempted surprise had passed away: our troops experienced—

"The feigned retreat, the nightly ambuscade,  
The daily harass and the fight delayed,—  
The long privation of the hoped supply,  
The tentless rest beneath the humid sky."

On the night of the 9th there was a storm and a heavy fall of rain. Sir Colin Campbell and a French general were to have effected a reconnaissance of the large force which harassed the British rear, but the weather prevented them.

The morning of the 10th broke in dimness and dreariness over hill and vale, rendering the enemy's movements obscure, but at last a gleam of sunshine enabled our people to discover his soldiers hard at work at some earth-works on the brow of the hill near Kamara. On the top of Canrobert's Hill, one of their videttes remained watching the British. After some time three columns were seen moving along the bank by Kamara in the direction of the high grounds above Baidar. Between Kamara and the road to M'Kenzie's Farm clouds of Cossacks passed to and fro, and every indication was presented of a large army in observation of our positions. On the heights overlooking the Woronzoff Road the Cossack videttes never for an instant relaxed their "look out," and it became necessary for the British to be on the *qui vive* incessantly. Our heavy dragoon videttes were doubled, but the Cossacks increased in boldness and in numbers, and approached so close that our artillery shelled them.

The reports of Tartar spies, who were em-

ployed successfully by the French, and of deserters who made their way to the British camp, agreed in representing a grand attack upon the lines, and upon the flank and rear of the British, as daily imminent. The incessant rains flooding the Tchernaya, and laying the whole country deep in either mud or water, perhaps prevented such an attempt, or else these reports were given out in the Russian army to deceive the deserters and spies, and mislead the allies, while the point of attack really intended was Eupatoria.

On the 9th the general-in-chief of our ally made known to his army, by an order of the day, the arrangement of the French emperor for the permanent division of his army into two corps (an arrangement which had provisionally existed); the one to be commanded by General Pelissier, the other by General Bosquet. This idea was the suggestion of General Canrobert to the minister of war; and, in consequence, Pelissier was sent from the army of Africa to take the command of the first *corps d'armée*, which was to conduct the left attack; while Bosquet's corps should still remain a corps of observation as before, but also to sustain the new attack—that against the Malakoff. Each of these corps was comprised of four divisions, while the imperial guard and the 9th division, under Brunet, were placed near head-quarters, so as to be directed in reserve of either corps as circumstances might require.

The entire force of the French army on the 9th of February was 83,000 men. The arrangements of the two *corps d'armée* were as follows, according to the journal of the Siege Corps:—

#### FIRST CORPS.

Commanding officer—the General of Division, Pelissier.  
*Artillery*:—Commanding officer—the General of Brigade, Le Bouf.  
*Engineers*:—Commanding officer—the General of Brigade, Tripiet.  
 1st Division—The General of Division, Forey.  
 2nd   "                   "                   Levaillant.  
 3rd   "                   "                   Pâté.  
 4th   "                   "                   De Salles.

#### SECOND CORPS.

Commanding officer—the General of Division, Bosquet.  
*Artillery*:—Commanding officer—the General of Brigade, Beuret.  
*Engineers*:—Commanding officer—the General of Brigade, Frossard.  
 1st Division—The General of Division, Bouat.  
 2nd   "                   "                   Camon.  
 3rd   "                   "                   Mayran.  
 4th   "                   "                   Dulac.

The superior command of the engineers remained in the hands of the General of Brigade Bizot, and the superior command of the artillery with General Thiry. General Niel returned to Paris to make his report to the emperor.

The French have taken all the credit to themselves for the adoption of the new and ultimately

successful attack upon the Malakoff, as the key of the place; and have, in several of their publications, insinuated, and even expressed the idea, that the first and erroneous direction of the attack was to be attributed to the English engineer general. The reverse was the case. General Burgoyne, the British chief of the engineer staff, from the very first pointed out the true attack; but the French brigadier in charge of that department of Canrobert's army objected so strenuously, that General Burgoyne was overruled. That gallant and wise old general at once indicated the mode in which Southern Sebastopol must be conquered; and had his views been carried out, much suffering would have been spared in both armies, and many lives saved. In the British House of Commons, Captain Vernon, moved by the incessant attempts on the Continent to discredit every scientific branch of the English army, brought the matter under the notice of the representatives of the British people. The following report of his speech places the matter in its true light:—

"I rise pursuant to notice to call the attention of the house to the services of the corps of Royal Engineers in the Crimea. I do so because there is a disposition abroad to depreciate the services of the British army in the Crimea. We think it high time that something should be done to counteract this tendency to detract, and my statement this evening will be a step in that direction. No detractor has ventured to question the courage and the conduct of the British soldiers of the general service. So far as the special corps are concerned, I have never heard any one bold enough to say the British artillery was second to any in the world, and my statement this evening will show that the British engineers were equal, to say the very least, to any engineers that took the field. The war that has just terminated, unlike any other modern war on record, narrowed itself into one mighty siege. The victory of the Alma was but the introduction to the siege of Sebastopol, and the battles of Balaklava, of Inkerman, and of the Tchernaya, were but futile attempts on the part of the Russians to raise that siege. A fortress important rather for its uses than for its strength—a fortress so low in the scale of scientific defence that it was supposed, erroneously enough, to be open to a surprise, so moderately fortified that it was considered liable to the affront of a *coup de main*,—became under the pressure of circumstances, and by the mere force of earthworks erected by the genius of Todleben, one of the strongest places on record, and held at bay for eleven months the chivalrous valour and the military science of the world. This war, then, being a siege, it follows that the battle was fought by science. It was a war of engineers, and I rise in my

place to claim for the British engineers their full share in the achieving of that great result which has brought about the peace. There were three great turning points on which the success of the war depended. First was the election of a place of landing in the Crimea; secondly was the decision as to which front of Sebastopol should be attacked—for we were not in a condition to invest the whole, according to the real acceptance of the term; third, and most important, was the discovery of the key to the position of the front to be attacked. Now, sir, I may at once avow that I claim for the British engineers the decision on all these three points, and I shall confine myself as much as possible to proving that this was the case. I must trust to the indulgence of honourable members while I place historically before them these three questions in their relative positions. It will be seen at a glance that this question widens itself from a corps question to a national one. What I now say, by the light of the press, will be spread far and wide. What I now say will, doubtless, by many be repugned, and it therefore behoves me to start a proper base, and to go on adding fact to fact in order to be able to defy all contradiction. In January, 1854, on account of the appearances in the East, Colonel Vicars, with three engineers, left England to place themselves under the orders of Admiral Dundas, who commanded in the East. At Gibraltar Colonel Vicars was taken ill, and the command devolved upon Captain Chapman, now Colonel Chapman, whose distinguished services I have had occasion before to bring under the notice of the house. These officers joined the fleet in the Bosphorus, and were dispatched to reconnoitre the strong position of Maidos, near the Dardanelles. Now, at this juncture the home authorities were without any precise information with regard to the East. In this dilemma, Sir John Burgoyne, whose high position as Inspector-general of fortifications might well have excused him from the arduous undertaking, volunteered his services, at this inclement season, to proceed to the East, to make military observations of such forces as should be sent by allied French and English armies in support of the Turks, in the event of a war with Russia which then appeared imminent. His services were accepted with eagerness. On his way through Paris the Emperor Napoleon associated with him Colonel Ardant, an officer of French engineers. These two proceeded together to the Dardanelles, and inspected the position of Maidos, and afterwards of Boulahir, referring which latter the officers of engineers were withdrawn from Maidos to reconnoitre Boulahir, which they did in that inclement season, the snow being then deep on the ground. Sir John Burgoyne and Colonel Ar-

dant then proceeded to Constantinople to reconnoitre the position of Bujukhekedj, about twelve miles from Constantinople, a strong position, intended to be made the base of operations and to cover Constantinople. Colonel Ardant went forward to examine the position of Kara-su, where strong lines of defence were available, connecting the Sea of Marmora with the Black Sea. Sir John Burgoyne meantime went to Shumla, to confer with Omar Pasha, and he reconnoitred and reported upon Varna. Thence he returned to England, leaving Colonel Ardant at Gallipoli. Now, while Sir John Burgoyne was at Constantinople, there was presented to him a project for the defence of that town by certain French officers attached to the embassy—these lines of defence were to pass from the Sea of Marmora to the Golden Horn, and from that to the Bosphorus, passing within a mile of the suburbs of Constantinople. The ground was ably taken up, but Sir John Burgoyne at once pointed out that it was faulty, because it passed close to an enormous population and a city liable to conflagration as was Constantinople; but the principal objection was, that it abandoned to the enemy the Bosphorus, which was our only means of communication with the Black Sea. This plan of defence, therefore, was abandoned in favour of Kara-su, which in every point resembled the lines of Lisbon, with a similar advantage of the stronghold of Bujukhekedj. War was now declared; the allied army was sent to Gallipoli, and took up the intrenched post of Boulahir; they then proceeded to Constantinople, leaving a small force to occupy Gallipoli. The Russians having made no impression on the Danube, notwithstanding their vast military resources, and the allied armies having advanced to Varna, in support of the Turks, the proceedings of Sir John Burgoyne and of Colonel Ardant were criticised as being too cautious and unenterprising, by taking up a defensive position for Constantinople and the Dardanelles; but it must be remembered that at that time the war had not begun, and it could not have been supposed that the Russians, who, in so arrogant a manner, had forced on the war, should have been held entirely in check by the Turks; and it was therefore requisite that Constantinople should be protected, and the Dardanelles, without which there were no means of communicating with the Sea of Marmora, the Bosphorus, or the Black Sea, which latter was at that time in the possession of the Russian fleet; in a word, it would have been impossible to trust an allied army in that country if such a strong position as Gallipoli and its adjacents had not been found. Such was the opinion of the Emperor Napoleon, and, what is more to my purpose, such was the opinion of Sir John

Burgoyne. In August Sir John Burgoyne was sent out to command the engineers in the Crimea, and was placed upon the staff. In September the army embarked at Varna for the purpose of invading the Crimea. And now, sir, I come to the first point I wish to prove—namely, the selection of the part of the Crimea in which the landing was to be effected. A council of war assembled on board the *Caradoc*. It was attended, on the part of the French, by General Canrobert, by Colonel Trochu, one of the French staff, and by General Bizot, the French engineer; on the part of the English, by Lord Raglan, by Sir George Brown, by Sir Edmund Lyons, and by Sir John Burgoyne. The French held the opinion that the best place to land was at the mouth of the Katcha, and I believe that Sir George Brown coincided with that opinion, but he said, 'Before coming to a decision on this point, I think we ought to know the opinion of Sir John Burgoyne, who has had more practical experience than any other officer present.' On this Sir John Burgoyne declared that the Katcha was not the proper place to land, that it was a difficult and defensible ground, and close to the resources and reserves of the Russians, and he pointed out, on the other hand, that the safest place to land was at the Old Fort. Sir John Burgoyne's representations were made known to Marshal St. Arnaud, who at once grasped the idea, and consented to the move. The landing, therefore, was safely effected at the Old Fort, and Eupatoria, in the rear, was seized and occupied. The abandoning of the idea of landing at the Katcha was very distasteful to some officers of the French staff, but when that place fell to our position it was seen that Sir John Burgoyne's estimate of the difficulty was right, and that an attempt to land there would have been followed by failure and disaster. I think, sir, I have proved now my first point, and that I have a right to claim the selection of the place for landing for the British engineers. I now come, sir, to my second point—that is, the selection of the side on which Sebastopol was to be attacked. After the battle of the Alma the troops advanced towards Sebastopol, across the rivers Katcha and the Belbek. Now, the intention of the French, and for which they had prepared projects, was to attack Sebastopol on the north side. Sebastopol on the north side was situated on a promontory, and its defences were placed on rocky heights, having in front of them strong ground of a very defensible character, narrowed by the bay of Belbek on one side and the broad and deep valley of the Tchernaya at the head of the harbour on the other side, the promontory being dominated by a strong permanent work called the 'Severnaia.' Now, Sir John Burgoyne did not think that the north side of

Sebastopol was the side to be attacked; he rather held to the opinion that it should be attacked on the south side, and he wrote a report to Lord Raglan, giving his reasons for holding that opinion, an extract from which report I will now, with the permission of the house, proceed to read:—

"The communications with the fleet, when all resources were necessarily obtained, would be from the fine bays and harbours of Balaklava, Kamiesch, and Kazatch, instead of from an entirely open beach, which was alone available on the north. The fronts that were exposed to attack were extensive, and, though naturally of great strength, were not more so than that of the north, which was limited, and consequently, admitted of defence after defence. The south side covered the docks, barracks and all the great establishments of the place; whereas, if the north promontory were obtained, there was the harbour still intervening which could not be crossed by any means; and the only resource would have been a bombardment, and not possession. In rear of the encamping ground to be occupied by the allies in front of Sebastopol on the south side was a compact and most powerful position facing the country, and the communication to it from the harbours was direct and comparatively short, while on the north there was no favourable position on the land side; the ground to cover the camp and landing-place must have been of enormous extent, for that landing could not have been nearer than the Katcha, as the Belbek was commanded by the enemy's batteries and the communication would have been much longer, and over two heights instead of one. The enemy, if attacked on the north, having but one front of the garrison, of moderate extent, to cover, could have greatly increased the outer field army for raising the siege. I thoroughly reconsidering every circumstance it is impossible to conceive how the operations could possibly be sustained against the north side; nor how the army, were it to remain there, could avoid some frightful catastrophes."

"This report, sir, was sent to Marshal St. Arnaud, and that officer, with his usual sagacity, accepted the idea, and consented to attacking Sebastopol on the south side. The came the question, how was that to be done? If there be one axiom in war more cogent than another, it is that an army should never separate itself from its base; and if there is another axiom equal to that in cogeny, it is that a flank march should never be made in the presence of an enemy. And yet, at first sight it would seem that the proposition of Sir John Burgoyne embraced both these military errors; but it was not so in fact. He proposed to leave one base, but the base moved, so that he should

upon it again; and the flank march to enable him to reach the south side of Sebastopol was in the rear of a flying and disorganised enemy, and it thrust the army between Menschikoff and Sebastopol. The movement was therefore undertaken, and the army sat down before Sebastopol, never to rise from it until it left that place and its defences a hopeless ruin. I think, sir, that I am entitled to say that I have proved my second point, and that I have a right to claim the action of the side on which Sebastopol could be attacked for the British engineers. The siege was now commenced with scanty military means. There were 300 or 400 saps where there should have been as many thousands—for it should be remembered that in the earthworks at Sebastopol was engaged the whole military power of Russia—where, if there had been as many thousands, it would have saved thousands of lives and millions of money. There were eighty sappers of engineers sent to the Crimea; of these forty-three were killed, wounded, and *hors de combat*—a wholesale slaughter with no parallel. Many of these officers passed in the inclement season, and under what the French call ‘fire of hell,’ 100 nights, making nearly a third of the whole time of the siege. Under that fire the executive officers, Chapman and Gordon, erected batteries of so substantial a character that they were not damaged by the fire of the enemy. The British artillery defied the fire of Todleben, the Russian artillery swept from the face of the earth the French batteries, but no missile hurled against the English batteries stopped for one single moment their steady, sure, and onward course. In the first reconnaissance of Sebastopol, Sir John Burgoyne perceived that the Malakoff was the key to the position of the front attack, and he so represented it to Lord Raglan. After the battle of Inkerman he again impressed on the authorities that the Malakoff was the place to be attacked. Upon the arrival of General Canrobert, the French aide-de-camp of engineers to the emperor, a council of war of the allied engineers was held; at that council of war Sir John Burgoyne again represented that the Malakoff was the key to the position, and that it could be attacked. After the council of war had been held, wishing to place on record his opinion he reduced it to writing, and, through Lord Raglan, sent it to the French engineer General Niel. The following day General Niel called a council of French engineers to take under consideration Sir John Burgoyne’s memoir—prepared a *procès verbal* of what there was said, and sent a copy of it to Lord Raglan. Sir John Burgoyne’s information. The paragraph of that *procès verbal* stated that the Malakoff should be attacked in compliance

with the opinion of Sir John Burgoyne. The words used were these:—

“Il résulte des dispositions adoptées en conseil, et suivant le vœu exprimé par le Lieutenant-général Sir John Burgoyne, que des travaux d’approche devront être exécutés devant la tour Malakoff, afin de pouvoir attaquer, par ce point dominant, le faubourg de Karabelnaïa, en même temps qu’on donnera l’assaut à la partie ouest de la ville.”

“I think, therefore, sir, I have a right to say that I have made out my third point, and that I am justified in claiming the discovery of the key to the front attacked for the British engineers. Now, sir, that I have established the claim of the British engineers to the merit of deciding on the three turning points of this war—they forming a part, and an important one, of the British army—what becomes of the case of those who would seek to depreciate the services of the British army in the Crimea?”

It will be perceived from the speech of Captain Vernon that General Niel, instead of suggesting the attack upon the Malakoff as his own original idea, treated it as the idea and proposal of Sir John Burgoyne, which he approved, overruling the contrary opinion, that of Brigadier Bizot, upon whose plan the siege had been hitherto conducted. Yet the Baron de Bazancourt, the French emperor’s private commissioner, who had access to every authentic document, and drew up the very report quoted by Captain Vernon, conceals the fact that the plan was General Burgoyne’s, while he represents General Niel as the person with whom the responsibility and honour of the Malakoff attack rested. This is a rare specimen of disingenuousness on the part of an officer of rank, and one holding a position of trust and consequence, and betrays a disposition towards an ally unworthy of a great people and a victorious army. We do not believe that France, its emperor, and its army, applaud these unworthy attempts at depreciation, which are the more to be deprecated because France and her army need no accession of military glory.

The state of affairs from the Russian point of view, during this period, was expressed by Prince Menschikoff in a despatch to his government, under date of the 12th; his references to incidents of the siege go no higher than the 8th:—“On the 30th we succeeded in discovering subterranean works of the French leading towards the fortifications. With the aid of artillery we destroyed, on the 2nd, a portion of the enemy’s gallery. On the 6th the French, trying the same means, attempted our countermines; the attempt turned to their own disadvantage. On the 8th the play of a new mine enabled us still more to destroy the enemy’s works. Meantime our artillery successfully replied to the fire of the besiegers. At night

detachments of volunteers continually harass the enemy in their trenches, and by obliging them to beat to arms, compel them to suspend their works."

The following despatch of Lord Raglan reveals the enemy's movements as they appeared in the British lines:—

*Before Sebastopol, Feb. 10, 1855.*

MY LORD DUKE,—I have nothing material or important to report to your grace since I addressed you on the 6th. There was rain yesterday and the day before, and in the course of last night there was a considerable fall of snow, which remains on the ground; but it does not freeze, and the country is again saturated with wet. It is reported from the front that great activity prevails in the town and harbour of Sebastopol. Large convoys of apparently sick men were observed to be moving out of the place, and numerous carts, with one horse, to be coming in. The enemy appear to be breaking up hulks in the Arsenal Creek, and to be using the material for platforms and *chevaux de frise* at the Battery "du Mat." We are proceeding with the armament of the works on the right. The health of the troops continues to improve in some slight degree. They are amply supplied with warm clothing and with provisions. Forage is our only want, and this arises chiefly from the commissary-general not receiving from England the supplies of hay upon which he has reckoned. I enclose the return of casualties to the 5th inst.

I have, &c.,

RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

It is a most painful thing to be obliged to animadvert upon the despatches of a man possessing such qualities of excellence as Lord Raglan; but there is frequently no way of reconciling his lordship's despatches with truth and honour, but by supposing him ignorant of the real state of things in his own army. His lordship in the foregoing despatch represents the health of the troops as improving in some slight degree, and all the supplies for the men abundant. Under the same date, the *Times'* correspondent, who was much more about the camp than Lord Raglan, and as all the world now knows, much better informed as to the true state of the army, gives this testimony:—"I regret to state that sickness does not diminish in the camp. Scurvy and low fever extend their action every day. Now scurvy is mainly caused among debilitated men by the use of salt meat and the want of vegetables. Even fresh meat alone will develop it among men worn out by excessive labour, should they have no leguminous diet. I believe there has been only one cargo exclusively of vegetables ever sent up here, and that came in the *Harbinger*, which lay in Balaklava for weeks, till her load of potatoes and onions began to rot and become putrid, so that much of it was unfit for use, and had to be thrown away. Whoever had an order got a sack of potatoes; but who could carry a sack of potatoes to the front? Meantime, ships chartered by government for the use of the service come in day after day to Balaklava, with quantities of vegetables for sale, and with stores of provisions to be sold for the private profit of the stewards

and adventurers at great prices, though charter-party of these vessels expressly forbids any such use to be made of any ship, or of private property to be conveyed in her while she is in the employment of the government."

Had "our own correspondent" known the contents of the English general's despatch, designed to write a reply to it, he could not have more effectually carried out his intention.

On the 13th, Lord Raglan sent another despatch:—

*Before Sebastopol, Feb. 13, 1855.*

MY LORD DUKE,—I mentioned to your grace in my despatch of the 10th inst., that there had been a return of bad weather, and that the country was saturated with wet. On Sunday it rained or snowed from morning till night, and the wind was very high, and though it subsided yesterday, still the ground was in a worse state than I had seen it for some time. The enemy has made no movement. Major-general Jones, Royal Engineers, arrived a few days ago, and is busily engaged in making himself acquainted with the position occupied by his army. Lieutenant-general Sir George Brown has returned, and I have great satisfaction in adding, that he is in excellent health. His wound is healed, and with the exception of not having entirely regained the full use of his elbow, he no longer suffers any inconvenience from it. He will resume the command of his division with the loss of time. I enclose the return of the casualties to the 18th inst. (One killed and two wounded.)

I have, &c.

RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

It is not surprising to those who read such despatches, that Lords Aberdeen and Newcastle should have declared that they gained their first correct intelligence of the state of the army from the London newspapers. His lordship informed the minister of war that the enemy had made no movements; the correspondents of the London morning papers represented the enemy as making remarkable movements, which proved to be of great importance and after—as they were indications of the march upon Eupatoria, rumours of which had reached his lordship's camp, and were heard by the correspondents of the press, although beyond his lordship's knowledge. In illustration of this statement the following, from the correspondent of the *Morning Herald*, will suffice:—"During the 10th and 12th their (the Russians') force again diminished, and the enemy were observed moving north, along the ridges of Inkerman. Almost at the same time, intelligence was received that a large part of Liprandi's corps, with other troops, were advancing against Eupatoria. This was on the 13."

Either the British general wished to conceal from the minister of war the occurrences that took place in his own camp, and in that of Liprandi, or his lordship knew less about it than the civilians who accompanied his army, and the moderately well informed connected with it. At all events the despatches of the general, and the letters of the "correspondents," of the very same date, contradict one another on matters which are now all

known to have been as these correspondents declared them.

The arrival of Sir George Brown was encouraging to the army: as second to Lord Raglan, he was extremely efficient, and made up by his vigilance and activity for the want of those qualities in the commander-in-chief. It is but justice to his lordship to observe that his health was extremely delicate, and no officer with health so imperfect could have put forth the physical vigour necessary in such a command. Sir George Brown did not appear to be quite recovered from the effects of his wound; he was pale, and age seemed to creep upon him, in spite of the indomitable vigour by which the hardy and gallant veteran was so strongly characterised.

The condition of the artillery horses caused anxiety not only to the arm of the service which more immediately suffered in consequence, but to the whole army. For several days up to the 13th, a short ration of barley and a little chopped straw was their only food—the hay had been expended: four months previously Commissary-general Filder had urged upon the authorities at home that means should be taken to procure fodder for the horses, but attention was not paid to his requisitions. Lord Raglan had authority to procure what was required; ships of large tonnage lay idle in the harbour, and the shores of the Euxine and Bosphorus abounded with what was wanting so badly in the Crimea. At a board of veterinary surgeons, 140 horses of the artillery were condemned as no longer serviceable; “the mounted staff corps was reduced to twenty-eight effectives.”

On the 13th the Russians made a successful cannonade, blowing up a French magazine within the batteries; this was followed by “six tremendous salvoes of artillery” before the French returned fire. The Russians mounting the parapets gave loud cheers, to which the French responded by an overwhelming shower of shells, which burst over and amongst the Russian gunners, and the sailors who manned the batteries. Some of the shells falling on the walls of the admiral’s house rent it, and the Russian battery No. 3, at the Flagstaff Fort, was silenced. The French mortar batteries had now become very destructive to the enemy, having been advanced to within 1300 metres of the inner batteries of the Russians. A sortie followed, which was quickly repulsed, the French losing only five men. Great secrecy was ordered in the arrangements connected with all the attacks, French and British. The engineers and artillery officers were directed not to give information to officers of the line, or to any one not strictly authorised to demand it.

The recall of the Earl of Lucan, the com-

mander of the British cavalry, was at this period the subject of discussion in the whole army, and the general impression was that his lordship was a badly used man. That his care of the cavalry horses was deficient, has been proved by the inquiries on the spot of the Crimean Commissioners, and at the Chelsea Commission of general officers appointed to hear his lordship’s defence; but the discussions between Lord Lucan and Lord Raglan, which arose out of the light cavalry charge at Balaklava, were the real cause of his recall, and on that ground we are unable to see its justice. The orders to Lord Lucan, given by Lord Raglan, were inconsistent, and inappropriate to the actual situation of affairs, and his lordship had no alternative but to obey.

On the night of the 16th a fierce storm tore down tents and huts on the heights along Balaklava, and swept them, along with piles of loose battery *matériel*, down the steep. The temperature rose considerably, the wind having been described as “hot” and “tropical;” and the crocus, hyacinth, and other flowers, of which the soil and climate of the Crimea is so productive, burst forth with their bright green shoots, under the influence of the warm atmosphere. There was another sortie that evening against the French, the loss of the latter being slight—thirty-five men in killed and wounded.

A powerful reinforcement to the corps of observation of General Bosquet gave assurance for the protection of the British right. This accession of force consisted of 8000 men. The Russians at the same time unmasked their batteries which they had erected on the Inkerman heights, over the Tchernaya, for the purpose of playing upon the English right flank; the distance was too great, the messengers of vengeance fell short of the British position. On the 17th men were seen working in the Russian batteries on the north side of Sebastopol: about 2500 were engaged in making a trench from the end of the bay at Inkerman towards the Belbek.

Lord Raglan visited the lines, and was engaged in their inspection throughout the day; as the weather grew milder, his lordship’s health enabled him to visit more frequently the posts which required his supervision. “All our lines,” says the *Times*’ correspondent, “towards the sea road from Yalta, have been much strengthened, and the profile of the works, which was certainly not satisfactory before, has been altered and improved.” The oxen which had been introduced to supply the troops with fresh meat had been dying for want of fodder, and the mortality among them became so great by the date of which we write, that the speedy extinction of the whole became certain.

On the 17th General Canrobert, writing to his government, stated that the French army was impatient for an assault, that he expected in a few days to be ready again to open fire from his whole line, and hoped his ally would be ready to open a general fire also. In this attitude we must leave besiegers and besieged while we turn to another sphere of combat; but before we do so, it may be instructive to place before the reader an American estimate of the conduct of the British, and the condition of their army throughout the campaign. There is a tone of boasting, and a disposition to depreciate everything English in the passage; but it is a sketch of the British military system from an American point of view, which shows us how our Transatlantic brethren regard it, and must be important to us, because it is the general view of a people with whom we may yet be at war. Referring to the privations and sufferings recorded in this History, and the causes by which those evils were produced, the American editor observes:—

“Nothing less than this would have convinced Great Britain of the utter folly and absurdity of the system on which the British army is conducted. It has long been usual for officers of the British infantry and cavalry to buy their commissions, and to buy promotion from grade to grade afterward. The artillery and engineers pass a sort of examination, and when a man in these corps is really anxious to learn his profession, some poor facilities are afforded him to do so. But it is contrary to the practice of the service for officers of the line to interfere in such matters. They are expected to be rich or noble—in every case to be gentlemen, but nothing more. The consequence is, that for many years Great Britain has not contained a more thoroughly incompetent and useless set of men than the officers of her army. Perfect gentlemen in manners—when they do not fall into the habit of gambling, drinking, and so forth,—they know positively nothing. Their lives are spent in the drawing-room or at the mess-table. Delightful companions and very popular with young ladies, as soldiers they are as worthless as the wooden target at which their men are taught to fire. Like that counterfeit, they never flinch from danger, but stand firmly to be shot: but like it, to expect counsel from them would be ridiculous. Of the science of war, of the duties of an officer in the field, of the thousands of matters with which a soldier should be conversant, in order to make head against the enemy and protect the lives of his men, they are wholly, helplessly ignorant.

“These are the men whom England sent out to command her brave soldiers. In their hands she placed their lives, and the consequence is that after a campaign of a few weeks, 40,000

out of 54,000 are under the sod or in the hospitals; and though three battles have been won, the failure of the campaign has come to be admitted on all sides, and the expediency of the withdrawal of the troops openly debated. From day to day a fresh Inkerman may be expected, and though it is hard to say what may be the issue of a combat between the Russians and French, no one can doubt what would be the effect of a bold sortie on the weak English lines. There are doubtless other points besides that one on which an attack might be made. There are, indeed, many reasons for believing that the withdrawal of the force under Liprandi from the line formerly occupied in the valley of the Tchernaya has been nothing but a *ruse* intended to delude the besiegers into an extension of their ground.

“That these things are well known and fully appreciated in England will be seen by the speeches republished elsewhere, and the cabinet movements which have just taken place. Whether they will lead to the correction of the real evil remains to be seen. The spirit of conservatism is very strong in all European countries; and the Horse Guard have strong friends in parliament. For years and years enlightened men have urged the reform of their system, the abolition of the plan of selling commissions and promotion, and the adoption of some rules obliging officers to learn their business. But the aristocracy has been too strong for the reformers. The army was a convenient nursery for the stupid sons of the scions of nobility; they would not give it up. So long as peace lasted the most ignorant lord's son was competent to discharge the duties of an officer; and the rulers of England thought it would be time enough to think of change when war broke out. They resisted reform accordingly; rather increased the diminished power of rank and wealth in the army; sold ensigncies, companies, colonelcies; and now they find they have sold their arms and their country's honour into the bargain.

“We have no wish to draw invidious comparisons, but contrasts will force themselves on the mind on such occasions as these. It has long been a favourite answer of Englishmen, when questioned about their costly war establishment, to say that their position in Europe required them to maintain 100,000 men in arms to defend their country, at an expense of 100,000,000 dollars a year more. They have sneered at the insignificant army of the United States, and expressed a common curiosity to know what we should do if we became involved in war. It is not many years since that contingency happened. (On that occasion the total available force of the United States was something like 7000 men

Before a year was over, more than 300,000 had volunteered to serve; and we were enabled to make two invasions of the enemy's country, to fight three battles in one, and six in the other, to storm three of the strongest forts in America and the world, and to seize the enemy's capital. The country invaded was full as unhealthy as the Crimea: indeed, the cold at Balaklava is not nearly so deadly as the fevers of the Rio Grande or the vomito of Vera Cruz. Yet not one disaster occurred to

check the ardour of our troops; and the mortality from disease was not much greater than it would have been had they been quartered in barracks in the same latitudes. In comparing this simple record with that of the British campaign in the Crimea, the true secret of the difference is disclosed at once. Our officers were mostly West Point men; theirs idle noblemen or the sons of rich merchants and landholders, who know nothing of their trade. This explains everything."

## CHAPTER LXVIII.

### THE BATTLE OF EUPATORIA.

"I think by some odd gimmals or device  
Their arms are set, like clocks, still to strike on.  
Else ne'er could they hold out so as they do.  
By my consent we'll e'en let them alone."—SHAKSPEARE. *Henry VI.*

It was a remarkable circumstance, that either the allies nor the Russians, in the earlier part of the campaign, estimated the position of Eupatoria as it ought to have been valued by both. The allies appear to have sooner discovered its strategical importance, and to have strengthened the defences there, before the enemy could bring a force to attack so powerful as to awake great apprehensions for its safety. It was strange that the Russian Government, and its generals in the Crimea, should be so ignorant of the relation of Eupatoria in a military point of view to the Crimea, so remiss in providing against its occupation and strength by the allies. The czar himself, it is alleged, was the first to perceive the danger of its possession by his enemies, and to have ordered its capture at any cost. For this purpose the army of Liprandi was quietly drawn away from the Tchernaya, and after a harassing march of six days, occasioned by the wet state of the ground, was joined before Eupatoria by a strong force under Osten-Sacken. What the precise strength of these united *corps d'armée* as it is difficult to determine, for the reports of the Russian generals were fabulous; their numbers and losses were underrated with shameless falsehood; and the desperate and repeated attempts to storm the place, which met with signal defeat, were designated by Prince Menschikoff "a successful reconnaissance." The estimate formed of their numbers by the Turkish generalissimo, upon data supplied by the prisoners and from his own observation, was, that they consisted of thirty-six battalions of infantry, six regiments of cavalry, 40 Cossacks, eighty pieces of artillery in position, and a few troops of horse artillery which were held in reserve. It is not easy to estimate the numerical strength of either battalions of infantry or regiments of

cavalry, as the rules applying to such matters in the Russian service were relaxed by the contingencies of war. Perhaps 50,000 men may be a tolerably correct computation of this army.

The forces of the defenders are differently represented: the historian is as much at a loss in this case as Prince Menschikoff, who thus described the object of the attack:—"To ascertain accurately the number of the hostile forces that occupied Eupatoria, and to see whether there would not be a possibility of expelling them." If this were all that was intended by the prince, there was much more attempted by Osten-Sacken and Liprandi, without discovering after all how many men Omar Pasha had at Eupatoria. The Baron Bazancourt states the number in the defence as 40,000; Mr. Woods describes the army under Omar as consisting of 25,000 Turks. There were also a few French, and the crews of the English fleet. Probably 30,000 would be a correct estimate of the numbers of the defending force.

Omar Pasha had only been a few days in the town before the assault was made. He found on his arrival the Turkish infantry, with forty-five guns, under the command of Suleiman Pasha and Selim Pasha; and a small body of cavalry, not exceeding 400 men, under Skender Beg. Skender was a famous man in the Turkish army, "a Polish renegade," and a most intrepid soldier. He was not like Cassio, who

"Never set a squadron in the field,  
Nor the division of a battle knew  
More than a spinster."

He had been engaged with the Russians ninety times, at the head of troop, squadron, regiment, or brigade, as chance or duty led. There were about 200 French sailors and marines of the crew of the *Henri IV.*, wrecked in the storm of the 14th of November, and the crews

of the French frigate *Veloce*, the Turkish frigate *Scheckfaer*, and the English ships *Furious*, *Valorous*, *Curaçoa*, and *Viper*. The ships of war were so drawn up that the right flank of the defence was completely covered by their guns, so as to render all attempts on that side too desperate to give the least hope of success: although bravely tried, it failed.

Before entering on the detail of the battle, it may be desirable to present the reader with Prince Menschikoff's despatch of the 19th of February:—

"On the 17th the troops cantoned in the vicinity of Eupatoria were employed in a reconnaissance of the town, at a distance of 250 toises. They opened a cross-fire of artillery upon the works, and in a very short space of time had dismounted and silenced several of the enemy's cannon, besides blowing up five ammunition tumbrils. Having satisfied himself that Eupatoria was occupied by 40,000 men and 100 pieces of artillery, General Churleff, who commanded the detachment, gave orders for it to retire beyond the range of fire, which was effected with the utmost order, the corps marching towards Sebastopol. The siege works at that place have not advanced; our artillery and sharpshooters gall them continually. On the 13th we blew up the French field powder-magazine in the trenches by a shell."

How far the representations in this despatch were correct the facts of the conflict reveal. On the morning of the battle the Turks ranged themselves behind their half-formed batteries with the most prompt alacrity, and with unbounded confidence in their general and their cause. Omar Pasha took up his post on a rising ground, from whence he could at once overlook the defence and the lines of the enemy. The position of the defence was in no respect strong. The little town is formed along the sweeping shore of the bay. The houses, with the exception of a few modern Russian buildings, are in the old Tartar style—square walls, plain and bare without, having in the inside verandahs looking into a court, in the true oriental style. The usual population of the place had been 10,000; but, in consequence of the severities of the Russian army, and the sympathy of the Tartar population with the allies, the inhabitants had increased to the number of 30,000. Such of these as were not in arms crowded the flat tops of their houses to see the battle, their curiosity gaining the mastery over considerations of personal safety: in this way some of them fell under the explosion of the enemy's shells. The town, in the state which its batteries and defences then were, was almost open. On the left, however, the *Henri IV.* and four French transports had

been stranded, and seemed as if sailing shore from their upright position. The sails and marines remained in the *Henri IV.*, as she was placed broadside to the enemy, as the vessel were at sea. This ship and the transports formed an admirable defence to the extreme left of the place, sweeping the range with the range of their guns, and rendering it impossible for the Russian cavalry, powerful as it was in numbers and condition, to enter. At both the north and south ends the English steamers and a Turkish ship took up positions which enabled them to cover with their guns both flanks of the defence. Beyond the town the country presents the appearance of a vast arid plain. An old Russian barracks in ruins was a short distance in front. The space, however, is not a perfect level, for the ground rises gradually from the front to a line of tumuli which lie nearly parallel with the town, the left tumulus being nearest to the right of the defence. From these lines of tumuli, three miles in number, the ground again descends into the vast plain beyond. On the left of the defence there was nothing peculiar in the aspect of the ground: on the right, Lake Sasik almost fringed the town, the lake being separated from the bay by a narrow segment of land. On the small space between the lake and the town were some corn-mills, which were comprised within the lines of the defence; and nearer to the Russians, between a curve of the Simpheropol Road and the Sasik, was the Greek cemetery, behind the further wall of which the Russian infantry formed, and through which they rushed forward to the attack. The anchorage of Eupatoria is very unfavourable to shipping, whether martial or mercantile—worse than any occupied by the allies in the Black Sea, not even excepting Varna. The sea was rough on the morning of the engagement, and had a gale sprung up, the shipping could not have contributed so materially to the defence. The Russians generally chose a misty or foggy morning for offensive operations against the allied positions in the Crimea. The 17th of February favoured them in this respect: under cover of its gloom they were enabled to form along the line of the tumuli, and behind them unseen. Their cavalry was so numerous, that of Omar Pasha numerically so inferior, and the morning light so imperfect, that the Russians were able with impunity to push up their light horse in reconnaissance to the very works, and to bring forward their fieldpieces, and several powerful thirty-two pounders, to desirable positions without losing a man. Their first operations were upon their own right; here the cavalry in great force charged up the road leading into the town on that side, but were met by so galling a fire from the guns of the English steamers, and of the stranded French

ships, that they suffered severely; a portion of them hesitated and turned, some charged boldly on, until the musketry of the French sailors and marines, as well as showers of grape and canister, compelled them to retire and re-form beyond range. The cavalry then moved gradually towards the right centre attack. The cannon opened along the whole line, and for two hours played upon the defence. It was a splendid battle of artillery, and the gloom of the morning heightened the interest of the scene, giving to the flashes of the guns so much more brilliancy. It appeared as if the little town were begirt with lightnings, the flashes of which never intermitted, while innumerable thunders burst upon the earth, and rolled forth over city and sea. Upon the centre of Omar's position the greater force of the enemy's artillery was directed, and there many of the brave defenders fell. The Russian advance was worked well, but that of the defence better. The Turks stood to their batteries, not only with unflinching courage, but with patriotic and soldierly enthusiasm. The British officers scattered amongst them covered themselves with glory, and the confidence reposed in them by the Turkish artillerymen knew no bounds.

Notwithstanding the smoke of so many pieces of cannon, as the morning advanced the scene became more extended and picturesque. The sky was not cloudy, although a haze covered the dawn, and as the wind freshened it dispersed. From the position occupied by Omar Pasha the long dark lines of Russian infantry were distinctly seen behind the artillery, their cavalry preserving a watchful and menacing attitude to their right and right centre. As the rising day gradually disclosed the imposing forces of the Muscovites, the Turks from the batteries, and the Tartars from the house-tops, strained their eyes in the direction of their heavy masses, but there was no blanching—on the contrary, as the enemy became more distinctly seen, the enthusiasm of the soldiery of Omar increased, and shouts of "Allah! Allah!" rolled along the flaming lines. The discipline of their chief was stern, and when the first few shouts, as if of joy on at last seeing the foe with which they had to contend, subsided, the men remained silent at their guns, and only the voice of command, or the call of the bugle, or the roll of the Turkish drum, could be heard through the din of the cannonade, until the clamour of battle rose amidst the close and fierce contest which, after two hours' artillery combat, was waged upon the extreme of the Russian left. During the cannonade, the scenes at the rear of the Turkish batteries were exciting. Tartars running to and fro, carrying ammunition and bearing away the wounded and the dead; women and children piercing

the uproar of the conflict with their cries; and out at sea the ships moving as new advantages of position demanded, while from their broadsides were vomited streams of fire as shot and shell were hurled upon the foe. Every moment of the combat the enthusiasm of the defenders rose higher, and, without any exaggeration, it may be written that the whole line was impatient to grapple closely with the enemy.

It appeared for a short time as if the Russians hesitated as to the wisdom of an assault, and expected a sally from the garrison. The cavalry of Omar were too few—only 400 men—and the cavalry of the enemy too numerous, amounting to several thousands, for any such movement on the part of the Turks. Besides, the position taken up by the Russians forbade that: their extreme left, consisting of infantry and fieldpieces, rested upon a small lake separated by a narrow piece of land from Lake Sasik; their right rested on the line of tumuli; and near it their cavalry was massed, rendering a sally in that direction as hazardous as on the other flank it was impracticable; while along their line, and especially on the centre, their guns played with most formidable power—and to protect these guns from a *coup de main*, earthworks were thrown up, behind which were detachments of rifles. From their right several attempts were made by their cavalry after the first repulse, which ended in skirmishes. On one of these occasions they came on, emboldened by the slackness of the fire opposed to them; the *Viper* gun-boat threw two Lancaster shells, which burst among them with fearful havoc, and they rapidly fell back upon their main body.

It became at last obvious that the grand effort was intended to be made on the extreme left; and, as soon as Omar Pasha perceived that their infantry was manœuvred for that object, he sent to Captain Hastings of the *Curaçoa*, the senior officer on the station, a request that he would send the *Viper* to that flank. While this order was being effected the enemy, perceiving the movement, again threw his cavalry forward against the left of the defence; but the place of the *Viper* was taken by the *Valorous*, which opened a well-directed fire upon the cavalry, compelling their rapid retreat, leaving many of their fallen upon the field. The *Curaçoa* and the Turkish steamer were both very effective in their fire.

The Muscovs at last brought a reserve of eight heavy guns, which inflicted serious injury upon a redoubt near the centre, from which they had suffered much during the morning. The English Colonel Ogilby opened fire in another redoubt with a single gun, to draw off the cannonade in some measure from the point on which it was so heavily concentrated.

This he effectually accomplished, for four of the eight pieces were directed upon his single gun, which they did not succeed in silencing, nor did a man who worked it fall, although the works were shattered, and the men covered with *débris*.

Finding all attempts to silence the batteries of the defence in vain, the enemy determined upon a storm. They selected for the point on which to execute this purpose the extreme right of the place. Their reasons for its selection may have been that there was less to fear in that particular direction from the fire of the Turkish artillery; the outworks at the windmills between Lake Sasik and the town appeared to be more vulnerable, and the wall of the Greek cemetery afforded a shelter in approaching those works. Here the third and fourth battalions of the regiment of the Azoff infantry, the battalion of Greek volunteers, three sotnias of the regiment No. 61 of Cossacks of the Don de Jeroff, under General Chruleff, emerged from behind the wall of the burial-ground, advanced rapidly through the cemetery, and attempted to storm the outworks above described. While General Chruleff was forming his Greeks and Cossacks for the assault, the *Furious* British war-steamer landed a rocket party on the extreme right of the town, who, coming round among the windmills, opened their fire precisely on the head of the Russian column as it emerged from the broad gate of the cemetery. The discharge was point blank, the rockets tearing through the column, which nevertheless endeavoured to deploy, but was so broken by the inequalities of the ground, and the various impediments met from tombs of every size and shape, that they necessarily lost time under the unexpected and destructive fire of the little rocket brigade; a portion of the column never left the burial-ground, or came out only in a struggling and confused mass. Those who did come forth were met by a deadly volley of musketry from the intrenched position of the Turks, from which they precipitately sought shelter in the cemetery once more. A ringing cheer broke from the windmills and the redoubts, in which the British tars, and Turkish infantry and artillery, mingled their shouts. General Chruleff, undismayed, rallied his men; the Russian regiments obeyed his orders without any show of reluctance, but without enthusiasm; the Greeks and Cossacks rallied with heroic alacrity. Field-pieces meanwhile opened fiercely upon the mills, which were broken beneath the cannonade, and soon brought in ruins among the defenders.

The conduct of General Chruleff was most intrepid. He rode a large and conspicuous horse, and wore a uniform more showy than is customary with the Russian officers under

fire. Rallying his Cossacks and Greeks again led them on, and this time in better order; the Turks awaited the onset in silence and allowed the assailants to approach within seventy or eighty feet of the works, when fire of musketry was poured with fatal effect among them: the Russians reeled back under the shock of that dreadful volley, and again sought the refuge of the cemetery. The general exposed himself most recklessly in his attempt to preserve order among his troops, and to rally them yet again. Strongly reinforced, he advanced a third time against the position with apparent determination to conquer it. Scaling ladders and other means of gaining access were carried by detachments, and the whole came on with better order and more rapidity than in the second attempt. They this time advanced to the works and endeavoured to plant the ladders, but fell so fast under the steady fire of the defenders, that the attempt was abandoned in despair, and the friendly cemetery was sought once more for shelter. On this occasion it was not permitted to afford a respite from the Turkish rifles, for Selim Pasha, at the head of the regiment of Roumelia, supported by an Egyptian battalion, sallied out in pursuit, penetrated the cemetery, shot down or bayoneted many of the fugitives, who fled in utter disorder upon their main body—the Roumelians and Egyptians retiring with little distance within their works. In this gallant charge Selim Pasha, a *ferik* or lieutenant-general, and a most gallant and skilful soldier, perished; a musket-ball pierced his body, and he fell dead, cheering on his gallant followers. In his second in command, Ismail Bey, was wounded also, in consequence of his too forward valor; only a few other officers were slightly hurt. The result of this dashing charge was instantaneous upon the whole Russian line; they retired for about two miles, and there bivouaced. The retreat was executed with order and skill, and as it commenced the sun burst out brilliantly over the field, and was reflected by the arms and uniforms of the fine army, as the artillery limbered up and covered the retiring infantry and the cavalry in turn covered the retiring guns. Scarcely had the Russians retreated more than the Tartars, to the number of about 2000, rushed from the town into the cemetery, and rendered the scene of horror there still more horrible. The dead and dying were strewn thickly among the tombs, many of which were torn up and shattered by cannon balls and shells. The Tartars stripped the dead, and in several cases mutilated them—a work in which some of the Turkish soldiers participated. Two of these ruffians presented themselves before Omar Pasha, one of them with the head of a Greek volunteer reeking in his hand, and the other with the head of a Russian

ludier. Omar at once put them under arrest, and made examples of them in such a way as was likely to deter their comrades from similar atrocities. It is but justice to the Turkish soldiery to state that they generally expressed their disapprobation of such acts.

Appalling scenes were not confined to the one which had been occupied by the Russians, or to the cemetery; the ground around the hills, and the works in front bore evidence of the superior weight of the Russian cannon. On one spot a number of artillery horses were crushed into a mass of blood and mangled flesh. Some similar instances of the effect of a closely-directed cannonade were presented by the fallen men; headless trunks were strewn about, and iron bodies lay among shattered guns and earthworks, marking the progress of the battle. The Turks showed a most laudable humanity to their wounded, and a decent reverence for the dead, in which they are unsurpassed by any people, notwithstanding the criminal departure from this characteristic which had been occasionally shown by their irregular soldiery in the treatment of slain Russians. Nor can we withhold from the Russians a large and honourable participation in this sentiment and feeling. It matters not what may be the religious rite of the people, in any portion of that empire—whether Greek, Latin, Armenian, Jewish, or Mohammedan—nor how various the obsequies practised, there is a consecrated care and an tranquil solemnity attendant upon the mouldering remains of the departed, almost unknown to us with all our boasted civilisation. Throughout the vast regions subjected to the government of St. Petersburg, extending from the Atlantic to the Pacific, and from the Icy Sea to the shores of the Caspian, there are great public cemeteries at well-judged distances from the city populations; and so situated as to ensure inviolability, be compatible with health, and keep up such associations of thought and feeling concerning the dead as to promote the civilisation of the living. At St. Petersburg and in Moscow, the Greek church lavishes on its burial-places ceremonial and expense. The Greek cross is engraven upon the stone that surmounts the grave, or there is inscribed there the story of departed worth, and how the dead still is to surviving friends. All care and reverence, and the safeguard of imperial authority, impress the Western soldier with one trait of civilisation to which the unlettered Russ have attained. In Finland, Lithuania, and Poland, the hand of imperial rule has set apart the place of tombs—so that Lutherans, reformed and Romanist, may free within its precincts, each to honour his own creed, and see preserved in sacred quietness places so endeared. On no space of Russian soil is this paternal care for the living, as

to the depositories of the deceased, more conspicuous than in the Crimea. At Sebastopol, small as is the population, and open as is the country around it, the cemetery is extramural, so that it was held by the French army as a line of intrenchment. At Simpheropol the most picturesque objects in the vicinity are the places of burial, and they are so arranged that the health of the inhabitants shall suffer no injury, and the homes of the dead no indecency—equally preserved from levity of approach, and from inflicting any insalubrious influence in the neighbourhood. At Bagtché Serai, the Tartar capital, the cemetery, with its turbaned tombs, is preserved with as much jealousy as the antique palaces of the khan; and the attention, culture, and taste, as marked as in the garden of the Gheri, the old sultans of the vanquished race. The Jew devoutly seeks the spot set apart for the interment of his people; and although nothing besides which is his remains unmolested, where the Greek or Moslem holds ruthless sway, yet here at least his oppressions cease—they do not maltreat the depositories of his buried ones. In the untroubled quiet of the cemetery, secure from the footfalls of his tyrants, he lays the ashes of his fathers to rest; as of old, when Abraham set his race the example in the land of Abimelech, of providing for this sacred duty, and of regarding this tender accompaniment of a true civilisation. Descending along the meandering slopes and rugged precipitate declines, to the Valley of Jehoshaphat (for in the land of the Crimean Tartar, as in the mysterious land of his origin, the Jew has a valley so named), the traveller will find the homely, devout, and almost Christian Karite Jews, enclosing their last resting-place within the boundaries of a decent distance from habitations. Even the poor gipsy-boys, as they roam about with the characteristic wildness of their race, disturb the burial-places of no other race; and the rude gipsy horse-dealer, honest in nothing beside, would not pluck a bough from the overhanging cypress, nor ravish a flower from the tomb on which it drooped and breathed its life away, as if longing to die upon the breast whose sleeping sanctuary it was intended to adorn. The Tartar women, as they come from the woods laden with filberts, cease the clangour of their usual garrulity when they pass the gates of a necropolis, or even see at a distance the well-defined erections within it. There is in all the races of the Crimea some traditionary reverence for the dead. Our French ally, as well as our enemy, surpassed us in this quality. It is no surprise that our French confederates excel us in artistic taste, whether they decorate with offerings a nuptial altar or a tomb. But even the Germans are before us, both in the grace of a refined burial and the precautions of sanitary policy

connected with it. Surely our Evangelism teaches no disrespect or forgetfulness in these matters! Is it not a dreary picture, and filling with tones of acute anguish the sacred song of the Psalmist, when he describes the uttermost desolation of our nature thus:—"Our bones lie scattered at the pit's mouth?" It is in "the sure and certain hope of a glorious resurrection," that the Gospel teaches us to lay lowly beneath the green sod, or the sculptured marble, the lips that filled our sanctuaries with psalmody, and the hearts that thrilled with the emotions of Christian consolation.

In whatever foreign land the enterprising Englishman lays him down to rest in the last long repose, it will do no dishonour to our nation if it copy from other nations their respect and reverence for the spot where the ashes of the departed remain. Such was the force of national hostility, and such the demoralising effect of war upon the heart, that Turk and Tartar for awhile forgot their traditional emotions in their treatment of the Russian dead in the Greek cemetery at Eupatoria. Some few set up the displaced sepulchres of the Greeks, but in other instances the vindictive feeling entertained to that race was shown in the treatment of their broken tombs. Omar Pasha was enraged when, arriving at this spot after the battle, he witnessed these indignities to the graves of the Greeks and the bodies of the Russian dead, and he drove with violence the marauding Tartars away. The muschir, as he rode along the lines while the victory was no longer doubtful, was received with a wild excitement; the soldiery hailed him as if he were a god; some clung to his stirrups, others ran before him with gestures of fanatical enthusiasm, and loud exclamations of triumph. The sagacious chief commended the common soldiers, who are sensitive to the praises of a general whom they respect; and protestations arose on every side that if he would lead them out against the enemy, they would expel them from the vicinage. Omar was too wise to try their prowess in that way, knowing that, without cavalry, and a better equipped field artillery, he dare not pursue the well-appointed army of the enemy.

An incident occurred just as the retreat began, which has been variously related. A carriage was seen moving about during the battle, almost beyond cannon range. The cavalry officers and mounted orderlies were seen, from Omar Pasha's position, having frequent recourse to this carriage, as if receiving their orders thence. When Omar had some leisure to direct his attention from the general conflict to objects which did not immediately appear of vital importance, he entered one of the redoubts, and addressing the Turkish gunner, asked if he thought he could throw a shot

as far as that carriage. The gunner's reply was, "Yes, highness, with the help of God and your encouragement, I think I could." The order was given, and promptly obeyed; the instant the carriage, luckily for its occupants, moved away, for the shot fell upon the spot it had just left, scattering, slaying and wounding the cavalcade which was around it. It was reported by prisoners and deserters that it was the carriage of Prince Menschikoff, who it was said commanded in chief during the action. By others it was alleged that it was occupied by one of the grand dukes. Little information could be gathered from this description of prisoners, who were often ignorant of everything which it might be expected they would know, and sometimes pretended to be ignorant. There were many Austrian subjects in the Russian cavalry; one of these, a Croatian, was taken prisoner; this man belonged to the 12th division, commanded by Liprandi, and to the 32d regiment, called Arafsky; he had been at the battle of Balaklava, and had remained in the army of Liprandi in observation there, while his corps left to take part in the attack on Eupatoria. His information was to the effect that three days before his troop had left the environs of Sebastopol, with only six days' rations of bread in their canvas bags, and that the commissariat waggons were still forty versts behind, in consequence of the bad roads. This was important information to Omar, for he gathered from it that commissariat difficulties would probably compel a portion of the force to be sent before him to evacuate the neighbourhood. The prisoner either did not know, or would not tell, who commanded the Russian army, but alleged that the commander's rank was that of a prince, and that before the battle the prince harangued the troops, and promised them money if they should force their entrance to the town. This, which both prisoners and deserters confirmed, showed that the attack on Eupatoria was no mere reconnaissance, as Menschikoff's despatch so mysteriously put forth. The number of Russian slain who were found, and almost all of the wounded, were in and before the Greek cemetery; on every other part of the field there not only bore away their wounded but the dead, whom they buried at some distance; the object of this was to deprive the victors of the triumph of reporting a great number of Russians slain, and thereby increasing the courage of the Turkish soldiery.

During the battle, and the whole day after it was gained, and the next night, men, guns, and matériel of war were landed; these arrivals were opportune, for the Croatian prisoner referred to, informed Omar Pasha that the enemy had 100 guns, many of them 32-pounders, well horsed, and capable of being served

with great rapidity. The Turkish general continued to strengthen his defences, as soon as the men had removed the wrecks produced by the combat, and had buried the dead. The working parties were changed four times within that day and night. The pasha showed the utmost vigilance and diligence. It was surprising that the Turkish officers generally did not catch this noble infection; but all the native officers lapsed into their usual languor after the excitement of the contest had subsided. One of the colonels, very fat, and said to weigh eighteen stone, was an exception to the lazy gentry who bore the commission of the sultan—for no officer, Turkish, French, or British, equalled him in activity; he appeared to be ubiquitous, for at every point he inspired the Turkish soldiery with zeal, either to land munitions and supplies, or build up and consolidate the defence. Immediately upon the withdrawal of the Russians, Omar Pasha dispatched intelligence to Kamiesch and Balaklava, informing the Russians that Liprandi was before him with nearly his whole force, and suggesting the idea of a bold attack upon any corps lingering in observation at the rear and right flank of the armies before Sebastopol. The allied chiefs dispatched to the war two more vessels of war, in case a fresh attack should render their assistance requisite. The moral effect of the battle was everywhere great, beyond the magnitude of the contest itself. Within Sebastopol it had less influence than anywhere else; for the troops were unable to believe in a successful reconnaissance, which five Turkish waggons were blown up in the fiction which, if it had been a truth, would have been of little consequence. The number of Turks slain in the defence was also set down at a number amusingly fabulous. In the allied camps the effect was to redeem the Turkish reputation for courage, which, so far as the common soldiers are concerned, should never have been brought into question. Turbans are not Turks; the former, and not the latter, had fled from the redoubts at the siege of Balaklava. "Bono Johnnie" was himself again; and extra rations of rum were consumed by the British to toast the triumph of their Turkish confederate from the odium of cowardice, so thoughtlessly and wildly heaped upon him. At Constantinople the exultation of the Moslem knew no bounds; nothing could compare with it, except the rage and resentment of the whole Greek race, whether in Greece or Turkey. In Russia the consequences were more important than anywhere else, for while the people were deceived as to the real nature of the conflict, the czar was tormented and the anguish the defeat inflicted upon him had much to do in producing, or at all events aggravating, the illness which brought him in the prime of life from wielding the

sceptre of many dominions to bow, himself, beneath the sceptre of death.

The following, taken from the columns of the *Invalide Russe*, is a specimen of the way in which the affair was represented to the Russian public—"We knew by the report of Prince Menschikoff's aide-de-camp of the 12th, that on the 3rd the Turkish troops disembarked at Eupatoria had made an offensive movement upon the village of Saki, in numbers of more than 10,000. In order to assure himself of the exact amount of the enemy's forces in occupation of Eupatoria, and to ascertain if there was not a possibility of expelling them, Prince Menschikoff ordered Lieutenant-general Chruleff to execute, on the 17th, a strong reconnaissance upon that town, with a party of troops stationed in the vicinity. The troops destined for this operation approached Eupatoria within the distance of 250 yards, and opened a cross fire of artillery upon the place. The enemy responded with a lively cannonade from the fortifications which surround the city; nevertheless, the action of our artillery was so happily executed, that in a few seconds five ammunition waggons belonging to the Turks were blown up, and several pieces of cannon dismounted. Carried away by this success, the 3rd and 4th battalions of the regiment of the Azoff infantry, the battalion of Greek volunteers, and three sotnias of the regiment No. 61 of Cossacks of the Don de Jeroff, got nearer to the town, and profiting by the shelter which the locality offered, commenced a smart fusillade with the enemy: nevertheless, General Chruleff, being assured that the town contained nearly 40,000 troops with 100 pieces of artillery, and that further effort on our part promised no result, gave orders to the troops to retire. This difficult movement was executed with remarkable order. Our loss in this affair amounts to nearly 500 men killed or wounded. The loss of the enemy was in all probability much greater; for his troops, pent up in narrow streets, remained for a long time exposed to the terrible fire of our artillery, the projectiles of which had clear range of the entire town."

While the people were flattering themselves with the occurrence of a new event redounding to the honour of the Russian arms, the sick czar, in his palace, felt a deep and heart-blighting humiliation. To be beaten on his own territory by a Turkish army, after having been driven by Turkish bands from the Danube and the Pruth, was mortifying to his pride beyond all the disasters which his mad policy had entailed. From the hour in which he heard of the battle of Eupatoria his equanimity was never restored. Omar Pasha killed the czar! He was among the mortally wounded by the defence of Eupatoria.

Although there was no very great generalship displayed in this battle by Omar, yet there were no mistakes; the affair was competently conducted, the arrangements were safe, and the issues were satisfactory. The fame of the pasha was elevated and extended; this was felt from the gates of the seraglio to Lake Sasik—from the dreary steppes of the Tauric government to the dreary chambers of St. Petersburg. Western Europe acknowledged the claims of the adventurer to rank among the first generals of the age.

Such was the battle of Eupatoria, and such its moral effects; its political and military consequences may be traced in the events yet to be related in this History. The following despatches will place some matters before the reader unsuitable to introduce in the author's account of the engagement, and will show the light in which the event appeared in the judgment of the various actors connected with it, and the authorities concerned in forming a just estimate of its general relation to the campaign and to the war. The following is the despatch of the Turkish general to Lord Raglan:—

MY LORD,—I have the honour to inform your lordship that the enemy attacked Eupatoria on the morning of the 17th inst. The troops intended for this attack had left the camp before Sebastopol six days ago, and other troops from Perekop and Simpheropol had joined them in the night of the 16th, and the morning of the 17th, in the flat ground that lies behind the heights that are before Eupatoria. As far as one could guess, and according to the information furnished by prisoners, the enemy mustered thirty-six battalions of infantry, six regiments of cavalry, four hundred Cossacks, eighty pieces of artillery in position, and some troops of horse artillery, which were in reserve. The attack commenced at daylight by a strong cannonade, during which the enemy used even 32-pounders. At first the Russian showed themselves in great force along our whole position; but seeing that our left was protected by men-of-war, which went there when the first shot was fired, they concentrated against our centre and right. I then requested the senior officer of the English royal navy to send the gun-boat *Viper* to the right, and to take up a position near the French steamer *Vélocé*, and the Turkish steamer *Schehfaer*, on board of which was the Vice-admiral, Ahmed Pasha. At the same time I reinforced the right with some battalions of infantry and some pieces of artillery, which I withdrew from the left. The enemy continued his fire, without ceasing, from the position held by his artillery, supported by a powerful fire of skirmishers; and then his infantry, carrying planks and ladders, three times tried to storm the works. Each time it was repulsed, and obliged to retire under our fire; but it was enabled to effect this retrograde movement under cover of its artillery, and of heavy masses of cavalry. Our cavalry, which at the present moment only musters about 200 or 300 horses, and which charged the Russian infantry at the commencement of its retreat, did not dare to pursue it in the face of such heavy masses. The superiority in artillery and cavalry prevented our disturbing the Russians on their retreat. After four hours and a half's fighting, they commenced retiring in three different directions, towards the bridge of Lake Sasik, towards Top Mamai, and towards the Perekop Road. I have every reason to be satisfied with the conduct of my troops during the day. Although behind works only half finished, and not fully armed, they showed a bold front, and were very steady. Our losses are not very numerous, but they are to be deplored. We regret the death of Selim Pasha, lieutenant-general, commanding the Egyptian troops. We had, moreover,

87 killed and 277 wounded; 79 horses killed and wounded. Amongst the killed there are seven officers and ten are wounded, amongst them Suleiman Pasha, thirteen inhabitants of the town have been killed, eleven wounded. I consider it my duty to make honorable mention of the French detachment that is here, of the English men-of-war, *Caracooa*, *Furious*, *Valor*, *Viper*, of the Turkish steamer *Schehfaer*, and of energetic co-operation of the French steamer *Vélocé*, all contributed greatly towards frustrating the efforts of the enemy. The French detachment had four killed, and nine wounded: amongst the latter is a major officer. The Russians must have suffered a heavy loss. According to the report of the civil authorities of the town, who had to bury the dead, their number of killed amounts to 453; their artillery lost 300 horses. They carried away a great many of their dead, and almost their wounded. We have taken seven prisoners.

I have, &c.,

OMAR

Colonel Simmons, the British commissioner with the Turkish army, also addressed to Lord Raglan the following:—

“The enemy's artillery opened their fire about twelve hundred yards from the place, covered by skirmishers, and supported by heavy masses of infantry in their rear, and cavalry on their flanks. The artillery subsequently took up a second position more in advance, about four hundred yards from the small crown work which is being erected in front of the mills to the north-east of the town; and after continuing their fire for some time, the infantry advanced to the attack, having formed under the cover of a wall about six hundred yards from the right of the town. They were repulsed at this point, leaving from 150 to 200 dead on the field. On other portions of the field a number of horses were left dead, but the killed men were removed. At length, about 10 A.M., the whole force retired, covered by the artillery and cavalry. I am not able as yet to ascertain the number of men engaged, but I should think there were not less than 40,000 of all arms, with a very powerful artillery. As many as sixty of the enemy's guns must have been firing at one time, amongst them some 32-pounders. Prisoners report that they were accompanied by 100 guns. As yet, all the particulars I have been able positively to ascertain is, that Landrandi's division (the 12th) was present. At present I understand that they are in position about five miles north from this, their fire leaning on the Sasik Putrid Lake. It is a much pleasure I have to inform your lordship that the portion of her majesty's fleet under the Hon. Captain Hastings have rendered most efficient assistance. The *Valorous* threw many well-directed shells, and completely covered our left; whilst the *Viper* gun-boat, which was at first stationed on the left with the *Valorous*, by Captain Hastings' direction moved, and took up a flanking position on the right, near the mills.”

The despatch of Lord Raglan to the English government was a brief recapitulation of the

bove, and containing them as enclosures. The French general thus addressed the imperial minister of war. This despatch, in common with most accounts of the battle, refers to two assaults, while Omar Pasha mentions three. The enemy was thrice repulsed before the sortie which compelled his retreat.

*Crimea, February 19.*

MONSIEUR LE MARÉCHAL.—Yesterday, the 18th, an English steamer coming from Eupatoria brought the news that the enemy had vigorously attacked that place, and had been repulsed. That vessel left Eupatoria without taking the despatches of Commandant Osmont. I was without details. To-day only I received a report from Commandant Osmont, containing the precise details, which I subjoin:—

In the night between the 16th and 17th the Russians, taking advantage of the darkness, established round the place—the circumvallation works of which are not quite completed—a sort of irregular parallel, consisting of abatisments thrown up, intended to cover their artillery riflemen.

On the 17th, at eight, A.M., eighty pieces of artillery opened their fire. Behind this artillery there was a mass of 5,000 infantry, commanded (according to Commandant Osmont) by General Osten-Sacken. There were also some horse.

After a cannonade of nearly two hours' duration, the enemy made their preparations for an assault on the east side, where the smallest number of guns are mounted. Five battalions of infantry, provided with necessary materials for crossing the fosse and scaling the walls, advanced to within 400 metres, protected by a segment of a wall belonging to an old cemetery. Two of these battalions were then thrown forward. This column arrived within twenty metres of the fosse, but, fired by a brisk fire, was compelled to retreat. About a second time to the attack, it was vigorously repulsed by a Turkish battalion, which, making a sortie from the town, attacked it boldly at the point of the bayonet, and routed it, while the small body of Turkish artillery charged it on the flank. This column left 150 men in the cemetery.

Throughout the cannonade continued along the whole front. The fire of the enemy was chiefly concentrated on the hill (so called) of the Mills, where the Egyptian division, Selim Pasha, and the Egyptian general, Rustem Bey, were killed, nobly fulfilling their duty. At ten o'clock the Russians began to waver, and soon in full retreat.

The defence of Eupatoria confers the greatest honour on the commander-in-chief, Omar Pasha, and the officers under his orders. It inaugurates, in the happiest and most brilliant manner, the *début* of the Ottoman army in the Crimea.

Commandant Osmont estimates the loss of the enemy at 100 killed and 2000 wounded. Writing at the very moment of the event, he had not yet received the official report of the losses of the garrison. He estimates them at about 100 killed and a proportionate number of wounded.

The little French garrison of about 200 men of the 3rd regiment of marines, and a portion of the crew of the *Véloce*, figured honourably in the defence, under the command of their commander, Chef-d'Escadron of the Staff, whose intelligence and firmness are known to us. We had four men killed and eight wounded; among them Lieutenant Las Cases, who had command of the marine guns. His wound is not serious. He is a distinguished officer, full of vigour.

The steamers in the roadstead, among which I must mention the *Véloce*, Captain Dufour de Mont Louis, rendered good service to the defence of Eupatoria by a directed fire. I am, M. le Maréchal, &c.,

CANROBERT.

On the 22nd of February General Canrobert issued an order of the day, directed to his officers, in which he eulogised the conduct of

Omar and his army in terms highly complimentary to both. The address will be found in a subsequent page.

The naval despatches present the battle from the point of view in which the officers of that service regarded it.

*Royal Albert—off Sebastopol, Feb. 20.*

SIR,—I have the honour to inclose, for the information of the lords commissioners of the Admiralty, copies of two letters which I have received from Captain Hastings, of the *Curacoa*, senior officer at Eupatoria, reporting an unsuccessful attack upon that place at daybreak on the 17th inst., by a large Russian force of cavalry, artillery, and infantry, and inclosing a letter from Omar Pasha, expressing warm acknowledgments for the great services rendered by her majesty's ships *Curacoa*, *Valorous*, *Furious*, and *Viper*, as well as his highness's thanks for the reinforcements of steamers which I had sent to him on hearing that the enemy was still in force in his neighbourhood.

Captain Hastings appears to have conducted his share of the defence with his accustomed zeal and ability, and to have been well and effectively seconded by Captains Buckle and Loring, and Lieutenant Brock, and the officers, seamen, and marines of all her majesty's ships present on that occasion.

Colonel Simmons, of the Royal Engineers, who is attached to Omar Pasha's staff, estimates the attacking force at 40,000 of all arms; and he states that as many as 60 guns, some of them 32-pounders, played upon the place at one time.

I understand that at nine o'clock the enemy's infantry formed under the shelter of a wall at 350 yards from the place, and advanced to the attack; but were repulsed with considerable loss, and soon afterwards retired, leaving nearly 200 dead on the nearest spot, and removing the rest of their dead from the more distant parts of the field.

Omar Pasha's army appears, from the latest and most authentic accounts, to have had nearly 100 men killed, and about 250 wounded, and to have had 80 artillery horses killed, and some guns much damaged.

The *Banshee* has brought me a report from Captain Hastings up to noon yesterday, at which time the enemy remained encamped about five miles from Eupatoria, with his left leaning on the Putrid Lake Sasik; while Omar Pasha, with the garrison, having been reinforced after the battle by further Turkish troops brought over from Varna in British transports, as well as by the *Dauntless*, *Curlew*, *Arrow*, and *Lynx*, sent by me hence, and by two French steamers sent by Admiral Bruat, awaited an attack with confidence in a favourable result.

I am, &c.,

EDMUND LYONS,

Rear-Admiral and Commander-in-chief.

To the Secretary of the Admiralty.

INCLOSURE No. 1.

*Her Majesty's ship Curacoa, Eupatoria, Feb. 17.*

SIR,—I have the honour to acquaint your excellency that this morning, about 6.30 A.M., the Russians, in considerable force, attacked the Turkish troops which are encamped at this place under the command of his Highness Omar Pasha.

The ships under my command at this anchorage, which are named in the margin, immediately proceeded under steam to close the flanking position of the Turkish intrenchments—*Valorous* and *Viper* taking the left flank, and *Curacoa* and *Furious* the right. About half an hour after the commencement of the attack I received from his Highness Omar Pasha a request to strengthen as much as possible the right flank, as the enemy were pressing their attack upon that point.

The *Viper* was immediately recalled, and from her light draught of water was enabled to effect good service, as also the three other ships in their respective positions.

The conduct of the captains, officers, seamen, and

marines under my command on this occasion deserves your excellency's approbation.

I have, &c.,

G. F. HASTINGS, *Captain.*

P.S. The French and Turkish vessels also did good service in the respective positions which they took up.

*His Excellency Rear-admiral Sir Edmund Lyons, Bart., G.C.B., K.C.H., &c.*

INCLOSURE No. 2.

*H.M.S. Curaçoa, Eupatoria, Feb. 18.*

SIR,—I have the honour to acknowledge the receipt of your memorandum of yesterday's date, relative to my report of the Russians having attacked this place on the 17th inst., as communicated by the steam transport *Queen of the South*, and I beg to inform you that the reinforcements of vessels mentioned therein have duly arrived here; and that I immediately informed his Highness Omar Pasha of the reinforcements being sent to his support, who begged me to offer to your excellency his warmest thanks.

In the late attack the Turks suffered a loss of 88 men killed, 250 wounded, and 78 horses killed. The loss on the part of the Russians cannot be ascertained.

No further attack has been made; but the Russians still remain in force about five miles from Eupatoria, and large reinforcements, both of men and waggons, are daily arriving from the road to Simpheropol. If the *Arrow's* services could be spared she would be of great assistance here.

I have, &c.,

G. F. HASTINGS, *Captain.*

*His Excellency Rear-admiral Sir Edmund Lyons, Bart., G.C.B., K.C.H., &c.*

*Royal Albert—off Sebastopol, Feb. 24.*

SIR,—I have the honour to report, for the information of the lords commissioners of the Admiralty, that no attack has taken place at Eupatoria since that of the 17th inst., which, as their lordships will perceive by the enclosed copy of a letter from Colonel Simmons to me, was more serious than was at first supposed. Her majesty's ships are in eligible positions for assisting in the repulse of any future attack.

The weather, which for the last few days has been very severe, is now remarkably fine.

I am, &c.,

EDMUND LYONS,

*Rear-admiral and Commander-in-chief.*

*To the Secretary of the Admiralty.*

INCLOSURE.

*Eupatoria, Feb. 20, 9 P.M.*

SIR,—The bearer is an aide-de-camp of the Seraskier, bearing despatches from Omar Pasha to his government. His highness would be much obliged to you if you would kindly order him a passage to Constantinople by the first opportunity.

The position is much stronger here than it was; in fact, I should say doubly so, and nearly twice as many guns mounted as on the 17th. That affair was pretty sharp, and the Russians lost a great many men: we have interred 53, and there can be no doubt they carried off and buried many more who were killed at long ranges by our artillery. They also left nearly 300 dead horses on the field.

Our loss was 87 killed, 277 wounded, Turks; 4 killed and 9 wounded, French; and 13 killed, 11 wounded, of the population; besides 79 horses killed and 18 wounded. Our field battery had 19 men (Turks) killed, and every gun (six) disabled.

The Turks behaved very well. Selim Pasha, the Egyptian, who was killed, was a great loss; but his place is well supplied by Suleiman Pasha, who was wounded.

Omar Pasha is most gratified at the promptitude with which you sent up ships after hearing of the attack.

The exertions of the officers and men of your fleet disembarking troops, &c., here are beyond all praise, but, unfortunately, the weather during the last week ten days has not been propitious, and consequently transports have been detained longer than they otherwise would.

I am, &c.,

J. N. SIMMONS

*Rear-Admiral Sir Edmund Lyons, K.C.B., &c. &c.*

*Montebello, Kamiesch, Feb. 20, 1855.*

On the 17th the town of Eupatoria was attacked from the eastern side by the Russians, with eighty pieces of artillery, six regiments of cavalry, under the command of General Korff, and twelve regiments of infantry—at 25,000 men, under the orders of General Osten-Sacken. The battle lasted five hours and a half, beginning at 11 in the morning. The Russians were vigorously repulsed, their loss was reckoned at 500 men killed, and a proportionate number of wounded. The Turks had 88 men killed, and 250 wounded: they lost 70 horses in action. The general of the Egyptian division, Selim Pasha, Colonel Rustem Bey, were killed. Among the French, four marine artillerymen of the *Henri IV.* were killed, the wounded were seven, of whom three belonged to the *Henri IV.*, and four to the regiment of marines. The attack of the Russians has not been renewed. The steamers anchored in the roadstead energetically contributed to the defence of the place. I have dispatched the *Brandon* and *Megara* to Eupatoria. Admiral Lyons has also sent thither a frigate and a corvette, with 1000 artillerymen.

BRVA

*Vélocé, Eupatoria, Feb. 21, 1855.*

Since the defeat of the 17th the Russians have made no further attempt against Eupatoria. To-day columns of infantry and convoys of waggons are seen retiring from before the place, and taking the direction of Simpheropol. Many villages are in flames in the vicinity of Eupatoria. New guns of positions are being landed, and new defences in course of construction. The city is in a state of defence.

DE MONTLOU

In the battle of Eupatoria notice was taken of the death of Selim Pasha, the commander of the Egyptians. His history is as romantic as his death was gallant. He was generally known among the Egyptians by the title of "the last of the Mamelukes." This appellation was literally correct: he was the only survivor of that body when Mehemet Ali, in 1821, massacred them. They had been assembled at Cairo, and Mehemet, jealous of their power, and annoyed by their arrogance and occasional insubordination, ordered their indiscriminate destruction. Selim, who was then a mere youth, was one of the few who survived. Seeing that there was no other hope of escape from the means which Mehemet had taken to destroy his party, he mounted his horse, and forced him to spring from the lofty wall of the place into the space below. The horse was killed by the fall, but Selim survived, wounded and severely contused. Mehemet Ali, astonished at the youth's determination and escape, ordered him to be spared. He soon recovered, and his subsequent and brilliant military career was entered upon under the auspices of Coles Selves.

CHAPTER LXIX.

OPERATIONS OF THE CONTENDING ARMIES IN THE NEIGHBOURHOOD OF EUPATORIA AFTER THE BATTLE OF THE 17TH OF FEBRUARY.

*Messenger.* West of this—scarcely off half a mile,  
In goodly form comes on the enemy;  
And by the ground they hide, I judge their number  
Upon, or near, the rate of thirty thousand.

*Mowbray.* The just proportion that we gave them out.  
Let us sway on, and face them in the field. SHAKSPEARE. *Henry IV.*

In the midst of the triumphs of Omar Pasha, consequent upon his victory, he was subjected to a serious domestic grief, which it is generally supposed ever after subdued his energy, and rendered him less fit for a large command. This was the loss by death of his nephew. Previous to the battle, this young man was attacked by typhus fever, which prevailed among the Turkish forces, and he was removed from Eupatoria to Constantinople. The young man, although but twenty-two years of age, had acquired a reputation for military talent; he was the adopted son of Omar, who was extremely fond of him.

In his grief, however, the famous soldier did not forget his duty. Precautions were taken against the return of the Russians, whom deserters (perhaps spies) reported were reinforced by fresh troops from Perekop, and were ready, with 30,000 picked men, to assault the place, aided by an increased artillery. It was rumoured that the troops encamped in the vicinity, and those at Simpheropol and Perekop destined for service against the place, numbered not less than 80,000 men. Accordingly, Omar caused his troops to work incessantly at the defences, while he dispatched letters to Kamiesch, Balaklava, and Constantinople, placing the English, French, and Turkish authorities in full possession of what information he could gather. In the two places last mentioned troops, provisions, and munitions of war were sent by day. Landing these stores from the ships impeded the progress of the defences, but the men of the English and French steam squadron in the roads, which was reinforced, aided in this work, while the officers made themselves useful in the fortifications.

Among the troops landed from Constantinople was a body of irregular cavalry (Bashibazouks); this description of force was much valued by Omar Pasha, as the plain around Eupatoria was peculiarly favourable for the use of cavalry, wherein the Russians were inferior, and of which the Turks were almost invulnerable. The new cavalry arrivals were chiefly Kurds—very doubtful auxiliaries anywhere in the neighbourhood of Kurdistan, at a distance from their native land, and not so general so strict in discipline as Omar, nor so likely to be useful. There could be no doubt

they were disposed to plunder if opportunity were presented; but nothing was left for their rapacity, as the Russians had burned all the Tartar villages, and either drove the inhabitants into the interior, forced them to join their ranks, or frightened them into timely flight to the already crowded city of Eupatoria.

The rations supplied to the Turkish troops were excellent, and abundant in quantity: they consisted of biscuit, rice, *kaourma* (a kind of preserved meat), beans, and butter. Lemons, oranges, figs, nuts, chestnuts, tobacco, could be purchased cheaply at the bazaars, where private speculators sold them. Such luxuries as were procurable at Kamiesch and Balaklava were altogether absent from Eupatoria. The pashas had their supplies with them, and the men relied upon their rations; the English and French officers found what they wanted on board the ships of the squadron; so that the bazaars limited their supply to the articles mentioned.

The common soldiery manifested the most ardent zeal and enthusiasm in every labour, and longed for another opportunity to chastise the "Muscovs." *Mutatis mutandis*, matters at Eupatoria were not unlike those at Silistria. The enemy, however, did not prove in the long run so pertinacious at the former as at the latter place. Omar won the love of the common soldiers by his kindness, and constrained their respect by the sternness of his discipline. He adopted the wise method in feeding the army, of first distributing rations to the privates. This was an innovation seriously injurious to the interests of the officers, who would in all probability have resisted or embarrassed such a distribution had not Omar been surrounded by so many English and French. The Turkish officers have, by the military law of the sultan, a right to a number of rations varying with their rank. Thus a lieutenant-general has thirty-two; general of brigade, twenty-two; colonel, sixteen; lieutenant-colonel, twelve; major, eight; &c. Omar reduced this scale, no doubt offending by his happy audacity the clique at the Porte as well as the peculating officers of his own army. He issued an order of the day, giving to a major, two; a lieutenant-colonel, three; a colonel, four; a brigadier-general, five; a lieu-

tenant-general, six, rations *in natura*. These worthies consented to receive them under protest, claiming the right to demand the value of the rations in money another time—to which Omar had no objection, so as their feeding and fighting while with him bore some fair proportion to that of the men whom they so indifferently commanded.

There was no forage on the steppe at that early period of the year, and, besides, the Russians commanded it; but Omar personally superintended the organisation of his commissariat, and procured fodder from Varna and Burgas in sufficient quantities, and with tolerable regularity.

The proceedings of the Russians after the day of battle were at first unascertainable by Omar, although he had used spies on the Danube, and employed similar agencies at Eupatoria also, more efficiently than the English and French chiefs did before Sebastopol. In a letter dated Eupatoria, February 25th, from one perfectly cognisant of all that had been ascertained there of the Russian movements on the steppe, the following remarks occur:—"Since the affair of the 17th the Russians have not disturbed us. It is, of course, impossible to say whether they are waiting for further reinforcements to recommence their operations, or whether, having found the works too strong to be carried by a *coup de main*, they have determined to assume the defensive, leaving only a *corps d'observation* in the neighbourhood, which latter plan would have the advantage for them that they could more or less choose their own battle-ground. Among these conjectures there is only one thing certain, and that is, that there are still Russian troops, infantry as well as cavalry, in the neighbourhood of Eupatoria. One body of them is to be seen on our left, in the vicinity of the little lake to the north of the town. On Thursday last another body of infantry as well as cavalry, with a number of arabas, supposed to be some convoy, was seen moving on the road to Sak, the first station towards Simpheropol."

That the Russians kept up a very close observation was obvious, for at that juncture Colonel Simmons cruised close along the coast on board the *Curlew*, and shells were thrown at the ship from several points. He observed a paddle-box boat, a portion of one of the wrecks of the 14th of November, lying on the shore not far from Eupatoria; he sent a boat's crew to bring it off; the Russians, perceiving this, brought down horse artillery to prevent the removal, but were driven back by the fire of the *Curlew*. Deserters gave information that the movements of arabas observed from the ships and redoubts were for the purpose of bringing up mortars to shell the place. Up

to the end of February the Russian headquarters remained at Oraz, about five miles distant, and their cavalry videttes occupied the second line of tumuli referred to in the description given of the Russian position on the occasion of the battle recorded in the last chapter. The *Dauntless* and *Curlew* made various experiments as to the common range of the shipping. Before the vessels began their operation the outlying Turkish videttes were drawn in, lest any accident should occur in the firing. The Russians perceiving this movement, and of course unable to comprehend it, pushed on their patrols to ascertain its cause; this movement was opportune for the purpose of the ships, as they tried their range upon the enemy's videttes, putting some *hors de combat*, and causing the rest to gallop back to the tumuli.

The Turkish chief had still to contend with the dilatoriness and want of principle of his own government. He every day visited the piers at Eupatoria, and inspected personally the shot, shell, arms, clothing, and provisions landed; and but for his vigilance and industry, speculation at the capital would have destroyed the enterprise, as it soon after the defence of Kars. Omar was especially particular as to the supply of his army with fuel, a matter as to which the home authorities did not see the necessity; but the general persevered in seeing his demands in that respect executed until wood and charcoal were landed at Eupatoria in large quantities, so that soon after the battle the troops had regular rations of fuel. A person resident at Constantinople and in a position to know what he related observed:—"Omar Pasha has throughout the campaign given proof of his skill as a general, and it could be wished that his power in his own army was more complete, and that he was not obliged to defer in so many things a minister at the Porte who enjoys no high reputation either for genius or integrity." The person referred to in this extract was Rifaat Pasha, whom General Williams had denounced to Lord Clarendon as a traitor to the cause in which the allies fought. Omar was well seconded in his activity and surveillance by everything by several officers. The crew of the *Henri IV.* were directed by their commander to erect a large crane on one of the piers, and the British men-of-war's men were ordered to construct several on the others. Commander Hoseason, R.N., Lieutenant Ingham, of the East India Company's army, Seaforth Bey (Major Kutzulesco), and the Turkish colonel, Abdalah Bey, were as indefatigable as Omar himself.

Deserters from Liprandi's corps caused considerable excitement by relating the movements of that general and the troops under

command. According to their account, after the defeat before Eupatoria, he retraced his steps towards the Tchernaya; but as the weather suddenly changed, and the heaviest fall of snow which had been known for many winters covered the route, the general lost his way, and his troops were subjected to the greatest hardships. Many fell out of the line of march, and were never heard of after; others finally made out the corps of Osten-Sacken, frost-bitten and exhausted; and numbers perished in the attempt to regain the Tchernaya. Unfortunate as was Liprandi during all the war, not excepting the exploit making the passage of the Danube (which, though bravely effected, cost many lives by plague and pestilence), he was more unlucky on this occasion than on any other. None of the engagements in which he took a part cost such a loss of life among his troops as the march from before Eupatoria, to regain the position before Balaklava, on the night of the 18th and 19th of February. The reports concerning this were very various and discrepant, some alleging the loss of half his corps, others a third and a fourth. There is no doubt that thousands of men perished on that dread-night. Occasion will occur to refer to this subject more particularly in the next chapter. The Russians for some weeks continued to make close reconnaissances, and frequent skirmishes took place: a letter from the scene of operations thus describes one of them:—"We just brought our luncheon to a very satisfactory conclusion, when the alarm was given, we adjourned from our mess-room (what profanation of the term!) to the redoubt. One of our messmates from the frigate, whose presence it would not be fair to reveal, was coming with us, and accompanied us to see the fun, which very nearly ended in a most disastrous catastrophe. As our people manned the guns and rockets, the Cossacks came over the hill at a gallop, and commenced scouring the steppe in order to secure the flocks of sheep which were feeding on it. As they swept past at some 1000 yards' distance, our batteries opened fire upon them with round-shot and shrapnel, which emptied several saddles. The Cossacks, however, being 'diners out,' were not deterred from their very laudable endeavour to secure a dinner, and a very interesting skirmish ensued between them and the Tartar regular horse, the one party endeavouring to secure their mutton, the other as strenuously endeavouring to save it. The Cossacks cut off a flock, and drove them towards the steppe with their lances, and while doing so were repeatedly charged by the Tartars, who would gallop within 100 yards, discharge muskets at them, and then wheel round. The Turkish officer who is in command

of the irregulars shot one Cossack with his pistol, and wounded another by a sabre cut. While this skirmishing was continuing with varied success, a large force of Turkish infantry marched out with their general at their head, and poured several volleys into the Cossacks, who were compelled to retire, with a loss of some of their numbers, but with a gain of part of their booty. As they retreated along the crest of the hill, they came under our fire again, when we gave them a volley of shot and rockets; one of the latter burst among a group of the enemy, knocking over two, and giving a great addition of speed to the remainder. Another shot struck directly beneath a horse, which fell upon its head, and flung its rider to some distance. The Cossack picked himself up and took to his heels, but the horse was captured, with several others. These successful hits were loudly cheered by our blue-jackets, who watched the effect of each shot with great earnestness, and whose nautical expressions would have greatly amused the landmen. Thus, when the enemy retired in haste, they exclaimed that they 'were making sail;' and when the pace increased to a gallop, they declared that 'the Rooshians must have the wind right aft—they were bowling along at such a rate!'"

As the Turks began to feel more confidence in their numbers, they became the assailants; and although they knew well that an army of at least 30,000 men lay before them, better equipped for war than any of the corps which the czar had engaged on the various theatres of struggle, they were minded in the spirit of the motto selected for this chapter to "sway on," and meet the enemy in the field. They had repulsed the foe when protected against his assault by the breastwork and redoubt, and they were confident to engage him upon the steppe, notwithstanding the numbers and completeness of his cavalry. The Russians seemed much astonished at the increased boldness of the Turks, and accounted for it on the supposition of very strong reinforcements of French and British marines having been landed. They were not well informed of what took place in Eupatoria, the only instance in which, during the war either in Europe or Asia, the Russian spy system failed to work efficiently.

Every day, and generally twice a day, from the beginning of March, the Turks sallied out in quest of the Muscovs. They observed a singular regularity in these excursions: in the morning and in the evening, at the same hour, a detachment of Kurdistan cavalry galloped out upon the plain, followed by horse artillery and infantry. They generally passed out at the same point, and moved towards the range of tumuli where the Russian cavalry videttes kept up their ceaseless observation. The latter

retired slowly upon their reserves. These, prepared for what was going on, advanced in strength; the Turks galloped to the nearest tumultus, looked at the enemy for some time, and retired upon their own reserves. The Russians were in such case accustomed to throw out skirmishers, and form in pelotons; the Turks and Tartars would then make flank movements: various evolutions on the part of the Russians would counteract those of the Turks, both parties firing carbines and pistols when neither could carry half the required distance. The Russians gradually retiring, the Turks would follow them to the next line of tumuli, sometimes approaching pretty close during the various windings and manœuvres mutually practised. On these occasions the chief officers would exchange salutes, as if it were a holiday review. The whole affair would begin over again along the second series of mounds, until the Turks in turn gradually retiring, the Russians would gradually advance to their original position.

Colonel le Dieu, the French commissioner, was recalled at the beginning of March, much to the regret of the army with which he served.

The Tartar irregular cavalry began by degrees to be very useful, both French and Turks enlisting them: they preferred the service of the sultan. They had been accustomed to carry heavy muskets on horseback, which impeded their efficiency, but early in March sabres, lances, carbines, and pistols, were distributed to them, and their utility was greatly increased.

On the 5th of March the Turks made a reconnaissance on a larger scale than they had previously ventured upon. Two squadrons of the 2nd regular regiment of Rumeli, called Hadji Alay, because it had made the pilgrimage to Mecca, and a squadron of rediffs (a militia which comprises cavalry and infantry) of the 2nd regiment of Guards, a small detachment of Bashi-bazouks, and a large detachment of the newly-arrived mounted Tartars, under the command of Skender Beg, went out upon the steppe. They took, as usual, the direction of the tumuli. The nearest to the Turkish left, which was occupied by the Russians, was close to a bridge which leads over a creek running inland from the Putrid Lake Sasik. Opposite the Turkish centre the Russians occupied two large tumuli in unusual force, and behind them videttes were strongly posted, falling back to the little lake to the north of the town, on the side of which was a little Tartar village, called Meskow, which the Russians had burned. Near the bridge, in a hollow to the right of it, was posted a strong squadron of lancers, to support their videttes: these were quite hidden from the Turkish skirmishers. Towards the

centre there were two sotnias of Cossacks, upon which the videttes retired as the Bashi-bazouks advanced; and besides these Cossacks, to the left, was posted a beautiful squadron of hussars all mounted on white horses. The general arrangements of the Russian cavalry outposts was well known to the Turks by their frequent reconnaissances and skirmishes for some days before. Skender Beg, who always had commanded these excursions from the town, based his plan of action on this occasion upon the knowledge he had thus acquired. He sent the two squadrons of the 2nd regiment to the right, to keep at bay the Russian Lancers while he, at the head of the rediffs, Bashi-bazouks, and Tartars, advanced towards the two mounds in the centre already described. The enemy's videttes fell back upon the main guard in the customary manner; but before they could be joined by their reserves, Skender Beg gave the order to charge, which was promptly obeyed, the Cossacks hurrying back with all their speed. Both parties opened warm fire; but the Turks, charging on, were in the midst of the Russian main guard when the reserves of the latter came up. Skender Beg ordered his men to charge them, and he, with his usual intrepidity, led them on, first in the charge: his Bashi-bazouks bravely followed, the Tartars halted, and the rediffs followed away; a few of the Tartars fled with the flying Roumelians, and a few more, it is but justice to say, joined the Kurds in their brazen onset. The result may be foreseen: the Cossacks rallied, charged the few brave men who had followed their leader, swept them away, and the hitherto hesitating and stationary Tartars an instant afterwards were flying before the victorious Cossacks. Skender Beg miraculously escaped; two of his Bashi-bazouks remained by him, and these three intrepid men cut their way through the Cossack sotnias; but the gallant chief received a sabre-cut on the head, which penetrated the skull, a lance-thrust which scarred his breast, and a sabre-cut on the hand, which took off two of his fingers. The Tartars had taken such care of themselves that only one was lost; four Bashi-bazouks fell in following their too confident chief, and the rediffs, who never came within lance-length of the enemy, suffered more than either, six of them having been shot down before they got clear out of harm's way. About 2300 yards from the tumuli the frightened horsemen of Islam drew up. Skender Beg exhorted them in vain to return to the charge; but the sight of his streaming wounds was sufficient to deter them from any closer contact with the enemy. Faint with loss of blood, he resigned the command to Safer Pasha (General Koscelszky, a Pole). He was equally unfortunate as to obtaining their acquiescence in the

movement towards the enemy; and after sundry manœuvres in the promenade style, which appeared to suit them, although, not without symptoms of trepidation, they joyfully and with alacrity obeyed the command to retreat *en échelon*, in the performance of which duty the Russians scarcely even noticed them. There was nothing remarkable in this whole affair, except the rashness of Skender Beg, and the superfluous bravery of himself and his few Bashi-bazouks. This force was utterly unfit to cope with Russian regular cavalry. The rediffs were sober citizens, who hardly knew how to sit on horseback; the Tartars were only fit for scouts, and the Bashi-bazouks for skirmishing: none of them had ever seen a line of battle before. It was utterly absurd for their commanders to use them except as scouts and skirmishers; but they were elated by the glorious result of the battle of Eupatoria, and fancied that any description of Turkish force could beat the Russians.

Eupatoria soon began to assume the aspect of a fortress; and while Omar performed all the duties of a general, the native magistrates, or medglis, preserved order among the Tartar population.

The death of the Emperor Nicholas was one of the most signal episodes of the war; the incidents connected with it will be related in their appropriate place. Tidings of this event reached Eupatoria on the 7th of March, and gave rise to rumours similar in nature to those which the event caused throughout Europe—perhaps throughout the world. It was determined in the garrison that the tidings should be communicated to the Russian commander; for it was rightly conjectured that the news could not have reached the enemy's camp—Eupatoria, by medium of the sea, being more immediately in connection with the sources and media of information. Safer Pasha was delegated to this delicate mission. He accordingly, attended by two squadrons of regular cavalry, wended his way towards the Russian lines. Turning to the right as they left the town they ascended the first mound occupied by the Turkish videttes, and passing it, advanced to the parallel mound occupied by the videttes of the enemy; and, when some little distance from it, Safer Pasha rode forward, only attended by his staff, until he approached the bridge which crosses the creek at Lake Basik, where a squadron of Russian lancers were posted. The Cossacks *en vidette* retired slowly to the ruined village near the bridge, as if afraid that some ruse was being put in practice against them. Safer Pasha still advanced; but pausing at a little distance, when the Cossacks began to make demonstrations of a hostile nature, he ordered a Polish officer, with a trumpeter, to advance in the mode

usual when a parley is demanded between opposing forces. This officer told the Russian officer of the main guard that his errand was to invite the Russian commandant of outposts to meet the Turkish commander for a conference. The Russian commander was at the camp, but was sent for; and when he arrived, turned out to be a Pole, an old friend as well as countryman of Safer Pasha. The greeting was lively, and Prince Radzivil—for such was the Russian commander's designation—was extremely courteous to the whole Turkish party. He was much surprised and excited by the news of the death of his emperor, of whose illness he had heard, but had not entertained apprehensions for his life. The two Polish chiefs made some useful arrangements about the treatment of prisoners. It was gathered also by the Turkish staff that few of the Kurds, or rediffs, who had been led out by Skender Beg had been killed,—they were wounded and prisoners. The lieutenant-colonel of lancers had inflicted the severe cut upon the forehead of that adventurous horseman, whose feat very much resembled that of Major Edwards in one of his exploits in the Punjab. Brandy, tobacco, and other little luxuries, were exchanged by the generals and their staffs; and they parted as good friends (to use a Hibernicism) as enemies could possibly be.

This peaceful conference created in Eupatoria a desire for its renewal, and Safer Pasha went out again, ostensibly to effect a change of prisoners, when all who could find an excuse for going left Eupatoria along with him, making a very promiscuous cavalcade of soldiers, sailors, and civilians—Turks, Tartars, French, and English. A gentleman who was one of the retinue of the Turkish negotiator on this occasion relates what he saw, in a manner that would suffer from any attempt to abridge it:—"The affair was more or less managed as yesterday, only that we had to wait rather longer for the commander. The Polish officer, who was again in advance, amused himself by talking, drinking, and smoking with the Cossacks. At last we saw a cavalcade coming from the right; when they approached, the squadron of Lancers near the bridge, who had again dismounted when they heard of our peaceful intentions, got in their saddles, and when we passed them we heard a hearty cheer. It was the usual answer to the question which every superior officer in passing his troop makes—'*Zdra stferit tyè, rabiata?*' ('How do you do, children?') To which the answer is—'*Zdravja jelaiv washe?*' ('We wish good health to you'). The prince sent his aide-de-camp before, and soon after galloped up himself. Again a good deal of politeness, and cigars were exchanged. By degrees the Turkish staff as well as the Cos-

sacks drew nearer, and a few minutes afterwards both parties were mixed up together. The predominant feeling was curiosity on both sides, both parties wishing to surpass each other in politeness, except a few Cossacks, who came up on foot and made their observations. I always thought the Cossack faces in *Punch* a caricature; since I have seen these specimens I think they remain behind the truth. Safer Pasha proposed an exchange of prisoners, which the Russian commander accepted. After that the order of the day was introductions. Some French officers were introduced who were seeking for some sailors of a French brig stranded somewhere about Sebastopol; it was rather an odd moment to choose for introductions. Among those introduced was Captain Methuen, of the *Colombo*, as the bearer of the news of the death of the emperor."

The weather now cleared up beautifully; spring asserted her glorious reign, which in the Crimea is indeed genial and lovely; and although there were some alternations of warm and cold days, and the nights continued sharp, and were sometimes severe, yet the fine weather had come, and the roads were dry and fit for the movement upon them of any reinforcements the Russians might choose to send against the place. But they were now too well prepared in the garrison to fear the result; notwithstanding the inefficiency of his cavalry on the plain, Omar was assured that his artillery would be well and bravely served, and that his infantry would give to any assault of the enemy another reception as memorable as that of the 17th of February.

During the interview above recorded, it was agreed to exchange the prisoners at noon the next day. On inquiry, the Turks were found to have only five prisoners, and they were wounded and could not be removed, so it was resolved to postpone the exchange; but Safer Pasha resolved to go out and tell the circumstance himself, and see his friend the Russian commander; and accordingly a procession went forth, and was met by another in all respects similar to the preceding. During this interview a somewhat mysterious occurrence took place. A Tartar officer, on a fine white horse, rode past the left of Safer Pasha's escort towards the Russian lines. Some Turkish officers and sergeants set out after him, as he appeared to be a deserter. It was, however, too late, as a strong party of Cossacks rode up to meet him, and thus escorted he rode safely into the Russian lines. This occurred just as the conference between the two Polish representatives of Russia and Turkey were terminating their conference. It was observed that the former and his staff rode up to the Tartar captain (*tuszbashe*), and had a conference with him. The Turkish general promptly sent over to the

Russian commander a messenger, demanding the restoration of the absconding cavalier and the white horse. The reply was a refusal, grounded on the fact that when the horseman was seen approaching, Cossack videttes were sent to warn him of his contiguity to the Russian position, when he replied that he was aware of that, and came to join service with Russia, and at once divested himself of his sword, and presented it to a Cossack officer. This reasoning did not seem sound to Safer Pasha, and he felt that an unworthy advantage had been taken in a small matter. On his return to the town it was found that no officer had deserted from the Tartars in the Turkish pay; inquiry was made of the French, and no one had absented himself. Conjecture assumed many forms as to who or what the trooper of the white horse could be, but no satisfactory conclusion was arrived at. The probability is, that the Tartar chief was a Russian spy, who had assumed that uniform, and took advantage of the relaxed vigilance attending the conference to inspect the place, and make good his escape in time as the conference was closing. The ready approach of the Cossacks to protect him, as if they had waited in expectation of his arrival, and the apparent consultation with him by the Russian commander of the outposts, give colour to this opinion.

As the Turkish general and his *cortège* were returning from the conference, five Tartars, all intoxicated soldiers in French pay, were moving out, evidently with the intention of deserting: they were arrested. The Tartars felt French discipline to be irksome, and when not permitted to join their compeers in the Turkish service, sometimes deserted to the enemy. The French did not succeed in conciliating the natives, Tartars or Asiatics, so well as the British.

An interesting letter from Eupatoria thus comments upon the frequent conferences which had taken place:—"Amusing it is to hear from what points of view the Turkish soldiers look at these interviews with the Russians, which are something new to them. Some of them having heard of the previous acquaintance of Safer Pasha with Prince Radzivill, think them only a renewal of old friendships under rather difficult circumstances, while others see the first steps towards peace in these encounters, principally as the death of the Emperor Nicholas, the author of the war, seems to lend some probability to this version. But by far the greatest part think it uncommonly strange that, since the last check received by the Turkish cavalry, these peaceful and complimentary interviews have been substituted for the former warlike but harmless military promenades; and this is so much more the case as they see daily numbers of cavalry and artillery horses arriv-

ing and landing. To-day, again, another interview was projected, to take four cases of Bordeaux and some tobacco as a present over to the Russian commander. But this time Safer Pasha did not go himself; he sent only one of his aides-de-camp. The Russian commander sent, likewise, only his aide-de-camp, who, I hear—for I was not there—received the presents smiling, and with the observation that the Russians were so plentifully provided with everything that they had even sucking-pigs (*cochons de lait*), and would be very happy to offer some of them. What the projects are for to-morrow is as yet unknown, perhaps to send matches to light the tobacco, or glasses to drink the Bordeaux; but I hear there are some apprehensions of a visit of the Russians, and that of a less amicable nature. Bodies of infantry have been seen moving about, and in general an unusual amount of activity was observed. The patrols have therefore been strengthened, and other precautions taken to receive them properly. I must say I do not believe in an attack. It would be foolish of them to try to take a place which is of no use to them, and which they could not hold for a day, on account of the men-of-war. There are said to be, again, 50,000 men around Eupatoria, but even with this force the taking of Eupatoria, as it is at present, would be very problematical, principally as the Turkish soldiers are well aware that they have only the choice between the Russians and the sea in the rear. As long as the Turks remain here they are harmless, and in case they advance, the Russians may defeat them, as the cavalry of the latter is so superior to theirs, and so numerous."

Yet the rumours of an attack were reasonable, for in a few days the Russians doubled their videttes, and appeared in greatly increased force. Siege artillery and two divisions and a half of infantry had arrived, according to the reports both of deserters and Tartar spies. Projects for removing the Tartar women and children began to be discussed, and it was thought of sending them by the transports to Burgas and Varna. An effort to get rid of the Tartar men not suitable for enlistment was made by offering them eighteen piastres a day as labourers at Balaklava; but the only labour the Tartars like, is tending cattle or driving waggons,—many, however, accepted the employment proposed.

Some curious specimens of partisan falsehood appeared in the newspapers of Constantinople and St. Petersburg, in connection with the cavalry affair in which Skender Beg was wounded. The *Journal de Constantinople* proclaimed that the Turks had eleven killed and two wounded, while the Russians lost thirty men; like the Russian attack on Eupatoria, as

represented by the *Journal of St. Petersburg*, it was a "successful reconnaissance." On the other hand, the *Invalide Russe* magnified the skirmish into a grand cavalry battle, in which the Russians had the usual loss of the one Cossack killed,—it was, however, admitted that a few also were slightly wounded; whereas the Turks incurred great slaughter, were pursued three versts, driven into the town in full flight, to the confusion and consternation of the garrison.

Matters went on in and around Eupatoria in the manner here described until the 20th of March, when Omar Pasha effected a movement which had an important influence upon the safe occupation of Eupatoria, and the effect of that occupation upon the campaign.

The cavalry force of Omar had been gradually and greatly augmented. Kurdistan irregulars, and others of the Bashi-bazouk description, a few rediffs, and a considerable body of regular Turkish horse, were landed from Constantinople and Varna. By dawn of day on the 20th five regiments of cavalry, two troops of horse artillery, and a strong division of infantry, marched out of Eupatoria. They reached the line of tumuli, the scene of previous skirmishes, the Russians retiring as usual upon their main supports. The Turks this time closely followed. A long line of Cossacks skirmished and protected the Russian right flank. The Turks followed from one range of tumuli to another, until a considerable body of their horse came upon the creek behind which the Russian cavalry had fallen back. The Russian strategy now became obvious, they manœuvred to draw the Turks as far from the town as possible, and then by operating on their left flank to cut them off. Omar Pasha's own directions were followed in this excursion, and he had previously warned his cavalry officers of such a danger, and took care to guard against it. The Turkish infantry took up a position, and the cavalry skilfully and cautiously advanced until the Russian outposts retired upon their camp. Omar kept the position he had taken up, and his object in the expedition was soon unmasked; he never intended an attack, but designed to make a demonstration which would keep the Russians occupied, and expel them from the tumuli, until the purpose of the demonstration was accomplished. That purpose was to erect new works at a greater distance from the town, and this he succeeded in effecting before the Russians had any idea of his intentions: before a week new redoubts were erected, armed, and garrisoned, relieving the over-crowded town, promoting the health of his army, advancing discreetly his position, and greatly strengthening the defence. The tumuli formerly in the possession of the Russians were now occupied

by the Turks, and the Russians had been skilfully manœuvred back to a less advantageous position, while a kind of intrenched camp defended the town as a strong line of outworks, rendering the place almost impregnable with such a commander as Omar, and such troops as he commanded, against any force the Russians could probably bring against it.

On the 29th a foray was made by the Bashi-bazouks upon the village of Bazar, on the borders of the lake, where there was a Cossack post. The Bashi-bazouks succeeded in coming suddenly upon them, and putting them to the sword; the Cossacks behaved most cowardly on the occasion, as disgracefully as the Tartars and rediffs had conducted themselves under Skender Beg. The Bashi-bazouks pursued, shouting "*Yallah Allah*," their customary war-cry, until the retreat of the "Muscovs" was turned into flight. The pursuers then turned their attention to the village and the Cossack quarters, which they speedily stripped of everything that was at all valuable and portable. Food and fodder, uniforms and accoutrements, pipes and tobacco, brandy and raki, were carried away in triumph, all of which things proved advantageous to the winners of these spoils of war. The captures most prized by the victors were copper dishes, copper cooking utensils, and the cloaks of the whole detachment of the vanquished horsemen, which had been left behind; some of them were good furs.

The Russians were discouraged by the growing boldness and efficiency of the Turkish cavalry, whose irregulars began to obtain a mastery in combat over the Cossacks, and to display more activity, if not more vigilance, than that description of Russian cavalry. They accordingly fell back, moving their headquarters from Oraz farther into the country, and ceased to harass the Turks, or even approach with their former boldness.

This condition of things continued through the spring, until the steppe became covered with verdure and the beautiful wild flowers for which it is so famous. The winter campaign at Eupatoria had passed away in every respect favourable to the invaders; the spring operations had opened, giving them easily won advantages; and the summer gradually advanced, nothing occurring to weaken the Turkish position or prospects.

Omar grew more and more confident, and leaving his garrison in security, sailed for Kamiesch, to confer with the allied officers as to the conduct of the future. The proceedings in and around Eupatoria during the later spring, and the summer, must be reserved for the narrative of another chapter. It may here, however, be observed as preparatory to our narrative then, that if operations around Eupatoria were difficult in winter, and in the early

spring, they were almost as difficult in summer, for reasons peculiar to the climate and the country.

An English clergyman, well acquainted with the Crimea, has published his views on this subject, which will appropriately close this chapter. Writing of the dangers incurred in conveying large bodies of troops in the early part of spring,—so favourable for executing marches in most other countries,—he shows how sudden and unexpected frosts and falls of snow, like that which destroyed so many of Liprandi's troops on the 18th and 19th of February, and from which Sir Colin Campbell and his Highlanders suffered at the same moment in an expedition from Balaklava upon the Tchernaya (as the next chapter will relate), might involve an army in ruin. He also affirms that a sudden thaw following such a frost and snow-fall, is yet in some respects more dangerous:—"If an attempt was really made to convey a large body of troops over the snow from the north of the peninsula, and if any detention occurred from a sudden thaw, the unhappy victims of imperial ambition will have found themselves exposed to destruction from a more terrible enemy than frost and cold."

A late spring and early summer campaign against a force occupying Eupatoria is also exposed to peril, according to the author we quote, whose remarks were written early in April, 1855, and in reference to the position of Omar's army at that time:—"When the steppe is covered by the luxuriant grass of the spring the task of crossing it in force is of course an easier one, as the baggage animals find their provender on the spot, and, being entirely grass-fed, the scarcity of water is, as far as they are concerned, much less felt. But this favourable period is comparatively short. The heat of the sun ripens the herbage very rapidly; early in June it begins to scorch up, and becomes in July and August highly inflammable from its dryness. So remarkable is it in this respect, that it was a cause of great anxiety to Munich lest his camp should be destroyed by the firing of the steppe; and every wheeled carriage was furnished with a large besom, for the purpose of instantly extinguishing the first sparks that might be seen. As a means of defence against an invading army, it is scarcely necessary to point out how effective such a conflagration must be. When Munich, the year after the expedition to the Crimea, laid siege to Ochsakoff, the Turks burnt the steppe for three leagues around the town; and this circumstance of itself would have compelled Munich to abandon his hope of taking it, had not one of his shells accidentally exploded a large powder-magazine, causing such destruction that the governor surrendered in a panic. In the plain of the Crimea a westerly breeze generally pre-

vails through the months of May and June; and, if necessity required it, nothing would be easier, after securing as much hay as could be brought within the defence of the lines, than to take advantage of the dominant wind, and interpose a barrier of temporary barrenness between Eupatoria and any besieger. I say temporary, because it is the general practice to burn the surface in the month of August, such a proceeding being considered advantageous to the growth of the young grass; and, if a besieging army is to come by land from the north in sufficient strength to attack a force of 40,000 men in Eupatoria, there will be plenty of time to get in the hay before its arrival. There is, however, together with these advantages, one great drawback to the assemblage of a large force at Eupatoria. The supply of water is said to be deficient in quantity, and bad in quality. I suspect it is derived from wells very near the shore, and is probably filtered from the sea, and brackish; but the town once contained a considerable population, as appears from the circumstance that when the Russians entered it (and burnt it), in 1736, there were 2500 private houses in it, most of them built of stone. Pallas speaks of it having been formerly supplied by pipes from a reservoir at some distance from the walls, and says that the

water was raised into this by the constant application of horse-power out of a 'very good and deep well.' Of this, however, he adds, that in his time (1794) scarcely a trace remained, and that the wretched wells in the town were the only available sources. It occurs to me, that here we English have an occasion on which we may advantageously put forth our peculiar resources, by sending forth, before the bad water has begun its work of destruction in the camp of our ally, a regiment of well-sinkers and pipe-layers to restore the old hydraulic apparatus to efficiency, or supply its place by a better one, worked, not by the agency of horses, but that of steam. If we can preserve in an efficient state that which is now the only army Turkey has left, we shall do more towards bringing the war to a successful termination than by any other possible course. If they choose to do anything, let them do it quickly and completely. Let an English steamer carry out every appliance, and every man who may be required. Let us have no borrowing of idle Turkish soldiers, or hiring of slippery Croats; and let an ample supply out of the very 'good and deep well' be brought to the surface, and distributed through the town and camp at Eupatoria by the 1st of May at the latest."

## CHAPTER LXX.

THE SIEGE OF SEBASTOPOL DURING THE LATER PORTION OF FEBRUARY.—EXPEDITION OF SIR COLIN CAMPBELL AGAINST THE RUSSIANS BEYOND THE TCHERNAYA.—SEVERE REPULSE OF THE FRENCH IN THEIR ATTEMPT TO DESTROY THE WORKS CONNECTED WITH THE MALAKOFF TOWER.

"Our life is but a battle and a march,  
And like the wind's blast—never resting—homeless,  
We storm across the war-convulsed earth."

COLERIDGE.

THE third week in February opened before Sebastopol with mild spring weather, but the troops did not improve in health, as might have been expected. Typhus fever appeared in many of the regiments, and carried off not only the weakly and delicate, but the strong and sturdy. This mild weather was soon interrupted, for on the night of the 19th and 20th a dreadful storm of snow fell upon the whole surrounding country—by far the most severe the troops had known. In the last chapter reference was made to the sufferings and losses of the corps of Liprandi, on their march from the neighbourhood of Eupatoria to regain the position over the Tchernaya, which they had vacated for the purpose of hastening to the aid of Osten-Sacken against Omar Pasha, in the hope of crushing him before he could consolidate the defence of that place. Before his departure from the camp near Balaklava, Liprandi stationed a division in a good position

near the Tchernaya, where they were to remain in observation until his return. Intelligence was brought by some spies to the generals of the allied armies that the division were the sole occupants of the camp where that general had been for so long posted, and a night attack and surprise were consequently concocted, in the hope of destroying or capturing the entire body. The mode of action resolved upon was as follows:—this expedition was to be conducted by Sir Colin Campbell, on the part of the British, and by Generals Bosquet and Villenois, on the part of the French. The weather, from the 15th to the night of the 18th, had been such as to prepare the country for the movement of troops, and greatly to facilitate the passage of artillery: sunshine by day, and drying winds by night, had characterised the interval from the 14th to the 18th. According to the arrangement, Sir Colin's force was to consist of the Highland brigade

and Rifles, rather weak in number, being under 2000 men. The French contingent of the enterprise was to number 4000 men. Soon after dark the French began their preparations, from the vicinity of head-quarter's camp, and the troops were told off on whom this duty was to devolve. Sir Colin also made his preparations, and soon after midnight the march was to begin. Before midnight, half the French detachment had assembled in columns of companies near their head-quarters. Sir Colin's men were also ready and willing. Scarcely had the different groups of men collected when the weather changed, the wind rose, and was cuttingly cold; the sky became overcast; and the stars, which a few hours before glorified the whole heavens, were obscured. The wind changed, became less cold, and then a torrent of rain fell for at least an hour—such rain as was seldom seen in Europe, unless perhaps in the Crimea. The wind again changed, blowing in fiercer gusts from the north; the rain froze; the whole earth was covered with ice in so short a time as to be quite beyond the conception of persons only accustomed to the climates of Western Europe. Snow then fell, and the wind rose to a gale, drifting the fallen snow into every hollow and valley, and covering the whole plateau to a great depth in a very brief space of time. To make a reconnaissance, or find out the enemy on such a night, appeared hopeless to General Canrobert; and he therefore sent Major Foley to inform Sir Colin of his determination not to send out the French troops, and those already under arms were ordered to their tents, which they found with difficulty, near as they were, so altered had the whole face of the plateau become by the drifted snow. Major Foley lost his way, and many hours were consumed by him in vain attempts to find it, and ultimately he found himself at Lord Raglan's head-quarters. Informing his lordship of the mission confided to his care, and his inability to accomplish it, being then utterly exhausted, his lordship dispatched an aide-de-camp to General Campbell that the French were not coming, and ordering him to postpone the enterprise. It was about three o'clock in the morning when this officer set out for Balaklava. Passing through the French camp, he made General Villenois acquainted with his mission to Sir Colin; but that officer generously said he would move down his men to the English general's support, lest the latter, not having received any intimation of the change of General Canrobert's intentions, should have started upon his march, and perhaps meet the enemy in strength, and finding no support, be overpowered. The aide-de-camp, after a weary contest with the difficulties of his journey,—all landmarks having been covered with snow,—at

last arrived at Balaklava—Sir Colin was gone. True to his orders, neither rain, frost, snow, nor storm could deter him and his gallant Highlanders from the path of duty. The aide-de-camp bravely went in pursuit. The track of the brigade was already covered with snow, so that no trace of it could be discovered; and after overcoming countless difficulties and incurring great dangers,—for it was impossible to see a yard in advance,—the aide-de-camp reached Sir Colin near to Tchorgoum, whither he and his persevering soldiers had buffeted their way with snow and tempest. Sir Colin, hearing that Brigadier-general Villenois had determined to move down to his support, determined, if possible, to accomplish the object for which he had gone forth, and ordered the march to be resumed. Sir Colin's brigade was accompanied by a detachment of Zouaves, and despite the increasing violence of the storm, the men of both services were as ardent as the general to fall upon the enemy when so little likely to be expected, and thus render a great service in the campaign. The way became more and more dangerous; the Rifles were the advanced guard; the Highland light infantry followed in skirmishing order. The general's directions had been few and simple, and his troops were capable of their steady execution. There was to be no firing in case they came upon the enemy. Thus the men plodded on until day dawned: slowly did the light struggle through the drifting snow-wreaths and the masses of snow-cloud which darkened the whole heavens. A few feet before them were all that the troops could see, and the snow was so deep as greatly to impede their progress and increase their fatigue. Yet there was not a murmur—all were patient under their sufferings, and glowing with ardour for the object of their contemplated exploit. At last the advanced guard came suddenly upon the pickets of the enemy, whose watchfulness not even such a night could derange, but who were unable to desert the approaching troops, it was so dark. Their sentries were seized by the light infantry, when their comrades immediately gave the alarm, and the Cossack videttes fired their carbines, and the infantry their muskets, at random into the darkness. No one was hit, but the report of fire-arms put the Russian division on the *qui vive*, and they stood at once to their arms; for their drums beat violently the alarm, and the hoarse voices of command penetrated the muffled atmosphere, and came heavily on the ear of the advancing English. Through the snow-rifts Sir Colin made a reconnaissance, which enabled him to determine that the columns of the enemy were retiring upon the heights above the Tchernaya. To make out their number was impossible—his conjecture being 5000 men.

This was near the truth; the division numbered rather more than 6000. By their slow movements, Sir Colin judged that they had strong supports upon which to fall back. He was deceived by their skilful movements. Liprandi had at that time the main force of his corps with him, and they were sinking beneath the tempest, in impassable places, in one of the most terrible marches ever endured by an army. The snow not only continued to descend, but fell in increasing quantities, hiding the enemy completely from view. The word was given to fix bayonets and advance; the men found they were unable to obey the order, their hands were so benumbed with cold; the Rifles could not handle their weapons; frost-bite had attacked the men, especially the Highlanders, in the ears—their bonny Scotch bonnets affording no shelter to that feature. The horses refused to face the increased storm. There was no appearance of the French; and if they had been a very short distance off, it was impossible they could be seen, and improbable that they could be heard. In this most distressing situation, Sir Colin was life and soul to his brave troops, riding about encouraging and cheering them by voice and example; but there was no disguising the fact—the noble-hearted uncomplaining men were sinking. Sir Colin was not the man to sacrifice his heroic soldiers, as a gamester flings his dice, and loses all or wins great stakes. He resolved, however, to await the arrival of the French, and if their advent was timely, to attempt something against the enemy if the soldiers could use their hands. He could not halt the men, a short halt even and many would never have moved again—they would have sunk, benumbed and stupified, into the frost-deep that subsides in death. He therefore kept them moving to and fro, until all hope of the arrival of the French was unreasonable, and the reluctant order to return was given. At eleven o'clock, A.M., the men arrived at their quarters, fatigued, hungry, frost-struck, and in some cases utterly exhausted. Never before did English soldiers do so much or behave better on such a night—if ever, in the varied wars of England, British soldiers had before endured a single night of such soul-penetrating hardship. But few shots had been fired, and those only in reply to the shots at a venture made by the retreating pickets of the enemy. Three prisoners were the only trophy of this dreadful march; but it must not be supposed that this was the only injury inflicted on the enemy—they were exposed to far more sufferings than the English: obliged to stay all night posted on a hill-side,—not daring for a moment to give up the advantageous position they had found, and unable to see whether, if one more advantageous were at

hand,—many of the Russians fell down dead in the snow, and a terrible proportion of them were frost-bitten. The sufferings of Liprandi's corps on its march scarcely exceeded those of the division which maintained the snow-beaten bivouac which the English general had compelled them to take up. Perhaps more punishment, and with less loss, was inflicted upon the enemy than if the surprise had been actually successful. Every regiment which accompanied General Campbell had a portion of its men sent to hospital, and not a few of the Highlanders lost their ears by frost-bite.

Had the French co-operated, there can be little doubt that if they had found their way as well as the English, the Russians must have been caught as in a trap, and destroyed or made prisoners. The plan of action, as it afterwards transpired, was this:—the English were to advance by Kamara and Canrobert's Hill, and proceed stealthily to the enemy's front; the French were to move by the Woronzoff Road, and turn the Russian left flank, so as to cut off their retreat by the Traktar Bridge.

The troops with Sir Colin were a French regiment (Zouaves), the 42nd, the 71st, 79th, and 93rd Highlanders, and twelve pieces of horse artillery. The blinding snow caused them in the first instance to miss their way, and they wandered for some time in the vineyards to the left. But the Highland soldiers, as if by instinct, hit upon the right track. Perhaps no other troops but Highlanders could have discovered it; accustomed in their native mountains to the snow-storm, and all its dangers and difficulties, they were able to conduct themselves with an instinct through the storm, such as no other portion of either army possessed; and to endure with a hardihood which no other soldiers could rival. Mr. Woods, in relating the events of this hard march, says that at half-past four o'clock in the morning the English lay down on the hill-side, waiting for the arrival of the French. This may be so—on the authority of that gentleman we should be disposed to rely much, but it is contrary to our other sources of information; and knowing the danger of lying down, or even standing, in such circumstances, we are disposed to think that Mr. Woods was misinformed.

It was as Sir Colin was retiring from the environs of Tchorgoum that Villenois' four regiments arrived, having generously persevered until they came upon the British in their retrograde movement. He was willing to return and advance upon the Russians, but both officers saw how hopeless of success such an effort must be; besides, Sir Colin had then received the order to retire, and the march of Villenois

had been countermanded before he set out—his own generosity having prompted his movements to share the perils of the English, and perhaps to succour them under unforeseen disaster. Long after these events had transpired, and when Sir Colin Campbell was received with festive entertainments and brave welcomes in his native land, the veteran remembered with gratitude the heroism and generosity of Villenois. A public meeting assembled in the city of Glasgow, where Sir Colin was born; the object was to subscribe for the relief of certain sufferers by an inundation in France, by which life and property had been extensively sacrificed; the lord-provost took the chair; the celebrated historian, Sir Archibald Alison, moved the first resolution, and the *élite* of Glasgow notabilities supported the purposes of the assemblage, when the whole proceedings received additional and deep interest from the circumstance of Sir Colin Campbell presenting himself to relate the noble instance of French sympathy he had experienced on the awful night of the 19th of February, 1855. The address of Sir Colin was as follows:—"There is one anecdote I must relate to you respecting these Frenchmen. In February of past year I was ordered, with the Highland brigade, a detachment of cavalry, and twelve guns, to move to a certain position, to co-operate with a large force of the French, with a view to turn the Russians out of the Tchernaya. The weather became very bad—a frightful night of snow, and frost, and cold. I succeeded in fulfilling the order given me, and the troops under my orders found themselves at time in the position. The French did not appear. The night was so bad that they had received counter-orders; and, actually to keep my men from being frost-bitten, I had to march them round and round in circles. I had been associated with a Frenchman named General Villenois—a man whom I love very much—a man who is admired as a soldier. In the morning after receiving the counter-orders the night before, on coming out of his tent, he saw the Highland brigade, the detachment of cavalry, and the guns at a distance. Immediately on seeing our troops, and recollecting that the French army had been called back in consequence of the dreadful state of the weather, he said, 'My friend Campbell may find himself overpowered,' and sounding the bugle without waiting for the instructions of his superior officer, he sent a body to my relief. Happily I was in such a position that whenever they came against me, I knew I could drive them out of it. But that does not take away from the merit of General Villenois in sending his troops to us. I believe it is impossible to know of more unity, or a stronger feeling of

regard than that which existed between the Highland soldiers and the Frenchmen."

It appears that considerable confusion took place among the French in endeavouring to obey the orders and counter-orders which had been given them for this "reconnaissance." The division of General Espinasse had been ordered by General Bosquet to perform the part, the arrangement of which had been committed to him. His account of the attempt made by him to do what he was commanded thus appears in the journal of the division:—"After having made sure, by frequent blowing of the trumpet, that no troops had remained in the plain of Balaklava, outside the Mameluk of the English vidette, the general gave the order to march, in order to avoid being frost-bitten, and in such a manner as to remain near the rest of the force. For that purpose the men were marched successively with the wind and against the wind, describing circles, and at daybreak they found themselves at the foot of the positions, the steep acclivities which they climbed with difficulty, by reason of the accumulation of snow. At a quarter past six the men re-entered their bivouacs, not a single man missing at roll-call."

The severity of that night was much felt in the trenches, very great numbers were brought to the French hospitals afflicted with frost-bite. Probably the most graphic account of the character of the weather the day which followed is recorded in the journal of Mr Russell. He thus relates his experience:—"Such a day as followed that morning I have never witnessed. Being anxious to get a letter off by the post ere it started from Kamiesel, and not being aware that the reconnaissance had been countermanded, I started early in the morning for the post-office marked through a blinding storm of snow. The wind howled fiercely over the plain; it was so laden with snow that it was quite palpable, and had a strange *solid* feel about it as it drifted in endless wreaths of fine small flakes, which penetrated the interstices of the clothing, and blinded horse and man. For some time we managed to get on very well, for the track was beaten and familiar. I joined a convoy of artillerymen, but at last the drifts became so thick that it was utterly impossible to see the right or left for twice a horse's length. As I fancied the artillerymen were going too much to the right, I bore away a little, and soon after met a solitary pedestrian, who wanted to know the way to Balaklava. I sincerely trust he got there by my direction. As he was coming from Lord Raglan's he confirmed me in the justice of my views concerning the route, and I rode off to warn my friends the artillerymen of their mistake. They were not to be found. I had only le

them three or four minutes, and yet they had passed away as completely as if the earth had swallowed them up. So I turned on my way, as I thought, and, riding right into the wind's eye, made, at the best pace I could force the horse to put forth, for my destination. It was not above an hour's ride on a bad day, and yet at the end of two hours I had not only not arrived, but I could not make out one of the landmarks which denoted an approach to it. Tents, hill-sides, and jutting rocks, all had disappeared, and nothing was visible, above, round, below, but one white sheet drawn, as it were, close around me. This was decidedly unpleasant, but there was no help for it but to ride on and trust to Providence. The sea or the lines would soon bring one up. Still the horse went on snorting out the snow from his nostrils, and tossing his head to clear the drift from his eyes and ears; and yet no tent, no man—not a soul to be seen in this peninsular warming with myriads of soldiery. Three hours passed!—Where on earth can I be? Is this enchantment? Has the army here, the lines and trenches, and Sebastopol itself, gone clean off the face of the earth? Is this a horrible dream? The horse stops at last, and refuses to go on against the storm. Every instant the snow falls thicker and thicker. A dark form rushes by with a quick snarling bark—it is a wolf or a wild dog, and the horse shudders and is affrighted. The cold pierces one's bones as he faces the gale, and now and then he plunges above the knees into snow-drifts, which are rapidly forming at every hillock and arrow in the ground; a good deep fallow—well or pit—might put a speedy termination to one's fears and anxiety at a moment's notice. Minutes become hours, and my eyes were bleared and sore striving to catch a glimpse of tent or man, and to avoid the new dangers in our path. Suddenly I plunged in amongst a quantity of brushwood—sure and certain sign that I had gone far astray indeed, and that I was at some place removed from the camp and the wood-cutters. The notion flashed across me that the wind might have changed, and that in riding against it I might have shaped my course for the Tchernaya and the Russian lines. The idea of becoming the property of a Cossack picket was by no means a pleasant ingredient in one's thoughts at such a moment. Still what was to be done? My hands and feet were becoming insensible from the cold, and my face and eyes were exceedingly painful. There was no help for it but to push on, and not to let night come on. That would indeed be a serious evil. At this moment there was a break in the snow-drift for one moment, and I saw to my astonishment a church dome and spire on my right, which vanished again in a moment. My im-

pression was, that I must either be close to Kamara or to Sebastopol, and that the church was in either of those widely separated localities. Either way the only thing to do was to bear away to the left to regain our lines, though I could not help wondering where on earth the French works were, if it was indeed Sebastopol. I had not ridden very far when, through the ravings of the wind, a hoarse roar rose up before me, and I could just make out a great black wall as it were rising up through the snow-drift. I was on the very edge of the tremendous precipices which overhang the sea near Cape Fiolente! The position was clear at once. I was close to the Monastery of St. George. Dismounting, and carefully leading my horse, I felt my way through the storm, and at last arrived at the monastery. The only Zouave in sight was shooting larks out of a sentry-box, but he at once took my horse to the stable, and showed me the way to the guard-house, where his comrades were enjoying the comforts of a blazing fire, each waiting for his turn to be shaved by the regimental barber. Having restored circulation to my blood, and got the ice out of my hair, I set out once more, and a smart Zouave undertook to show me the way to head-quarters; but he soon got tired of his undertaking, and deserted me on the edge of a ravine, with some very mysterious instructions as to going on always '*tout droit*,' which, seeing that one could not see, would have been very difficult to follow. By the greatest good fortune I managed to strike upon the French tents of the waggon train, and halting at every outburst of the tempest, and pushing on when the storm cleared away a little, I continued to work my way from camp to camp, and at last arrived at head-quarters, covered with ice, and very nearly 'done up,' somewhat before four o'clock in the afternoon. It was some consolation for me to find that officers had lost themselves in the very vineyard, close to the house, that day, and that aides-de-camp and orderlies had become completely bewildered in their passage from one English divisional camp to another."

The weather continued severe for some time after the great snow-storm: although the days were sunny, the keen north wind bore upon its breast sleet and snow at intervals, and through the nights it swept over the plateau like an enemy on the charge. In the camp and at Balaklava the troops did not appear to suffer from this, because they could move about, and all had by this time long boots, and warm clothing to some extent, and some regiments had very thick great-coats, which, although generally too small, were beneficial as a protection against such piercing cold. In the trenches, where the men could not move about,

and dare not light large fires (when fuel was procurable), the suffering was great; but the wind dried up the trenches, and the long boots were there felt to be a protection of the most appreciable value.

The Russians in the field, and even in the various garrisons, as at Sebastopol, Simpheropol, and Perekop, were reported by Tartar spies and deserters to be sickly, and the number in hospital from frost-bite, chest complaints, and typhus fever was very serious. The following despatch of Lord Raglan, written on the 17th, gives a fair picture of the condition of both armies at that date, and for a week after; except that his lordship was probably misinformed as to the necessities of the enemy in respect to provisions. The army before Eupatoria was well supplied, and it is unlikely that such would be the case while there was scarcity at Simpheropol:—

MY LORD DUKE,—I have the satisfaction to acquaint your grace that the weather has improved since I last addressed you, and the country is becoming drier. Two days ago the thermometer was up at 60°. It was somewhat lower yesterday, and early this morning it was down below freezing-point, and at this moment it is snowing. I mention these particulars in order to show your grace how variable the climate is. No movement has been made upon the part of the enemy. The garrison of Sebastopol is engaged in deepening the ditches, and improving the defences of the south front, and in constructing works on the north side of the harbour. I have received information that the Russian army, in the neighbourhood of Bagtché Serai and Simpheropol, is suffering much from want of provisions, and from privations of all kinds. I am happy to be able to say that the railway is making considerable progress, and that every hope is entertained that in the course of a very short time it will be available for transit as far as Kadikoi, which will accelerate the conveyance of stores up to the camp. I inclose the return of casualties up to the 16th instant. I have great pleasure in stating that Colonel Bell, of the Royal Regiment, who received a slight wound in the side from a musket-ball, when commanding in the trenches on the night of the 14th instant, experiences very little inconvenience from it, and has felt well enough to continue to discharge his duty with his accustomed zeal.

I have, &c., RAGLAN.

*His Grace the Duke of Newcastle, &c. &c.*

The letters of private persons confirmed the tidings conveyed in Lord Raglan's despatch:—"The drying winds continue, and the plateau to the south of Sebastopol can be traversed easily on horse or foot, even at the bottom of the ravines. With this fine weather the good spirits and energies of our men have returned. The trenches are dry; the men get all they want, provisions are abundant; hay has arrived and fresh vegetables have been sent up to the front to check the scurvy."

Correspondence from the East at this date was eagerly read by the English public, from the impression that spring in the Crimea was favourable to military operations; such communications as the following increased this appetite for Crimean news:—"The Cossacks are riding about the hills in front; our videttes are watching them; vast masses of men in long

lines carrying planks of wood or fascines intersect the plain, and seem at a distance like armies of ants migrating. The thunder of cannon from the front booms through the air, the martial music of the French regiments interrupted by the creaking of cart-wheels, the cries of camel drivers in nearly every language, the East or West,—worse than all, by the terrible instruments of the Turkish bands,—speaks of war, which no Englishman has ever known at home in this day."

The desire in England to ascertain how the railway operations proceeded was very strong; the people regarded it as a project of their own, and would have considered any failure in respect to it a greater disaster than almost any government failure. The following account of its progress, under date of February 19th, gave universal satisfaction:—"The progress of the railroad is extraordinary. It is already completed out to the entrance of the village of Kadikoi, to-morrow it will have passed through it on its way out to the plateau, and on Wednesday it will be, in all probability, used for the transport of a cargo of shot and shell out as far from Balaklava in the intervals of the workmen's labour. The aspect of the town is greatly altered for the better. The wretched hovels which the Turkish soldiery propagated pestilence and died have been cleaned out or levelled to the earth, the cesspools and collections of utter abomination in the streets have been filled up, and quicklime has been laid down in the streets and lanes, and around the houses. The sutlers have been driven forth to a world of their own outside the town, and the number of visitors to the town diminished. Indeed, the railway, which sweeps right through the main street, very effectually clears away the crowds of stragglers who used to infest the place. It is inexpressibly strange to hear the well-known rumbling sound of the carriages and waggons as they pass to and fro with their freights of navvies, sleepers, and rails; it recalls home more strongly than anything we have yet heard in the Crimea."

A few days afterwards, the *Times'* correspondent wrote—"The *Australian* arrived to-day with Lord George Paget on board. The railway is now 100 yards beyond Kadikoi. Or stationary engine has been run up to the big ground opposite, on the plateau near the camp. *Inter alia*, we are to have an hotel at Balaklava. It is to be conducted by 'Mrs. Seacole, late of Jamaica.' I suppose the lady calculates on a liberal share of patronage when visitors come out to see the siege in the summer."

On the 20th (the night after the great snow storm) the Russians, calculating that the severity of the weather would cause the English to relax their vigilance, made a petty sortie. Mr. Russell relates it as made after the

usual manner, which he thus describes:—“Some thirty men are sent in advance of a party of from five to eight hundred, in loose skirmishing order. These men advance stealthily, *à tirailleur*, up to the line of our sentries and pickets, and feel their way cautiously, in order to ascertain if there is a weak and undefended point for the advance of the main body. If the firing is slack, the latter immediately push on, rush into the trenches, bayonet as many as resist, and dragging off all the men they can get as prisoners, return to the town as rapidly as possible. In these affairs the French suffer most. Any man, however weak, can rush across a landing into the nearest room, and do damage in it before he is kicked out. The French are so close to the Russians, they may be said to live next door to them. The latter in form in a small body under cover of their works, at any hour in the night, and dash into the works ere our allies can get together to drive them back again.” On the night of the 19th, the sortie was made against Major Chapman’s batteries on the left attack. The sentries saw and challenged them, and instantly delivered their fire. The contest was short and unimportant, but men fell on both sides, and the “Rushi” “took nothing by their motion.” On the morning of the 22nd, General Canrobert published the following order of the day:—

“ARMY OF THE EAST!—The enemy has just sustained another check. On the morning of the 17th they attacked Eupatoria with 25,000 infantry, 80 pieces of cannon, and 4000 cavalry. His corps, composed of all the reinforcements that could possibly be brought together at Perekop or from within the Crimea, was vigorously repulsed by the Ottoman troops of the Army of the Danube, under the orders of Omar Pasha, general-in-chief. On the second attempt of an assault, a column of Turkish troops, rushing out from the place, resolutely charged the assaulting party with the bayonet, and drove them back for a considerable distance. At last the enemy, after a fruitless struggle of two days’ duration, was forced to retreat with considerable loss. This brilliant affair reflects the highest honour on our allies, and worthily continues the series of their successes against the common enemy during the preceding years. We have the satisfaction to add that the small French garrison, under the orders of Chef de Escadron d’Etat-Major Osmont, composed of a detachment of the 3rd Marines, and a detachment of naval gunners, under naval Lieutenant de la Caze, have vigorously sustained the honour of our arms, as well as greatly contributed to the defence of Eupatoria, by the success which they had prepared for that purpose. This first exploit of the army of his

majesty the sultan felicitously inaugurates a campaign, the opening of which can no longer be retarded.

“Companions in arms! With unconquerable energy, and a patriotism that has spread your renown through Europe, ensuring you a place in history, you have during one year mastered the very hardest trials to which the organisation and *morale* of an army can be exposed. These trials are close upon an end. Those which now await you are such as your courage will look upon without alarm. You will soon join battle with an enemy whom you already know how to conquer. The ardent sympathies with which France accompanies her armies will be with you when you meet them, as they have before followed your previous victories and glorious sufferings during this war. The heart and the prayers of our emperor are with you; his solicitude trebles your efficiency and powers.

“Soldiers! be sure the English, Ottoman, and French armies, firmly united, will triumph with the aid of God, who protects the just cause.

“CANROBERT, *General-in-Chief*.”

The proceedings of the Russians, in connection with the famous Mamelon, gave the allies considerable anxiety. The most advanced trenches of the allies were about 400 yards distant from this defence, which was itself about 600 yards in advance of the Malakoff Tower. No adequate efforts had been made to dislodge the enemy from the Mamelon, although our engineers constantly drew attention to the necessity of depriving him of its possession. Had the advice of General Sir John Burgoyne been followed in reference to it, many valuable lives would have been spared; but the opinions of that gallant and skilful officer never received the respect which they deserved. The English commander-in-chief had a prejudice in favour of the French engineer officers, who had, nevertheless, hitherto proved themselves inferior to ours throughout the campaign.

On the night of the 22nd noises were heard in the trenches, which evidently proceeded from the Mamelon. The sounds were those of numerous bodies of workmen urging some vast undertaking with great energy. The pickets and trench-guards were doubled. The 23rd was a dim heavy day, such as often in the campaign favoured the foe. The Russians carried on their operations under cover of the fog; the same noises were heard, the same indications of energy fell upon the ears of the listeners in the trenches; but nothing could be seen. In the evening the weather cleared, and the formidable results of the labours which sent the strange sounds over the lines were apparent. Two rows of gabions had been

filled and placed round the summit of the hill, which rose with a perpendicular rocky face in front, the stone having been quarried out for building purposes at Sebastopol. Under cover of the gabions, numerous working parties were still busy plying their tools with the most eager haste. It was obvious that the French could never allow the batteries to be completed without a desperate attempt to frustrate the design; and General Canrobert accordingly resolved upon an attack. The erection of this work so far was admirably managed, justifying the eulogy contained in Prince Menschikoff's despatch:—

"On the night between the 21st and 22nd of February we erected a redoubt on the left flank of the fortifications of Sebastopol. This was done so promptly and unexpectedly, that we received no annoyance from the enemy (the allies). On the night between the 24th and 25th the enemy (the allies) attacked the redoubt with considerable forces. Two regiments repulsed them. The enemy lost 600 men. The mining operations of the allies have been suspended."

There are two errors in this despatch: the prince underrates the number of Russians engaged; and, unfortunately, he also underrates the heavy loss of our ally. What the difficulties of this undertaking on the part of the French were, are briefly stated in a letter of General Canrobert of the 24th to the French minister of war:—

"Being informed yesterday morning that the Russians had raised, during the preceding night, some important works of counter-approach, directly opposite to our works, and upon the lower part of one of the slopes of the plain of Inkerman, which descends to the Careening Bay, I repaired to the spot, and after having carefully examined the nature of the enemy's intrenchments, I decided on having them stormed. The operation was a difficult one, for numerous defenders were sheltered behind the intrenchments; and it was the more impossible to surprise them, since they had thrown forward, to about 700 metres in advance of their position, a complete chain of small fortified posts. Beside which, the 800 or 900 metres that our soldiers had to traverse before reaching the enemy, were literally ploughed up by the projectiles of more than 80 guns, fired as well from the ships as from the land-batteries which converge on that place from all the points of a semicircle."

The attack was ordered for the night of the 23rd to the 24th. Its general superintendence was committed to General Bosquet. It appears from the French journal of the siege from the 23rd to the 24th of February, that the general

ordered for this service two battalions of 12nd Zouaves, of 500 men each; one battalion of the 6th of the line, and one of the 10th of the line. The respective strength of these two battalions is not stated; neither does the journal mention what was indisputably the fact, that a battalion of French marines constituted the reserve. General Bosquet charged General Moray with the direction of the attack, the supreme command of which was given to General de Monet.

Eleven o'clock on the night of the 23rd was the hour of rendezvous for the expeditionary detachment. At midnight the attacking columns took their positions in the intrenchments. Colonel Cler, with the Zouaves, took post behind two large openings made to the right and left of the second parallel. The right battalion was commanded by Major Lécroix, at the head of which Colonel Cler ultimately placed himself; the left battalion was under the command of Major Derbois. Between these two battalions General Moray placed himself at the head of a strong battalion of marines, probably numbering 1000 men. General Bosquet, with his usual alacrity and vigilance, inspected all these arrangements himself. The night was intensely dark, and all was still around the camp and in the trenches, when, at half-past one, General Moray gave the signal, and instantly the battalions issued to the front, and formed in columns by sections; in front of each a company was thrown out as the *avante garde*, with each a captain of engineers and a small detachment of soldiers of that corps, with orders to destroy the works.

The moon was in its first quarter, and had gone down at eleven o'clock, after which the darkness became deeper, favouring the enterprise. Much misapprehension existed with the intelligence of this attack reached England and France as to the design of the French general. It was not intended to make a lodgment: the orders on this subject were precise, and show that Mr. Russell and Mr. Woodcock mistook the nature of the assault when they describe it as a defeat of the French. The orders of General Canrobert were in the following terms:—"The end which the French general wishes to attain, in making this sortie from the Inkerman intrenchments, being solely to produce a moral influence, the order is given to occupy but for a short time the enemy's works; and to overturn and abandon them after the signal of retreat. The use of that signal is left to the commanding officer of the troops engaged."

The Zouaves crept forward furtively, and for a time, noiselessly; the 6th and 10th of the line, under Colonel (Major) Derbois, formed a hollow to protect the return. The French

no suspicion that their approach was expected; but unfortunately the Russians were aware of the whole plan of attack, for it had been a subject of conversation in the French camp all the evening; and a soldier of the foreign legion, an Italian, knowing how valuable such information would be, and perhaps not having any very goodwill to the French nation, deserted, and put the Russians in possession of what was contemplated: they took their measures accordingly. In front of their works a long line of small posts was formed behind a wall which lines a part of the Sebastopol Road, and where that road crossed a hollow space. Ambuscades were in front and flank of that line, which were protected in the rear and near the works by small bodies of infantry formed in squares. The force which occupied these posts was afterwards estimated by the French at 1200 men.

The right column of attack arrived at the outer line of the ambuscades without seeing an enemy; but as soon as it entered the net-work of fusillade, point-blank, was opened upon the head and flank of the column. This fire was received by the advanced companies; the main body avoided the fire, wheeled to the left, and charged into the ambuscade with the bayonet, driving the Muscovites quickly out. The left column meanwhile encountered a deep ravine, the valley, as the Russians call it, where large ones lay along the declivities in great proportion: these were rolled down by the passage of the troops, thundering against one another as they bounded to the bottom, and making a noise which, even if the enemy had not been apprised of the attack, would have betrayed it. The central column, which advanced in support of the others, came precipitately upon the ambuscades that were arranged across its course, and received a close and terrible fire from the troops posted there. All the columns were now much disordered, especially that which had to make its way by the rough and rocky ravine. The fire from the ambuscades had brought down many, and no less than three shots struck General de Monet himself. Both hands were shattered by musket-balls. Feeling weak with loss of blood, he committed the command to Colonel Cler; and then, holding up his mangled hands, exclaimed, "Soldiers, advance, follow me—that is the point we must reach!" he rushed forward against the redoubt through the squares of the enemy, followed bravely by his Zouaves. At this moment the advanced companies were engaged with three squares in a desperate and confined bayonet-struggle, which the darkness rendered more desperate. This close encounter prevented the enemy from shooting down the main body of the advancing column—for so close were they, that, dark as it was, no shot

could fail to tell had they been able to fire upon the assailants. Colonel Cler re-arranged the men, ordering Commandant Lacretelle to charge with his Zouaves on the right; Commandant Derbois, with his soldiers of the line, on the left; and he himself, heading such men as he could get together, dashed forward to the ditch of the intrenchment, and scaled the parapet. Scarcely had he done so when the victorious parties, under Lacretelle and Derbois, penetrated into the work from either flank. The Russians were hemmed in, in the gorge of the intrenchment, and were obliged to make a desperate resistance; they delivered a volley, before which many of the French went down, for the muzzles of the Russian muskets were at their very breasts; they then received their assailants on their bayonets, several superior officers being literally impaled. The shock was terrible, the havoc great; and the impetuosity and determined bravery of the French were irresistible. Never did Frenchmen behave more chivalrously than that night around and upon the Mamelon.

While this terrible conflict raged in the gorge of the work, and every blow struck dealt wounds and death, the sky over Sebastopol became suddenly illumined by innumerable fires, rockets and pyrotechnic preparations of every conceivable sort were flung up high into the heavens. The hills and valleys instantly echoed the sound of the Russian trumpets, the tocsin rang in the town with a sound clear and alarmful above all the clangour, and forthwith a peal of artillery from ships and battery shook Sebastopol and the earth around it. The combatants no longer fought in darkness, the artificial lights which glared above the town revealed the whole struggle distinctly; and men were seen like fiends, of every horrid hue, struggling in deadly combat. While the Grenadiers and Cossacks appeared swaying to and fro, their bayonets crossing those of the Zouaves, the French engineers were destroying gabions and parapets. The illuminations thrown up by the Russians enabled them to see the numerical inferiority of their assailants, encouraging those actually in the conflict, and instructing those who were about to be moved to their support. The Russians here adopted the diabolical plan which they so disgracefully resorted to at the battle of Balaklava—they fired into the combatants, friends and foes, regardless of the sacrifice of their own troops if only the assailants were shot down. The French nevertheless swept the defenders from the redoubt, but the Russian batteries at that moment directed upon it a concentrated fire which no troops could withstand. The French lay down while the grape and canister swept over them with the screeching sound of a tempest. It was from the Malakoff that the

most murderous fire came, and the Zouaves, dauntless still amidst scenes of such horror, cried "On to the Malakoff! on to the Malakoff!" Their officers could with difficulty restrain them from the gallant, but desperate and hopeless, enterprise; and some, bursting the bonds of discipline, rushed forth and met the fate which an intelligence equal to their bravery might have enabled them to foresee. Lying within the shelter of the redoubt the Zouaves persisted in holding it, contrary to the original intention of the attack, and the precise orders of the French chief. They were not permitted long to maintain their couchant position; the cannon of the batteries suddenly ceased, and dark masses of infantry fell upon either flank of the French supports, who maintained a position sheltered by some gabions outside the work. The marines, who were here posted, at first made a gallant defence, but after they were thrown into confusion by quick and repeated volleys from their numerous assailants, they were charged with the bayonet and driven pellmell among the rocks and uneven ground, where they could not be re-formed, nor rallied, and were in fact dispersed, helpless fugitives, upon their own lines. General Monet at this critical moment gave the signal for retreat; he was the first to enter the work and the last to leave it. It is incomprehensible that, with orders so precise as those already quoted, he did not give the command to retire as soon as the object of the engineers was tolerably performed. It is even surprising that with so small a force he should have continued the enterprise when he saw that it was no surprise, and that the enemy were well prepared and numerically far superior, for this was obvious as soon as his troops entered among the ambuscades. Dauntless courage is not sufficient for a general—prudence and consideration for human life are quite as essential. Many comments to the disparagement of the English generals have been made at home and on the Continent, but in no respect did the French show superior generalship. Most of them had more experience in large commands; but the English generals showed as much fertility of resource up to this period as their vaunted allies. Generals Evans, England, Burgoyne, Brown, and Campbell, were not surpassed—we fearlessly say, not equalled—among the French generals, unless Bosquet be the exception; the Duke of Cambridge, although inexperienced as a general, was as well acquainted with the military art and the minutest details of the profession as any officer well could be.

Monet at last retired, reluctantly accompanied by his desperately daring soldiers. Colonel Cler, upon whom the command without the redoubt devolved, heard the signal twice before he moved a man, while the musket-balls of the

enemy seemed to fill the air, and the flower of his troops lay bleeding around him. At that moment the French soldiers believed that they suffered more from the misdirected fire of the marines, who were then giving way, than from the bullets of the foe. The marines in the French navy were a most unsuitable force for the kind of service on which they were that night sent, and were so considered by the li and the Zouaves, on the part of whom a bitter contempt arose to the marines for their deficiency in skill in the emergency. The whole of this little force were soon surrounded in the retreat, but a desperate bayonet-charge procured them a passage through the enemy at the expense of many valuable lives. Several officers sacrificed themselves to the safety of the brigade; Captain Sage and Sub-lieutenant Levestre were among these heroes. They fought their way back to the trenches, having lost one-fourth of their men in killed, wounded, and prisoners. The total was not less than 1000, although both French and Russian accounts compute it at about 600.

The work was not entirely destroyed, nor was the injury inflicted upon it commensurate with the loss of life. Nor was it true, as the Baron Bazancourt represents it, that the moral influence of the event compensated for the loss. The Russians felt encouraged, they illuminated the town, joy-bells flashed their triumphal peals upon the still dark air, and a *feu de joie* rang along their lines, while shouts of victory and defiance rent the atmosphere.

The generalship displayed was wretched. Canrobert was a first-rate general of division, but as little fit to command in such a siege as St. Arnaud or Lord Raglan. Instead of allowing his projects to be bruited about the camp, he might have imitated his enemies in their secrecy. Sudden as was the resolution taken to attempt the destruction of the new works of the Mamelon, hardly a soldier in the French army was ignorant of it, and even the plan to be acted upon, before the moon went down that night—even in the English lines was well known. The conduct of the affair was rash and headstrong. Frenchmen do not require to prove their bravery by rushing to useless destruction, their valour is celebrated in all lands.

General Canrobert proclaimed to the army the brilliant courage of the men who had forced their way over a path so bloody to the enemy proposed, and who showed so extraordinary devotion. The language employed was full of well-earned compliment, but it gives no information requiring a place here. One passage was just and beautiful:—"The commander-in-chief, in the name of the emperor and France, thanks those brave soldiers who have maintained the honour of our flag with suc

ty courage, that our enemies themselves render it their homage."

The commander-in-chief testified correctly the admiration of the enemy, for General Sten-Sacken sent a letter to Canrobert in which he paid this tribute to the fallen:—"I hasten to inform you that your valiant dead, who remained in our hands, on the night of the 23rd, were buried with all the honours due their exemplary intrepidity."

The following is the despatch of General Canrobert. He affirms that the retreat of the French was *unmolested*, which is a grave error, they had to cut their way through the host that surrounded them. It is probable that the general meant to convey the idea that, after the bayonet charge by which they cleared for themselves a way out of the circle of fire which begirt them, they regained unmolested the trenches. This is correct, except that a musketry fire was poured after them.

MONSIEUR LE MARÉCHAL,—I have the honour to send you details of the *coup de main* executed in the night between the 23rd and 24th of February, in advance of the right line of attack. The following dispositions had been taken:—A detachment of engineers, and a detachment of artillery, two battalions of the 2nd Zouaves (Colonel Cler), and a battalion of the 4th regiment of Marines (Commander Mermier), commanded by General Brigade Monet, were to carry the redoubt constructed by the Russians in front of our right lines. Two battalions of the 6th and 10th of the line formed the reserve. The whole was commanded by General of Division Mayran, and moreover, the operation was under the superintendence and direction of General Bosquet, Commander of the Second Corps. The Russian work had some ramifications in advance, which, in the obscurity of the night, presented obstacles of which it was difficult to appreciate the disposition or strength. The troops destined for the attack stormed them and routed them, and, while the battalions on the French left and centre overcame these obstacles, the Zouaves, led by Colonel Cler, and having General Monet at their head, who had already received several wounds, penetrated into the redoubt under a heavy fire of musketry, and threw themselves upon the infantry crowded in a dense body inside. This infantry gave way, after a short but severe struggle, in which the detachment of engineers, under Captain Valesque, took a brilliant part, as did also the artillery, commanded by Lieutenant Delafosse. The Zouaves displayed the most remarkable intrepidity. The enemy had suffered considerable losses. The object we had proposed was attained. I could not think of holding a position open on all sides to the Russian artillery, but we had shown them once more our superiority in action. The return to our lines was accomplished without the enemy, who were struck with astonishment, molesting us, notwithstanding their numerical superiority. The reserve, which had left the trenches, to cover, if necessary, the retreat, did not meet with one. Our loss was considerable, but not in proportion to the danger of this nocturnal combat, where our soldiers were exposed until they returned to the trenches to the fire of the artillery of the town. Our troops behaved admirably, as they always do, and I cannot praise them too highly.

CANROBERT.

The English general also made an especial despatch for his government of an event so important:—

*Before Sebastopol, Feb. 24, 1855.*

MY LORD,—The weather has improved since I wrote the despatch of the 20th inst. The snow is still on the ground, and the nights are cold; but the wind has subsided, and we have to-day a bright sunshine. Consider-

able activity continues to prevail in the movement of the enemy's troops on the north side of the harbour, and convoys of waggons are constantly arriving, and the object of the Russians would appear to be to fortify the heights extending to their left, and looking upon the valley of the Tchernaya. The troops of the garrison having lodged themselves on the point of the spur of the ridge from Inkerman over the Careening Bay, at about 300 yards from the new French parallel, on the extreme right, General Canrobert determined to dislodge them; and this was gallantly effected at two o'clock this morning by 1500 men, under the immediate command of General Monet, and the direction of General Mayran, with however, I regret to say, some loss, the consequence of the heavy fire which was brought to bear upon them from the enemy's batteries and the shipping, whilst they were engaged in demolishing the works. When this object was accomplished, they withdrew to the trenches, as had been their intention. The gallant General Monet is, I am much concerned to have to add, among the wounded.

I enclose a return of casualties on the 22nd inst. Lieutenant-general Sir George Brown has, I am happy to say, resumed the command of the Light Division in perfect health. The railway is getting on remarkably well, and the exertions of Mr. Beattie, who is superintending the works, are unremitting, and entitle him to great praise.

I have, &c.

RAGLAN.

Another despatch from his lordship, three days later, gives a concise and clear account of the events which transpired in the interval:—

*Before Sebastopol, Feb. 27.*

MY LORD,—It appears that, on Saturday night, the enemy sunk three or four more ships of war in the harbour, as far within the booms as the first sunken ships were outside of them; and, according to the most accurate examination yesterday, there are now four barriers or impediments to the entrance of the harbour, viz.: two of sunken ships and two booms.

The only movement on the part of the enemy, since I last wrote to your lordship, is the march of some infantry and artillery from the neighbourhood of Bagtché Serai towards the Tchernaya, upon which river, near Tchorgoum, they have at present five guns and several hundred men.

The weather has been fine for the last three days; the snow is gradually disappearing, and the country is becoming drier.

The enemy have reoccupied the ground which was the scene of contest between the French and Russians on Saturday morning before daylight; and they are making great progress in a work they are establishing upon that point.

I enclose the return of casualties to the 25th inst.

I have, &c.,

RAGLAN.

*The Lord Panmure, &c.*

At this juncture the British Naval Brigade rendered good service, whether under fire or at work; their state of discipline was excellent, and yet a freedom was allowed to them in various ways which was denied to the troops. Admiral Lyons, in a despatch, sent the following as an enclosure:—

*Camp, Naval Brigade, Feb. 18.*

SIR,—I have the honour to inform you that the enemy still continues strengthening his works. I am happy to say that there have been no casualties this week, and that the brigade is remarkably healthy. We have only 27 men on the sick-list, victualling 999 men and officers. All symptoms of scurvy have disappeared, and I am informed by the medical officer in charge that he considers this is principally owing to the liberal supply of oranges issued to the brigade.

I have, &c.,

S. LUSHINGTON,

*Captain commanding Naval Brigade.*

*Rear-admiral Sir E. Lyons, Bart., G.C.B., &c.*

The cheerfulness of the British soldiery during the closing weeks of February was as encouraging to their officers as their patience had been and still continued to be. The Irish regiments were very remarkable for the fun and frolic in which they indulged under all circumstances. The following is an exemplification of this:—"Everywhere there is a laugh or joke; not perhaps the wit of a Swift, but wit enough to indicate cheerful hearts. At this moment some men near me are making a wall, and chatting. 'Do you call that,' says one, 'the way to make a wall? What a simple woman your mother must have been!'" "Do you think so," answers his companion. "I was told once what a fool I was, but do you know what they soon found out?"—"No," said the other.—"Well, then, I'll tell you; they found out that I was no fool—it was only a silly look I had."—"Well," joined in a third, "you always look very simple, I can tell you; so they have hit you off."—"I look simple, do I?" replied the joker; "why, you should only see me sometimes—I look so stupid that once, in the barrack-room, they took me for you." At this there was a hearty laugh, and the wall-building went on merrily."

Little incidents like these are of importance in an army, as indicating the tone and temper of the common soldiery. Lord Hardinge, on the first night of the battle of Ferozeshoohah, went among the men, lay down with them on the earth under the fire of the enemy, and joked and chatted with them: the occasion was exceedingly critical, and he knew well that all depended upon the tone and temper of the ranks. He rose from his earth-couch that night no longer uneasy, for he saw the men were full of hope and courage, even under a murderous cannonade which the Sikhs continued all night. The spirit of the men before Sebastopol in the British lines at the end of February might well embolden any general.

On the night of the 25th to the 26th the French were disposed to renew their attack on the Mamelon, and a very large force was under arms for several hours; but no attempt was made. The Russian batteries played during the whole time, lighting up with their incessant flashes the ravines and rugged country around. The enemy threw out numerous bodies of rifles under the protection of this fire, who were met by the French *enfants perdus* with their usual daring and resource.

During the closing days of February, Lord Raglan was busy visiting batteries and divisions, and doing all that during the earlier part of the siege he did not do, in the way of active and vigilant inspection, although he and his staff were up half the nights making out returns for the home government. Conference among the allied generals was frequent; and it

was alleged that disagreements were rife, the main subjects being the plans of the engineers and their modes of carrying them out. The conviction became stronger in both armies that the counsels of Sir John Burgoyne had been sound from the beginning, and that many disasters had arisen from their neglect.

The Russians continued to work as much as they could, seldom before laboured in any siege; and it was evident that they were erecting a large square redoubt on the spot so lately and valorously contested. The French held the control of the neck of the creek of Sebastopol and Inkerman. On the south-east side of that creek the shore is high and somewhat precipitous, so that men could not ascend or descend in any compact order. Between the Malakoff and the Mamelon a deep ravine runs to the sea, which it would be next to impossible to cross under fire. It became therefore important to the Russians to keep a tenacious hold of the works they had planted in front of that ravine; and for this purpose they laboured incessantly, carrying on by day and night heroic andculean labours.

The French repeatedly borrowed our heavy guns to give strength to their batteries.

On the 27th an armistice was agreed upon for the burial of the dead, during which officers and men exchanged civilities. Scarcely had the armistice terminated when the French and Russians opened fire once more, and the sharpshooters were engaged in their usual struggle.

The progress of the railway seemed great to puzzle the Cossack videttes. Having never before seen locomotives, their amazement when they beheld them flying at the rate of twenty miles an hour was ludicrous; they galloped to and fro in the greatest excitement, and, as well as could be judged through the glasses of observers, with signs of trepidation.

February went out in frost and snow; but the troops had now clothing and rations, and all looked forward to a spring campaign with hope.

A letter, not indeed from the Crimea, but from the Wellington Barracks, London, appeared in one of the morning papers of January, relating the extraordinary heroism of a mere child. It is one of the most remarkable instances of courage and humanity united which the war revealed:—

"A sergeant-major, now in Wellington Barracks, who has recently returned from the Crimea, has sent us the following enthusiastic account of the conduct of a young soldier, of ten years old, named Thomas Keep, of the 3rd battalion Grenadier Guards, under the command of Colonel Thomas Wood. The sergeant-major states that this boy accompanied the army to the heights of the Alma, preserving the rs

undaunted demeanour throughout the battle. At one time a 24-pounder passed on each side of him, and shot and shell fell about him like hail; but, notwithstanding the weariness of the day, present dangers, or the horrid sight, the boy's heart beat with tenderness towards the poor wounded. Instead of going into a tent to take care of himself after the battle was over, he refused to take rest, but was seen enturing his life for the good of his comrades in the battle-field. The boy was seen stepping carefully over one dead body after another, collecting all the broken muskets he could find, and making a fire in the night to procure hot water. He made tea for the poor sufferers, and saved the life of Sergeant Russell and some of the private soldiers who were lying nearly exhausted for want. Thus did this youth spend the night. At the battle of Balaklava he again assisted the wounded. The boy did his duty by day, and worked in the trenches by night, taking but little rest. At the battle of Inkerman he was surrounded by Russians for twenty minutes, and, to use his own words, he said he thought it was a 'case' with him; but he escaped all right. He received one shot, which went through his coat and out at the leg of his trowsers, but Providence again reserved him unhurt. He helped, with all the bravery of a man, to get in the wounded, and rested not until the poor sufferers were made as comfortable as he could make them. He waited on the doctor when extracting the shot from the men, and waited on the men before and after. 'Thus did this youth,' says the writer, 'do anything to any one who needed help. Some of the wounded say that they could not have been alive now had it not been for this boy's unwearied watchfulness and kindness in their hours of helplessness. This boy had been recommended by Colonel Robinson and Colonel Wood, and other officers in her majesty's service.' "

In the 88th regiment, or Connaught Rangers, a soldier named Hourigan displayed great courage at Inkerman, and afterwards in the trenches. Henry Grattan, Esq., son of the distinguished Irish patriot and senator of that name, sent him a present in money, and wrote to his colonel concerning him, which drew forth the following characteristic letters from the officer and the soldier. Hourigan had been seen, in one of the contests in which he had been engaged, to encounter and slay three Russian soldiers.

*Camp before Sebastopol, Jan. 22.*

"DEAR SIR,—I beg to acknowledge the receipt of your letter regarding Hourigan,—not Houlahan, as the papers call him,—and to thank you for the interest you and all take in the 88th regiment. I assure you I think the fine young fellows we have here will never

disgrace the old Rangers, but follow their footsteps in their career of honour and glory. I assure you, up to this time, nothing can exceed their gallant behaviour; and their most fervent wish and prayer is that they may be allowed to have a dash at the walls. I must not forget to mention their patience under all their very severe trials; one hardly hears a murmur or complaint, although many poor fellows are obliged to go on picket in trenches in this inclement weather, who ought to be in a comfortable bed in hospital; indeed, the truth is, that few are really fit for anything else. I am happy to say, that, in consequence of the great reinforcements received by the French lately, they have commenced to-day to take the duties which were performed by the second division, and the latter are to assist the light division, so that we may now expect better times; and, thanks to the munificence of the whole country at home, the men are now well clothed, and more comforts arrive daily. Pray excuse this scrawl, and believe me yours,

"H. SHIRLEY, Colonel,

"Commanding 88th regiment."

"To Henry Grattan, Esq."

*Camp before Sebastopol, Jan. 22.*

"HONOURED SIR,—I have duly received your very kind and flattering letter, which gives me the highest satisfaction that my poor endeavours to do my duty should meet the approbation of such an Irishman as the son of the 'illustrious Henry Grattan.' Honoured sir, I want words to convey to you in adequate terms the meed of my gratitude towards you for your very handsome present, which I value the more as I know you are prompted by the purest motives of goodness of heart and noble-minded singleness of purpose to bestow a favour on the lowest of your countrymen. I am happy to inform you that Colonel Shirley has promoted me to corporal for the affair at Inkerman; besides, he has recommended me for the medal and gratuity. All the papers mention my name as 'Houlahan,' and that I am a native of Waterford. My name is Daniel Hourigan, and I am a native of the county of Clare. In conclusion, honourable sir, as I have no friends at home who require the money, I would kindly thank you to forward the amount to me here. Hoping that I may never die until I have the pleasure and satisfaction of thanking you in person for your kindness and generosity to me, I remain, honoured sir, your most devoted and obliged servant and countryman,

"DANIEL HOURIGAN,

"Corporal, 88th Connaught Rangers."

"To Henry Grattan, Esq."

Amongst the achievements attributed to Hourigan was the rescue of Lieutenant Crosse from a fabulous number of the enemy. It ap-

pears that more glory was ascribed to him in that case than fell to his share, for Lieutenant, then Captain, Crosse published the following letter concerning the encounter in which his life was so imminently endangered:—

TO THE EDITOR OF THE TIMES.

*Army and Navy Club, Feb. 16.*

"SIR,—In the impression of the *Times* of to-day there are letters copied from one of the Dublin papers, relative to my life having been saved at the battle of Inkerman by Private, now Corporal, Hourigan, of the 88th regiment; but, as he did not in any way assist me, I deem it only justice to those who did that I should correct the error. I fired the first chamber of my revolver (one of Dean's) to save Hourigan's life, and did not see him again during that day. When I was attacked by the six Russians I saved my own life as follows, viz.:—I shot four, and was then bayoneted by the fifth, who fell, bringing me on my knees, and while there I had to defend myself with my sword against the sixth. I got on my feet and walked as well as I could to the rear, and at about ten yards' distance met my colour-sergeant, Pat Cooney, and told him to take command of the company, and get me a man to assist me, as I was wounded. Private John Gascoigne came; I afterwards called two more, Privates Samuel Price and Pat Connolly, to defend us, as the Russians were close to us. Privates Price and Gascoigne supported me till I got a stretcher, I think, from the 49th regiment, and they and two men of that corps carried me to the hospital of the Light Division.

"Such are the facts of my escape at the battle of Inkerman; and how the romantic story that has been going the round of the papers got into circulation I cannot divine.

"Trusting that you will, in justice to the men I have named, insert this in your journal, I have the honour to be, sir, your obedient servant,

"J. G. CROSSE,

"Captain, 88th Regiment."

A letter written in February, by an Irish soldier, is illustrative of the humane and gallant feelings which prevailed among the men:—"Three days ago our regiment was in the trenches, we had one man knocked to pieces and two more wounded by grape. The same day a very feeling circumstance took place. Two Russian soldiers were coming down a street; says one of our men, 'By the powers, but she have a woman to protect them.' 'Bad luck to me,' says another, 'if she ges one side I'll have a slap at them.' They would not chance a shot for fear of hitting the woman. But she was not four paces from the Russians when whiz go the Minié rifles, and down tumbles one of them; the other started off at a good

run. 'Faith,' said one of my comrades, 'if I shot the woman the bloody Rooshians would be Old Nick know it, and he would stick it in the papers that we were shooting the women; and other countries would say, Sinope again.' Now my dear wife, although we are at bloody war this little incident will let you see that, while we have no reluctance at shooting or bayoneting a Russian we have some respect for the women."

A letter concerning the policy of an army at Eupatoria, the operations of which were narrated, was written by an officer who pointed out the dangers which might have ensued, but happily did not:—"Omar Pasha is by this time at the head of his *corps d'armée*, at Eupatoria. The Turks already landed have been engaged with the Russians partially, and have shown the same aptness to conquer which they proved upon the Danube. The occupation of that position is of great importance, but many strategists deny the wisdom of it without complete investment of Sebastopol and well-maintained connection with Omar Pasha's force. They say that the existence of two separate armies, unable to support one another, tempts the enemy to concentrate his whole force upon that most susceptible of defeat, and destruction even without the knowledge, not to say the help, of the army with which it was intended to co-operate. The operations of the Romans against Hannibal, of Napoleon I. in his Italian campaigns and in the campaign of 1812, and of our own Wellington in the Spanish Peninsula, illustrate this peril."

One of the most touching letters written by a humble soldier during the war was by a Scotch bombardier. It breathes a home-love and pious feeling, associated with stern determination in the performance of duty, which have been frequently displayed in the letters of our soldiery:—

*Camp before Sebastopol, Feb. 11, 1855.*

"DEAR FATHER,—I received your welcome letter on this day, and lose no time in writing an answer. I was glad indeed to hear from you, as I am desolate and alone, without an earthly companion to whom to speak my mind or say a word about the soul, or Christ, or his salvation. I cannot express to you the joy your fatherly letter gave me. It is plain that although distance separates us, you have not forgotten me, and however apart in body, we are not so in spirit. My situation here will not allow me to leave the battery in my charge one hour, as during the shortest absence the bugle might sound the near approach of the enemy. My promotion places me in charge of a gun, and I must be always present when called upon. I know there are many Christian soldiers in the camp, but duty is so rigid and

and it is impossible to spare even one hour. Indeed, so constant is the employment of the men, that even if many were in one company, I doubt whether they could manage to meet, not knowing the moment the enemy might attack, and we turned out to fight. I see your letter for me by your writing to Woolwich. I have been well in health since we came to the Crimea, but, as you say, our encampment here is different indeed to that at Chobham. Here I saw a brave soldier found his grave, and I have been called, in the providence of God, not only to witness terrible scenes, but to experience marvellous deliverances. I owe much to my Heavenly Father, who in the hour of peril and death interposed His omnipotent power. I may say that, in some instances, I have been more exposed than most of my comrades, and in every such case, by the mercy of God, I escaped unhurt! I was once surrounded by thousands of Russians at my gun, who obliged our gunners to quit their posts and leave their guns. One comrade alone remained with me, and him they shot and stabbed with two bayonets, and there was my single self with scores firing at me, like a lion upon whom lead had no power! I was the object of God's delivering hand, and here I am, thanks to His name. I lost my beloved comrade, the good Major Townsend, about one week. I lament him deeply. This was at the battle of Inkerman. O my kind father, what shall I say? I over-worked myself on that day, so much so that bodily strength failed me to get home. The working of my gun was for one man and myself, instead of ten! too much, indeed, for human strength, but the occasion required it. In the morning, when preparing hurriedly for battle, I said in a half loud voice, 'O God, my confidence is in thee; a hair shall not fall to the ground without thy notice and permission,' and soon after the fire began. Oh! gracious God, how good thou hast been to poor sinner like me, a mark of thy mercy, long-kindness, and long-suffering! My dear father, not only an hour would I spend in writing to you, but twelve, because my heart and mind are with you while I write, and I think I see you and hear your voice. I have news to relate of importance, and I presume you know all that passes, through the newspapers. You mention a Mr. Matheison, and I cannot think how truly delighted I should be to see him. If he visits our camp I hope I shall. I hope this will find you and Mrs. Rigley quite well. May the Lord give you strength to labour for him, and should my life be spared, and that I should go back to England, you may expect me to come and see you. My dear father, don't forget our situation here. It is not over yet. A great struggle is at hand—I mean the *assault*, but so far from despairing, I shall continue to trust in the

Lord. Give my Christian love to Mrs. Rigley, and accept the same yourself, and praying God to bless you both, I am yours, &c.,

"BOMBARDIER NEILL McLEOD,

"P. Battery, 4th Co. 12 Batt. Royal Artillery,  
"British Army, Crimea."

It has frequently been our wish in affording to our readers the interesting details which the letters of eye-witnesses and actors in the great drama present, to obtain letters from Russian officers and soldiers, or from persons in any way serving within the besieged city, but efforts to procure such have been in vain, from causes which will readily occur to the reader. The following extracts from the letter of an American, who practised as a surgeon during the months of January and February within Sebastopol, will supply in some degree the desideratum. This gentleman saw of course many of the scenes within the fortifications, and the events that passed there, and could say "part of which I have been." The medium by which he made his knowledge and opinions known was an American paper entitled the *Providence Journal*. The communications were entitled *Americans in the Russian Service: an inside view of Sebastopol, Events of the Siege, Desertions from the Allies*. The information conveyed did not answer to the large expectations excited by the parade of attractive headings, but still some glimpses of what went on inside of Sebastopol were given to the Americans, which were not received by the British public. The American surgeon, and a colleague, also an American, appear to have been employed in surgical operations upon the wounded, and their sympathies were cordially with the Russians and against the allies. For the month of January the following short extracts will suffice:—

"Jan. 15.—There was a sortie from the fourth bastion last night upon the trenches of the allies, in which nineteen Russians were killed and twenty-one wounded. I am not able to judge of the amount of loss and damage which the English and French experience in these affairs. It cannot but be serious, if they are taken by surprise, as sometimes happens. None but the darkest nights are chosen for these excursions.

"Jan. 16.—Three English deserters to-day, who reiterate essentially the statement of those of yesterday, that they suffer much from cold in the trenches; that many are sick; that none are let off from duty unless they are actually unable to walk; that they have to dig up roots for fuel; that their coffee is given to them green, which they must parch and grind as they best can. None of the English soldiers that I have yet seen are provided with boots. The Russian soldiers all have boots. The

English soldiers above speak of the arrival, just now, of winter clothing, sheepskins, boots, &c., and wooden houses that have been brought out from England, and are being put up for the sick, many of whom until now have been kept in tents; also of the extreme difficulty of transporting provisions, &c., from Balaklava to the camp, the draught horses being worn completely out by hard work. I may inform you that the daily allowance of a Russian soldier in Sebastopol is 3 lb. of bread, 1 lb. of fresh beef in soup, a portion of *grus* (a kind of farina porridge), and two glasses of brandy.

"Jan. 26.—I saw at General Osten-Sacken's this evening a ball made of very hard wood, like those used in bowling-alleys, weighing perhaps 12 lb., sent over either by the French or English. One contrivance of destruction which they occasionally make use of is worth mentioning for its droll novelty. It consists of half a cask or barrel, to the bottom of which is fitted a cylindrical piece, which just fits the calibre of a mortar. They fill this with small grenade bombs, and send it over. The small talk of the day just at present is upon the probabilities of peace."

During the month of February the information transmitted to the *Providence Journal* does not seem to have been so abundant nor precise. We glean from it that his "professional occupation was at that point where the wounded were brought from the various bastions or batteries." "A very fine hall immediately behind Fort Nicholas was appropriated to the purposes of an operation hall." "At the end of February there were 3000 sick and wounded in the *Hospital where we were*,"—implying that there were other receptacles for sick and wounded patients, and if they were occupied in any proportion to that where the two Americans operated, the suffering, sickness, and injuries from wounds in the fortress were appallingly numerous. No account is given of the average sickness, or the general rate of wounded brought in, or the nature of the diseases prevalent in the place. Perhaps the letters were inspected

by the commandant, who, however unwilling to interfere with an American gentleman's correspondence, when the czar was so anxious to conciliate the citizens of the Union, would be very solicitous to expunge some portions of what bore hard upon "hol Russia." The correspondent gave no information as to whether the inhabitants were few or numerous, or how employed: he in one instance relates that two children, who had been burned shockingly by the explosion of a bomb, were brought to the American surgeon to be dressed, and this circumstance he dwells upon in a manner that might lead his readers to infer that the allies fired bombs for the purpose of burning little children who might stray or play in the streets, so thoroughly *ex parte* and unjust is the spirit of the narrative. He bears testimony to the good practice of the British mortars lent to the French, one of the bombs from which went over the operation hall about the end of February, bursting within twenty yards. For the last week of January and the first of February he gives an average of the wounded brought to the hospital of which he had charge, which he computed at twenty. On the morning after the sortie of the 19th he stated them to be eighty-four. No account is given of the medical staff, its number, plans, regulations, or general efficiency—perhaps these topics were "tabooed." There is enough let out to show that the Russian loss by wounds and disease was extremely heavy, surpassing that of the allies a great deal as to the former instrumentalities, and probably not behind that of the French from the latter cause.

The writer boasted that he and his countryman and colleague were quartered in the same house with General Osten-Sacken, with whom they were on terms of intimacy (of which he seems as proud as if born in an aristocratic country). But this is hardly reconcilable with the presence of that general before Eupatoria, a part of the time at all events. Such, however, is a specimen of the "Correspondence from the inside of Sebastopol" by an American surgeon in the Russian service."

## CHAPTER LXXI.

### DEATH OF THE CZAR.

"They that see thee shall narrowly look upon thee, and consider thee, saying: Is this the man that made the earth to tremble, that did shake kingdoms?"—ISAIAH.

EUROPE had probably never been so greatly or suddenly startled by any event as by that which is here recorded. Rumours had reached England and France through Germany that the emperor was ill, but that his illness did not incapacitate him from business, to which he was devoted with his wonted energy and

iron will. When tidings reached him of the disastrous result to his arms of the battle of Eupatoria, he was labouring under a severe attack of influenza, and the effect the tidings had upon him was most injurious. He intensely felt this humiliation by Omar Pasha and a Turkish force, who had repulsed his

troops on the Danube, occupying, as a separate *corps d'armée*, a portion of Russian territory. He also considered the position one more dangerous to his power in the Crimea than most of his generals regarded it. It was by his direct and especial orders, and those orders delivered with unusual eagerness and energy, that the attack upon Omar Pasha's position was made. When he heard of the defeat, his whole nature seemed to feel the recoil, and in proportion to his determination to carry that point was his mortification at the result of the attempt. He never rallied again. On the 22nd of February he consented to refrain from public business, except some directions given in his own apartments, but even this was too much for his shaken frame. On the 23rd he devolved the government upon his eldest son. By this time his prostration was very great; he had insisted upon treating himself, and neglected the importunities of his family and the representations of his physicians as to the necessity of care and rest. On those occasions he would say to his empress and children, "This is not a time to take care of one's self while Russia is at war. I have something else to do than to watch over my health." To his medical advisers he replied, "Thank you, gentlemen, you have performed your duty, I must away to the performance of mine;" and would go forth with his cloak thrown loosely around him to inspect troops or material of war, or to see that some orders had been executed. It was alleged that one circumstance unfavourable to his recovery was his insisting that his physicians should treat him with a view to keep him from growing too corpulent, which he supposed would impair his dignity of person. During the few days which intervened between his confinement to his palace and his death, which was on the 2nd of March, his illness increased alarmingly, fever and inflammation of the lungs supervened. Dr. Mandt, his "body physician," informed him that atrophy of the lungs was possible. He received the communication with fortitude, inquiring, "When shall I be suffocated?" to which Dr. Karell replied, informing him that the danger was great, and that such an issue was to be apprehended as very imminent, but hoped that the peril would be dispelled. The czar did not seem to entertain any hope for himself, but called his empress and children around him and blessed them. He did the same by his chief officers and servants. The charge of union and affection given to his family was touching, and his injunctions to his children to respect their mother, and be guided by her counsels, were most solemn and becoming. Various "last words" have been attributed to him. It was communicated to the Prussian court that his last utterances

were—"Tell Fritz not to forget his father's recommendations in reference to Russia." The empress herself was represented as giving out that the emperor closed his life by saying to her, "Tell my brother-in-law that I trust he will not forsake his own nephew and my children in the great perils which may be before them." The new emperor, Alexander, in a proclamation to his troops, described his father as having addressed his last benedictions to them.

The motives for all these varied versions are transparent. The only authorised account of his illness and death was that recorded in the *Invalides Russe*. There is reason to believe that the account is *substantially* true, and the picture it presents is most touching:—

"As it now turns out, his majesty had been for some time violently affected with *grippe*. About the 18th of February his body physician, Dr. Mandt, begged for permission to call in other physicians. The emperor took this very lightly, and turned it off with a joke, but consented that the body physician, Dr. Karell, should be also consulted. The emperor became by degrees worse from want of sleep and increased cough, with plentiful expectoration, so that the physicians, on the 22nd, begged his majesty would keep his room. The emperor would not hear a word of it; on which one of the physicians said to him, 'No medical man in the whole army would allow any soldier so unwell as your majesty is to leave the hospital, for he would be sure that his patient would soon come in again worse.' The emperor answered, 'You have done your duty, gentlemen, and I thank you, and now I will do mine;' and on this he got into his sledge in rather cold weather, and drove to the exercising-house to see some men of the infantry of the guard, who were about to march into Lithuania to make up the complement of the regiments there.

"At this inspection, which was the last occasion of the emperor's being seen in public, he was evidently very unwell, coughed violently, expectorated excessively, and said as he went away, 'I am in a perfect bath (of perspiration),' although it was anything but warm in the exercising-house. The emperor then drove to Prince Dolgorouki, the minister of war, who was ill, cautioned him not to go out too soon, and then returned to the Winter Palace. In the evening he was present at the prayers for the first week of Lent, stayed some time with the empress, but complained of being cold, and kept his cloak on in the room. From that evening the emperor did not quit his little study. It was there, on February 23rd, that he received his flügel adjutant, Colonel von Tettenborn, and dispatched him to Sebastopol; all the while

lying on the sofa, and covered up with his cloak. After that his majesty transferred all business into the hands of the Grand-duke Alexander.

"The days from February 24th to the 27th passed over without one's learning anything further on inquiry than that 'the emperor does not leave his bed, as he is somewhat feverish: the cough is getting less and less hard,' &c. During the whole time he was ill the emperor lay only on his camp bed, *i.e.*, on a casing of Russia leather filled with hay, a bolster of the same kind, and with a blanket and his cloak over him. It was not till February 28th that his state was looked on as decidedly serious. On that night he became rapidly worse. The physicians apprehended a paralysis of the lungs. On the evening of March 1st they despaired of his recovery. The empress and the crown-prince begged him, at the request of the physicians, to take the sacrament. It was not till then that the emperor seems to have recognised the real danger of his state; but hardly any shock is stated to have been noticeable in him.

"In the night from the 1st to the 2nd instant, Dr. Mandt communicated to the emperor that he was dangerously ill, and that more particularly his lungs were violently affected, and gave great ground for apprehension. The emperor answered very calmly, 'And so you think that I am liable to a paralysis of the lungs?' To which Dr. Mandt answered, 'Such a result is very possible.' On this the emperor very calmly and collectedly took the sacrament, took leave of the empress, their children and grandchildren, kissed each, and blessed each one, with a firm voice, and then retained only the empress and the crown-prince with him. This was about four o'clock in the morning. The emperor said subsequently to the empress, 'Do go now and take a little rest, I beg of you.' She answered, 'Let me remain with you; I would I could depart with you, if it were only possible.' To this the emperor replied, 'No; you must remain here on earth. Take care of your health, so that you may be the centre of the whole family. Go now; I will send for you when the moment approaches.' The empress could not do otherwise than obey this distinct expression of the emperor's will, and left the room.

"The emperor then sent for Graf Orloff, Graf Adlerberg, and Prince Dolgorouki, thanked them for their fidelity, and bade them farewell. Subsequently the emperor had all the servants immediately about him sent in, thanked them for their services, blessed them, and took leave of them: on which occasion he is said to have been himself very much affected. Last of all the Kammerfrau von

Rohrbeck was sent for. The emperor thanked her for the fidelity she had always shown the empress, for the care with which she had always tended her in sickness, begged her never to quit the empress, and ended with 'And remember me kindly at Peterhoff, that I'm so fond of.' The emperor pressed Dr. Karell's hand, and said to him, 'It is no farther of yours.'

"Whilst the emperor's father-confessor was speaking with him he took the empress's hand and put it into the priest's, as if he would confide the empress to the ecclesiastic. After this the emperor lost his speech for a while, during which time he was engaged in prayer, and crossed himself repeatedly. He subsequently regained his voice, and spoke from time to time up to his decease, which took place without a struggle in the presence of the whole family, March 2nd, at ten minutes past noon.

"Almost the last articulate words that the emperor spoke were, 'Dites à Fritz (King of Prussia) de rester toujours le même pour la Russie, et de ne pas oublier les paroles du papa' (the late King of Prussia). At first the face of the corpse was very much sunk and fallen in; but in the evening the fine features had become more imposing than ever from their repose and regularity."

Our engraving of the czar's last moment faithfully represents the apartment, the description of bed on which he lay, the members of his family then around him, and their attitude at the instant when his majesty was *in articulo mortis*. After death the body was placed upon a state bed at the Winter Palace, in the room of the Grand Duchess Olga, and the public were admitted at certain hours to see it. The embalment, which took place under the directions of the professors of medicine and surgery, was admirably performed. A large pall edged with gold, was thrown over the corpse covering the face, which was removed by the attendants at the desire of such visitors as were privileged. The room was very simply decorated, and no attempt at display was put forth except of a religious kind. Lighted tapers, crosses, and other ecclesiastical concomitants surrounded the bed on which the corpse lay and three Greek priests offered mass alternately.

The crowd that went to see the body was immense, and great eagerness to behold the face of the corpse prevailed. Persons were ordered to stop only a few minutes in the room, and pass on; but there was such a disposition to contemplate the deceased, and especially when permitted to see his features, that there was some difficulty in carrying out these orders notwithstanding the obedience so natural to the Russian people. The scene singularly justified the appropriateness of the motto *sc*

ected for this chapter. The solemnity of those who passed through the death-chamber was impressive. Every Russian knelt near the coffin, made the sign of the cross, and kissed the pall which so gracefully hung over the body. No one could witness this deep reverence for the czar's remains without perceiving how completely the power of his name had penetrated the hearts of his people; and how acquainted with the writings of Pope but would naturally apply his lines in the elegy upon the death of an unfortunate lady :—

"How loved, how valued once avails thee not,  
By whom remember'd, or by whom forgot;  
A heap of dust alone remains of thee—  
'Tis all thou art, and all the proud must be."

The devotion of the passers through that solemn chamber could not fail also to impress a stranger with the conviction that the czar was popular because he represented the feelings and desires of the Russian race. The conflict he originated, and waged with such sanguinary and ferocious energy, was the people's; they regarded an invasion of Turkey quite as much a war *pro aris et focis*, as the defence of Cronstadt or Sebastopol. They regarded Turkey as the old Byzantine empire, into which the Turks have temporarily intruded, and of which the czar is the lineal and lawful sovereign, even irrespective of his claim as the head of the only orthodox church. They bowed at the feet of the dead as at the feet of a holy martyr to a most holy cause, whose divine mission, to exterminate the followers of the false prophet, and set up an orthodox empire in the seat of the venerable Byzantine, was opposed by the western schismatics and heretics, aided by all infidels everywhere, and by Satan, as the chief enemy of the czar, holy Russia, and the true church.

On the 11th of March the burial took place. The remains were borne, in deeply solemn state, from the Winter Palace to the Cathedral of St. Peter and St. Paul; the streets were crowded by a vast concourse, and

"The long funeral blackened all the way."

The minute gun, the muffled drum, the wind-instruments, which seemed to wail in pathetic notes, were alone heard amidst the deep silence of the vast multitude, until these were followed by the organ, mournfully pealing forth from the sanctuary an empire's sorrow. As the sarcophagus, gorgeously yet appropriately decorated, passed along, the people fell upon their knees in reverence to the dead, and rose with more resolute will for the war, in which, though struck by no bullet or splintered shell, their martyr had fallen. Half a million of Russians had been sent by him to a bloody death on the fields of war, or the many deaths of death by disease; half a million more

were ready to follow him to the grave before the bayonets and shot of the confederated armies; and the more willing to become sacrifices because he had died in his own department of the struggle.

The effect of these proceedings throughout Europe, it may well be believed, was startling. At Constantinople deep sorrow fell upon the great majority of the Christian population. Their two great hopes—to escape from the oppression of the Turks, and to oppress Turks, Jews, heretics, and schismatics themselves—seemed blasted by the untimely removal of the great champion of bigotry and persecution. He had been formed after their own image. He regarded the liberation of the orthodox from all invidious treatment, and the subjection of all others to the rule of the orthodox, as the true object for which to live; and as this is almost the only vitality Christianity has in the East, the czar, who fed and sustained it, was to them a living saint, already canonized by his holy acts. The Turks and Egyptians, while they generally preserved a suitable demeanour, could not restrain their joy at the tidings; and the sultan's court was filled with gratulations. In France the tidings were received with somewhat of awe, and the French court, strangely, went into mourning. Although the theatres were ordered to be closed, the courtiers did not refuse to

"— Bear about the mockery of woe  
To midnight dances and the public show."

In England a sensation of mingled astonishment, solemnity, and pleasure were blended. What Lord Raglan is represented to have said at Sebastopol expressed the public opinion and sentiment of England :—"This is the finger of God!" The intelligence of the czar's death came very suddenly upon the British public. On the morning of the day he died his illness was known in England by means of the electric telegraph; the evening of his death the great fact was known by the same medium in London, and in many of the capitals of Europe—illustrating the wonderful power of this modern invention. When the House of Lords met at five o'clock on that evening, the Earl of Clarendon addressed their lordships in the following terms :—"My lords, I feel it my duty to communicate to your lordships the contents of a telegraphic despatch I received half an hour ago from her majesty's minister at the Hague; it is as follows :—"The Emperor Nicholas died this day at one o'clock, of pulmonic apoplexy, after an attack of influenza." I have also received a despatch from her majesty's minister at Berlin, stating that the Emperor of Russia died at twelve o'clock, about an hour before these despatches arrived." Lord Palmerston communicated the intelligence to the Com-

mons; and the very same night the electric telegraph flashed the news over the surprised realm. It was a curious circumstance that Lord John Russell, who was on his way to the Vienna Conference, was tarrying at Berlin in hopes of bringing the Prussian court into a policy more nearly allied to that of England, when the intelligence arrived to his Prussian majesty.

The general impression throughout Europe was that the czar had died by unfair means—that poison had probably terminated his existence, as a matter of state policy,—there being no hope of peace while he lived, if the resources of Russia could hold out. It was alleged that a large party, considering the prolongation of the war destructive to the empire, wished to remove him who would not fail to persevere in it “while he had a man or a musket.” All these sinister suggestions were proved to be unfounded, when the disease to which the great patient succumbed was made known, and the circumstances attending his death detailed upon proper authority. Any impressions as to his having come unfairly by his death were very much removed by a very remarkable letter, published in the *Times* newspaper the day after the tidings of his death arrived in the English metropolis. This letter was quoted into the newspapers of every nation in the world, Russia only excepted, and exercised an extraordinary influence on the opinions universally formed concerning the decease of the czar and its causes. The author of the letter was Dr. Granville, a physician of much reputation. It is probable that his communication and his interviews with the government influenced them in some degree in their dilatory policy, and the indulgence which they showed him; whereas Dr. Granville intended to put them upon their guard as to any calculations upon the moderation, courtesy, sense of honour, or general policy of the czar, and to be on the *qui vive* for any act, however rash, sudden, or irrational, which he might perform.

1, Curzon Street, May Fair, March 3.

“SIR,—I commit into your hands the following letter and memorandum for publication. It is fit that the people of this country should know that, at the commencement of the diplomatic dispute with Russia, ministers were made aware of the state of mind and prospect of life of its mighty ruler. The discussions carried on with him were shaped on the usual metaphysical grounds. They should have been guided instead by a knowledge of the physical condition of the disputant.

“At every confidential interview with the British representative, up started the monomaniacal idea of ‘*l’homme malade—gravement malade*,’ which was often repeated, ‘not with-

out excitement,’ added Sir George. If that fact did not of itself open the eyes of ministers in January and February, of 1853, the timely professional warning conveyed to them in the annexed letter not long after, might, one would think, put ministers on their guard, albeit the warning came from an humble individual. Who knows how many thousand lives are sacrificed, and millions of money squandered, might not have been saved if, on the conviction of the truth of the warning received, instead of continuing for months together all sorts of unprofitable arguments, peremptory language and peremptory action had been employed, leaving no time to the imperial and real ‘sinner’ for the infliction on his own devoted people, and those of the three nations allied against him of that irreparable mischief which he has been suffered to perpetrate? It was thus that Pitt dealt with Paul—but, alas! there is no Pitt now.

“For regularity’s sake I mention that the passages in the following letter, which were strictly confidential, are omitted. The first was the expression of a purely religious opinion, which, though awfully appropriate at the moment, might be considered presumptuous. The second detailed the grounds on which, during my residence of several weeks in Petersburg in 1849, in attendance on a high personage at the imperial court, I formed a medical opinion which I deemed it my duty to convey to the government at home: the publication at this moment would be injudicious. The third passage was an allusion to my ill-requited service in the navy, which cannot interest your readers.

“I have the honour to be your obedient servant,

“A. B. GRANVILLE, M.D.”

#### CONFIDENTIAL LETTER TO VISCOUNT PALMERSTON

Kissingen, Bavaria, July 6, 1853.

MY LORD,—Failing in my endeavours to meet your lordship at the appointed interview at the House of Commons on the 22nd ult., at which I proposed to make a *vivâ voce* communication of some importance to the government, as I thought, concerning the present political discussions with Russia, I stated, in a second letter written at the moment of my departure from England, at this place, that I regretted the disappointment, inasmuch as the subject of the intended communication, from its delicate nature, did not admit of being committed to paper. I think so still. But, on the other hand, the necessity of the government being put in possession of the communication appears to me to become every so much more urgent, that if it is to be of any use, it must be made at once, or it will fail to direct ministers in time, as I think the communication is capable of doing in their negotiations with Russia, and in their estimation of the one particular element which, I apprehend, has first provoked, and is since pushing on the emperor in his present reckless course. Mine is not a political, but a professional communication, therefore strictly confidential. It is not conjectural, but positive, largely based on personal knowledge, and partly on imparted information accidentally obtained—it is not essential that I should name from whom, for I take the responsibility of the whole.

myself, inasmuch as the whole but confirms what I have myself observed, studied, or heard on the spot.

The Western cabinets find the conduct of the Emperor Nicholas strange, preposterous, inconsistent, unexpected. They wonder at his demands; they are startled at his state papers; they cannot comprehend their context; they recognize not in them the clear and close reasoning of the Nestor of Russian diplomacy, but rather the dictates of an iron will to which he has been made to affix his name; they view the emperor's new international principles as extravagant; they doubt if he be under the guidance of wise counsels. Yet they proceed to treat, negotiate, and speak as if none of these perplexing novelties in diplomacy existed on the part of a power hitherto considered as the model of political loyalty. The Western cabinets are in error. The health of the czar is shaken. It has become so gradually for the last five years. He has been irritable, passionate, fanciful, more than usually superstitious, capricious, hasty, precipitate, and obstinate withal—all from ill health, unskillfully treated; and of late deteriorating into a degree of cerebral excitement, which, while it takes from him the power of steady reasoning, impels him to every extravagance, in the same manner as with his father in 1800; as with Alexander, in Poland, in 1820; as with Constantine, at Warsaw, in 1830; as with Michael, at St. Petersburg, in 1848-9. Like them, his nature feels the fatal transmission of hereditary insanity, the natural consequence of an overlooked and progressive congestion of the brain. Like them, he is hurrying to his fate, sudden death, from congestive disease. The same period of life, between 45 and 60 years of age, sees the career of this fated family cut short. Paul, at first violent and fanatical, a perfect lunatic at 45 years of age, is dispatched at 47, in 1801. Alexander dies at Taganrog in December, 1825, aged 48. For five years previously his temper and his mind had at times exhibited the parental malady by his capricious and wayward manner of treating the Polish provinces. He died of congestive fever of the brain, during which he knocked down his favourite physician—Sir James Wylie, who assured me of the fact at St. Petersburg in 1828—because he wished to apply leeches to his temples. Constantine, eccentric always, tyrannical, cruel, dies at Warsaw suddenly in July, 1831, aged 52 years, after having caused rebellion in the country by his harsh treatment of theudet officers. I saw and conversed with him on the parade and in his palace at Warsaw in December, 1828. His looks and demeanour sufficiently denoted to a medical man what he was, and what his fate would be. It has been said that he died of cholera; again, that he had been dispatched like his father. The physician in chief of the Polish Military Hospitals assured me some years later that he had died apoplectic and in a rage. Michael, after many years of suffering from the same complaints which afflict his only surviving brother—enlarged liver, deranged digestion, and fulness of blood in the head—came in 1848-9 intolerably irritable, violent, and tyrannical to his own officers of the artillery and engineers alike, of which he was the supreme chief. In July, 1849, he consulted me at St. Petersburg. It was after he had passed in review the whole train of artillery which was leaving the capital for Hungary, at which review I was present and near him, and witnessed scenes of violent anger towards generals and aides-de-camp hardly equalled in a lunatic asylum. I found him as described above. I advised cupping, diet, non-exposure to the sun, and to fatigue, the administration of suitable medicines, and the cessation from drinking steel mineral waters, of which he was fond ever since he had been at Kissengen. His physician, the younger Sir James Wylie (himself since suddenly dead), assented reluctantly, but did not try my advice into execution. The Grand-duke, in the late he was, unrelieved by any medical measure or proper treatment, joined the army, rode out in the sun, and fell from his horse apoplectic in September, 1849, aged 48. To complete the disastrous picture of the and-children of Catherine, their mother, Maria of Wirtemberg, a most exemplary princess, died apoplectic in November, 1829, scarcely more than 65 years of age. The attack, mistaken for weakness, was treated with stimulants and bark by her physician, Ruhl, and bleeding was only had recourse to when the mistake was discovered too late to save. The meek and mild Elizabeth had

but a short time before followed her imperial partner, Alexander, to the grave, in the still fresh years of womanhood, 50 years of age.

During my second sojourn in St. Petersburg, in 1849, for a period of 10 weeks . . . . . What the opinion was of the emperor's health—what acts of his came to my knowledge, which bespoke eccentricity—what were the sentiments of his physician, Dr. Mandt, who, homeopathist as he is, and exercising a most prepotent influence over his master, leaves him, nevertheless, unrelieved, except by mystical drops and globules—what transpired of political doctrines and opinions, or, in fine, what I gathered afterwards at Moscow on all co-equal points, must be left to your lordship's conjecture,—not difficult after all I have divulged. To go further would be like a breach of trust, and of that I shall never be guilty. In all I have related there is nothing that had been committed to me as a privileged communication; while the imperative requirements of the moment calling for its immediate divulgement I hesitate not to make it, under the firmest conviction that my fears and anticipations will be surely realised. If so, then the method of dealing with an all-powerful sovereign so visited must differ from the more regular mode of transacting business between government and government. For this purpose it is—to put her majesty's ministers on their guard accordingly, that I have determined to place in your lordship's hands the present professional information, which must be considered as so strictly confidential that I shall not sign it with my name.

That I have selected your lordship as the channel of my communication rather than the minister of foreign affairs, to whom more properly it should have been addressed, will at once appear natural to your lordship. In my capacity of once, and for some years, your lordship's physician (though not now honoured with that title), your lordship has known me personally, and is convinced that what my pen commits to paper, may be taken as coming from an honourable man and your obedient servant.

"N.B.—An acknowledgment of the receipt of this letter came by return of post in Lord Palmerston's handwriting.

"*Memorandum.*—At an interview with Lord Palmerston, February 23, 1854, on matters of a private nature, his lordship was pleased to ask me before we separated whether I still adhered to my opinion and prediction. I replied that before July, 1855 (the emperor would then be 59 years old), what I had anticipated would happen. 'Let but a few reverses overtake the emperor,' I added, 'and his death, like that of all his brothers, will be sudden.' It has proved so. Alma, Inkerman, Balaklava, shook the mighty brain: Eupatoria completed the stroke, which has anticipated my prognosis only by a few weeks.

"A. B. G."

The publication of this important document modified the opinions formed of the czar's conduct and character in England, which continued to be discussed in all the leading journals and magazines of the British Isles. There was a certain dignity about his death which his abettors laid hold upon to proclaim his goodness and greatness notwithstanding many admitted errors. Others said that, like Charles I., he was great only when he came to die. The aristocratic classes in England, although they had suffered so much by his ruthless ambition, were his ardent admirers,

and seemed to forget how many of their dearest and bravest fell by his ruffian bands, in the regrets they expressed, and the admiration of his character which they incessantly proclaimed in every circle. Earl Grey, who was his country's only open opponent in the House of Lords, and the czar's special advocate there, gave vent to his regrets in that place. The noble earl's eulogy was eloquent, as his speeches generally are, but specious and sophistical, qualities common to his orations. It will furnish our readers with a fair specimen of how a very large portion of the higher classes of English citizens really regarded the czar:—"Up to the time of Prince Menschikoff's departure from Constantinople, Russia was in the right, and England greatly to blame for the course she pursued; from that time I think Russia put herself in the wrong, and that the occupation of the principalities was an act of violence and injustice. But admitting Russia to have been then in the wrong, surely the fact that such a man as Bishop Southgate is of a different opinion, must be taken as proving that she may not have been so wilfully and palpably in the wrong, as we have been in the habit of assuming, and that some allowance ought to be made for her conduct. There have been too many gross faults in our own conduct to give us a right to be very severe in criticising that of Russia. Was it unnatural that errors, and very serious errors, should be committed, in the circumstances in which he was placed, by such a man as the late Emperor Nicholas, and does he deserve for these errors the unmeasured vituperation of which he has been the object? For my own part, I will not shrink from saying of him, that, with all his faults (and there were many), he was still a great man, in whose character there was much to admire. I am persuaded that he was sincere and earnest in his devotion to the welfare of his people. No doubt he was often mistaken as to the means of promoting it, but he acted to the best of his judgment; the good of his subjects as he understood it, not his selfish gratification, nor any low or mean interest of his own, was the end to which all his exertions were directed, and for which he displayed such untiring energy, and underwent such unremitting labour, in governing the vast empire which Providence had placed under his rule. When I read the touching accounts which have been published of the last illness of the Emperor Nicholas—when I contemplate the spirit of Christian resignation with which he met approaching death, the calm and unaffected fortitude he displayed in that awful season, his thoughtfulness for his people, his family, and his attached followers, I cannot, I say, consider these things, without utterly dis-

believing that a man, capable of so passing through the great and final trial of human nature, could be one whose character deserves to be described in the odious terms which have been applied to the Emperor Nicholas. Whatever were his faults, fraud and falsehood were not among them. He was, I think, unbearing, arbitrary, violent when his will resisted; and is it wonderful that the man should have become so, who for near thirty years had ruled with unlimited power and almost unchecked success the vast dominions of Russia? Would he not have been something more than human if he had remained entirely proof against the trials and temptations of such a position? But, I repeat, that his faults were those of a high and noble, not of a low and mean nature, like falsehood and fraud."

Lord Panmure, in a speech delivered at a Bible Society meeting in Edinburgh, replied to some remarks of Mr. Bright, the member of parliament for Manchester, made at a similar meeting in Rochdale, and which was in the spirit and manner of Earl Grey's address to the House of Peers. Lord Panmure referred to a German colony of Moravians settled in the Crimea. This body of religionists held views similar to those of the sect to which Mr. Bright belongs, especially on the sinfulness of all war. His lordship's object was to unveil the czar's conduct to those people as exemplifying his character. "I shall relate the matter without quoting the lordship. They emigrated to the Crimea under the auspices of Alexander I.; there was a certain degree of toleration, and their conduct had never given offence to the successors of Alexander, as they did not seek to make proselytes from the established church, but to reform and cement the czar's Mohammedan subjects; and their civilising influence on the Crim-Tartars was obvious, and it might have been supposed would have been thankfully acceptable to the czar. After the death of his mother, who much restrained his bigotry, Nicholas tolerated these amiable and peaceful colonists, violating the compact under which they settled there, and completely refuting by his conduct to them the character for truth, honour, uprightness, and magnanimity, which was eagerly claimed for him by the partial advocacy of Earl Grey. He compelled them to limit their labours to their own material advantages, and claimed, as members of the Greek Church, the converts made by the community from the Tartar population. According to the compact or charter of their settlement, the Moravians were exempt from military service, but their converts were to be liable to it, the same as other Russian subjects. Earl Grey's pattern of everything noble destroyed the

charter of the little colony, and placed it under the usual laws of military service. The poor people in vain represented that they and their fathers had settled there making a testimony against the lawfulness of war; in vain did they plead the inviolability of conscience: the lord of a hundred races, the ruler of sixty millions of men, whom Lord Grey declared to be so vastly elevated above all that was ignoble and mean, persecuted these poor peaceful Christian people with a relentlessness of which many a savage chief would be ashamed, and with an indifference to the honour of Russia and her czars, which ought to cause even the capricious tongue of Lord Grey to abstain from eulogy. Imprisonment and flogging were first resorted to by the colossal tyrant and truce-breaker; and these failing, death was offered as the alternative of their continued refusal to serve in the army. They pleaded conscience, and died! He hanged 300 of the able-bodied of the small community, the most virtuous of his subjects: To falsehood, and violation of compact, he added injury, insult, and ultimately murder. He hated them with a religious animosity because they refused all overtures to join the Greek Church, of which he was head. Selfish, false, ambitious, and cruel, he carried these qualities alike into the government of his own subjects, and his dealings with foreign states; into matters civil, and matters religious. It will ever be a shame to Western Europe that this scourge of human-kind, and this strange compound of fanaticism and hypocrisy, should have been permitted to flaunt his greatness before the thrones and peoples of free nations, and carry on a career of territorial plunder more barefaced and unprincipled than that of the meanest fillibustering captain which ever found adventurous supporters in the New World. Lord Panmure did good service to religion and liberty by calling the attention of the citizens of Edinburgh to the facts of the czar's dishonour and blood-guiltiness to the Crimean Moravian colony. It was strange that this story, so damning to the emperor's greatness, furnished no paragraph for the eloquence of the truly eloquent George Thompson, or any other of the advocates of the Peace Society, while these orators rivalled Earl Grey in panegyrising the saintly qualities of the peace-loving Nicholas! This is to be regretted by all who wish success, as we do, to the efforts of Christian men who seek to propagate a disrelish for war, and the duty of every people cultivating peace at the expense of many and great sacrifices.

The Rev. Dr. Leask, minister of Esher Chapel, Kennington, London, in an eloquent discourse delivered on occasion of the death of the Muscovite emperor, placed before his audience the true feeling which ought to be

cherished by the English people toward their departed enemy:—"But let us not press against the bier of the helpless autocrat. We have no authority to mount the judgment-seat. That is occupied by ONE who judgeth righteously. In his hands we may safely leave the souls of monarchs as of common men, without misgiving and without anxiety. He needs no witnesses, for he knoweth all things; and the winding up of the affairs of a groaning creation will justify our belief that the Lord God Omnipotent reigneth in the armies of heaven and among the inhabitants of the earth. . . . Let us so act during life that posterity may love our memory. 'The curse causeless shall not come;' but, alas! it is to be feared that the deep curses of multitudes fell upon the head of the departed czar, and that many have rejoiced at the tidings of his death. When that colossal spoiler fell, helpless as a branch smitten from the forest, men felt as if a heavy crushing burden had been mysteriously rolled from the world's heart. Whether that feeling correspond with judgment, and whether that judgment agree with the light shed by revelation on the moral government of God over humanity, are questions which I shall not at present attempt to answer; but the fact unquestionably is just as I have intimated. When the telegraph of yesterday confirmed the rumour of the previous day that the Emperor of Russia was dead, men did grasp each other heartily by the hand, did look happier than during many previous months, and did feel as if a destructive storm had suddenly subsided. But how sad is all this. How melancholy the reflection that men should rejoice over the death of one of their fellow-mortals! Either there was in him, or there is in them, something fearfully wrong when such emotions can be excited by the blow of the last enemy. How terrible to die unwept!"

A passage from a discourse delivered by the Rev. J. Sortaine of Brighton, placed the czar's character in a light in which it would appear as if the preacher had in view Earl Grey's oration, and some kindred effusions from that class. There is a discriminating and eloquent force in this analysis:—

"If the late Czar Nicholas had died some two years ago, there would have been no sufficient reason why thoughts upon his decease should occupy an hour so sacred as the present one. It would have been a topic, chiefly, if not solely, of interest to the politician and historian. And in their summaries of his character and reign, both would have said, that, while equally sharing with his ancestors, Peter the Great and the Czarina Catherine, in largeness and unscrupulousness, and perseverance of aggressive policy towards Europe, he far sur-

passed them in the wisdom and benignity of his domestic government. To his ruthless atrocities in Poland they would have placed, as an offset, his untiring efforts to raise the populace of his vast empire from the miseries of serfdom. If they pronounced him a perfidious marauder on the rights and properties of the chivalrous Caucasian and the unoffending Turk, they would have contended for his stern equity against rapacious venality at home. They would have said, that if he was not so humane and gentle as his brother Alexander, he was less impulsive and more uniformly just; and that he left his empire far more consolidated in its form, far more vital and healthy in its internal activities, vaster and richer in its commerce, and higher in its scale of European civilisation and influence than he found it when he ascended his throne. Such, we say, would have been the estimate of the statesman and historian; so that his very crimes in statescraft and in war—shaded off, as they would have been, by the generous consideration that they were natural to a semi-barbarian and an autocrat—would have been unnoticed from his surpassing his Muscovite predecessors in the paternity of his rule. Happy had it been for him if he had died then, and thus secured to himself the homage of posterity! But the ‘crafty’ man is a ‘froward’ man, and the counsel of the froward is carried headlong.”

Much has been written of the czar’s desire to improve his country. He, doubtless, encouraged its material advancement so far as promoted its military resources. But he had a hatred of literary men, and of any gifted persons in other than the military art,—if we except actors, artists, and musicians, who ministered to his personal pleasures, or the pleasures of his family and court. What his conduct was to literary men may be learned from Golovin, himself a Russian. His sketch was written some time before the emperor’s death:—“Lermontoff, another eminent Russian poet, died, and Nicholas exclaimed, ‘He lived like a dog, and has died like one!’ Ryleieff was a distinguished lyric poet. Nicholas hanged him! That is his way of treating Russian talent. Polejaieff was another young poet of liberal tendencies. Nicholas called him to him, and embraced him. Everybody believed that he meant to take him into favour. He made him a soldier; and when the poet died, a friend, wishing to find his body, was told to go and look among the boxes which are used as coffins for the common soldiers. Sakoloffsky wrote some spirited verses against the czar. His judges asked him whether he had not hurled his fiercest invectives against God. ‘Yes,’ replied the poet, ‘knowing that God is more merciful than the czar.’ He was thrown into a dungeon, which he never quitted save

as a corpse. Even at this very moment Nicholas is wreaking his vengeance on Bakuin, whom he is pledged to Austria to keep immured in prison. Disgust prevents our continuing the sad list of victims, and we will, therefore, conclude by mentioning a single fact, to show his mode of treating female poets. Madame Rastopchin wrote some verses entitled ‘The Husband and the Wife.’ The husband is Russia, and the wife is Poland; and the poet shows that if they do not love one another, it is for want of a proper understanding. Madame Rastopchin was exiled to Moscow. The court goes there; and, at the end of a few months, the empress meets the exile at Madame Nesselrode’s, and invites her to a ball at the palace. As soon as Nicholas sees her, he orders her to quit the palace.”

The life of the Emperor Nicholas was eventful, but in no way interesting as exhibiting any qualities of his own, except his courage, which was proved on ascending the throne, when he quelled an insurrection by his self-possession, promptitude, and fortitude. His success was followed by as bloody and ferocious a specimen of vindictiveness as his cruel house ever perpetrated. His person was generally esteemed handsome; but this general impression was created by the habit prevailing among all European aristocracies to praise him. His stature was gigantic, and there was an effort to maintain a sort of imperial carriage, which gave it a pomposity and affectation, and made his gait something between a stride and a strut. His features were regular, but without beauty or expression. His mouth smiled, while his eyes refused his lips the sympathy ever rendered in the countenance of the amiable, and good, and beautiful. Even in his most complaisant looks there was a severity approaching to ferocity. There was a certain coarseness, boldness, and yet furtiveness of purpose in his expression, which gave him the look of a genteel but gigantic highwayman. Perhaps one of the best likenesses of him extant is at Chatsworth, the celebrated seat of the Duke of Devonshire, in Derbyshire. The author of these pages will ever remember the impression of repulsiveness and cruelty which it inspired when years ago he first saw it there; and many have felt similarly on beholding it. It gives the idea of a ruffian on a grand scale, who had moved in the highest circles of civilised and fashionable life.

The Emperor Alexander I., as is well known, died without issue, and he was the eldest of four brothers. The next in seniority, Constantine, was accordingly heir to the imperial throne. That prince abdicated his right in favour of his next brother, Nicholas. Various motives were attributed to Constantine. It was alleged that, being subject to sudden

NICHOLAS I.

*Emperor of all the Russias.*

gusts of passion, in which he perpetrated the wildest outrages, he was conscious of his incapacity to govern with temper or justice. It was also alleged that, having married a Polish lady, the Muscovites would never submit to accept her for empress, and his alternative to repudiating her was the renouncement of an empire; and he accepted that alternative, as he tenderly loved her, receiving the vicerealty of Poland. That Alexander desired to set aside Constantine in favour of Nicholas is certain, as the latter was supposed to lean to the German rather than the pure Muscovite party. Accordingly he ascended the throne, and received the reluctant homage of the Russian people, whom he afterwards governed in a spirit so accordant with their tastes, that none of his predecessors holds a higher place in the loyal remembrances of the nation. In 1825 his remarkable reign began. He initiated his sovereignty at home by putting down the secret societies, then numerous in the empire, and by the sanguinary suppression of a revolt against his authority. He began his relations with foreign states by fomenting disputes with Turkey and Persia, and seizing and holding, with the connivance of the English government, some of their fairest provinces. The policy of the English in thus acting was to strengthen Russia as a counterpoise to France; Turkey and Persia openly avowing their sympathies with the French. The French revolution of 1830 gave a new direction to his mind; from that time his aim was to strengthen absolute monarchy and legitimacy in Europe, and to suppress the liberties of the European peoples. The rising of the Polish nation in 1831 strengthened this policy. The independence of Poland was quenched in blood, and the czar grossly violated the treaty of Vienna. It was from no want of material to prove the personal treachery and political bad faith of the czar, that Earl Grey held him up to the Peers of England as the standard of fidelity, personal and political. The remaining years of his life were principally spent in fostering Panslavism in Eastern Europe, and pushing quietly his influence towards Central Asia. Constantinople and Calcutta were the grand prizes his ambition aimed at—the policy he inherited from his predecessors; and in pursuing which, fraudulently and violently, he realised the French proverb, "*Mais l'homme propose et Dieu dispose.*" The following brief sketch of the royal house of Russia, from the columns of the *Presse*, will appropriately close this chapter. His imperial majesty had reached a degree of power beyond all his predecessors, but, like them all, he exemplified the truth sung so long ago by the classic poet of another and still more powerful realm:—

"Pallida mors æquo pulsat pede  
Pauperum tabernas Regumque turres."

"Russia reckons three historical dynasties—the first commencing with Rurik, a prince of Scandinavian origin; the second, that of the Grand Princess of Wolodomir, commencing in 1157 with Andrew Yourewitch, who was assassinated in his palace; the third, that of the house of Romanoff, commencing in 1613 with Michael, and numbering among its descendants Peter the Great, founder of the existing greatness of the Russian monarchy.

"Peter the Great ascended the throne in 1682, having for his first wife a Princess of Wolfenbittel. He organised against Europe that great destructive machine known as the Russian empire, and reformed his country with a hatchet in his hand instead of a sceptre. His son Alexis, terrified at the cruelties of his father, fled first to Austria, and then to Naples. Peter prevailed on him to return, when Alexis was tried, and condemned to death. The sentence was commuted to perpetual imprisonment; but the unfortunate prince died on the morrow of poison. His mother, who was soon after committed to a convent, also died suddenly. Peter then espoused Catherine Skovrousky. Later in life he became suspicious and cruel, and grew tired of the ascendancy of his favourite Menschikoff. In 1725 he died suddenly in his palace.

"Catherine I. succeeded him. At her death, after a reign of two years, Menschikoff elevated to the throne Peter II., the son of the unfortunate Alexis. The emperor, who was governed by the Dolgorouki family, ordered Menschikoff and his family into Siberia. During this reign the old boyards recovered their power, and the German and other adventurers, patronised by Peter the Great and Catherine, were in disfavour. Peter II. died suddenly in 1730.

"The old Russian party, by a sudden reaction, seized the government, and proclaimed as empress Anne, Duchess of Courland, niece of Peter the Great and daughter of Ivan, who was put to death by order of the former sovereign. The Dolgorouki family, who had bestowed the crown on Anne, were sent to Siberia; and Biron, a Courland favourite of the empress, governed Russia. He is said to have transported 25,000 men into Siberia without trial. Anne died exhausted in 1740.

"Biron placed on the throne the young Ivan, the child of the Duke of Brunswick Luneburg, and a niece of Peter the Great. General Munich, the favourite of those now in power, sent Biron into Siberia. Lestock, a French barber, conspired with Elizabeth, a daughter of Peter the Great. They entered the chamber of the Duke of Brunswick, took the young czar from his cot, and sent him to the fortress of Schlusberg. His parents, who were thrown into

the castle of Kolmogora, lingered through twenty years of suffering.

"Elizabeth, now empress, sent for the son of her sister, the Duchess of Holstein-Gottorp, who was married to a princess of Anhalt-Zerbst. Elizabeth died of some undiscovered malady in 1762, and the Duke Holstein-Gottorp ascended the throne under the title of Peter III. Catherine Anhalt-Zerbst, his wife, had been assassinated the same year in the Peterhoff Palace. A few days afterwards Ivan suffered the same fate in his prison of Schlusberg; and thus ends the legitimate line of the Romanoffs. The succeeding czars have no drop of Muscovite blood in their veins.

"Catherine and her favourite Potemkin now governed Russia. She lavished an unnatural hatred on her son Paul, who betrayed a Finnish origin by his Calmuck face and red hair. Catherine died of apoplexy in 1796.

"Paul I. ascended the throne, and took to wife a Princess of Wirtemberg. Of a fantastic temper, dangerous to all about him, notwithstanding all his vigilance and precaution, Paul I. was strangled in his own scarf on the night of the 23rd-24th of March, 1801.

"Alexander succeeded him. His favourite, the cruel Arakbchuff, governed in his name. Towards the end of his life, this prince was infected with religious mysticism; and the Russian orthodoxy suspected him of a leaning towards Catholicism. He died at Taganrog, on the 1st of December, 1825, under circumstances of much mystery.

"There were still alive three sons of the Emperor Paul: Constantine abdicated in favour of his brother, receiving in exchange the viceroyship of Poland. This prince died in 1831, after an interview with Count Alexis Orloff, and his wife soon followed him to the tomb.

"Nicholas ascended the throne in 1825, and inaugurated his reign by drowning in blood the revolt of the 13th of December. After a reign of thirty years, he died suddenly at St. Petersburg, on the 2nd of March, 1855, from a disease of the lungs, according to the *Moniteur*—from a stroke of apoplexy, according to the *Débats*. Michael, Paul's fourth son, died suddenly at Warsaw, in 1848, during the war in Hungary. This prince was opposed to Russian intervention in Hungary, and per-

sisted in a claim to the viceroyalty of Poland for himself.

"The Emperor Nicholas leaves behind him the following numerous family:—His wife, the Empress Alexandra Fedorowna, formerly Frederica Louisa Charlotte Wilhelmina, daughter of the late Frederick-William III., King of Prussia, and born on the 13th of July, 1798. The issue of this marriage are:—

"1. Alexander Nicolaiwitch, Cesarewitch, and hereditary Grand-duke, born on the 29th of April, 1818; married on the 28th of April, 1841, Maria Alexandrovna, formerly Maximilienne Wilhelmina Augustus Sophia Maria, daughter of the late Louis II., Grand-duke of Hesse, born on the 8th of May, 1824. Issue of this marriage—Nicholas Alexandrowitch, born on the 20th of September, 1843; Vladimir Alexandrowitch, born on the 22nd of April, 1847; Alexis Alexandrowitch, born on the 14th of January, 1850.

"2. Maria Nicolaievna, born on the 8th of August, 1819; married on the 14th of July, 1839, to Maximilian, Duke of Leuchtenberg and Prince of Eichstedt; became a widow on the 1st of November, 1852.

"3. Olga Nicolaievna, born on the 11th of September, 1822; married to Charles, Prince Royal of Wirtemberg, on the 13th of July, 1846.

"4. Constantine Nicolaiewitch, Grand-duke, born on the 21st of September, 1827; married on the 11th of September, 1848, to Alexandra-Josefovna, formerly Alexandra, daughter of Joseph, Duke of Saxe-Altenburg, born on the 20th of July, 1830. Issue—a prince and princess.

"5. Nicholas Nicolaiewitch, Grand-duke, born on the 8th of August, 1831.

"6. Michael Nicolaiewitch, Grand-duke, born on the 25th of October, 1832.

"The Emperor leaves, besides, two sisters—Maria Paulovna, Dowager Grand-duchess of Saxe-Weimar; Anne Paulovna, widow of William II., King of Holland. And a sister-in-law—Helen Paulovna, widow of the Grand-duke Michael, and daughter of the late Prince Paul of Wirtemberg. This lady's daughter, the Grand-duchess Catherine Michaelovna, is married to the Duke George of Mecklenburg-Strelitz."

CHAPTER LXXII.

ACCESSION OF ALEXANDER II. TO THE THRONE OF THE RUSSIAN EMPIRE.—INAUGURATION OF HIS POLICY.

"When a wicked policy is hereditary in a court, and sustains itself under better and worse princes alike, this is the greatest of all testimonies that the dynasty is incurably evil."—*Crimes of the House of Hapsburgh.*

THE powerful Emperor of all the Russias, Nicholas I., was consigned to the sepulchre of his fathers, and—

"Left a name at which the world grew pale,  
To point a moral or adorn a tale."

His tomb will be long honoured by true Russians as the shrine of a departed saint, but the traveller and philosopher will often gaze upon his gorgeous yet gloomy resting-place, and, pondering upon the vanity of human power, feel the sentiment of the poet—

"First of the mighty! can it be  
That this is all remains of thee?"

The eldest of his sons, Alexander, ascended the imperial throne, and did everything in his power to impress his subjects with the idea of the identity of his views with those of their departed chief. He declared publicly, what had not been previously known nor suspected, that he had been for ten years in the secret counsels of his father, and had given his approval of all the acts of policy which during that time the departed czar had put forth. The general opinion of him was that he in many respects resembled his uncle Alexander; that he was more mild than his august sire; was more in favour of the German party in the empire; was less ambitious than any of his family, and as a matter both of taste and duty, preferred peace. The new emperor hastened to correct such opinions, by declaring in language as strong as any ever employed by Nicholas, that he would stand by the policy handed down to him by his predecessors; that the glory, honour, and territorial aggrandisement of Russia, and the maintenance of the orthodox church, would engage all his ambition, and be the objects of his existence. It was alleged that the discovery of a powerful conspiracy among the high Muscovite party, to set him aside, and place his brother Constantine on the throne in his stead, compelled him to adopt this course, which was against his own desires; and it was further alleged equally against the private recommendations of the dying Nicholas, who was represented as saying, "Make peace at whatever sacrifice; France, backed by English fleets and English gold, will throw her numerous legions upon the empire, and if necessary pass over Prussia to the heart of our power. I made a great mistake in thinking that France and England would never unite; it was a fatal error, but I

never could have supposed so unlikely an alliance." Whether these words were really ever uttered by the expiring czar, they certainly express what must have been his reflections.

Whether Alexander had secretly determined to adopt the policy thus expressed it is impossible to say; but he deemed it necessary to the stability of his throne to prolong the war, and to pledge himself in the face of Europe that he would abide by the policy of his forefathers. By it he did abide, until the arms of the allies conquered peace.

By the grace of God, we, Alexander II., Emperor and Autocrat of all the Russias, King of Poland, &c.,

To all our faithful subjects make known:—

In his impenetrable ways, it has pleased God to strike us all with a blow as terrible as it was unexpected. After a short but serious illness, which in the last days developed itself with unheard-of rapidity, our beloved father, the Emperor Nicholas Paulovitch, expired this day, February 18th (March 2nd). Words cannot express our grief, which will be also the grief of all our faithful subjects. We submit with resignation to the impenetrable view of Divine Providence. We seek consolation only in it, and from it alone do we expect the necessary strength to support the load which it has pleased, the Almighty to impose upon us. In the same manner as our beloved father, whose loss we weep, devoted all his efforts and every moment of his life to the labours and cares claimed by the welfare of his subjects,—in like manner do we also, at this sad but grave and solemn moment, in ascending our hereditary throne of the empire of Russia, and of the kingdom of Poland, and of the grand-duchy of Finland, which are inseparable from it, take before the invisible God, always present at our side, the sacred engagement never to have any other object than the prosperity of our country. May Providence, which has called us to this high mission, may we, under its guidance and protection, consolidate Russia in the highest degree of power and glory; that through us may be accomplished the views and the desires of our illustrious predecessors, Peter, Catherine, Alexander the well-beloved, and of our august father of imperishable memory!

By their proved zeal, by their prayers, united with fervour to ours before the altars of the Most High, our dear subjects will come to our aid. We invite them to do so, ordering them at the same time to take the oath of allegiance to us, and also to our heir, his imperial highness the Czarovitch Grand-duke Nicholas Alexandrovitch.

Given at St. Petersburg, the 18th day of the month of February (2nd March), 1855, and of our reign the first.

ALEXANDER.

He also addressed the following orders of the day, dated March 3rd, to the Russian army:—

1. Valiant warriors, faithful defenders of church, and throne, and fatherland!—It has pleased Almighty God to visit us with a most severe and heavy loss. Our common father and benefactor has been taken from us. In the midst of indefatigable cares for the welfare of Russia and the glory of the Russian arms, my beloved father, the Emperor Nicholas Paulovitch, has passed away to eternal life.

His last words were—"I thank my glorious faithful

guard, that saved Russia in 1825; I thank the brave and faithful army and fleet. I pray to God that He will preserve in them constantly the same bravery, the same spirit for which they have distinguished themselves under me. As long as this spirit exists, the peace of the empire is secured from within and without, and then woe to its foes! I have loved my troops as my own children, and have endeavoured, as only I could, to improve their state. If I have not succeeded in everything, it was not for want of the desire, but because I either did not know better, or was not able to do more."

May you preserve for ever these memorable words in your hearts as the proof of his sincere love for you, which I, in the fullest degree, participate in, and as the pledge of your devotion to me and Russia.

2. Valiant warriors! Stanch comrades in arms of your illustrious leader, now resting in God!—You have impressed on your hearts the last expression of his tender, fatherly love for you. As a remembrance of this love, I confer on you, troops of the guard, 1st corps of cadets, and grenadier regiment (Suwarrow), the uniforms that his majesty the emperor, your benefactor, was pleased to wear. Preserve this pledge, and may it be held by you as a relic—as a memento to future generations.

I further order:—1. In the companies and squadrons which have hitherto borne the name of his imperial majesty, all ranks shall wear on their epaulettes and shoulder-pieces the initials of the Emperor Nicholas I., as long as there is one man left of those on the rolls of the army February 18th, 1855 (March 2nd). 2. The generals attached to the person of his imperial majesty, and also the general and flügel adjutants of his majesty, shall retain these initials in all cases where they formerly had them.

Thus may the hallowed remembrance of Nicholas I. for ever be perpetuated in our ranks, and may it be a terror to the enemy and the glory of the fatherland.

It will be observed that the emperor makes no scruple of describing to the nobles a set of last words as from his father, in which they are represented as the subjects of his dying thoughts; while in his order of the day to the army they are represented as nearest the emperor's heart, and the love of them on his lips as he was about to cease from speech for ever. With such tricks, no matter how solemn the occasion, the Russian throne and government did not disdain to carry out the vile and selfish policy of the imperial *régime*.

The nobles had presented a memorial and loyal declaration to the deceased czar, to which he did not survive long enough to make a formal and public reply. The new emperor met the deputation from that illustrious body, and thus answered on his own behalf and on that of his father their previous address:—"I desired to see you in order to transmit to you the words of our defunct benefactor—of my father, for ever memorable. He was so weak that he was not able himself to read the expression of your sentiments, and I was charged with that duty. Your zeal, gentlemen, consoled his last moments. After having heard all, he said to me, 'Thank them—thank them sincerely, and tell them that I never doubted of their devotedness, and that at present I am more than ever persuaded of it!' And, accordingly, now I thank you, gentlemen; and I am persuaded that these words will be deeply engraved in

your minds. I am persuaded that the nobility will prove that they are a noble class in every sense of the word, and advanced in everything that is good. You do not lose courage; I am with you, and you are with me!" Here the emperor made the sign of the cross, and continued—"God be with us! We will not dishonour the Russian soil!" He then embraced the marshal of the nobility, and said, "In your person, I once again thank the nobility! Adieu, gentlemen—may God be with you!"

On the 7th of March the diplomatic corps assembled to do honour to his majesty's accession, to whom he delivered the following speech, which he was described as delivering with great energy, and especially in its more warlike portions, when his countenance gleamed, and his whole manner indicated that he inherited the fanaticism as well as the policy of his father, or desired to simulate both:—"I am persuaded, gentlemen, that all your courts feel sincere sorrow at the misfortune which has befallen us; I have already received proofs of it from all sides; they have greatly moved me, and I stated yesterday to the ministers of Prussia and Austria how much I appreciated them. I solemnly declare here before you, gentlemen, that I remain faithful to all the sentiments of my father, and that I will persevere in the line of political principles which served as a rule to my uncle, the Emperor Alexander, and to my father. These principles are those of the holy alliance. But, if that alliance no longer exists, it is certainly not the fault of my father. His intentions were always upright and loyal; and, if recently they were misunderstood by some persons, I do not doubt that God and history will do him justice. I am ready to contribute to a good understanding, on the conditions which he accepted. Like him, I desire peace, and wish to see the evils of war terminated; but if the conferences which are about to open at Vienna do not lead to a result honourable for us, then, gentlemen, at the head of my faithful Russia, I will combat with the whole nation, and I will perish sooner than yield. As to my personal sentiments for my sovereign (here the emperor addressed Baron de Werther, minister of Prussia), they have not varied. I have never doubted the fraternal affection and friendship which his majesty the king always had for my father, and I told you yesterday how grateful I am to him for it. I am deeply sensible of the kind words which the emperor has caused to be transmitted to me on this occasion. (This was addressed to Count Esterhazy, minister of Austria.) His majesty cannot doubt the sincere affection which my father entertained for him at an epoch which he himself has recalled by the order of the day addressed to his army. Be kind enough, gentle-

PETER THE GREAT.

*From a Bust by G. Kneller. Engraved by J. Kneller.*

men, to communicate my words to your respective courts."

The policy which the new czar boasted as hereditary, is contained in what is called the "Will of Peter the Great." At the death of the Czar Nicholas it was printed and circulated extensively; and although it is to be doubted whether Peter actually left it as a legacy to his successors, there can be no doubt that they have acted upon it, and that ever since the death of Peter this document has been cherished in Russia as his political testament, and he only is considered a true Russian who subscribes to the national rule of political guidance it lays down. Whoever is cognisant of this fact, and studies the document, will be at no loss to comprehend the eager love of conquest which invenoms the heart of the whole people. In a German work, entitled *Geschichte Peters des Grossen*, von Eduard Pels, the document is thus given. The authority on which it was published was that of the notorious Chevalier d'Éon, French ambassador at the court of St. Petersburg in the year 1757:—

#### WILL OF PETER THE GREAT.

"In the name of the holy and indivisible Trinity, we Peter, Emperor and Autocrat of all the Russias, to all our successors on the throne and in the government of the Russian nation."

After the usual preliminaries to testaments, and a preamble setting forth that Providence had evidently designed Russia to be the conqueror and ruler of Europe, and of the world, he lays down the following rules for the attainment of that object:—

#### RULES.

"1. The Russian nation must be constantly in a war footing, to keep the soldiers warlike and in good condition. No rest must be allowed except for the purpose of relieving the state finances, recruiting the army, or biding the favourable moment for attack. By these means peace is made subservient to war, and war to peace, in the interest of the aggrandisement and increasing prosperity of Russia.

"2. Every possible means must be used to derive, from the most cultivated European states, commanders in war, and philosophers in peace, to enable the Russian nation to participate in the advantages of other countries without losing any of its own.

"3. No opportunity must be lost of taking part in the affairs and disputes of Europe, especially in those of Germany, which, from its vicinity, is of the most direct interest to us.

"4. Poland must be divided by keeping up instant jealousies and confusions there. The authorities must be gained over with money, and the assemblies corrupted, so as to influence

the election of the kings. We must get up a party of our own there, send Russian troops into the country, and let them sojourn there so long that they may ultimately find some pretext for remaining there for ever. Should the neighbouring states make difficulties, we must appease them for the moment by allowing them a share of the territory until we can safely resume what we have thus given away.

"5. We must take away as much territory as possible from Sweden, and contrive that they shall attack us first, so as to give us a pretext for their subjugation. With this object in view, we must keep Sweden in opposition to Denmark, and Denmark to Sweden, and sedulously foster their mutual jealousies.

"6. The consorts of the Russian princes must always be chosen from among the German princesses, in order to multiply our family alliances with the Germans, and so unite our interests with theirs; and thus, by consolidating our influence in Germany, to cause it to attach itself spontaneously to our policy.

"7. We must be careful to keep up our commercial alliance with England, for she is the power which has most need of our products for her navy, and at the same time may be of the greatest service to us in the development of our own. We must export wood and other articles in exchange for her gold, and establish permanent connections between her merchants and seamen and our own.

"8. We must keep steadily extending our frontiers—northward along the Baltic, and southward along the shores of the Black Sea.

"9. We must progress as much as possible in the direction of Constantinople and India. He who can once get possession of these places is the real ruler of the world. With this view we must provoke constant quarrels at one time with Turkey and at another with Persia. We must establish wharfs and docks in the Euxine, and by degrees make ourselves masters of that sea as well as of the Baltic, which is a doubly important element in the success of our plan. We must hasten the downfall of Persia, push on into the Persian Gulf; if possible re-establish the ancient commercial intercourse with the Levant through Syria, and force our way into the Indies, which are the storehouses of the world. Once there, we can dispense with English gold.

"10. Moreover, we must take pains to establish and maintain an intimate union with Austria, apparently countenancing her schemes for future aggrandisement in Germany, and all the while secretly rousing the jealousy of the minor states against her. In this way we must bring it to pass that one or the other

party shall seek aid from Russia; and thus we shall exercise a sort of protectorate over the country, which will pave the way for future supremacy.

"11. We must make the house of Austria interested in the expulsion of the Turks from Europe, and we must neutralise its jealousy at the capture of Constantinople either by pre-occupying it with a war with the old European states, or by allowing it a share of the spoil, which we can afterwards resume at our leisure.

"12. We must collect round our house as round a centre, all the detached sections of Greeks which are scattered abroad in Hungary, Turkey, and South Poland. We must make them look to us for support, and, then, by establishing beforehand a sort of ecclesiastical supremacy, we shall pave the way for universal sovereignty.

"13. When Sweden is ours, Persia vanquished, Poland subjugated, Turkey conquered—when our armies are united, and the Euxine and the Baltic are in the possession of our ships, then we must make separate and secret overtures first to the court of Versailles, and then to that of Vienna, to share with them the dominion of the world. If either of them accept our propositions, which is certain to happen if their ambition and self-interest are properly worked upon, we must make use of this one to annihilate the other; this done, we have only to destroy the remaining one by finding a pretext for a quarrel, the issue of which cannot be doubtful, as Russia will then be already in the absolute possession of the East and of the best part of Europe.

"14. Should the improbable case happen of both rejecting the propositions of Russia—then our policy will be to set one against the other, and make them tear each other to pieces. Russia must then watch for and seize the favourable moment, and pour her already assembled hosts into Germany, while two immense fleets, laden with Asiatic hordes and conveyed by the armed squadrons of the Euxine and the Baltic, set sail simultaneously from the Sea of Azoff and the harbour of Archangel. Sweeping along the Mediterranean and the Atlantic, they will overrun France on the one side, while Germany is overpowered on the other. When these countries are fully conquered, the rest of Europe must fall easily and without a struggle under our yoke. Thus Europe can and must be subjugated."

In the spirit of that extraordinary document the czars had ruled and plotted ever since the days of Peter, and Alexander was not, apparently, desirous to become the first exception.

The call to take the oath of allegiance was promptly answered through all the multifarious

nations that own his sway, and various remarkable scenes were presented on the occasion. A letter dated Warsaw, the 15th of March, says—"During the last four days our city presented a truly solemn aspect. The churches of all the Christian communities were full of people, who, in compliance with the last imperial manifesto, took the oath of allegiance to the Emperor Alexander II. and the hereditary Grand-duke Nicholas Alexandrowitsch. Yesterday was the turn of the Jews, who flocked in great numbers for the same purpose to their synagogues. I must relate to you a little incident which took place on the occasion. According to the law, every male inhabitant from the age of twelve is obliged to swear allegiance. The Catholic clergy of both worship did not object to that formality; but the pastor Ludwig superintendent-general of the Lutheran church in the kingdom, publicly declared in the oratory, and in presence of the persons delegated to assist at the ceremony, that he could not allow his parishioners to swear before their confirmation."

As in Moscow so everywhere, from the Black Sea to the White Sea, in the czar's extensive dominions scenes of solemnity were presented while the vast populations crowded before the places of magisterial assembly to invoke Heaven as to their loyalty to the Emperor of all the Russias and King of Poland and Finland.

Foreign courts paid their respects according to their accustomed forms, but the German monarchs showed an intense desire to conciliate the new authority. The King of Prussia was of course first in the race: a prince of the royal house carried his majesty's condolence for the loss of the august Nicholas, and his fervent wishes for the auspicious reign of the new monarch. Austria resorted to every form of mean flattery, and almost cringing vassalage to conciliate Alexander's goodwill: an arch-duke was sent with the most humble words and studied compliments. One of the first scenes which his royal highness was called upon to witness, was an assemblage of the chiefs of different departments of the state to present their duty to the emperor, to whom his majesty offered the assurance, in the hearing of the Austrian envoy—"I am determined to march in the way traced out by my father."

The arch-duke must have been greatly chagrined, for the *Court Journal* of Vienna has just published the following piece of flattery by authority:—

"The melancholy tidings which we yesterday evening communicated to the public have filled all hearts with sorrow. Recent occurrences have led to dissensions; there have been differences of opinion as to the duties of the various powers in regard to the events in the East; there have been conflicting opinions."

the course of action which the state of affairs requires: but all these matters have been cast to the background by the painful feeling caused by the great loss which the whole of Europe has suffered by the decease of one of its most highly gifted sovereigns. The reign of the emperor, which lasted almost thirty years, is one of the most brilliant periods in the history of Russia, and the name and memory of the defunct monarch is intimately connected with all those important events which have occurred within that long and momentous space of time. No one will be so prejudiced as to refuse to acknowledge, and that with the deepest gratitude, the great services rendered by the late Emperor Nicholas to the cause of order, legality, and of the monarchical principle, which together form the great pillars of the European family of states. But Austria, which yesterday, as the anniversary of the death of the Emperor Francis (1835), had such a vivid recollection of its affliction at the loss of that memorable paternal ruler, is particularly struck that, by a singular dispensation of Providence, Russia should on the very same day receive such a heavy blow, and that it should to both empires be a date attended with sorrowful recollections.

"The only alleviation that can be found for the painful impression which the astounding news has caused, is in the thought of the estimable qualities of the eldest son and successor of the Emperor Nicholas, the Emperor Alexander II.

"It is confidently to be expected that the monarch who has now ascended the throne of his deceased father will realise the sanguine hopes which are placed in him, as well in his own great empire as in the rest of the world; and that the work of peace just commenced—which was rendered possible by the honourable advances made by the defunct sovereign—will, from a feeling of filial devotion, be brought to a happy issue by the mild and propitiatory spirit of Alexander II."

The Austrian emperor published an order of the day to his army, in which, after eulogising the virtues of the Emperor Nicholas, he proclaimed that the Austrian cuirassier regiment "Emperor Nicholas" should retain that title forever.

In England it appeared that the government first had some hopes of immediate overtures of peace, for Lord Clarendon having announced the death of Nicholas to the House of Peers, requested Lord Lyndhurst to withdraw an important motion concerning the war, expressing the hope that the event which had just been announced, would materially and favourably influence the negotiations for peace about to be opened at Vienna.

Meanwhile the new autocrat put forth all his energies to continue his father's work: throughout the empire decree after decree was directed to promote the consolidation of his power; and the home administration received a new impulse in the direction of making every part of the empire more formally Russian. It was the remarkable saying of Uwaroff, one of the ministers of Nicholas—"In order that an empire so colossal may work harmoniously, that parts of such manifold variety, though tinged probably with their own peculiarities, *may be fused into a whole*, it is indispensably requisite to establish one language and one form of administration for all. The bases of Russian power are the three foundation-stones of—*absolute monarchy, Russo-Sclavonic nationality, and orthodox Greek Christianity.*" It appeared to be the new czar's intention, even in the midst of war, to realise practically this theory, for all the home measures of his government were taken in that spirit.

After a little delay, the true state of things in Russia as to the war and foreign policy became known in the West. From intelligence which afterwards transpired, it became certain that the departed czar had foreseen the defeat of Russia in the Crimea, and that his successor partook of his foresight. The late emperor, when losing his hold of all earthly things, gave up only from the last grasp his projects of territorial aggrandisement for the Russian nation. He became politically sagacious when the delirium of his ambition was checked, and the delusion of an irresistible power and glory dispelled. But the Grand-duke Constantine inherited all his sire's self-will and ambition without any of the wisdom which chastisement imparted, and he menaced his brother with a military revolution if at the approaching conference of Vienna an inch of Russian territory were surrendered, however acquired, or held by whatever claim. The nobles were suffering from the abstraction of their serfs to fill the ranks of the army, but they bore their sacrifices nobly, and supported the policy of their deceased czar. The merchants suffered yet more, and ruin fell upon many—the bankrupt murmured not, and the still wealthy gave freely to the national treasury for the prosecution of the war. Whatever the sacrifices, and even sufferings, of many classes, there was after all a party strong enough to give force to the menaces of Constantine, who was at that time resolved, like Samson, to bring down all in ruins around him, if he could thereby crush the enemy that mocked his strength. The chief resource of the war and the war party was the priests. The church freely poured out its hoarded treasures, and all persons were for war whom the priests could either alarm or beguile. The god of Russia, like the eagle on its standard, has

two heads—it is the god of bigotry and oppression, and from each head the sound went forth over the steppes and plains, and forests and regions of the empire—"My voice is still for war." The aged nobles were very religious, and the aged princesses and countesses were still more religious, and they supported a conflict which was waged for the holy places. Such were the wealthy and aged representatives of modern titles, who could do no more than toddle or drive to the Greek mass, or stand by and see the flogging of a serf. The priests had the ear and heart of all that class. Then there was the old nobility, in the proud sense of the term—they were also for war. Many of them, notwithstanding their characteristic extravagance, were rich. They were generally either freethinkers or devotees, and in the extreme of the one or the other. They were alike jealous of the honour of Russia, and loved her glory. The freethinkers among them had no principle in the matter, unless the love of national and personal renown be one. The devotees had *one* principle—the universal power and authority of the orthodox church; and all this class regarded their own form of government as alone suited to Russia, and believed that Russia was suited to the world. They considered that the princes of Russia ought to have grand hotels in Paris, and palaces on the Bosphorus, and that the centre of European civilisation, and the shores of the Golden Horn, should own them lords. The officials were all for continuing the contest. New provinces require new governors, and new offices of all sorts, and such persons, therefore, must profit by conquest. To lose provinces would be to narrow their sphere—they must extend their empire in order to live. The poor regarded the war as God's war, and their sufferings as a martyrdom for the true faith—for which they were ever willing. The emperor had none to rely upon as a peace party, except a small section of eminent statesmen, and the peoples of the newly-vanquished provinces, who had no wish to extend Russian glory. Yet, among these—Poles, Fins, Germans, Tartars, &c.—there were many who desired the war to go on, in the hopes that their provinces might be swept of Russian troops by their powerful and victorious enemies. The emperor, however peaceably disposed, could do nothing for peace until Russian arms experienced more decided reverses. Russia could still afford to make great sacrifices, and endure great losses, if she could only hold her own in the Crimea. If she did not possess a single port in Asia beyond the Cuban river, and made it and the Terek her line of defence, so long as she maintained her great fortresses on the Baltic and in the Crimea, she could bid defiance to her foes. Surrounded by weak states and peoples, she

could never fear temporary reverse, unless enemy made those states and nations str against her.

It was from this circumstance of great consequence, in regulating our policy with the power, to be well acquainted with the condition of the nations that skirt so wide a boundary, that, in case of war, or of a policy to prevent war being requisite, we might know what alliances to form, and where to strike. Almost all races out of Africa touched the fringe of the empire over which Alexander had just passed forth his sceptre, and the rites of nearly all religions are celebrated upon its frontier. Like a sea, it rises above all their landmarks, and their thrones and altars are engulfed. As the wolves upon her own wild steppes, and the equally ravenous Cossacks, armed in her service, prowled fiercely in quest of prey along her far-encircling bounds. The Russian armies were thrown in masses, or scattered in forts, along this great circuit, and were always on the *qui vive* for an expedition over its borders. Bounded by the Caspian Sea and Asia on the East, by the Baltic Sea and Europe on the west, and by the Black Sea and Africa on the south, she is just in the situation which gives her scope for conquest; while her northern boundary being the Arctic Ocean, she has nothing to apprehend, if she has nothing to conquer, in that direction.

We are too much accustomed to think of the ruler of this empire, when speculating upon its future possible or probable conquests; the temper of the people should have been much considered in any sound speculations in reference to Russian aggression. The czars have been of all sorts of characters, ranging from the indifferently good, as in the case of Alexander, down to the sagacious and energetic ruler Peter the Great, the able and unprincipled Catherine, or the frantic yet subtle, fanatical yet hypocritical, ruler of her recent destinies; but the people have been essentially the same, and the people were the real aggressors in the war, and in every war that had for its object the subjugation of contiguous territory. Bigoted, avaricious, cruel, and ambitious, there is no enterprise which a zealot or a robber on a large scale might prompt, which they have not hearts to attempt. If the emperor be unscrupulous, the people are still more so; if the emperor be despotic, the Russian heart is even more despotic. The secret that crouch love the forms of tyranny to crush them. Their despot is their idol; break the idol—as it has often been broken—and they will set up another in form and figure like it. They may hate and avenge the policy of a particular czar, but they will at once kiss the foot that steps over his strangled body to the vacated throne. It was not Nicholas, the

was the Russians with whom we warred, and who sought, through blood, plunder, and persecution, a universal dominion for him who was but the impersonation of all that Russia adored, in proportion as the zealot, the oppressor, and the plunderer were branded on his brow.

We have heard and read much of the hospitality and kindness of Russians to travellers on their territory, but they would all the while rejoice that their master invaded that traveller's land, made captives of his family and countrymen, and demolished the temples of their worship.

The new emperor made every effort to secure the goodwill of the notabilities of his empire. He summoned to his capital the Grand-duchess Olga (whose leanings to the English were no secret), and her husband, the Prince-royal of Wirtemberg; an autograph letter was sent to lieutenant-general Vetovtsoff, an influential person in the army, and the letter was accompanied by a snuff-box, set with diamonds and the imperial portrait; a similar letter and present was afterwards sent to Lieutenant-general Rostovtsoff. Various great changes were made in the military commands. General Berg was appointed military governor of Finland; Aide-de-camp General Baron de Leiven was appointed quartermaster-general of the imperial staff; and throughout the empire commands and promotions were given to those officers whose allegiance it was deemed desirable to secure.

The emperor's attention was said to be constantly directed to the Crimea, and among those in his confidence, it was the subject of perpetual and uneasy conversation. There appeared to be a singular providence in making that place the scene of Russian humiliation. Her most unprincipled intrigues and violations of treaty were in respect to it, and she lavished her resources there, to make it the basis of her power for the conquest of the East. She only required with it to secure the sovereignty of the Caucasus, and then the three great Eastern Empires—Persia, Turkey, and British India—were prizes of which she would feel ultimately sure. China and Japan would follow Persia and Turkey, in all probability before India fell from her sword, for to these far-off regions Russian ambition was directed. An especial treaty had been lately made with Japan, and she had within a short time plundered China of a vast area of territory. With the Caucasus and the Crimea behind her, Russia could make the Caucasus a base from which to conquer Central Asia, and finally lay another base of operations for the conquest of India, within fourteen days' march of the British possessions. To do any of these things it was essential to hold the Crimea. Driven from both the Caucasus

and the Crimea, her imperial greatness would vanish—

“And, like the baseless fabric of a vision,  
Leave not a rack behind.”

It is perhaps scarcely a digression to offer the opinion—however diplomatists have since decreed otherwise—that no peace should have been made with Russia until driven from Bessarabia and the Crimea, and Podolia were in that direction fixed as her boundary; while in Asia she should have been driven from all her possessions south of the Cuban river, and any advance beyond it should be regarded as a declaration of war against the civilised world. If permitted to hold any point at all upon the seaboard of the Black Sea (considering the Sea of Azoff as an arm of that sea) it should only be at the mouth of the Don; although it would be well for the safety of Europe to hold the gulf of the Sea of Azoff and the mouth of the Don, even as Russia herself has controlled the Delta of the Danube. To avoid all jealousies among the European powers in respect of her, there ought to be raised up a barrier of independent states between her and the rest of Europe.

However these things may be, or ought to be, the Emperor Alexander regarded the Crimea with admitted alarm, as draining out the resources of his country. His Cossacks had cleared the various countries, wherever they came, of food, horses, and provender, except the granaries and public stores, which were still filled with vast supplies for his forces. The emperor determined on changes in the command in that direction. Prince Menshikov, who had been seriously wounded in the leg, was recalled. His furious fanaticism against the allies almost amounted to monomania. Prince Gortschakoff was placed in command of the eastern portion of the Crimea, from Theodosia and Arabat to Kertch. The recall of Prince Menshikov excited astonishment all over Russia, as the Russian people and the private soldiers considered him the most skilful of all Russian generals and diplomatists, although Europe generally formed a very different estimate. He had, however, fallen into disgrace—the new emperor having been all along convinced that most of the disasters, diplomatic and military, which Russia had experienced were to be attributed to him. It was suitable that this man should be removed from confidence, if the new emperor had any wish to leave the impression in Europe that his mind was open to any proposals for peace. The necessity for his removal, on the ground of his mental and physical state, was however imperative; and here again retributive providence seemed to pursue the authors and chief abettors of this war. It is impossible

for any mind at all reflecting to overlook the hand of God in these transactions, and the workings of a mysterious providence throughout. What but a providential blindness could have influenced Menschikoff in leaving the landing of the allies in the Crimea unopposed, or Balaklava and Eupatoria unfortified and insufficiently occupied? Upon the chance that France and England could not coalesce, a war was risked by Russia against odds before which, humanly speaking, she must fall. Trusting to the gratitude of Austria—a power that was never grateful, that keeps no treaties, and observes no oaths—Russia sent her armies into the Dobrudscha, to be broken before Silistria, and to reel back discomfited and plague-smitten through the swamps of the Danube. No matter, for the purpose of these reflections, who originated the war: Napoleon, at the instance of England, withdrew his pretensions about the Holy Sepulchre, although the Latins have older treaty-claims than the Greeks; and Nicholas, refusing to meet that concession, where claims so strong existed, insisted upon guarantees for his own influence utterly subversive of Ottoman independence. He began the war like a fool, he waged it like a fanatic: he treated superior powers as if he were their conqueror, and received from their victories over his hosts that chagrin and despair which drove his spirit from the world. The war killed the Emperor Nicholas, and he was the author of it, however the demands of Napoleon may have been the pretext, or the occasion.

The fate of Prince Menschikoff is not less remarkable. He was the emperor's messenger to the Porte, and never did a message-bearer from kings play a part so arrogant and unwarrantable, or pursue a course so calculated to embroil his master with all around him. Wounded and sick, this messenger of blood and tyranny was carried away from the scene of contest; while, like his master, successive despatches of ignominious defeat and bitter disappointment smote his spirit, rendered him unfit for future service, and sent him an invalid to a monastery at Moscow. Nor was it the least remarkable among these strange providences that a small battery, the smallest in all the attack, recently erected by one of the Western allies, and worked and manned by the other, performed *its only achievement* by sinking the *Gromonozets* (*Thunderer*), the very ship which bore Menschikoff on his mission of haughty defiance to Constantinople, just as he himself sunk into decrepitude, whither the missile of those enemies consigned him. The most skilful operations of the Turks had been conducted by the Egyptian contingent, and the men of this contingent signalled themselves by greater bravery than any other section of the Mohammedan armies: it was to Russian

interference solely that the defeat of Mehmed Ali and his Egyptians was attributable, in 1841—for had not the czar interfered, other powers would not. Thus the policy of Russia in the past, by subjecting Egypt to the Porte, prepared for herself at this juncture a formidable foe.

Whatever were the reflections of the emperor, he set himself vigorously to accomplish all that was possible of what his father had undertaken: he therefore reinforced his army in the Crimea, replenished its stores, recalled the least efficient of its officers, and promoted Todtleben, to whose genius the skilful defence of Sebastopol was attributable, and rewarded officers and men there with a liberal hand. He attempted too much, and undertook some tasks that had proved too great for his father, and would probably prove ultimately too great for himself. Some of these were much to be commended: among them was the eradication of official bribery, peculation, and partiality, from both the civil and military services. The correspondent of the *Independent* Parisian paper, in a letter from St. Petersburg, thus writes upon the subject:—

“In my letters I have often alluded to the fraud and corruption which is the death of Russia. This evil is so rooted, it extends widely to every branch of the service of the czar's army, that the troops, despite the efforts of the sovereign, are in want of nearly every thing. I was assured a few days since by Alexander II., despite the usual mildness of his character, got into a regular fury on learning what took place, and resolved to act with extreme severity against any person, no matter what his rank, found guilty of fraud. I love the country well, and all his power will be of any avail to put a stop to these abuses. The evil is too deep-rooted in the Muscovite soil. All will combine together to deceive the most vigilant eye.

“The subjoined few facts of recent occurrence, the exactitude of which I guarantee, will show you the extent of the evil.

“A Livonian officer of very good family, trusted with the provisioning of the army in Taurus, went from province to province buying oxen, cows, and sheep, which he had sent to Odessa and Cherson. Wishing to make a nice fortune, he hit upon the following fraud. He proposed to some of the peasants to leave their cattle for a consideration agreed upon. The cattle were booked as delivered, and he gave a false receipt for the price of them. He then put them down as ‘died on the road.’ By this means he pocketed—first, the money of the peasants; secondly, the money of the government. It was clever, but not honest. Suspicions were at last aroused. When it was mentioned to the czar he would not at first

believe that one of his superior officers was capable of committing a crime the consequences of which to the army were incalculable. The rumours, however, grew so loud that a serious investigation was ordered. The officer was commanded to proceed immediately to headquarters at Odessa. He was not so slow as not to smell a rat. He felt some hesitation at obeying the order, but overnight he hit upon a plan, and, while staying at an hotel near Odessa, his room caught fire so cleverly that the flames, which purify all things, destroyed the accounts. He arrived at headquarters with a certificate that his papers were burnt. What more could be exacted? We are assured that the fire spared the roubles in his pouch. He was acquitted. Poor fellow! as Molière would say.

"Another anecdote, the truth of which I will guarantee:—A dealer in flour, in the vicinity of Kiev, provides some thousand sacks of flour to the commander of the place, and asks an exorbitant price. He is refused payment. He is brought up for usury and fraud. The affair is a serious one; he is liable to a very severe penalty and a journey to Siberia in perspective. He was as calm, however, as if conscience was pure and his cause a good one. At the appointed day he appeared before the judge, and proved by his books, A plus B, that to accept the supply the officers had exacted for themselves 80,000 silver roubles, or 240,000 francs. Very flattering this for the officers of the Russian army! The trader was acquitted and his honour saved; the money was paid; he gained nothing on the transaction.

"Everywhere, at the very steps of the throne, the most audacious robberies are committed. The Emperor Alexander I. said that his sailors would steal his guns if they dared; Alexander II. observed the other day that his attendants would steal his breeches if they had the opportunity. The following gave rise to the observation:—Among the emperor's household there is a chamberlain silversmith, who has the care of the crown plate. He has a dozen 'tehinowiches' under him. For some time these gentlemen have amused themselves by passing the plate through acids, by which process a considerable portion of the silver was taken off, which they afterwards transformed into a solid state by a chymical process. This robbery had been carried on for a long time before it was discovered. But as all were equally guilty, no culprit could be found for want of proof. The crown plate has been ordered to be melted down and recast.

"The *bourgeois* and merchants are not personally subjected to the recruiting tax, but they have to pay 500f. for each recruit asked for them. Thus they provide as many soldiers

per thousand merchants as the nobles provide per thousand peasants. This tax brings in a considerable revenue to the crown. The number of merchants in the whole extent of the empire amounts to about 150,000, and as the state has already levied about sixty men per thousand, it results that the merchants have had to pay about 400,000,000f. Thus, however good Russians they may be, the *bourgeois* are beginning to find the war taxes somewhat heavy.

"The populations who suffer most from this state of things are precisely those who entertain the least sympathy for Russia—for instance, Finland, Livonia, Esthonia, Courland, Poland, and the Southern provinces, which are almost exclusively inhabited by Tartars and Mussulmans. The provinces of the Baltic particularly are weighed down by taxes. Whatever may be said about the Russian party carrying on the war to the last man and the last rouble, the government will have to consult a little the Catholics, the Protestants, and the Mussulmans, who united form more than one-third of the population of the empire, and who have certainly a right to be heard in the matter."

Reform in the administration of public affairs, and especially in the finance of the empire, became a pressing necessity for the new monarch. The treasury was very low, and willing as the people were to maintain the war, their means of doing so were very sensibly impaired. A report was spread through Europe that the emperor was obliged to sell the crown diamonds, at the suggestion and with the urgent advice of his chancellerie. Some account of these jewels will doubtless interest our readers:—"The crown treasury of the czars at Moscow contains precious stones of considerable amount. The two most considerable are diamonds, one the size of a pigeon's egg rose-cut. The Russians have given it the name of the Orloff. The other has the form of an irregular prism, and is of the size and almost the length of a little finger; it bears the name of the Shah, and its history is as follows:—It formerly belonged to the Sophis, and was one of two enormous diamonds which ornamented the throne of Nadir Shah, and which were designated by the Persians by the names of 'Sun of the Sea,' and 'Moon of the Mountains.' When Nadir was assassinated his treasures were pillaged, and his precious stones divided among a few soldiers, who carefully concealed them. An Armenian named Shafras resided at that period at Bussora with his two brothers. One day an Afghan came to him, and offered for sale the large diamond, 'the Moon of the Mountains,' as well as an emerald, a ruby of fabulous size, a sapphire of the finest water, called by the Persians the 'Eye of

Allah,' and a number of other stones, for the whole of which he asked such a moderate sum that Shafras suspected that they had not been honestly come by, and told him to call again, as he had not the money in the house. The Affghan, fearing Shafras was going to act with treachery towards him, left the place and could not again be found, although the three brothers made every search for him. Some years afterwards the elder brother met the man at Bagdad, who told him that he had just sold all his precious stones for 65,000 piastres and a pair of valuable horses. Shafras had the residence of the purchaser, who was a Jew, pointed out to him, and he went to him and offered him double the price he had given for them, but was refused. The three brothers then agreed to murder the Jew and rob him of his purchase, which they did, and on the following day poisoned the Affghan, and threw both the bodies into the river. A dispute soon afterwards arose between the brothers as to the division of the spoil, which terminated in Shafras getting rid of his two brothers by poison, after which he fled to Constantinople, and thence to Holland, where he made known the riches he possessed, and offered them for sale to the different courts of Europe. Catherine II. proposed to buy the Moon of the Mountains only. Shafras was requested to come to Russia, and he was introduced to the court jeweller. The terms demanded by Shafras were—letters of nobility, a life annuity of 10,000 roubles, and 500,000 roubles, payable by equal instalments in ten years. Count Panin, who was then minister, delayed the settlement of the bargain as long as possible, and in the meantime had the Armenian led into such extravagances that he fell into debt, and when the minister found that he had no means of paying what he owed he abruptly broke off the negotiation. Shafras, according to the laws of the country, could not leave until his debts should be paid, and the court jeweller prepared to take advantage of his embarrassments and intended that the diamond should fall into his hands for a fourth of its value. Shafras, however, discovered the trap that had been laid for him, and, disposing of some of the less valuable stones among his countrymen, paid his debts, and disappeared. Agents were sent after him, who had even orders to assassinate and rob him, but he escaped them. Ten years after, while he was at Astracan, renewed offers were made to him, but he refused to enter into any negotiations unless the bargain should be settled at Smyrna. Catherine accepted, and became the possessor of the diamond for letters of nobility, 600,000 roubles, and 170,000 paper roubles, making together about two and a half millions of francs. Shafras, not being able to return to

his country, where he would have had to give an account of two homicides and two fratricides, fixed himself at Astracan, where he married a countrywoman of his, and had seven daughters. One of his sons-in-law poisoned him for the sake of possessing a share of his property. The immense fortune which the murderer had acquired (from ten to twelve millions) was divided, and soon spent by his successors, and several of the grandchildren of Shafras are now living at Astracan in abject misery."

From the descriptions of the emperor's coronation afterwards published in Europe, it would appear that these precious treasures were not parted with, at all events irrecoverably. But it is quite true that very extraordinary and humiliating exertions had to be made to keep up the public credit in a measure, or supply the sinews of war.

The only remaining public act of the emperor, which was of interest beyond the bounds of his own empire, was a manifesto to Europe, through his ministers and agents at foreign courts. It was communicated in the form of a note from the grand-chancellor. It was the first official paper given to Europe by the new emperor, and will therefore be peculiarly interesting to the page of history. Its contents were also felt to be important in every court and cabinet. This document will appropriately close the chapter on the accession of Alexander II. to the imperial throne:—

*St. Petersburg, March 10*

My despatch, of the 2nd inst., will have informed you of the accession of his Majesty the Emperor Alexander II. I also, at the same time, had the honour of sending you the manifesto of our illustrious sovereign, issued the first day of his reign. This document expresses his Majesty's profound sense of the importance of the duties which he is called to fulfil. Those duties have been imposed on him by Divine Providence in the midst of severe trials. Assuming the throne of his ancestors, he beholds Russia involved in a war, the like of which occurring a new reign history cannot produce. Our illustrious sovereign accepts these trials, trusting in God, confident in the unwavering devotedness of his people, and filled with religious reverence for the memory of his much-loved father. In a child-like spirit of piety he accepts as his heritage two obligations, which, in his eyes, are equally sacred. The first demands from his Majesty the employment of all the power which the will of God has placed in his hands for the defence of the integrity and honour of Russia. The second imposes on his Majesty the duty of steadily devoting his care to the completion of that work of peace, the bases of which were sanctioned by the Emperor Nicholas. Faithful to the ideas which predominated in the last dispositions and arrangements of his illustrious father, the emperor has renewed and confirmed the instructions with which the plenipotentiaries of Russia had been provided from December until the time when the Vienna conferences were to have been opened. In this way the intentions of the Emperor Nicholas are certain to be fulfilled. Their aim was—

To restore to Russia and Europe the blessings of peace. To confirm the freedom of worship and the welfare of the Christian peoples of the East without distinction of race. To place the immunities of the principalities under a collective guarantee. To secure the free navigation of the Danube in favour of the trade of all nations. To put

and to the rivalries of the great powers respecting the East, in such manner as to preclude the return of new complications. Finally, to come to an understanding with the great powers respecting the revision of the treaties by which they have recognised the principle of closing the Bosphorus and the Dardanelles, and in this way to arrive at an honourable settlement.

A peace concluded upon such a basis as this, since it would terminate the calamities of war, would call forth the blessings of all nations upon the new government. Russia, however, feels deeply, and all Europe must acknowledge the fact, that the hope of a restoration of peace would prove vain, if the conditions of an adjustment would overpass that just limit which a sense of the dignity of the crown led our august lord to fix irrevocably. The emperor will wait tranquilly until the cabinets called together in common with Russia on this question of universal interest for all Christendom shall declare the laws by which their policy will be guided. Our august lord will enter upon these important deliberations in a sincere spirit of concord; this is the declaration which I

am expressly commissioned by his majesty to make to you in his name.

The general instructions with which you are provided prescribe to you the course which you are to continue to follow in your intercourse with the governments to which you are accredited. The emperor, in confirming you in the post to which you were appointed by the grace of his illustrious father, relies implicitly on your fidelity and zeal. It is his desire that on all occasions your conduct and language should bear witness to the loyalty with which Russia regards obligations involving fidelity to treaties; to its constant desire to live on good terms with all allied and friendly powers; and, finally, to its reverence for the inviolability of the rights of every state, as well as its firm resolve to maintain intact and make respected those rights which Divine Providence has entrusted to the emperor in making him the protector of the honour of the nation.

You are instructed to bring this to the knowledge of the court at which you had the honour to represent the Emperor Nicholas of glorious and much-loved memory.

NESSELRÖDE.

## CHAPTER LXXIII.

THE SIEGE OF SEBASTOPOL IN MARCH.—PROGRESS OF THE RAILWAY.—IMPROVEMENT OF BALAKLAVA.—RESTORED HEALTH OF THE TROOPS.—ACTIVITY OF THE ENGLISH GENERALS.—UTILITY OF FOREIGN LABOURERS.—PREPARATIONS FOR A NEW BOMBARDMENT.—SORTIES, COMBATS, ETC.

“Dishonour not your mothers,—now attest  
That those whom you call fathers did beget you!  
Be copy now to men of grosser blood,  
And teach them how to war! And you good yeomen,  
Whose limbs were made in England, show us here  
The mettle of your pasture; let us swear  
That you are worth your breeding, which I doubt not,  
For there is none of you so mean and base  
That hath not noble lustre in your eyes.”

SHAKSPEARE.

UPON the progress of the railway from Balaklava to the trenches so much depended, that all intelligence concerning it was eagerly sought and perused in England. Happily it was under the direction of such men as Messrs. Peto and Barry, and the immediate superintendence of Mr. Beattie; for had it been under any government department whatever, it would either have proceeded so slowly as to be of little use, or have altogether failed. Steadily did the work proceed during the whole month of March, and by the opening of the second bombardment in April, material of war was brought up to the very trenches. At the beginning of March, the rail was very useful in carrying up ammunition and guns for portions of the way, which became more and more extended as the month advanced. Commissary-general Filder declined to use it for his purposes, even when nearly finished; alleging that forming a depot at the terminus, unloading the waggons, and in loading mules and men, would increase labour, and consume time, to such a degree as would render the use of the rail no saving to the whole. There was much force in this, the commissary was well provided with other means of transport by this time. He did not object to the commissaries of divisions using the rail, so far as it served them; and they all professed to derive the greatest advantage from it. When the shot, shell, powder, &c.,

were deposited at the temporary termini, as the rail advanced, large parties of muleteers and Highlanders received the burdens and brought them to the lines. The Highlanders were more worked in this way than any other of the troops, which may perhaps account for their indifferent health during this month, especially in the 79th. Many of them carried very oppressive burdens from the railway up to the depot behind the lines. Very early in its operations, the railway enabled the British to return the good offices of the French, who had so often assisted them with ambulances, mules, and men, in the agony of their endurance during the winter. Instead of bringing up with horses whatever was required for Bosquet's camp on the edge of the plateau overlooking the Woronzoff Road, the railway, with little labour and with rapidity, deposited such things within a convenient distance for Bosquet's *corps d'armée* to remove. The French paid many compliments to the discipline, order, and regularity which prevailed among the navvies; and evidently wondered how so much organisation and system could prevail in English departments worked by voluntary enterprise, when such confusion and helplessness pervaded everything conducted by government—the converse of this being the case among themselves. Our polite allies were not aware that the provost-marshal had to be invited more

than once to curb the rough spirit of refractory navvies. It is but justice to them to add, that although boxing and wrestling matches, and rough experiments in new sources of amusement, engaged them sometimes, to the annoyance of those around them, they were good workmen, good-tempered, good-natured, and hearty in the cause from patriotic feeling. The French were particularly obliged by the carriage of hut and hospital timber, as soon as the railway was in a working condition. One of the earliest advantages of the enterprise arose from a branch having been formed to the other side of the harbour, so that the harbour on both sides became available, and guns and ammunition were brought up from what was called the Diamond Wharf. Another great advantage, very early obtained, was the removal of the issue department for fuel and fodder belonging to the commissariat from Balaklava to Kadikoi, where the navvies constructed a depot and platform, with suitable sheds, as they would have done on an English line. The value of forming the fuel and fodder issuing department at Kadikoi may be judged from the fact that 1000 sacks of barley were daily given out. It was a great relief to Balaklava, to subtract so large an amount of business from a place where so much that was chaotic and distracting interfered with the efficient distribution of every material. The navvies worked a limestone quarry in front of the third division, whence they were enabled to obtain lime of an excellent quality, which proved not only useful for building purposes on the railway, but also for purifying Balaklava, and for placing in the pits where so many dead bodies had been putrifying. The lime-burning in front of General England's division proved a source of amusement to the British, and of great annoyance to the enemy, who, seeing the smoke so constantly ascending thence, concluded that extensive works were going forward, and shells were constantly thrown to interrupt them. The shells fell harmlessly about the lime-kilns, and thus the navvies, without losing a man, gave the enemy trouble, and caused him an extra expenditure of ammunition. These energetic fellows also erected a large washing-house for the hospital, which was of very great utility—it had been one of the chief *desiderata* both at Balaklava and Scutari, in connection with the care of the sick.

Up to the middle of March, the climate seemed to agree well with the railway labourers, but they then began to complain of lassitude, and an inability to produce their usual complement of labour; they, however, rallied in health subsequently, and performed their useful and important task. The improvement at Balaklava became very great, and the facilities of receiving from the ships what was

wanting on land, aided much the efficiency the army during March.

The electric telegraph was another of the agencies which proved a useful auxiliary. By it Balaklava and the camp were connected by prompt communication, so that Sir Colin Campbell could at once inform Lord Raglan of any operations upon his flank by the Russian army in the field, and his lordship could quickly communicate his instructions. Headquarters were, by this means, brought in contact as it were with all the attacks, and with General Bosquet. The French worked the semaphore system of telegraphs, Canrobert giving to them the preference.

The increased means of transport in various forms enabled the English to regard the time necessarily consumed in the construction of the railway without impatience; for so pressing were the demands for supplies of all sorts, the lines, that the British army would have been much endangered if relying only upon the railway, without the other new accessories, or upon the latter without the railway. The usual amount of labour at Lord Raglan's disposal would have been literally useless to meet the waste in the trenches, and the vast preparations requisite for the second bombardment, to which the expectation of the armies and of the civilised world was not turned. A considerable number of Turks from Constantinople and Smyrna, who had been employed there as porters—a motley crew from the shores of the Levant, of men good, bad, and indifferent, the bad and indifferent being much the more numerous—and still larger numbers of Croats,—were employed in the new department of the land-transport service. They worked hard, were paid well, fought fiercely among themselves, and were kept well in hand by the English provost-marshal. These men carried up prodigious loads, and were employed in promoting the objects of the sanitary commission, which arrived later than was expected, but set to work with vigorous earnestness when it did arrive, until dead horses disappeared from the surface of the plateau, houses in Balaklava were whitewashed, the burial-places covered with lime, the fleet cleared from the harbour, and various other measures completed, which the gentlemen connected with the commission and the railway co-operated in accomplishing. Mr. Rawlinson, the engineer of the sanitary commission, Doctors Sutherland and Gavin, his medical coadjutors, and certain practical men acting as inspectors, executed what, had it been left to the staff of the British army, would never have been attempted.

The health of the troops varied with the weather, and “March many weathers,” an expression so proverbial in England, applied

to the Crimea: it "came in like a lion," and went out as fiercely. Some portions of it were as mild as early summer, and the spring-like appearance of the country charmed every eye. The fruit-trees, which had not been cut down close to Balaklava, were rich with blossom; verdant grass sprung up on the trodden and bare earth behind the camp; the crocus, hyacinth, and other Crimean spring flowers, burst forth over the sun-warmed plateau; and so prolific was this fair vegetation, that it was no uncommon thing to see the crocus peeping up from beneath iron shot or bomb-shells, and to see the little snowdrop nestling in its purity and beauty amidst broken planking, piles of ammunition, or in the corner of some rude hut. The vines put forth their luxuriant branches early, pushing their way into the wooden tenements of the soldiery. The birds commenced their carolling, and all nature seemed turned into smiles and song. The soldiery caught from her this inspiration, and every face looked cheerful, and the old home ditties resounded through the camp—"Scots wha hae," and "Rory O'More," were as familiar to the ear of the dwellers at camp, as they had been in the autumn, before famine, fever, and frost, the pelting storm, and the pitiless rain, had deprived the men of joy, although no combination of misfortunes had robbed them of their courage. Frequently, however, the azure sky was suddenly overcast, and as if the Storm King made his home among the bleak hills of the Taurus, gusts of fierce power would sweep the earth and clouds. Many a night of bitter frost, and some of heavy snow, followed days of sunshine, and even of relaxing heat. The men were well supplied with warm clothing; comforters, socks, and shaggy coats of all patterns were in abundance:—the people of England had sent out enough for English, Turks, French, and Russians. The men seemed to think that, whether the day was hot or cold, these articles should be worn in honour of the donors, and many caught cold by being obliged, from excess of heat, to throw off those winter garments, and then, finding themselves on duty in the trenches, shivering for twenty-four hours for want of the articles with which they had encumbered themselves upon the sunny plateau. Sir George Brown, true to his habits as a martinet,—as he was to his sword and his queen at the day of battle,—resolved to put an end to the irregular habits of the men as to their attire, and published a divisional order, insisting upon a strict costume, and *the reappearance of the discarded stock!* And the general being a man to be obeyed, a great change was speedily effected in the light division.

Many of the men suffered from those sudden climatic changes, which were especially felt from the want of good shoes and boots. There

were large supplies of shoemaker's work of some sort, but the work itself was generally atrocious, although this had been a subject of complaint with the previous supply. Both boots and shoes were too small in the majority of cases; and when they could be got on, they seldom were worn longer than ten days before the soles came off. The thick mud of the plateau was a severe test for any shoe or boot, but those with which the soldiers were supplied were almost useless; many a night of severe frost, and often nights of rain, during that month, the soldiers did duty without soles to their shoes. From these causes there were many invalids in March, notwithstanding the abundance of fresh meat and vegetables, and the consequent disappearance of scurvy; and although the comforts of the men in other respects were various, and generally ample, the sickness, at the close of February, made the medical returns for the beginning of March rather inauspicious. Lord Raglan sent home the report of the 2nd of March, from the medical-inspector of hospitals, Dr. Hall, which was in substance as follows:—

"The result of the sanitary condition of the army is by no means so satisfactory as the previous improvement during the week of fine weather that we had, had led me to anticipate; but, though the unfavourable change in the weather, from the genial warmth of spring to the bitter cold of winter, which took place on the 20th, had an injurious effect on certain classes of disease in weakly subjects, still there is sufficient improvement remaining to enable us to look forward with confident hope to the future; and I am more inclined to indulge this hope from the favourable change which has taken place in the type of fever prevailing in the General Hospital at Balaklava, in the 93rd Highlanders and some other regiments, from low typhoid to that of a remittent, and even intermittent, form.

"Bowel complaints continue to be the most prevalent class of diseases; but I think they are not so serious as they were a short time ago; nor is scurvy so manifest as it was since the issue of lime-juice daily as a portion of the men's ration. Lately, I have instructed the medical officers of regiments to inspect the men, for the purpose of detecting this complaint (skin diseases), and seeing that the men are clean in their persons, and change their shirts and flannels at stated periods. The last weekly report is favourable. In the 4th division, which is the only report I have at hand in my hut, only 138, out of 2596 men inspected, bore any traces of scurvy; and this is one of the divisions which was as much, or more, effected with it than any division in the army a short time ago. Mr. Roberts, the staff surgeon recently appointed to superintend the

medical concerns of the division, is an intelligent, active, and zealous officer, and he has effected wonderful reforms since he joined. If the issue of fresh meat could be insured, together with vegetables and lime-juice, I am quite satisfied, now that the men are warmly clad, and will soon be better sheltered, a manifest improvement would take place in their health. And if the military operations carrying on would only admit of some longer exemption from duty, a still greater improvement would be observed. I am inclined to think our greatest difficulties and miseries have been surmounted, and we may now look forward for better and more cheering times. It was wonderful to see the cheering effect the few fine days had on the health and spirits of the men; and as the winter may now be considered nearly at an end, I am full of hope and confidence."

On the whole, the men were much better off in March than they had been since landing in the Crimea, for food, shelter, clothing, cleanliness, medical attendance, medicine, hospital accommodation, and, above all, relief from excessive labour. The generals also paid more direct attention to the men, showing a deeper personal interest in them: for the first time since the opening of the siege, a general officer visited the trenches daily. Major-general Jones, of the engineers, was also a frequent visitor of the works, inspecting everything with minute attention. His report of the conduct of the officers of engineers and artillery was very flattering. As the former class of officers in the British service were depreciated, it is but just to mention that General Jones, after the war was over, in a speech at a public meeting in England, declared that the competency, courage, and attention to duty of those who composed that arm of the service before Sebastopol, were worthy of the highest eulogy. He found the greatest promptitude to obey his orders, and the most satisfactory performance of the most arduous and intellectually difficult services. Perhaps never in any army did the artillery behave better, either as to activity, courage, or intelligent qualifications for their duties.

Pleasing, on the whole, as the accounts are which appear in the foregoing pages, it must not be supposed that confusion, mismanagement, and selfishness had taken their departure from the British camp in the Crimea, and from the harbour of Balaklava. The following incident, related by Mr. Russell, is evidence to the contrary:—"As an instance of the way in which public money is squandered by the authorities,—well, if not by the authorities, by somebody or other who is vicegerent for the Genius of Misrule at Balaklava,—I will just mention a circumstance which has recently

come to my knowledge, and which any economist on the committee of inquiry may profitably ask a question or two about. Mr. Alfred Pratt, an officer of customs, was appointed by the War-office some time ago to superintend the warehousing and landing of stores at Balaklava, and was sent out there by the government with a staff of one foreman, two workmen, eight warehousemen, and thirty dock-labourers, with whom he arrived a month ago. This little expedition has, up to the present moment, cost the country about £5000, and has not done a particle of good for the money. Mr. Pratt, who is a practical engineer, offered to build a landing-wharf, but the authorities would not give a site for it. They would not employ him on the duty which the government commissioned him to execute. He states that he has been treated with neglect, and has been subjected to contumely and affront; and at this instant he is employed side by side with a corporal in superintending the levelling of ground for wooden huts at a salary of 25s. per diem!"

It was obvious that, in the midst of improvements effected by civilians, and by persons sent out from the government with especial commissions to overrule the routine of the departments, the disposition of the official to impede all reform,—even although the public interests were sacrificed by their opposition,—was but little abated. Where they could, with any safety, obstruct, they resisted all deviation from their own ways, although horrors unutterable, and "confusion worse confounded," were the consequences of these ways. Every man who applied business habits and energy to the reformation of abuses, was "a dangerous man" in the official vocabulary, and insult as well as obstruction met him at every turn. The overbearing power of public opinion in England, and the exposure of these practices in the London press, alone protected those who saved the soldier, and saved their country from contumely and hindrance on the part of most of the Crimean authorities. These censures do not apply to the generals of division and brigade, who were, for the most part, from the commencement of the expedition, noble soldiers, men of experience in their profession and patriotism in their principle and feeling. It must not be supposed that the bad conduct and incompetency of those who have fallen under public disapprobation, at home or abroad, have been exaggerated in this work. A very small portion of the misdoings of these people, at their gross ignorance, has been noticed; at many of the most painful instances of the sort only came to light too long after the event for the public to insist upon retribution on account of them. As an instance of this, the author last quoted relates, in March, 185

(and the circumstance was first made public by him), an occurrence connected with the battle of Balaklava, which might have led to the defeat of our heavy cavalry, and would have caused such an issue but for their extraordinary skill and courage:—"It will scarcely be credited (but it does no harm now to mention it) that at Balaklava the Scots Greys *had no cartridges* to fit their carbines, and that they were armed with the old cavalry sword, which bent in several instances on coming in contact with the thick coats of the Russian horsemen. The new swords are excellent weapons, and afforded great satisfaction to all but those on whom they were tried." Such an event could not have happened by any mere mistake: either utter neglect, ignorance, cupidity, or treason, must have placed the Scots Greys almost unarmed before their foes.

It was only during the month of March that some portions of the infantry received Minié or other superior muskets, instead of the old and inferior weapons which they had brought to the Crimea.

Mr. Russell relates a striking case of mismanagement in a single instance, being felt long after, and the extraordinary impunity allowed to the perpetrators. Under date of the 6th of March, he wrote:—"We have now about sixty garrison carriages at the artillery depot, and the stores of shot and shell seem inexhaustible, but, in reality, are not too much for thirty ours' firing. Our guns of position will now be available, if ever we require to use them. The story of these guns is instructive. It will be remembered that the Russians inflicted great loss upon us by their guns of position at the Alma, and that we had none to reply to them. Indeed, had they been landed at Kalamita Bay, it is doubtful if we could have got horses to draw them. However, if we had had the horses, we could not have had the guns. The fact is, that sixty fine guns of position, with all their equipment complete, were shipped on board the *Taurus* at Woolwich, and sent out to the East. When the vessel arrived at Constantinople, the admiral in charge, with destructive energy, insisted on transhipping all the guns into the *Gertrude*. The captain in charge remonstrated, but in vain; words grew high, but led to no result. The guns, beautifully packed and laid, with everything in its proper place, were hauled up out of the hold, and huddled, in the most approved higgledy-piggledy *à la Balaklava ancienne*, into the *Gertrude*, where they were deposited on the top of a quantity of medical and other stores. The equipments shared the same fate, and the hold of the vessel soon presented to the eye of the artilleryman the realisation of the saying anent the arrangement of a midshipman's chest, everything uppermost, and nothing at hand."

The officer in charge got to Varna, and in vain sought permission to go to some retired nook, discharge the cargo, and re-stow the guns. The expedition sailed, and when the *Gertrude* arrived at Old Fort, had Hercules been set to clear the guns, as his fourteenth labour, he could not have done it. And so the medicines, that would certainly have done good, and the guns, that might have done harm, were left to neutralise each other."

In the above gross case of clumsy and incompetent management, medicines to heal the sick, and arms to fight the enemy, were huddled together, and both made inaccessible. It was the fashion at home to boast of the order and good management of everything in connection with the navy: this case is but a specimen of very many which would prove the disorderly way in which matters were managed in that branch of the service. The state of the harbour of Balaklava at any time, up to the end of March, 1855, would prove the same thing.

Perhaps one of the most glaring abuses was the way in which the transports were permitted to remain in the harbour as places of abode for certain gentlemen who preferred them to Balaklava or the camp. For these transports the government paid enormous sums; and there they remained, rocking on the waters of Balaklava harbour, perverted to private purposes, under a system of favouritism and corruption. The author of these pages does not know the names of the gentlemen who possessed these expensive hotels, while the men were in want of those things which the increased transports should have been employed to convey for them; he can, therefore, have no invidious object in view while he records this; he simply performs a duty which historical fidelity demands. The money of the nation was squandered in this way in a manner disgraceful to the government, and to the people who tolerated such faithlessness.

No exhibition of injustice and the abuse of authority was more signal than that in the case of Captain Christie, a brave and upright sailor, who did his duty with fidelity and skill. On an earlier page of this history the loss of the *Prince* and other transports was noticed, which were wrecked in the great gale of the 14th of November, in consequence of Captain Dacres having refused to allow them inside the harbour—notwithstanding the importunities of Captain Christie, who superintended the transports, for their admission, and his strong representations in reference to the *Prince* in particular, because of the value of her cargo, and the state of her anchors. It is necessary to refer to this matter again, as with the month of March the captain's services

at Balaklava terminated. The loss of the *Prince*, the *Vulcan*, and so many other transports, caused a great sensation in England, and some violent parliamentary discussions: it was necessary for the government and the heads of departments to do something to appease the public clamour, and satisfy so many of the most respectable and powerful of their own supporters, who were discontented, and openly and strongly expressed that discontent. The usual mode of procedure in such cases was resorted to: it is an infamous mode, but will of course continue so long as the electors of the United Kingdom permit. The approved plan of quieting the public to which we refer is, to sacrifice some person who has least power and political interest, and who may with some degree of plausibility be selected. Thus, to conciliate the people when discontented with the campaign of 1854 in the Baltic, an attempt was made to turn Sir Charles Napier into the "scapegoat" of the Admiralty. Sir Charles would not go silently into the wilderness; he could use his pen and tongue, had money and connexions, and, as a Jupiter Tonans of agitation, shook the old Admiralty to its foundations. Captain Christie was neither an orator, nor a writer—a rich man, nor a man of large political connexion; and it was very convenient to make a sacrifice of him, and thereby prove how zealous the government was, and how plainly any mischief which ever happened resulted from individual misdeed, which they were ever ready to punish. This was the work of the Aberdeen cabinet. Mr. Gladstone, "in his place," assured the House of Commons that Captain Christie having arrived at Malta, a telegraph ordered him back to the Crimea, to be tried by court-martial for the loss of the transports under his care. This was very satisfactory to the house, and placed the good Mr. Gladstone in a favourable light, and very much in contrast to the wicked Captain Christie, who allowed the storm to wreck the transport fleet! The real facts were, that Captain Christie never received any orders at Malta to go back to the Crimea and stand his trial. *He had not gone to Malta at all. He never left his post for a day.* He was ordered to be tried by court-martial, and after his heart was nearly broken, the admiral informed him that there was no ground for such a procedure, and he was free to go home. He was superseded in his command, and the man selected to fill his place was the Captain Heath who went about canvassing certificates from the transport captains, *that the harbour of Balaklava was in a condition of order, and that matters there were regulated with precision and system.* Every one knew at home and abroad what a scandalous imposition this would have

been if the glaring untruth of the statement did not render an imposition upon any one impossible. Captain Heath is a very efficient officer, no doubt, and may have been as competent as Captain Christie to assume the office the latter so worthily filled, but it was not therefore he was chosen. His toadyism, not his talent, gained for him the responsible post while Captain Christie, whom every member of the government and all the authorities in the Crimea knew to be free from blame, was superseded, in order to cover the delinquencies of greater favourites, and make some sacrifice to the public indignation against the mismanagement at Balaklava. The mode in which Captain Christie was worked out of his post by an unprincipled intrigue was this:—About two months, or a little more, after the disastrous gale, Quartermaster-general Airey wrote to the captain, requesting details as to the loss of the *Prince*; this letter of the general's contained an enclosure, which was a letter from Captain Dacres the harbour-master, assuring General Airey that the *Prince* should be brought in as soon as possible. To Sir Richard Airey's letter Christie replied as follows:—

*Orient, Balaklava.*

"SIR,—In reply to your letter relative to the loss of the *Prince* steamer, I beg to state that she arrived off Balaklava on the 8th of November, in fine weather, when, in attempting to anchor, she lost both bower anchors and chains, they not having been securely clenched. She hung on by the *Jason* while she disembarked her troops, and in the evening stood out to sea and got another anchor ready. Being myself on board the *Melbourne*, at anchor outside, I was most anxious to get the *Prince* into harbour, and sent an officer repeatedly to the senior naval officer to request that she might be allowed to go in; but the object being at that time to have as few vessels in the harbour at the same moment as possible, he, although as anxious as myself, would not allow it. On the 14th of November, the day of the gale, the steam of the *Prince* was up in good time, but the sea rose and became so heavy that she drove, cut away her mast, and the survivors state that the mizen rigging fouled her screw before she struck.

"I have the honour, &c.,

"P. CHRISTIE."

*"Major-general Airey, Quartermaster-general."*

No intimation of any change of feeling towards him was made to Captain Christie: from the *Times* newspaper he learned the fact, by reading the speech of Mr. Gladstone, when describing him as ordered back from Malta—a statement which might well fill the mind of the ill-used officer with amazement. On the 20th of February, however, the mystery was

cleared up, for he was informed that he was superseded, and that Captain Heath, the very officer under whose management as harbour-master Balaklava attained its very bad reputation for confusion and filth, was appointed in his place! There was literally an outburst of sympathy in the Crimea. The captains of ships subscribed £200 as a tribute of respect; and all ranks and classes out of the naval and military clique that so disastrously co-operated with the government at home, were open in their expressions of condolence and esteem. In reply to the intimation that he was to be tried by court-martial, the captain thus addressed Captain Milne of the Admiralty:—

*Orient, Balaklava, March 5, 1855.*

"MY DEAR MILNE,—Many thanks for your kind note of the 16th. Although a court-martial is at all times a formidable thing, still on this occasion I feel such perfect confidence of success, that I rather rejoice at it. It will, I am in hopes, prove to the Admiralty and the public the rectitude of all my proceedings. I am as innocent of the loss of those two ships, *Prince* and *Resolute*, as a babe in a cradle. No officer could do more than I did in my endeavour to place them in safety. I only wanted a tug and leave to enter the harbour to accomplish this. After the *Prince* arrived on the 8th of November, there were four days before the gale of the 14th in which she might have gone in. There was nothing of greater importance in my opinion going on at the time. There was plenty of room in the harbour, two tugs, two line-of-battle ships, and several other men-of-war present; yet, with all this force at command if necessary, my earnest request was not attended to, and this ship, with her one anchor and valuable cargo, was allowed to remain outside. I of course did not order her to sea with one anchor, as I expected her to be taken in every hour, and I knew that it was of great consequence to the army that the warm clothing should be landed as soon as possible, as well as the rest of the cargo. I don't think poor Daeres will ever forgive himself for this. The transport captains and agents are all outrageous at my being superseded, and I trust the lords of the Admiralty will soon be convinced how little I have merited such treatment.

"P. CHRISTIE."

It was the end of March before the gallant captain was informed, by a letter from Admiral Lyons, that he was at liberty, as no charge could be substantiated against him. On the first of April he left the Crimea, and soon died of a broken heart. He prized his professional reputation far more than his lucrative post; he was dismissed from the former

arbitrarily and unjustly, and robbed of the latter infamously.

Having sketched the general condition of affairs during the month of March, we shall now proceed to chronicle the more prominent incidents of the history of the siege.

A despatch of Lord Raglan's, written on the 3rd, discloses the view he took of matters at the opening of the month:—

*Before Sebastopol, March 3.*

MY LORD,—Some more ships are said to have been sunk since I wrote to your lordship on the 27th. I am not certain of this; but, according to my observation, the new barrier across the harbour appeared yesterday evening to have been extended beyond the point at which I had seen it two days before.

The enemy is busily occupied in establishing a work considerably nearer the French batteries, on the extreme right, than that which was attacked by our allies on the morning of the 24th.

The enemy seem to be increasing their force in the neighbourhood of Sebastopol, both to the northward and upon the Tchernaya.

The railway continues to progress satisfactorily, and we already make considerable use of it in the conveyance of stores, hutting materials, &c., as far as Kadikoi; and the electric telegraph is completed between that village and my head-quarters.

The weather has again become extremely cold, and there was a fall of snow yesterday, and some little this morning.

I enclose a return of casualties to the 1st instant, inclusive.

I have, &c.,

RAGLAN.

*The Lord Panmure, &c.*

No attempt to disturb the Russians in the construction of these new works was made by our allies, against whom they were chiefly directed. His lordship's despatch does not mention that the cavalry horses continued to suffer, and that Colonel Dogherty had only three horses fit for service on the 3rd of March. The late hutting of the horses of the British cavalry division was a great misfortune, as the details of the Crimean inquiry, and those given before the Chelsea board of general officers long after, proved; yet we cannot but think that both Lords Lucan and Cardigan have had far more than their just share of public censure in connection with these transactions. Mistakes and blunders were made everywhere, as if by a fatal concurrence of misfortune; and frequently, as in the case of these generals, by men who had no wish to spare themselves, and were ready to lay down life in the service of the army and of their country.

The French signalled the opening of March by throwing shells and rockets into the town of Sebastopol; the long range of these projectiles enabled our ally to set fire to houses, and alarm the enemy for the safety of their magazines.

In the despatch of Lord Raglan, he announces the fact of the Russians increasing their numbers. It was afterwards ascertained what the Russian forces were at the time his

lordship wrote, or, rather, a few days subsequently, when the reinforcements were placed to which he referred. The following was the arrangement of the Russian army in the Crimea, as reported at the French head-quarters from a reliable source of information :—

In the town and in the suburb to the south of the Great Fort .....	39,000 men.
To the north of the Great Fort, and in places distant at the utmost 6000 yards, Belbek, Tchorgoum, &c. ....	35,000 "
On the Alma and towards Eupatoria.....	25,000 "
At Perekop.....	10,000 "
At Theodosia and Kertch.....	10,000 "
Total of infantry	119,000 "
On various points—cavalry.....	15,000 "
Engineers and artillery .....	10,000 "
Sailors.....	5,000 "
Grand total.....	149,000 "

A division of infantry was announced as hourly expected; as also a division of grenadiers and a brigade of reserve.

At daybreak, on the morning of the 4th of March, the Russians made an ineffectual sortie against the French. For an hour a severe fusillade rang up the heights; the cannon also gave forth their thunders. The Russians retired, and the day rose in brightness and silence. There was a grand council between the French chiefs and Lord Raglan in the course of the morning.

On the 5th, there were smart skirmishes at dawn between the French and Russians. The ninth division of the French army was moved to the right of the British attack.

The English were in good spirits, and amused themselves in all the old home ways when that was at all practicable. A "spring meeting" took place on the top of the ridge near Karangi, where horse-racing, after a sort never seen in England, delighted jockeys and spectators. There was a large assemblage of soldiers, sutlers, railway-labourers, Turks, and Croats, who gazed with eager delight upon the scene. The Cossack videttes on Canrobert's Hill and at Kamara could not comprehend the very peculiar movements of the English, and galloped about in the strangest excitement. While the races were going on, two Russian officers deserted in an ingenious manner. They were both Poles, and one had been degraded to the ranks for a political offence. They belonged to a party of the new reinforcements, and requested the men, twelve in number, to advance with them to the English vidette, persuading the party that he was a Russian soldier—the uniform of both the English and Russian light cavalry being frequently blue. When the party approached the English dragoon, he fired his carbine, and the Russians fled, the two Poles dashing forward to the English lines. The Cossacks, perceiving their object, galloped

hard to intercept them; but the English dragoon picket, gallantly pushing forward, were enabled to protect the fugitives. Their gratitude for their escape was touchingly expressed. They rode beautiful horses, which they said were not their own, and begged that Sir Colin would return them to the enemy, that no pretext might be left for them to say that the fugitives had stolen them. Sir Colin had the horses brought out to the last position occupied by our videttes, and then letting them loose they naturally galloped back to their own lines. These men stated that a corps of 8000 men had just joined the army between Baidan and Simpheropol.

On the 6th, the news of the death of the Emperor Nicholas arrived. General Canrobert was greatly excited: immediately on receipt of the intelligence he wrote a note to each of his two chiefs of *corps d'armée*, ending his despatch with the words, "this is great news." Lord Raglan wrote home a few days afterwards as follows :—

*Before Sebastopol, March 9.*

MY LORD,—I am happy to be able to inform you that the weather is exceedingly fine, and that I entertain great hopes, derived from the reports of the principal medical officer, that the sick will materially benefit by the improvement in the temperature.

Our advanced batteries are making considerable progress.

Every effort is directed to the maintenance of the camps in a healthy state, which, as the warm weather approaches, becomes daily more important.

I enclose the return of casualties to the 8th.

I received, on the evening of the 6th inst., a telegraphic despatch from Lord John Russell, dated Berlin, the 2nd, announcing the death of the Emperor of Russia at 12 o'clock on that day. According to the information of despatchers, the event has not been promulgated at Sebastopol.

I have, &c.,

RAGLAN.

*The Lord Panmure, &c.*

The tidings of the czar's death spread "like wildfire" through the camps; and perhaps never before was there so much political discussion in an army since that commanded by William III. in Ireland, or the iron host of Oliver Cromwell in England. The speculations about "the great fact" were as numerous as in the fashionable political circles of Western Europe. Whether the Russians had heard the tidings in Sebastopol was doubted; but they kept up an incessant fire all day, working their guns with fierce energy, as if to show that they had not lost heart, but were still ready to

"Confront the danger when the waves rolled high,  
Thwarting the storm."

During the previous fortnight a steamer had been anchored at the head of the harbour, armed with two long pivot-guns, which did considerable damage to the French working parties engaged around the new batteries on the heights of Inkerman. A battery of three guns, distant 1500 yards from the ship, was unmasked, and red-hot shot prepared. When

It was clear day the guns suddenly opened; the three shots passed right over the enemy's deck; the watch instantly rushed to turn up the screw; but, before she could be moved, several shots had struck her rigging, some her hull, and others her machinery. She slipped her cable, and hauled under the land. A deserter informed the English that three men were killed, three wounded, and the vessel so damaged that she was obliged to lay up and await for repairs.

It is probable that there was another vessel here, which hauled off in time to escape damage, for Lord Raglan, in a despatch written on the 8th, refers to two steamers; but other credible accounts represent the matter as it is given here. The despatch of his lordship was as follows:—

*Before Sebastopol, March 8.*

MY LORD,—The enemy continue to manifest great activity in preparing the work which I mentioned to your lordship in my despatch of the 3rd, and are now bringing up platform timber and guns for the equipment and armament of it. Vast convoys are daily observed arriving on the north side of the town; and I learn, from information entitled to credit, that the road leading from Simpheropol is covered with waggons, laden with provisions and munitions of war. This morning three British guns, placed in a battery overhanging the Tcheraya, opened upon two small steamers anchored at the head of the harbour, and, after a fire of about an hour, obliged them to take refuge behind a point. One of them appeared to have sustained considerable damage, and is supposed to have been deserted by her crew. The weather was fine yesterday, and is particularly so to-day, and the country is becoming quite dry. I have reason to hope that the sick are deriving material benefit from this change. I have established a convalescent hospital on the heights immediately above Balaklava, near a fine spring of water. The inspector-general of hospitals entertains great expectations of the advantages that will result from placing the huts in so healthy a locality. Lieutenant-general Pennefather has resumed the command of the 2nd division, and is, I am happy to be able to report, working remarkably well. I enclose the casualties to the 1st inst.

I have, &c.,

RAGLAN.

*The Lord Panmure, &c.*

It was not until the 6th of March that Lord Raglan received official information of the death of the czar, which became instantly known in the camp. The next day his lordship sent information to the Russian general under a flag of truce, who thanked him coolly, and either affected to put no faith in the statement, or disbelieved it. That night they constructed several more rifle-pits—a means of annoyance to the French more harassing than any other which the besieged had as yet employed. These pits were constructed in front of the Camelon, already described, and, being opposite the French advanced parallel, were a source of destructive inconvenience to those who occupied it. Many and fierce encounters between the two hostile parties were waged for the possession of these pits; and bitter, and perhaps humiliating, reverses were experienced by our troops in the attempts made to conquer them. Some shots from the English 9-pounders scat-

tered the gabions and sand-bags, and dashed the earth and embankments about; but our allies did not, during the month's operations, storm the pits at the point of the bayonet with sufficient resolution and numbers to drive the enemy from the position.

The efforts for arming all the batteries with the heaviest armaments ever before used in war, were unceasing. Several sea-service mortars, with a range of 3500 yards, were brought up to the British front. The second parallel was converted into one great battery; and detached works were constructed within 600, 800, and 1000 yards from the enemy's guns; but the "attacks" were in the same position as on the 17th of October, when the first bombardment was opened; they were, however, enlarged, better finished, stronger, and more heavily armed.

General Simpson and Sir John McNeil having arrived in the Crimea, both made a grand tour of inspection over all the works, and at the posts about Balaklava. General Simpson assumed the office which he was sent out to fill,—that of chief of the staff,—relieving Lord Raglan of much trouble, and the quartermaster and adjutant-generals also.

The French became extremely impatient of the delay in opening the new bombardment. Mr. Russell, in his journal, seems repeatedly to have doubts whether the French were as well advanced in preparation as the British. The fact was, that while such doubts were expressed by English correspondents in the Crimea, the French commander-in-chief was painfully urgent upon Lord Raglan, and perpetually complaining to his own government of the slowness of the English commander, and the danger to the cause thus created—giving thereby the enemy every opportunity to strengthen himself for the crisis. Very early in March, Canrobert informed Lord Raglan that he would be ready to open fire along his whole line on the 13th. The reply of the English general was:—"Your excellency knows that the English engineers have begun new batteries, which will play no unimportant part in the operations against the place. These batteries are somewhat advanced, but they will not be finished on the day which you indicate; and I cannot at this moment name, with precision, the time when they, as well as the other English batteries, will be able to open fire under proper conditions of preparation." The comment made upon this letter by the commissioner of the Emperor of the French, the Baron de Bazancourt, was as follows:—"It was impossible not to see that all these delays were fatal, and that they allowed the defence to acquire a development which doubled the obstacles and multiplied the dangers. The Russians, favoured by the configuration and

nature of the ground around Inkerman and Careening Bay, had, by skilful works, rendered it impossible to attempt anything against the Malakoff, except a powerful diversion. The difficulty of this perilous position was apparent to every one; and General Canrobert therefore continued daily to urge the commander-in-chief of the English army to hasten his preparations for opening the fire."

The letter of General Canrobert to the French minister of war, written on the 17th, reveals the state of things as they appeared from the point of view taken at the French headquarters:—"Our batteries present the enormous figure of nearly 500 guns ready to fire; and I am waiting, ever since the 14th, for the English to be ready to act with us. I urge them as much as I can, officially and officiously; for I feel the imperative necessity of throwing ourselves upon that part of Sebastopol, which it may be, perhaps, possible for us to take; but I am also bound to remember that it is my duty not to act without the concurrence of our allies. The important affair of the moment is to take by storm the Mamelon on the south of the Malakoff Tower, where the enemy is strongly intrenched under the protection of an encircling fire of artillery."

Again, on the 20th of March, he wrote:—"The English cannot yet tell me when they will be ready. This delay is the more fatal as the enemy profits by it to increase daily the strength of his works, and to add new ones to those which already exist."

On the 22nd the general again writes to his minister:—"Yesterday I urged Lord Raglan as strong as circumstances would permit. I have not been able to obtain a positive reply."

It is obvious from these communications, directed to Marshal Vailant by General Canrobert, that the French considered themselves ready to open fire early in March, and that they were deterred from doing so through the delays interposed by the English general.

Returning from this consideration to the actual progress of affairs, an important event occurred in the allied camp on the 12th. Omar Pasha landed at Kamiesch. The allied generals and admirals held council of war. The decisions of the council were to the effect that the Egyptian division which for some time had been at Constantinople, should be required for service at Eupatoria, and that Omar, with 22,000 men, the pick of his army, should land at Balaklava and Kamiesch to take part in the siege. The arrival of the Egyptian division which was at Eupatoria, would enable the allies to hold the place with 30,000 men, compelling the enemy to keep an army of observation there, and preventing the hope of a successful attack. If the attack upon the town should prove successful, Omar was to return to

Eupatoria with his own troops, a French division, and an English brigade, and march against Simpheropol, or such point of the Russian line of communication with Sebastopol as might be most strategically skilful.

On the 14th General Bisson was on duty in the French trenches, and, under his directions, Captain Champanhet, at the head of his grenadiers, captured three of the Russian advanced positions. The enemy returned the same day, and found the French Colonel Frossard at work with his sappers; the suddenness of the attack placed the French at great disadvantage, who held the ground with difficulty, and must have been driven from it had not Major Gibou and a party of riflemen charged with the bayonet and driven the enemy down into the ravine. Such was the result, according to the French relaters of the action.

On the 15th five detachments of the 3rd Zouaves, headed by Colonel de Brancion, carried five ambuscades, which the sappers destroyed under a heavy fire. Some hours after, the enemy, reinforced, stormed the captured ambuscades, but, failing in their attempt to carry them, retreated, after a severe loss in killed and wounded.

The account given by Mr. Russell of the first of these contests differs, at all events, from the result. He magnifies the conflict of the 14th, and represents the issue to have been adverse to the French. Comparing the various accounts, Mr. Russell's statement of the issue appears to be the correct one. The Russians ultimately held the ambuscades, which fact our French friends somewhat disingenuously suppress. On the 15th the French held several of the ambuscades on the right; but the Russians never allowed their fire upon the spot of intermit, and our ally suffered much.

Early in the morning of the 17th a brave French officer of distinction, Lieutenant-colonel Vaissier, was killed by a shot from the Russian rifle-pits, he having volunteered to relieve the French rifles opposed to them. Of this officer the French entertained a very high opinion, and afford the following information concerning him:—"He was between forty and fifty years of age, and had served with great distinction in Africa. In 1843 General Changarnier specially recommended him to the minister, speaking of him, as 'a very distinguished officer, from whom much may be expected.' He took part in all those struggles which occurred at every instant on the coast of Africa; and everywhere he showed himself full of energetic boldness and genuine military qualities. Captain in 1846, he entered in 1852 as major, in the 16th regiment of Light Infantry. It seems, sometimes, as if war respected such audacious bravery. Thus Vaissier was not wounded until the expedition

bylia. Though struck by a shot, he continues to fight at the head of his battalion; tries the enemy's position, and receives upon the field of battle itself the congratulations of General St. Arnaud. Called to join the army the East, as lieutenant-colonel, he conducts himself brilliantly at the battle of Alma; on the sanguinary day of Inkerman he leads his troops into the thickest of the fight; he was one of the heroes of that imperishable page of military history. On the 17th of March, in the following year, he was killed in front of the enemy."

General Canrobert's despatch thus referred to the combats that had taken place, and the general progress of events:—

*Sebastopol, March 17.*

On the night between the 14th and 15th inst. we carried the first line of the enemy's ambuscades which had been established in front of that mamelon before the Malakoff Tower, on which the enemy had thrown up a new work. On this ambuscade the enemy's rifles had annoyed our working parties, and on the morning of the 14th had killed Captain Guilhot, of the engineers, whose loss we sorely lament. The troops entrusted with this operation performed it with much vigour and impetuosity, under a fire of musketry and artillery kept up from the place. It was necessary to continue the operation during the night between the 15th and 16th; as, on the previous night, it was very vigorously carried out. The ambuscades have been razed. General Bosquet highly extols the energy of the troops employed in these two combats, giving occasion, as they did, to most honourable feats of individual prowess. Generals Niel and Bizot inspected the new parallel last night, and they have prepared the execution of another parallel near the mamelon in front of the Malakoff Tower. We are about to commence it to-night, in a soil where, unfortunately, rock is very near the surface of the ground, an obstacle we have constantly had to contend against in almost every part since the commencement of the siege. On the left, we have continued our works before the central bastion. During the same nights of the 14th-15th, and 15th-16th, notwithstanding a hot fire of grape and musketry, we formed a new parallel, more than 400 metres in length, to connect the old works with the trench forming a salient angle in the direction of this bastion. These operations have cost about thirty men either killed or wounded; among the former is Captain Adin, of the 2nd regiment of the Foreign Legion. In the night between the 15th and 16th the besieged, probably wishing to create a diversion on our extreme left, and supposing also no doubt that the works commenced on the right engrossed all our attention, directed against this left a sortie composed of 450 volunteers from various corps. Their effort was supported by a company of the 10th battalion of Foot Chasseurs and the company of Voltigeurs from the 2nd regiment of the Foreign Legion. This combat was most brilliant; the assailant, received by a sharp fire, and driven back at the point of the bayonet beyond the parapet of the trench, left in our hands twenty-nine men killed or wounded, and the same number on the ground that separates the trench from the ambuscade whence he had issued. He did, however, remove a large number with the aid of detachments provided with hand-barrows. On the whole, this little affair must have cost the Russians a third of their effective force engaged in it. It cost us five men killed and twelve wounded. During the eight days that have just elapsed, we have tried the fire of a small battery which we have erected, but which is armed and served by the English, and which commands some open spots in the principal harbour. We had observed that one of the war steamers, the *Gromonosetz*, by whose fire we had been annoyed, had been struck by our balls. We now learn they had barely time to take her to the stockade in the port, when she foundered. The incident is not with-

out its value, particularly on account of the moral effect it must have produced on the garrison. The port is, in fact, the line of retreat for this garrison, and the more threatening our action becomes against that line, the more will the troops feel uneasy and discouraged.

CANROBERT.

The following despatches from Lord Raglan will throw additional light on the progress of events:—

*Before Sebastopol, March 13.*

MY LORD,—The enemy commenced working upon the mamelon in front of the Tower of Malakoff in the night of Friday; but the nature of the work, from the thickness of the atmosphere, could not be distinguished. Great progress, however, had been perceived on Sunday, and that night a strong working party of the British troops was occupied in commencing a parallel from the advanced point of our right attack, with a view to form a junction with the corresponding parallel to be made on their side by the French, who began it on the following evening; and much was done to forward the operation before daylight this morning, and it is hoped that the object will be completed to-night.

The weather is generally fine in the early part of the day, but towards evening heavy sea fogs come rolling in, and wholly obscure the view of the place.

The enemy have shown a battalion and some Cossacks on the heights above Balaklava and towards Kamara, probably with the view to interrupt the French and English wood-cutting parties for the construction of gabions in the immediate neighbourhood, but the allied detachments have not been obliged to discontinue their work.

I enclose a return of casualties to the 10th inst.

I have, &c.,

RAGLAN.

*The Lord Pannure, &c.*

*Before Sebastopol, March 17.*

MY LORD,—The progress of the parallel which I reported to your lordship in my despatch of the 13th inst. has not been as rapid as was anticipated, the ground being extremely rocky, and the difficulty of procuring cover consequently excessive, and rendering it almost impossible to carry on the operation during the day. Both the English and the French have now, however, succeeded in establishing the communication between them. Her majesty's troops have not been assailed, but our allies have been kept constantly in action, and they have succeeded in driving the enemy from the rifle-pits in which they had established themselves, in their immediate front, with distinguished gallantry and great perseverance. They, however, have sustained some loss, though not equal to that which they have inflicted upon their opponents.

A steady fire has been maintained upon the mamelon in the occupation of the enemy from the guns in our right attack, and the practice of both the navy and the artillery has been conspicuously good, and reflects the highest credit on those branches of her majesty's service.

Although no positive attack had been directed against our works, our approaches are carried so close to the enemy that the casualties are greater than they have lately been, as your lordship will be concerned to remark in examining the returns I have the honour to enclose; and it is my painful duty to announce to your lordship the death of Captain Craigie, of the Royal Engineers, whose zeal and devotion to the service could not be surpassed, and who was killed on the 13th, after he had been relieved from the trenches, and was on his way to the Engineer Park, by a splinter from a shell, which burst close to him.

I have the honour to report the arrival of Lieutenant-general Simpson, who joined my head-quarters yesterday, and that of Sir John McNeill and Colonel Tulloch, who reached Balaklava a few days before.

I have, &c.

RAGLAN.

*The Lord Pannure, &c.*

*Before Sebastopol, March 20.*

MY LORD,—It is with deep concern that I transmit for your lordship's information the copy of a letter which I received on the 18th inst. from General Canrobert, announcing, with every expression of concern, the death of a British officer, who appears to have wandered into the French camp, and, not answering the challenge that was repeated three times, was shot dead by the French sentry whose post he approached. This officer, Surgeon Le Blanc, of the 9th foot, occupied the tent near the hospital huts of his regiment, situated at some distance from the encampment of the regiment itself. He was a gentleman of most temperate habits, and was occupied in reading, when, suddenly, upon the alarm sounding, he rose from his seat, leaving his candle lighted and his book open, and walked out—he was never seen alive afterwards. It should be explained that shortly after the close of day on the 17th there was a very heavy fire on the left of the French right, which was maintained for several hours. None of the English posts were attacked, but it was considered prudent to get the greater portion of our troops under arms. Mr. Le Blanc was shortsighted, and probably mistook his way from the first, the night being excessively dark, for he was found far distant to the left, and must have wandered from our position without knowing the direction in which he was going. Being anxious to ascertain the facts of this unfortunate case as correctly as possible, I have set on foot an inquiry, to be conducted by English and French officers, in association with each other; and I propose to do myself the honour to send you their report. I have addressed a similar letter to the general commanding-in-chief.

RAGLAN.

The Russians not only worked with energy at Sebastopol, as the despatches of the allied generals admitted, but the energy extended to the whole of Southern Russia. Not only had large reinforcements been hurried to the Crimea as soon as the roads became passable, but preparations were made to continue thence reinforcements on a still larger scale. A letter from Odessa of the 16th appeared in the *New Munich Gazette*, to the following effect:—"The cavalry corps concentrated around Odessa, under the orders of General Schabelski, is exclusively composed of dragoons, to the number, it is said, of 12,000 men. It has received orders to proceed immediately to the Crimea, and a part of the corps left yesterday. The seventh army corps, stationed at present in Bessarabia, will leave for the Crimea. The troops remaining in Bessarabia will be placed under the orders of General Luders, who will fix his head-quarters at Bender. According to reports received at Vienna, and there held worthy of credit, Sebastopol is provisioned for three months. The garrison is only 12,000 strong, but may easily be reinforced, whilst the bulk of the army, under the immediate command of General Osten-Sacken, numbers 40,000 men at the Belbek. The Russians have cut down all the trees in the district behind Inkerman, and behind the trunks they have, during the winter, constructed intrenchments and batteries in excellent positions. Prince Gortschakoff intends, it is said, to operate from Perekop and Simpheropol against Eupatoria at the head of 60,000 men."

The Russian journals meanwhile indulged in bombastic announcements of the prowess of

the besieged, and the failures of the besiegers. According to them the fire from the all batteries was an almost harmless expenditure of ammunition. The following appeared in the *Invalide Russe*:—"In order to complete the telegraphic despatch from Sebastopol, relative to the erection of a new redoubt in front of the Korniloff bastion, during the night between March 10th and 11th, A.D.C. General Baron Osten-Sacken announces, under date March 14th, that notwithstanding the heavy fire of the besiegers, the works are being successfully carried on in the new fortification. The fire of the enemy's artillery does scarcely any harm; thus, for instance, on the 11th of March last no less than sixty bombs fell on one of our bastions, and yet only one man was wounded. The galleries of the besiegers' mine, which we discover, are constantly destroyed with unvarying success. Nothing remarkable has occurred in the neighbourhood of Eupatoria. According to the statement of the prisoners, the Turks have about 1000 men killed and as many wounded in the affair of February 17th."

General Sir Harry Jones in a speech delivered in England after the conclusion of the war, represented the fire of the allies as most destructive, and delivered with the most beautiful precision.

The condition of the British army about the middle of March is well conveyed in a brief paragraph by the *Times'* correspondent:—"The number actually under arms, not employed on any duty whatever, yesterday (March 16) amounted to 20,600 men. The effectives now amount to 26,000 men (including rank and file and sergeants). The deaths in camp yesterday (March 15), I am told, amount to 14 only. This is another sudden fall. We have now 40,000 men and more alive; and of these between 15,000 and 20,000 of the noblest and strongest troops that ever handled musket. In dear old England the cavalry have long been numbered among the dead; but surely there must have been some mighty resurrection, inasmuch as Colonels Hodge and Paget have still at their call nearly 1000 sabres."

The 17th of March was a day of account in both armies; in the British, it being "St Patrick's day," the national saint-day of Ireland, there were, of course, fun and jokes wherever an Hibernian was to be found. Our French friends had races and other amusements, whether in compliment to their Irish allies does not appear. Mr. Woods says, that nearly half of the British army displayed some green substitute for a shamrock in their hats, caps, helmets, or whatever else covered their heads. As half the army was not Irish, it is to be presumed that their British fellow-countrymen paid the Patlanders the compli-

ent of wearing the national colour on the national day. The British fourth division had a race," the Hibernians were of course numerous, and the hilarity great, and characteristic of the occasion and those who enjoyed the race-ground was within long range of the enemy, who thundered over the course during the whole time. Still they "snatched dangerous pleasure," and gave vent to all the exuberance of their high animal spirits. A letter from General Canrobert on the 14th, announced to Lord Raglan the loss of a serving British officer, in these terms:—

*Head-quarters, March 18, 1855.*

"MY LORD,—I am grieved to have to inform you of an event, much to be regretted, which painfully engrosses the French army and its commander-in-chief. Last night, while the troops were kept perpetually on the alert, an English officer presented himself before the entrance of the 18th regiment, established near the watch-tower behind our trenches of the left flank. Although summoned three times by the *qui vive* the officer did not reply; the sentinel fired, and he was killed on the spot. I can hardly understand how this unhappy officer found himself at such an hour so far from the English camp. I believe that his death can only be attributed to his own imprudence; but I do not the less deplore the event, which must also be attributed to the natural emotion of a young soldier, who, in the midst of the events which marked last night, rigorously executed the military regulation.

"GENERAL CANROBERT."

*Field-marshal Lord Raglan, &c.*

The gentleman thus referred to was Mr. Edward Le Blanc, surgeon to the 9th regiment of the line.

On the night of the 17th and 18th, the French renewed their attack on the Russian rifle-pits; for four hours the warfare was waged around the blood-stained place, but the Russians were at the end victorious. So fiercely and bravely the French fight for the possession of those buscades, that there is little doubt they could have gained possession had not their transports failed to arrive.

Our allies did not appear to advantage in his description of warfare; their attacks were from well planned, while those of their enemy were most skilfully managed. The vigilance of the Russians was generally superior on these occasions. Two British divisions were under arms to assist the French, but the latter were tired, sorely discomfited and crest-fallen, on their lines. The officers behaved with more than their usual gallantry, encouraging the men by voice and gesture, and placing themselves in the foremost position of danger. Above the roll of the musketry the

voice of the officers could be heard, exclaiming, "*En avant, mes enfans!*" "*En avant, Zou-aves!*"

On the 18th a large body of men, probably not less than 15,000, entered Sebastopol from the north side. An equal number were detached from the corps of observation at Inkerman, and moved down to M'Kenzie's Farm. There did not appear to be any object in these movements, unless to carry out some system of relief.

About four o'clock in the evening General Canrobert reconnoitred the position of the rifle-pits and the Mamelon, and seemed to pay especial attention to the large square redoubt which the Russians had raised to the right of that work. This reconnaissance was preliminary to another attack on "the pits," for at nightfall a body of troops unusually large for these nightly enterprises passed to the front with six 12-pounder fieldpieces. Once more a fierce encounter raged around these centres of slaughter, which issued in both French and Russians retiring upon their own lines.

The 19th was an eventful day, for it revealed the unwelcome fact that the labours of the Russians had been even greater than was imagined; the battery lately fought for so gallantly against the French was now fully equipped: on the Mamelon a formidable new work appeared ready to receive its armament. It was observed that, for some reason which was not conjecturable, they had closed up forty of the embrasures of their batteries. Mr. Russell, writing at this date says:—"Our siege-works are in a state of completion. Those of the French are almost as far advanced. In speaking of siege-works, I refer to those which have been recently constructed in addition to our former batteries. The defences of Balaklava are strengthened day after day, guns of large calibre are placed in position along the heights, and the disadvantages of a plunging fire are obviated as far as possible. The French have thrown up a new work, containing six guns, right above our 32-pounder battery on the road to Kadikoi."

On a previous page we pointed out the error into which this gentleman,—always so painstaking and eloquent, and generally so accurate,—had fallen as to the comparative state of the French and English works. No doubt he had seen both, and was a very keen and observant witness. Either he wrote in error, or the French were very impatient, and General Canrobert was solicitous to begin the bombardment not only before his ally was armed, but before his own batteries were prepared. Perhaps it would reconcile these discrepancies to suppose that Canrobert, finding Lord Raglan was not ready on the 12th, 13th, or 14th of March, when he was anxious to open the bombard-

ment, he also began new works, and *these* had not quite approached their completion when Mr. Russell wrote. But even this idea fails to reconcile entirely the discrepancy between the accounts of English correspondents and French despatches; for, at the end of March, General Canrobert's complaints of the English, in his *private* correspondence with the French minister of war, were as bitter as ever. The Baron de Bazancourt, so much in the imperial confidence, thus observes upon the state of Canrobert's mind, with which he must have been acquainted:—"The presentiments of the commander-in-chief as to the gravity of the situation were not slow in being realised. The Russians, to whom we conceded so much precious time, accumulated defence upon defence, and constantly held ready powerful reserves to protect their new works."

"For these reasons," wrote General Canrobert, on the 31st of March, "in the region of our new attacks, all attempts, either on our side or that of the enemy, must cause combats of large proportions; and in order to meet this serious state of things, I am obliged to reinforce the 2nd corps with the division of the reserve, and to send every evening two battalions of the guard to take up a position near to it."

"I have hopes," adds the general, "that the English will be able to open fire in the first days of next week (about Tuesday next). This fire can be actively sustained for ten or twelve days. It will facilitate the approaches of the allies towards the place; it will diminish the difficulties which are presented to us in the carrying by force of certain of the outworks; and its effects will permit one or two columns of assault to lodge themselves upon some point of Sebastopol, and to plant our flag there."

However slow the English might have been, there was a solidity in their works which our allies might well have copied; the fire of the English artillery was also superior to theirs, and was directed every day, more or less, with precision and effect upon some portion of the enemy's works. Thus, during the 18th, shot and shell were thrown from the English batteries right into the Mamelon, and into the new redoubt to the right of it. Many lives must have been lost under a fire so precise and so galling. Nevertheless, the Russians planted sixteen heavy guns in the redoubt, which was covered by the fire from Inkerman, and the forts across the Tchernaya, and the Malakoff, so as to converge upon its approaches: it now became a thoroughly formidable bulwark of defence.

The night of the 19th-20th was one of storm, and the roar of the sea and the tempest could be heard all over the plateau. The enemy were either kept quiet by the hurricane,

or were so from policy. The allies did not disturb their repose.

On the 20th, Lord Raglan sent home following despatches. The report contains his second despatch from Dr. Hall was important, as showing how far the army was physically prepared for the operations so to be undertaken.

*Before Sebastopol, March 20, 1855.*

MY LORD,—In my despatch of the 17th inst. I reported to your lordship the progress made in forming the position constructed to unite the right of our attack with that of the French on the Inkerman heights.

The contest of the latter with the enemy for the possession of the rifle-pits in their immediate front was renewed after dark on that night, and was continued several hours, the fire being excessively heavy, particularly of musketry, and considerable loss must have been sustained by our allies, I fear, as well as by the enemy who continue to hold the ambuscades; but the English persevere, notwithstanding, in working forward, and are approaching the Mamelon, on which the Russians are busily engaged in building a formidable work, the progress frequently interrupted by our batteries and those of the French.

On the night of the 17th the English parallels were not attacked; but the fire to which I have above alluded was so continuous, that the whole force was either upon arms or ready to turn out.

I enclose the returns of casualties to the 18th inst.

It was currently reported yesterday that Prince Gortschakoff had died on his way to Moscow. I have not been able to ascertain if this report be founded; but it was fully credited as to have been dispatched to Constantinople.

Prince Gortschakoff is stated to have arrived at the Tchéné Serai, and to have assumed the command of the army.

Reinforcements are reported to be on their way to Russia, and the 9th division to have reached the neighbourhood of Eupatoria. The position of the Russian troops in the vicinity of the Tchernaya remains unaltered.

The progress of the railway continues to be satisfactory, and we are already enabled to use it with considerable advantage, both for the conveyance of supplies and for the transport of troops. The progress of the railway continues to be satisfactory, and we are already enabled to use it with considerable advantage, both for the conveyance of supplies and for the transport of troops. The progress of the railway continues to be satisfactory, and we are already enabled to use it with considerable advantage, both for the conveyance of supplies and for the transport of troops.

I have, &c.,

RAGLAN

*The Lord Panmure, &c.*

*Before Sebastopol, March 20, 1855.*

MY LORD,—I do myself the honour to transmit to your lordship a letter from the inspector-general of hospitals, forwarding the weekly return of sick to the 17th inst. The number of sick is not diminished, but the cases are lighter, and every day the men in camp exhibit a more healthy appearance.

I have, &c.,

RAGLAN

*The Lord Panmure, &c.*

*Before Sebastopol, March 19, 1855.*

MY LORD,—In transmitting the weekly state of sick in the army to the 17th inst., I have the honour to state that though the sickness still amounts to 14.81 per cent. the mortality does not exceed 0.51 per cent., which is proof that the diseases are milder in character; and I think I may safely say, the general health and appearance of the men is greatly improved; and had not the duty, by the unavoidable operations of the siege going on, been increased of late, I think the sick list would have been still more diminished, as the men's condition is, in every other way, so much improved both in diet, dress, and accommodation.

It has been proposed by the minister-at-war to give the men tea, coffee, and cocoa, on alternate mornings and to-morrow your lordship will receive the report the medical board ordered to consider the subject. T

to first I think good, and the change will be both agreeable and beneficial to the men; but cocoa, I am afraid, requires too much preparation to be usefully adopted in an army under present circumstances.

The prevailing diseases are fevers of a low typhoid form in some instances, and in others assuming an intermittent and remittent type, and bowel complaints. Fevers have been rather on the increase of late, but bowel complaints have become much fewer in number, and milder in character. Scurvy, too, though the number appears large in the return, is on the decrease; and I can assure your lordship, from recent personal inspection of the men of the different divisions, that the generality of the cases returned under that head are of the most trifling character; and under the use of the present mode of diet, I am in hopes the disease will soon totally disappear from our list.

In the first division, the brigade of Guards continues to prove in health and appearance, from its change of location, and the brigade of Highlanders is also efficient. The 79th and 93rd are influenced by the locality of their posts, which cannot well be changed, and have more sickness than the 42nd, which are more favourably situated; and in this regiment the most scrupulous attention is paid to the sanitary condition of their camp.

To show how locality affects the health of the men, I may mention the wing of the 2nd battalion of the Rifle Brigade, which occupies the high promontory of the northern extremity of the Balaklava lines overlooking the sea; and here, though the men are exposed, and the duty is as severe as in any other part of the camp, there is little or no disease.

In the second division, the 41st and 95th regiments have been more unhealthy than the rest, and have had a larger number of fever cases than others admitted into hospital, and many of them have been of a serious character. It is difficult to account for this, as there is nothing in the locality of the ground occupied by these two regiments different from that of the rest of the division. Perhaps their tents were a little more crowded than the rest, and the hospital huts, from the pressure of sickness, had more men in them than was advisable; but this I directed to be remedied when I visited the hospitals a few days ago.

The health of the third division is improved, decidedly so in some of the regiments; and the health of the fourth and light divisions is improved also.

The cavalry, with the exception of the 2nd Dragoons, is in good health; and the health of the 2nd, the superintending medical officer seems to think, has been influenced by local causes that are now in course of removal.

The health of the artillery has been tolerably good during the week, and the cases under treatment, both in the general and convalescent hospitals at Balaklava, have progressed favourably; and when the remainder of the hospital huts at the castle come into use, I expect great advantage from their occupation, both by convalescents and wounded men, should we unfortunately have any.

I have, &c.,

J. HALL,

*Inspector-general of Hospitals.*

*To Field-marshal Lord Raglan, G.C.B.,  
Commanding-in-chief.*

## CHAPTER LXXIV.

PROSECUTION OF THE SIEGE OF SEBASTOPOL, FROM THE END OF THE THIRD WEEK IN MARCH TO THE OPENING OF THE SECOND BOMBARDMENT.—DEATH OF ADMIRAL ISTOMINE.—STRUGGLES FOR THE RIFLE-PITS IN FRONT OF THE MAMELON.—DESPERATE SORTIE OF THE RUSSIANS ON THE NIGHTS OF THE 21ST-22ND.—BURIAL TRUCES, COUNCILS OF WAR, COMBATS.

"Nil actum reputans dum quid superesset agendum."

It was known on the 20th of March in the British lines that Prince Gortschakoff had succeeded Prince Menschikoff in the command in chief of the enemy's forces. Deserters reported that the latter prince had died of a wound in the leg, at Perekop; but this proved to have been an unfounded report. He was, however, severely wounded, and greatly reduced by sickness, as well as chagrin at his repeated defeats, and the displeasure of his new sovereign weighed heavily upon his heart. According to the same sources of information, the Russian admiral, Istomine, had been killed in the Mamelon, while there reconnoitring the Russian approaches. In this case the report was true. He was the last of the enemy's admirals in Sebastopol. When Nachimoff and Siniloff set out upon the expedition to Sinope, Istomine remained behind in command of the fleet. Thus all the naval chiefs who had taken part in the defence of Sebastopol perished.

On the night of the 21st an immense convoy entered the city. Complaints of the inadequate numbers of the English army for the work imposed on them were very generally heard. The engineer officers could not obtain

men to perform what was requisite; the troops were still borne down with fatigue in the trenches; and the trenches were often inadequately defended from the smallness of the covering parties. The ruinous plan of Lord Raglan in undertaking a proportion of the siege labour altogether beyond the strength of his army still bore down the men, delayed the operations, and gave to our ally cause for incessant complaint. Lieutenant-general Sir John Burgoyne left the camp and embarked at Kamara: a brave and skilful officer was lost to the army, whose services, in many respects, would have been invaluable if retained.

On the night of the 21st the French made a new attempt upon the rifle-pits; five were attacked, one was conquered; the conflict was long and sharp, and the loss on both sides considerable. Such is the testimony of Mr. Woods: Mr. Russell represents the French as more successful, having conquered and retained three of the pits, and maintained a tormenting fire against the enemy from the position thus occupied. The French accounts convey impressions still more favourable to their arms, describing the enemy as driven out of all the pits. As well as we can gather, the whole of

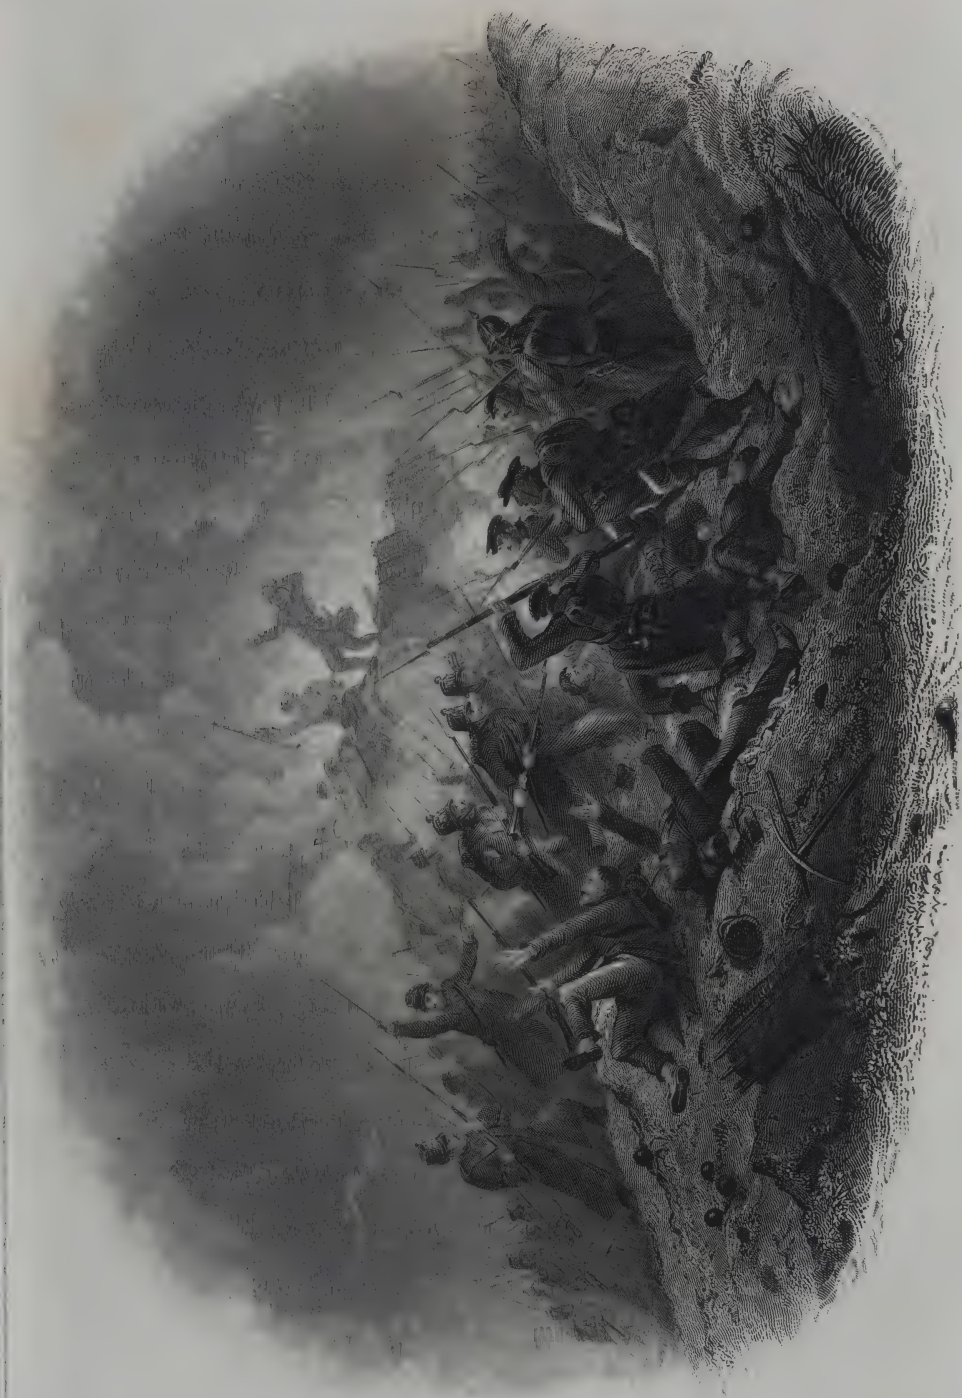

these accounts were right: the French expelled the Russians, who, reinforced, drove the French out of all the pits except three, two of which they abandoned after daylight, because of the heavy fire from the Russian batteries. The mortar practice of the British was very annoying to the defence. The two sea-service mortars recently brought up threw some splendid shells, one of which went over the Malakoff Tower, bursting among the buildings in the rear of it; another fell through the roof of one of the public buildings, of which it made a total wreck. Both the French and English threw shot and shell into the Mamelon with such precision that the enemy must have severely suffered. Prodigious exertions were made to bring up shot, shell, powder, and even guns, numerous as these weapons of destruction already were at the batteries. The British army seemed to labour in the spirit of the motto at the head of this chapter, thinking nothing done while anything remained to be done.

Some new regulations for the promotion of order at Balaklava were set on foot, where, in spite of recent improvement, they were much required. A gentleman who landed there on this day gives the following account of what he saw and what were his impressions; his representations do not accord with the official reports, and even the "own correspondents" must have been thankful for very small improvements when they wrote such pleasant things about Balaklava at this juncture:—"I was prepared to find Balaklava a muddy dirty place, but the reality far exceeded all my preconceived notions of how very dirty a place could be. What Balaklava had become in our hands I do not presume to say; but there appears to have been extraordinary ingenuity displayed in rendering what must have been a very pretty village or town almost uninhabitable. Sides and tops of houses are beaten in, streets and roads destroyed, trees cut down, and in all directions heaps of filth and rubbish impeding the paths and thoroughfares; and heaped up along the landing-places, in the midst of the mud, all sorts of costly goods. Tents, huts, fire-places, provisions, shot, shell, and in fact, whole ship-loads of things just landed so as to clear the vessels; the place crowded with extraordinarily-dressed people, and on the very roughest ungroomed and dirty miserable looking ponies and mules. The mud is garnished on each side of the road with frozen snow and icicles. The harbour crowded to excess with all descriptions of vessels, most of them having some disfigurement, the loss of a bowsprit, figure-head, or a something which made them look anything but with the usual smartness of English vessels; the boats moving about crowded with officers and men on foraging

expeditions among the shipping, and crawling from ship to ship with the most extraordinary agility; in fact, to do anything like business in Balaklava harbour it is necessary for a human being to be half cat, half monkey, as you are expected to take the most lengthy jumps from ship to ship, and scramble up a high vessel's side or over bow without ladder or rope; and it is wonderful how aguish hunger makes even a soldier. The road to the camp is distinctly traceable by all sorts of vehicles and the most motley dressed pedestrians—and alas! also by dead horses and mules putrifying and poisoning the air. The tents only partially keep out the rain, and at night your breath ascends, freezes, then thaws and descends in the form of large drops. Some days they feed well; and for days together they have nothing but their salt rations, frequently come in from the trenches wet to the skin, up to the knees in mud, tired, have a bit of salt meat and biscuit, and then sleep, wet as they are. Still, with all these drawbacks they are cheerful and happy, and many really like it. It is impossible to say too much in their praise, and if ever men deserved promotion it is those who have served, and are serving, before Sebastopol. There is more to be endured in one month of this work than in twenty 'Almas.'"

#### THE BATTLE OF THE TRENCHES.

On the night of the 22nd a furious battle was fought along the whole of the allied lines which exceeded in magnitude any which had taken place since the ever-memorable day of Inkerman. The French had united their lines at Inkerman with the British right attack by parallels; the advanced parallel passed in front of the Mamelon within five hundred yards. The line of intrenchment was thus rendered continuous from Inkerman, on the extreme right of the British to the extreme left of the French. The reader will remember that the French were obliged to occupy the extreme of the English right in consequence of the numerical incompetence of the latter to retain so extended a line as they had previously maintained. There were, however, two obstacles to the perfect continuity of the lines from Bosquet's forces, on the extreme right of the plateau, to the batteries of the extreme left attack, which was more immediately under the eye of Canrobert. These obstacles were called "valleys" by the Russians: they were, in some parts, deep ravines. One of these, the lesser, separated the extreme right of the British from the batteries at Inkerman manned by Bosquet; the other separated the extreme left of the British, where Lieutenant-general Sir Richard England held the ground and the extreme right of the original French

NIGHT ATTACK IN THE TENNESSES.  
REBELLION.

attack; this was called "the great ravine." [It will be seen from this simple description that the advanced parallels of the French (of Bosquet's *corps d'armée*) in front of the Mamelon fell upon the right of the lesser ravine, and upon the left of that valley the advanced trenches of the British right attack rested. The ground on the slopes of this ravine is broken by the edges of the quarries, which served the Russians so well as ambuscades, or, as Lord Raglan's despatch calls them, "concealments." This ravine, passing beyond the lines of intrenchment, wound round to the left, separating the English attack from the Malakoff, until it was itself lost in the great ravine where it entered Sebastopol. This description is divested of military technicalities as much as possible, so that the reader unacquainted with military matters may have a clear view of the ground upon which the bloody battle of the night of the 22nd of March was fought.

For two or three days before, the Russian batteries were comparatively silent: it was reserved this night to break the silence by a desperate attack upon the whole line of the besiegers. Deserters afterwards reported that the reason for choosing that occasion was the rival of the Grand-duke Michael; Prince Gortschakoff had, however, determined to signalise his assumption of command by some great operation. He was of opinion that the strategy of Prince Menschikoff had not been sufficiently bold, and the pro-Russian prints in Germany had boasted in virulent articles, and among telegraphic announcements, that the general Prince Gortschakoff had resolved upon the destruction of the allies, had already chosen his measures and his means, and would, upon his arrival, drive all before him, raising the siege, and sweeping the allies into the sea, or to their ships.

The attack appears to have been made with the choicest men which the prince could find available. The crews of the fleets were generally picked soldiers of the army, who, to the discipline of the land service added the hardihood of the sea service. Upon these Gortschakoff mainly relied for the execution of his purpose. Prince Gortschakoff himself described the force as consisting of "eleven naval battalions, and a detachment of the 35th crew." General D'Autemarre's report to Canrobert has estimated it:—"From the extent of the field of battle of the enemy, and calculating the depth of his columns and the length of the attack, I estimate that we have had to contend with at least fifteen or sixteen battalions." The attack was committed to the Russian general Kruleff.

In the evening of the 22nd the French threw shot and shell for several hours upon

the enemy's batteries, the latter description of missile doing considerable mischief to the parapets of the works and to the houses beyond. At about seven o'clock two Russian columns were observed descending from the Mamelon: at eight o'clock they opened a brisk fire on the French left, where the engineers were finishing some works, and this fire was maintained for some time. Mr. Russell, in his journal of this date, dated at a quarter to eleven, P.M., represents the firing as having then lasted three quarters of an hour—he could not have been in the camp earlier, or he must have been unable to hear what went on at the extreme left of the French. At nine o'clock, says the French journal of the siege, "a heavy fire of musketry begins; and in spite of the darkness we could follow the movement of the black masses deploying before our most advanced works. It was evident that the Russians wished, if not to invade our works, at least to molest them, and to stop their being finished, by a murderous fire and by the menace of an imminent attack. Such was, in fact, the purpose of the enemy. He foresaw that, in face of the new works which he was forming to connect the redoubts of Mount Sapoun (named by us '*les Ouvrages Blancs*'), we should not remain inactive; and he therefore attempted a strong sortie against the head of the French approaches."

"The column," says a staff officer of the French army, "which had thus been perceived, advanced against our front, while two others were to direct their course, the one against our right, the other upon our left. Their purpose was to turn the ravines of Karabelnaia, and to take us in flank, whilst the right extremity of the English trenches would also be attacked." The night was one of intense darkness, and the wind, which was very high, blew from the allies, rendering the noise of the Russian approach inaudible—so that the whole space along the allied front was covered with assailants before the grand rush upon the works was made.

To give a combined view of the whole action is extremely difficult, for the reasons assigned by Lord Raglan in his despatch; but it may be safely said that no account of this battle extant is at once so clear, comprehensive, and yet condensed, as that which is contained in the despatch of the British commander-in-chief. It is also the most truthfully correct—free from all exaggeration, and contrasts pleasingly with the French accounts; all of which—at all events all that we have seen—mingle sly detraction, and magniloquent eulogy, when describing the part the British took in the transactions of the night. Thus the French general of the trenches, D'Autemarre, in his private report, wrote:—"The enemy, before the ener-

getic and desperate resistance which is opposed to them, soon finish by spreading themselves along our whole left, and occupying all the space between the left 'tête-de-sap' and the zigzag occupied by the English,—unfortunately too weakly defended." The emperor's private agent adds to this:—"Before the supporting troops of our allies have been able to oppose any resistance, they penetrate, in numbers, within the parallel; spreading themselves in the communications, and making their way into the rear of our left, they take it in flank with a most murderous fire. It is at this moment that our losses are the greatest;" but appends the compliment—"On two other extreme points the enemy has rushed upon the English intrenchments. For a moment he clears them, but meets an obstinate resistance, which he vainly tries to overcome. Our brave allies have recaptured their position, of which it is impossible to dispossess them. The Russians, at length repulsed, after a violent struggle, are at this point obliged to retreat."

The despatch of Lord Raglan shows that, had the French been able to maintain their position, the British would not have been endangered, and that the greatest peril the English sustained resulted from their generous efforts to give support to their allies. Throughout this work all justice has been done to France, and all praise accorded to her braves, but, except in the mere matter of hard fighting, French writers upon the war, and French officers of distinction, have shown a disposition to run down their allies in a quiet but effectual way, where justice and truth, not to say kindness, demanded a different course.

*Before Sebastopol, March 24.*

MY LORD,—On the morning of the 22nd, the French troops in the advanced parallel moved forward and drove the enemy out of the rifle-pits in their immediate front, but nothing of any importance occurred during the day. Early in the night, however, a serious attack was made upon the works of our allies in front of the Victoria Redoubt, opposite the Malakoff Tower. The night was very dark, and the wind so high that the firing which took place, and which was very heavy, could scarcely be heard in the British camp; it is therefore difficult to speak with certainty of what occurred from anything that could be heard or observed at the moment. It appears, however, that the Russians, after attacking the head of the sap which the French are carrying on towards the Mamelon, fell with two heavy masses on their new parallel, to the rear of which they succeeded in penetrating and momentarily possessing themselves of it after a gallant resistance on the part of our allies. Having broken through, they passed along the parallel and in rear of it, until they came in contact with the troops stationed in our advanced parallel extending into the ravine, from the right of our advance, where it connects with the French trench. The enemy was here met by detachments of the 77th and 97th regiments, forming part of the guard of the trenches, who, although thus taken suddenly both in flank and rear, behaved with the utmost gallantry and coolness. The detachment of the 97th, which was on the extreme right, and which, consequently, first came in contact with the enemy, repulsed the attack at the point of the bayonet. They were led by Captain Vickers, who, unfortunately, lost his life on the occasion;

and I am assured that nothing could be more distinguished than the gallantry and good example which set to the detachment under his command. The conduct of the detachment of the 77th was equally distinguished and the firmness and promptitude with which the attack in this part of our works, was met, were in the highest degree creditable to that regiment. These troops were under the direction of Major Gordon, of the Royal Engineers, who was wounded on the occasion so severely, for some time, I fear, to deprive the army of the benefit of his valuable services.

The attention of the troops in our advanced works having been by these transactions drawn to the right, the enemy took occasion to move upon, and succeeded in penetrating into, the left front of our right attack, near the battery where two 10-inch mortars have recently been placed. They advanced along the works until they were met by a detachment of the 7th and 34th regiments, which had been at work in the neighbourhood, under the direction of Lieutenant-colonel Tylden, of the Royal Engineers, who promptly made them stand to their arms and led them with the greatest determination and steadiness against the enemy, who were speedily ejected from the works and fairly pitched over the parapet, with but little or no firing on our part. Lieutenant-colonel Tylden speaks in the highest terms of the conduct of his troops on this occasion, and particularly of that of Lieutenant Marsh, acting-adjutant of the 33rd regiment, whose services and activity throughout the night were very useful to him. Captain the Hon. Cavendish Brown of the 7th, and Lieutenant Jordan, of the 34th regiment, were unfortunately killed in this attack, after displaying the most distinguished gallantry, and Lieutenant McHenry, of the former regiment, was wounded, but I hope not very severely. Lieutenant-colonel Kelly, of the 3rd regiment, who commanded in the trenches, is, I regret to have to add, missing. The French, in retiring from the advanced parallel upon their supports, speedily rallied and fell upon the enemy, whom they repulsed with great loss, and followed so far up towards the Mamelon that they were enabled to level and destroy nearly all the "ambuscades" or "rifle concealments," erected along their front. I fear, however, that this success has not been accomplished without considerable loss on their part, although that of the enemy is much greater. Yesterday the whole of the ground between the posts of the two armies was covered with their dead, amounting several hundreds, besides those which they had undoubtedly carried off before daylight. In the meanwhile the enemy in great numbers found their way into the advanced batteries on our extreme left, which are not armed, and momentarily got possession of them. Working parties were, however, speedily collected and re-formed by Captain Chapman, of the 20th regiment, acting-engineer, and they at once drove the enemy out of the trenches with the utmost gallantry. Captain Magu, of the Royal Engineers, who was superintending the works, unfortunately fell into the hands of the enemy. I enclose the return of casualties to the 22nd inclusive. The wind is excessively high, but the weather is in all respects fine.

I have, &c.,  
RAGLAN

*The Lord Panmure, &c.*

To the description given in this despatch it is only necessary to add the detail by which the excellent outline may be filled up. On the point of the French line first attacked, the scouts descried the enemy's approach, and gave back noiselessly according to the orders that had been received. The service companies for the night, of three battalions of Zouaves, under the orders of Commandant Banon, lined the trenches, who remained silent as death until the cover of the parapets, until, at a given signal, they rose as one man just as the head of the Russian column approached near enough to be engaged, and before that manœuvre was attempted.

the whole head of the column was swept away by the volley. So sudden and terrible was the shock, that the enemy fell as if a mine had exploded, and cleared the space above it of every living thing. Before the Russians had time to recover from the shock another volley smote them, and the head of the column, which still stood without an attempt to deploy, was cut off as the corn before the reaper's sickle, or the grass before the mower's scythe. Instantly they deployed with loud cries, apparently of mingled astonishment, alarm, and ferocity; the dark masses extended rapidly to the right and left, the head of the sap was stormed, and the two wings of the assailing mass took the advanced work on either flank, where the fearless little Zouaves maintained their position against such unequal numbers. The French were surrounded, and there was no immediate help, and no way of immediate safety, but to cut through the assailing host with the bayonet. The Zouave bugle sounded the charge—it was responded to bravely, and the line of the enemy went down beneath the bayonets of the gallant little band. But they could not penetrate the dense mass of determined men before them, and fell back to their position under a galling cross fire from either flank of the redoubt. Again the trumpet sounded the charge, and the response of the few brave hearts was noble as before; a second time the front line of the enemy went down, but it was vain to persist in the attempt to pass through them—the little party fell back again to their position. Once more the trumpet rang out its clear and chivalrous blast, and a third charge, as desperate and sanguinary as those that preceded it, attested the courage and the energy of the invincible Zouaves. Still it is in vain, the mighty mass of the enemy rolls on in the darkness, happily ignorant of how few were opposed to them. At this moment no alternative to a gallant death seemed to remain for the soldiers of Africa, when Captain Montois, with two companies of *élite*, charged the enemy on the left flank of the work, clearing a passage through which the Zouaves retired upon their lines, pouring a deadly although a desultory fire into their confused and crowded foes. The Zouaves retired slowly, for Major Banon, an Irish officer in the French service, charged at the head of a battalion; he fell dead in advance of his men, pierced through the heart by a musket-ball.

On the left Colonel Janin of the Zouaves resisted the onset of the Russians, which was sudden and strong as a torrent. They overthrew the "gabionade" (a phrase given by our ally to a rifle ambushade formed with fagions and sand-bags) which the French had nearly completed, and which formed the head

of their sap. Colonel Janin had to make desperate efforts to preserve his position even for a little while; a musket-ball grazed his skull, and, while nearly blinded by the blood which flowed from his wound, a Russian soldier scrambling into the work, struck him with a huge stone in the face; having staggered back from the force of the blow, and with weakness from loss of blood, his men gave way, but recovering himself, he rushed forward upon the enemy, his men rallying by the example of their officer. Support arriving, a bayonet charge, close and bloody, in the darkness, decided the doubtful fray in favour of the Zouaves.

While these fierce contests raged along the right and left of the French positions, the British also fought and conquered an hour before their allies had cleared their front of the assailants.

Prince Gortschakoff succeeded in distracting the attention of the English outposts by causing a great excitement to appear in the Mamelon—drums beat, trumpets sounded, and loud shouts rent the air. During these proceedings, which appeared to the English on outpost duty as very odd and unaccountable, a powerful column of the enemy passed up the ravine from Sebastopol, and dividing, precipitated themselves upon the British right and left attacks. On the English right there was a newly erected mortar battery, where the Russians were for a time successful. The English sentries behaved with the greatest stupidity—they were at least as dull as they were indisputably brave. They had often been deceived all along the English line by the Russians answering the accustomed challenge in French. Whatever excuse there might be for this in General England's position, because of the contiguity of the extreme right of the French attack, there could be none on the right of the British line, until General Bosquet's corps manned the defences of Inkerman. It is to be presumed that in this case the English sentinels supposed that Bosquet's men had strayed across the ravine and stumbled upon their lines. It was a thing certainly possible; the French might in some secret attack, or stealthy reconnaissance, have got to the wrong side of the separating valley; but the probabilities were so few that the English deserve censure for this want of vigilance and soldierly alertness. When they heard the tramp of feet, they gave the usual challenge, and were answered, as the Russians *often before answered them in the surprises they effected*, by "Bono Franciz." The ruse was very stale, and one is tempted to ask concerning our sentinels, as the Bechuanas did concerning idolaters, when they first heard of them, "Had they any heads?" Hearing the clumsy phrase, "Bono Franciz," the English quietly allowed the

Russians to walk into the trenches, and were rather astonished when their guests began to bayonet those nearest to them. Then the English stood to their arms, but it was too late—the Russians were in, and not so easily sent out. The English might pronounce a great many Bonos in as bad French as that of the Russians, before one would leave who found the phrase such a convenient “open Sesame.” The steadiness of the British, thus surprised, was truly wonderful, nothing could surpass it—not even their dulness; they fought with a heroism never excelled; their obstinacy so amazed the Russians that they more than once paused as if in homage to the extraordinary valour of the few heroes who so undauntedly withstood them. The Russians were led by an Albanian, who, when next day he was seen stretched in death, was magnificently dressed. He was a chief, urged by his religious fanaticism to fight for Russia, believing that he was thereby fighting against all heretics and the yoke of Islam. He was a man of over fifty years of age, extremely handsome, and his garb resembled that of old Gaul. This man, like another of his class who had fallen in a previous sortie, had led many such attacks, and always with a courage worthy of his race. He was the first man to mount the parapet of the English mortar battery; the first to resist him was the Hon. Captain Brown, of the 7th Fusileers, who, breaking his guard, wounded him. The Albanian drew a pistol, and shot Captain Brown dead; but he fell immediately from the wound inflicted by the captain’s sword—when, turning to the magazine of the trench, the locality of which he knew, he fired another pistol into it; the ball did not penetrate the planking. The fallen chief then struck wildly about him with a large curved dagger, until the bayonets of the English pierced his heart, and extinguished his courage, energy, and fanaticism for ever.

Mr. Russell represents Mr. Brown as having been wounded in the trench, and afterwards found dead in advance of it, whither, although wounded, he had pursued the foe. Mr. Woods and Colonel Hamley declare that he was killed upon the spot by the pistol of the Albanian chief. It was at this moment that the Russian column, of not less than 8000 men, rushed upon the French parallel opposed to the Mamelon, driving out the Zouaves, after the bloody resistance already described. Having driven the French back, the attacking column divided; one division, turning to the right, took the English parallel that joined the French in the rear. D’Autemarre and Bazancourt represent the French as embarrassed by the weakness of the English defence, but this is disingenuous and untrue; it was because the French gave way (after a most desperate re-

sistance) that the enemy was able to penetrate to the rear of the English parallel. Here the Russians were received by the trench guard consisting of small detachments of the 77th and 97th (or Earl of Ulster’s own), who fought with inconceivable bravery and tenacity. The hero of the occasion was Captain Vicars, of the 97th. This gentleman was one of the noblest officers in the English army—

“Palman qui meruit ferat.”

He kept his men in hand with admirable skill and self-possession, although it was his first feat of arms. Seldom has any British officer, with so few followers, accomplished so much. Leading his men precisely at the opportune moment along the parallel, he charged the Russians in flank, exclaiming “On 97th!” “Follow me 97th!” They did follow, with the characteristic courage of Ulster men, and drove ten times their number of the enemy out. Vicars was first and bravest where all were forward and brave. Three Russians resisted his course—he was at the moment too far in advance of his men—two of them fell by his sword almost instantly; he fought like one inspired; the third fired into his side, and he fell wounded; he rose again—advanced upon the enemy—cleared the parapet—pursued them, and at last fell dead, pierced with three bayonet wounds in the breast. Never died a nobler soldier. He was a man of the most consistent and exemplary piety, and had spent the evening before the action in reading the Holy Bible and praying with his men. They were worthy of him; like him, most of them died to save their country in a desperate emergency. Never did men love an officer more dearly, or follow an officer more heroically. While this was going on Captain (Major) Gordon, of the Engineers, with a slight switch in his hand, stood upon the parapet encouraging the men, and hurling stones down upon the assailants. How this officer escaped with life is truly marvellous; he was wounded. Colonel Hamley says in the head and in the arm; Mr. Woods says he was wounded in two places; Mr. Russell says he received two balls, one in the arm and one in the shoulder; Lord Raglan represented him as severely wounded; his life was, one might say, miraculously preserved. After the death of the intrepid Vicars the Russians rallied, and swarmed into the battery in overwhelming numbers. They were probably in possession of it for a quarter of an hour, when the 90th, 34th, and 7th regiments who had been in advance of the battery to support the French, hearing the firing behind them, fell back. In the confusion and darkness no one knew what was best to be done, but Captain Vaughan, at the head of a party of the 90th light infantry, led his men stealthily

ong the covered way, and surprised the Russian flank. His men opened a galling fire of musketry, and then charged the enemy with a valour which rivalled that of the 97th. Here, from some cause, probably from the Russians not answering their fire (not having recovered from their surprise), a cry arose, "We are going into the French!" The result was that confusion ensued, and the little band was thrown into complete disorder by the Russians opening upon them a powerful fusilade. The moment was critical; Vaughan, like his predecessor, Vicars, resolved to sacrifice himself, and, flashing forward sword in hand, exclaimed, "Men of the 90th, follow me!" Sergeant Henry Clarke, Sergeant Bittle, Sergeant Essex, Corporal Caruthers, and fourteen men of the 90th, and a few of the 7th Fusiliers, charged the Russians with the bayonet. This little band fought like giants; they were giants in determination and strength. Most of them escaped with life, but covered with wounds. The parties of the 7th and 34th now arrived, and, most opportunely, a detachment of the Connaught Rangers, who seem to have gone astray from another part of the trenches; these parties shed against the enemy, and within the narrow space of the traverse and the battery hand to hand struggle took place of the most determined and murderous character. The Russians far outnumbered the scattered parties which here united against them. Colonel Kelly of the 34th commanded; he was wounded and carried off by the enemy. Lieutenant McHenry, of the 77th, had been disabled early in the action, when Captain Vicars distinguished himself so much. Colonel Tylor, of the Engineers, arrived and took the command, and skilfully organised the disjointed fragments of the victorious parties. The victory on the British right was complete. The conquerors were few, and never were conquerors covered with more glory—the living and the dead.

On the British left the struggle was less sanguinary. The detachments on duty were the 20th, 21st, and 57th regiments; they were not deceived like their comrades on the right by "Bono Franciz," to which reply they answered again by their musketry, and the enemy, daunted, fell back. Major Montagu, of the Engineers, was of too forward a courage, and fell into the hands of the enemy. Later in the night the assailants returned to the British left, the guards of which were this time not so much on the alert, supposing that danger had passed; the Russians, without firing a shot, dashed into the advanced batteries. Captain Chapman, R.E., rallied the British guard, charged the enemy with the bayonet, and in a short, clever, and decisive contest, cleared the works of them, except

their dead and wounded, who remained with the victors. Long after the English front was clear of the foe, their allies were plying the musket and the bayonet, and the whole of the British divisions were under arms and advanced to their support; the French, however, completed their own work, the enemy was beaten on all the line—beaten signally, and with terrible loss.

The loss of the British in this fierce night battle is stated in the despatch of Lord Raglan; that of the French will be found in the despatch of General Canrobert, who estimates the Russian loss much below what was afterwards discovered to be the fact:—2000 men of the Russian army were put *hors de combat*.

The following is the despatch of the French general, which contained, as enclosures, two orders of the day in reference to the preliminary combats for the ambuscades, which are appended:—

March 23.

MONSIEUR LE MARÉCHAL,—We had last night a very hard-contested, and, for our troops, very glorious combat, on our right works of attack, in front of the Malakoff Tower. At about eleven o'clock at night the enemy attempted a general sortie on that side, in which it appears that not less than fifteen battalions took part, which, according to Russian prisoners, were 1000 strong. These troops, divided in two columns, attacked *en masse*, and with savage yells, the head of the sap (*cheminement*) which we had undertaken in advance of our parallel to reach the ambuscades previously occupied by the enemy—ambuscades which it is our intention to join solidly together, to make a *place d'armes* of them. Thrice repulsed, and thrice brought up again to the attack by the exhortations of their officers, the Russians were compelled to abandon the occupation of this point, which was defended by companies of the 3rd Zouaves, commanded by Chef de Bataillon Banon. An obstinate struggle took place there, which has cost us dear, but with far greater loss to the enemy, in proportion to the masses brought against us. Colonel Janin, of the 1st Zouaves, commanded on this point, and fought personally with admirable energy. He was covered with blood from two wounds in the head, but which, happily, are not dangerous. The enemy, finding that their efforts, which only succeeded in overthrowing our gabion defences, which had not yet been filled up, were in vain, bore against the left of our parallel towards the Karabelnaia ravine, where a warm fusilade welcomed them, and prevented them from entering. They then suddenly threw themselves upon the right of the English parallel, succeeded in crossing the works, and took up a position in the rear of our left, which for a moment was exposed to a murderous cross fire. General D'Autemarre, on duty in the trenches, made the necessary dispositions with his usual energy and coolness. The fourth battalion of Chasseurs, coming up to the support, were ordered to charge in the ravine, and threw themselves valiantly upon the enemy, who, in an exposed position, and having suffered considerable loss, was driven back, to return no more. More to the left, the English, who had as yet been able only to assemble forces far inferior in number to their assailants, attacked the enemy with their habitual valour, and, after an obstinate struggle, drove him back. Still more to the left the English had been attacked by a sortie, which seemed to be a diversion, and which they soon mastered. *En résumé*, this operation of the besieged differed completely from all those hitherto attempted against our works. To effect it, and notwithstanding the strong force of the garrison, they had sent for two regiments (eight battalions) of fresh troops (regiments Dnieper and Ouglitch) from outside the walls. It was a sort of general attack upon our advances, and appears to have been well combined

for obtaining an important result. The importance of this failure of the besieged must be estimated, therefore, by the greatness of the object they had in view. The prisoners we have taken declare that their losses were enormous, and we think, in fact, that this disorderly combat, as all night combats are, and where the firing lasted for many hours, must have cost the Russians, considering the masses they brought forward, 1000 to 1200 men at least *hors de combat*. The ground in front of our parallels is strewn with the slain, and General Osten-Sacken has just sent to demand a suspension of hostilities, which has been granted, and is fixed for to-morrow, to pay the last duties to the dead. Our own loss, of which General Bosquet has only been able to send me as yet an approximate estimate, is considerable, and cannot be under 300 to 320 killed and wounded. We have especially to regret the death of Chef de Bataillon of Engineers Dumas, a superior and meritorious officer, who had a bright future before him, and who found a glorious death. He was killed by bayonet thrusts, after having already been wounded at the head of the works of attack. You knew him and esteemed him, Monsieur le Maréchal; your regret will be equal to our own. The same may be said of Chef de Bataillon Banon, of the 3rd Zouaves, who is missing and supposed to be killed. I will send you a detailed account of our losses. I have nothing to add to what I said in my last despatches respecting the health of the troops. It is satisfactory. I am informed that many families, under the pressure of other doubtless legitimate occupations, are astonished that no exchange of prisoners has as yet taken place in the Crimea, and address complaints and petitions to you on the subject. On this head I can only reply that, in concert with Lord Raglan, I wrote on the subject to the commander-in-chief of the Russian army, as far back as January last. Prince Menschikoff shortly afterwards sent a reply to the effect that he would refer the matter to his government, and that he would inform us of its ultimate decision. Thus matters rest, and I do not think it is for us to break a silence which they seem disposed to keep.

Accept, M. le Maréchal, the homage of my respectful devotion.

CANROBERT, *Commander-in-chief*.

P.S.—You will find annexed two orders of the day relative to previous combats.

#### GENERAL ORDER.

The troops of the second corps and Brunot's division, intrusted, under the direction of General Division Bosquet, with the new works of attack on the right, have vigorously opened the trenches in front of the Malakoff Tower. In the night between the 14th and 15th of March the troops under the orders of General Bisson, on duty in the trenches, did good service. Two companies *d'élite* of the 100th regiment of the line carried with much resolution the ambuscades of the enemy. Captain Champanhet's company of grenadiers especially displayed great energy in defending the post it occupied against very numerous assailants. Menaced, at daybreak, in its position by a strong force of infantry, it was supported by three companies of the Algerian Rifles, who, cheered on by the voice of Chef de Bataillon Gibou, threw themselves upon the enemy with the most daring courage, routed him, ejected him, and drove him back within the town. The commander of the Russian troops was seriously wounded; the second in command was killed. From the 15th to the 16th of March the troops under the orders of the general of the trenches, De Failly, acted with no less vigour in advance of the parallel in the attack and destruction of the Russian posts. The second battalion of the 3rd Zouaves, under the immediate orders of Colonel de Brancion, of the 50th of the line, threw itself upon the enemy with its usual impetuosity; and in this very interesting military episode, acts of courage most honourable to the performers took place. This *ensemble* of works, executed under the enemy's fire, and intermixed with combats in which, according to the enemy's own reports, the besieged always suffered considerable losses, does the greatest honour to the energy of the troops who have made their *début* in the difficult and laborious practice of siege operations. The engineer corps directed on the right

by Colonel Frossard has distinguished itself by its accustomed solidity and incessant activity, in which the Chef d'Escadron of the Staff Besson constantly took part, being charged with the laborious post of major of the trenches. On the extreme left of our works of attack the night, between the 15th and 16th of March, the besieged made a considerable sortie on the point defended by the company of the Voltigeurs of the 2nd regiment the Foreign Legion, Captain Bertrand, and by the company of the 10th battalion of Chasseurs, commanded by Second-lieutenant Bèdes. Warned by their view of these two companies calmly awaited the advance of the enemy till they were within a few metres of the parapet of the trench, when they poured in a volley almost point blank, then attacked them at the point of the bayonet without committing the fault of pursuing them too far. Notwithstanding the promptitude and care they evince in carrying off their killed and wounded, the enemy lost twenty-nine in our hands, and as many in front of the parapet on the ground traversed in their precipitate retreat. They lost in this affair at least one-third of the force engaged. This short and brilliant action does honour to the troops that fought it. They displayed coolness worthy of veterans, and with them I congratulate the Chef de Bataillon L'Hérillier, of the 2nd regiment of the Foreign Legion, whose skilful and decided dispositions were crowned with complete success.

The above general order is followed by a number of promotions in the order of the Legion of Honour.

#### GENERAL ORDER, No. 2.

The works executed by the first corps to complete the advanced parallel of our works of attack on the left, under difficult and dangerous circumstances, brought in relief the self-possession and solidity of the troops employed at them. The engineer corps has given here additional proofs of the vigorous tenacity which has earned, since the commencement of the siege, the praises and the esteem of the whole army. Captain Mouhaut, of Engineers, acting under the immediate command of Lieutenant-colonel Jourjon, has particularly distinguished himself, and I reward his ancient services by conferring upon him in the emperor's name the Cross of the Legion of Honour.

CANROBERT

On the 27th of March Lord Raglan wrote supplemental despatch, an armistice for the burial of the dead (to be noticed in another page) having in the meantime occurred; and on the 31st he concluded his despatches for the month, giving the latest official information so far home for that month:—

Before Sebastopol, March 27

MY LORD,—Adverting to my despatch of the 24th instant, I do myself the honour to state that the following officers have been brought to my notice as having distinguished themselves on the night of the 22nd and morning of the 23rd, in addition to whose names I have already submitted to your lordship:—Major the Hon. James Lyon Browne, of the 21st regiment, brother of the Hon. Captain Browne, of the Royal Fusiliers, who, it has already been my painful duty to report, fell upon this occasion; Captain Butler, of the 20th, and Captain Raman, of the 77th. I am happy to say that Captain Matagu, of the Royal Engineers, who was taken prisoner, was not wounded, and that Lieutenant-colonel Kelly, of the 34th regiment, who also fell into the enemy's hands, is not severely wounded, though he received some injury both in his head and hand. Major-general Eyre, a general officer of the trenches, highly eulogises the dispositions of Lieutenant-colonel Kelly, and laments the loss of his services. The major-general also speaks in the warmest terms of the conduct of Lieutenant-colonel Tylden, Royal Engineers, who received a contusion, which, however, I am glad to be able to assure your lordship, does not incapacitate him from continuing his exertions and displaying those qualities which render him so valuable an officer. There was a suspension of hostilities

s for about three hours on Saturday for the purpose of trying those who had fallen in the late encounters, and was evident, from the numbers of bodies of the enemy of the French, to whom the last sad offices had to be paid, that the loss sustained both by the French and the Russians had been very severe, particularly that of the latter. Some French, too, were found lying close to the Mamelon—a proof that their gallant spirit had carried them up to the enemy's intrenchments. Nothing of importance has since occurred. The siege operations continue to progress, and during the last two nights the interruption from the fire of the enemy has been inconsiderable. The enemy are very assiduous in the improvement of their defences, and in the establishment of a trench in the front of the Mamelon, towards which our army is advancing by serpentine sap. The weather continues very fine, and the appearance and health of the troops are manifestly improving. Dr. Gavin, of the Military Commission, and Mr. Rawlinson, civil engineer, have arrived, and are earnestly applying themselves to the discharge of the duties they have undertaken to perform; and I will take care that they receive every assistance it may be in my power to afford them. I close the return of casualties to the 25th instant. The *Malaya* has arrived, and has been disembarking her stores yesterday and this day in Kasatch Bay. Since writing the above, I have received the official report that Captain A. E. Hill, of the 89th regiment, was severely wounded and taken prisoner last night while posting his sentries in front of the advanced trench on our extreme right. I have, &c.,

The Lord Panmure, &c.

RAGLAN.

*Before Sebastopol, March 31.*

MY LORD,—Since I wrote to your lordship, on the 14th instant, the operations of the siege have been continued, without any material interruption from the enemy, beyond occasional shots from guns and mortars, and the more constant firing of musketry from rifle-pits, which have occasioned, I regret to say, the casualties which your lordship will see in the returns I enclose. Captain A. E. Hill, of the 89th regiment, whom I mentioned in my despatch as having been severely wounded and taken prisoner, died, I regret to say, of his wounds, before he reached the Russian ambulance, as I learned last night from General Osten-Sacken, to whom I had written for information on the subject. He had gone forward with a view to place the sentries in front of our advanced works, as I stated to your lordship on Tuesday, but he unfortunately mistook a Russian for a French soldier, and, having challenged it in French, he was immediately fired upon, and brought to the ground. Early yesterday morning a fire was observed in the town of Sebastopol, which raged with violence for a considerable time, but how it originated I have not been able to ascertain. The enemy has made no movement on the side of Tchernaya. The railway continues to progress in the most satisfactory manner, and last night had nearly reached the top of the hill usually called the Col de Balaklava, and advantage has been taken of it to bring up large quantities of ammunition and stores.

I have, &c.,

RAGLAN.

The Lord Panmure, &c.

The following letters from the camp give a brief but effective picture of the feelings of those engaged, and present in their just light the heroic actions of Captain Vicars, one of the most gallant soldiers and excellent men who fell victims to the war. The description given by the national poet in his *Henry VI.*, would well apply to this good and brave soldier:—

Whilst any trumpet did sound or drum struck up,  
His sword did ne'er leave striking in the field."

*Camp before Sebastopol, March 23.*

"THE action of last night—I might almost glorify it by the name of 'battle'—has been

a glorious and decisive victory. It was Inkerman on a small scale—an attack in very great force, and on all points; and everywhere they were beaten back with vigour and heavy loss. I saw at least 300 Russian bodies lying on the field. We calculated that their loss must have exceeded 1200 men. The French lost 500, and the English four officers and about 50 men. Captain Vicars, of the 97th, was in the advanced parallel of our right attack, with a picket of his regiment. The enemy attacked the French lines close alongside where he lay; a ravine only separated them. They at first drove back the French; and part of them then turned to their right, crossed the ravine, and took our trench in flank. We were unprepared, and at first thought the advancing body was one of the French. But Vicars found out they were the Russians, and ordered his men to lie down, and wait till they came within twenty paces; and they did so. When the enemy was close enough, Vicars shouted, 'Now, 97th, on your pins and charge!' They poured in a volley, charged, and drove the Russians quite out of the trench. Vicars himself struck down two Russians, and was in the act of cutting down a third with his sword, when another man, who was quite close (for the coat was singed), fired, and the ball entered his uplifted right arm close to where it joins the shoulder, and he fell. The arteries were divided, and he must have bled to death in a few minutes. Thus his end was as peaceful and painless as a soldier's death could be, and nothing could have been more noble, devoted, and glorious than his conduct in this, his first and last engagement. He was universally beloved, and none can doubt who knew him that he is now in the presence of that great and holy God whom on earth he deeply loved, and earnestly and successfully sought to serve. Poor fellow! he chose the Psalms and lessons for the preceding day (the Day of Humiliation), and read the service, when several of us met together to worship God; all present must have noticed the fervour of his manner; little did we think that he was so soon to be numbered with the dead."

A letter dated off Sebastopol, March 24, says:—"On the 22nd the Russians made a heavy sortie in the night on both ours and the French trenches; they were repulsed with great loss, but we also suffered—nine officers and 100 men killed and missing, among whom is the colonel of the 29th—whether killed or missing is uncertain. On the same evening the town was set on fire by some of our mortars, which are doing great execution, and kept burning all night. The deserters still confirm the report of Menschikoff's death, saying he died five days after receiving the wound in his knee. Admiral Istomine was also killed

by a shell in the Malakoff Battery—the same person who was well-known to Sir Edmund Lyons, and who exchanged presents—‘a cheese for a deer,’—some time back. Summer is fast making its appearance. Thermometer often at 60 degrees, and the weather exceedingly mild. The Russian Captain Kowseloff, who was on board the *Agamemnon* some time, and was ultimately exchanged for Lord Dunkellin, was shot 48 hours after he had landed for having been captured drunk.”

One of the most painful episodes of this action was the wounding and capturing by the Russians of a Captain Létors de Crécy, of the French service:—“I was present,” writes an officer, “at the suspension of hostilities; and that is what I learned, from a Russian officer, who had been Crécy’s adversary. ‘The officer of whom you speak,’ said he, ‘has been well cared for by some of the Russian religious sisterhood. He has been able to write to his mother and wife. He was obliged to suffer amputation. He is a brave man. For a long time we fought against him hand-to-hand, and we were not able to take him prisoner, until, wounded several times, he fell exhausted; his strength failing to support his courage. He has, in me, a friend; and I make it a duty to watch over all that concerns him.’”

The following letter was directed to the Empress of Russia by the superior of the Greek Sisters of Charity concerning the fate of this officer:—“He had received several bayonet thrusts in the chest, and the head laid open by a sword-cut. He lived six days, and that struggle with death was really astonishing. He was very strong, and of a very robust constitution. He was placed in a separate room, and confided to the care of the mother Séraphine. The orders of the doctors were punctually followed, and we were much grieved when the latter declared to us that our patient had not much longer to live. On the last day, an hour before his death, I went to see him. He gave me his hand, asked after my health, and remarked that I was very pale. I could scarcely answer him; I immediately quitted the room. Mother Séraphine did not quit him, and was present at his last moments. To-day his interment took place. Our Russian priest said the prayers. A black coffin was made for him, and I with the mother Séraphine and two of our sisters accompanied him to the cemetery. The soul was saddened at the sight of this tomb, at which no relative was present. There, I thought of the letters he dictated to a French officer for his wife, his mother, and his sister. Involuntarily tears flowed from my eyes. I remained near the tomb until it had been filled. The cross of the Legion of Honour, and a few *bréloques* which he had upon his person, were sent to the French camp.”

Bazancourt adds, “Directly after the death of the captain, a flag of truce brought a little packet, upon which was written, ‘Circ of Honour of Captain Létors de Crécy, and different objects which had belonged to him. This little packet was given to Colonel Raoul, major of the trenches of the left attack, who, during the interviews of the flags of truce took place; and was immediately sent to headquarters.”

On the 24th a truce was agreed upon for burial. Mr. Russell states that the allied commanders requested the armistice: all the other authorities represent Prince Gortschakoff as having sought it. Mr. Russell describes as a two hours’ truce: all the other narrators of the event state it as having been for three hours. The truce, however, took place at a given signal, and the scene was one of considerable interest. The number of Russian dead found in and about the allied lines was very great, and the time was actively employed in removing them. Mr. Russell describes the appearance of the Russian slain as coarse and soldierly-looking; their shirts and feet (which were stripped by their conquerors for the sake of the boots) he declares to have been singularly clean. Mr. Woods says that many of these soldiers were soft and ruddy-looking, unlike English recruits, and that they were *extremely dirty*. Colonel Hamley agrees with Mr. Woods. All these gentlemen stood upon the ground during the truce, and converse with vanquished and victors. The French believed that the Russians sought the truce as *ruse de guerre*, and therefore had the trenches well guarded, and the guards well supported.

It had been a matter of surprise the previous night that the mortars in the British mortar battery had not been spiked, as the Russians were so numerous, and so long in possession of that battery after their first successful attack. The mystery was cleared by the discovery having been made that the party who seized the battery had no spikes; for at some distance in front of it an Albanian was found dead, holding the hammer and spikes which had been intended for this purpose. Near him were several Greek civilians lying among the slain—volunteers for their faith, which they believed to be concerned in the war. The allied officers had a good opportunity of seeing Sebastopol during this truce; and the Russian officers slyly informed them they would never have a nearer view of it, except as prisoners. During the truce the opposing troops mingled as on neutral ground. The Russian officers made some attempts to draw the French and English common soldiers into conversation, in the hope of thereby gaining some knowledge of the state of things in the camps. A French soldier was asked if the allies were not suffering

from want of food; but he invoked heaven and earth to support his assertion that the armies had the greatest abundance supplied by the fields. His vociferations and earnestness staggered the incredulity of his interrogator, who was surprised to hear that the invaders were in such good circumstances. Another of these inquisitive gentlemen asked an Irish soldier, in a sort of confidential tone, how many men he did duty in the trenches at night, intimating his own knowledge of the very reduced state, numerically, of the British forces. Pat, looking about him knowingly, as if afraid of being caught in giving information to the enemy, whispered, "About 7000, your honour, does duty every night in the trenches, and a *wake* covering party of 10,000." The Russian, delighted with the ready wit of the poor fellow, told the French and English officers how well he had been answered. The allies were much struck, as they retired from this friendly intercourse, by the distinctness with which their works could be seen from the side of the enemy, while from the highest ground in the allied rear, their own works, or the enemy's, could be but imperfectly seen. A number of French were found dead within the enemy's lines, whither, in their too forward valour, they had pursued the flying foe.

In narrating the course of the action, the fall of an Albanian chief has been recorded. Mr. Woods, who saw him lying where he fell, thus describes his appearance among the slain:—"At the left end of this work was the little mortar-battery. Several broken Russian firelocks were here; and between the mortars, in a row, lay some eight or ten Russian corpses, with their little round caps laid over their faces. In the corner several blood-stained stretchers leant against the parapet. Captain Chapman, R.E., was here, with one or two artillery officers; and behind, where the little group stood chatting, lay the body of the Albanian chief, who had led so many sorties against the English. He was that of a man in the prime of life, well formed and muscular. His weapons were gone, and the body had been partially stripped. The jacket was open, and showed three deep bayonet-thrusts in the chest, and the healed scars of two former wounds were plainly visible. The countenance had a horrible expression: the blood which had flowed from the mouth had dried upon it; the eyes were staring wide, and the rich black hair was matted and powzy. His flowing kilt, all torn and soiled, had been used as a kind of shroud, and partially enveloped the corpse. Outside the work, the dead lay thick, and just as they had fallen. About one hundred were there in all."

The same writer describes the Redan, and that fortification became afterwards such an important work against the operations of the

British in the two great assaults, it will interest our readers to peruse the description:—"On the left of the Malakoff, but projecting 100 yards in advance of it, was the Redan. This is now one of the most tremendous of all the Russian works. Its three faces have, in parts, double tiers of guns,—there being in this one battery alone, it is calculated, not less than 150 pieces of ordnance, some of them of the heaviest calibre used in warfare. This work, like the Malakoff, is also defended by a broad deep ditch, with an abattis on the slope of the glacis. From between these batteries a most admirable view could be had right down into the town behind. Even with the naked eye everything might be seen quite distinctly; but, with a good glass, a minute examination could be made."

Mr. Woods could see no signs of injury done to the town by the six months' cannonade; but Mr. Russell, Colonel Hamley, and others, bear a different testimony: the point of view from which it was regarded by the different observers will probably explain this diversity.

The British officers were astounded at the piles of shot, shell, splinters, broken muskets, bayonets, swords, pouches, cartouches, bags, knapsacks, &c., which choked the way in different directions, so frequent had been the struggles in the front of the allied lines.

As soon as the work of burial was over, the Russians immediately opened fire—their riflemen from the loose stones and gabions built up before the quarry-holes near the Mamelon, and the artillery from the redoubt recently constructed there. The English replied with promptitude and effect, and the French quickly joined their cannonade.

Some obscure hints had been given during the time of the truce, about a great gun that would speedily open upon the English. The significance of these hints became apparent on the morning of the 25th, when, from the left inclosure of the Mamelon, an enormous cannon directed its fire upon the British right attack, No. 3 Battery—this battery had for several days done great mischief to the Russian works. The use of the electric telegraph in the camp, where it had just been completed, was now apparent, for a message was sent to the commander-in-chief by that medium, announcing that this tremendous cannon had been just unmasked, and asking for instructions. By the same medium the instant reply was flashed to the British battery from head-quarters, "Fight it." They did fight it, and beat it. A long 68-pound ship-gun, from on board the *Terrible*, was brought up—and the name, in this case, was prophetic, for the very first shot tore away the Russian embrasure, and left the gun exposed; the next shot struck the gun in the muzzle, splitting and dismounting it.

Within five minutes the electric telegraph answered the command "to fight it" by the message, "It has been fought, and is dismounted." What a novel scene in warfare is this! and how the scientific progress of the age was marked upon the rocky siege-ground before Sebastopol, as signally as when along iron roads, or beneath stormy seas, the electric wire gives its rapidly-conveyed intelligence!

On the 26th, Captain Hill of the 89th—mentioned in the last despatch from Lord Raglan—met his death in consequence of the ignorance which he, in common with the officers generally, evinced of the topography of the country. He had wandered into the Russian lines; the sentinels challenged, "*Qui va là?*" "*Nous Français,*" was the unfortunate answer; the Russian picket fired, and Captain Hill fell dead. A few men were with him, who retired upon their own picket; but on its advance, his body was not to be found. Lord Raglan much regretted his loss.

The Russians continued to work with the mattock and the trowel, and to erect earthworks and gabions, and repair damages, with a laborious energy never surpassed in any siege. They erected two new redoubts opposite the flanks of the British right, where a few nights before there were no appearances of any intention to erect new fortifications. As fast as they erected works they armed them; as fast as they armed, they manned and used them. On Mount Sapoun, to the right of the Mamelon, new works had also been thrown up, and partly armed, although the discharge of shells upon the spot seemed to render it impossible for men to work there. They also connected their rifle-pits by a trench, which they extended to the ravine described in the account of the action of the 22nd. In this manner an intrenched line was formed within eighty yards of the French, fortified with the rifle ambuscades, and covered by the guns of the Mamelon, while it defended the approaches to the Mamelon, rendering the storming of that work an extreme difficulty. Thus, at the end of March, was Sebastopol stronger than ever.

Information reached the British camp, by deserters, that the Russian soldiers were on half rations; that their pay was long in arrears; that all the superior officers of the navy were killed, and the sailors disheartened; and that the soldiers were murmuring at want of food and want of money: but so frequently did deserters bring similar tidings, which they supposed would please the allies, that it is strange any attention was paid to them.

At Balaklava Sir Colin Campbell was kept very much on the alert. Every day the new telegraph bore its flashing message to him from head-quarters, ordering out the troops in the early mornings, which were almost

as cold then as two months before. General Osten-Sacken, who was in observation of Sir Colin's position, showed caution, vigilance, and activity: his videttes and pickets constantly annoyed Sir Colin, while he rendered his own position extremely strong, and, in his own opinion, according to his despatches, impregnable.

April opened as coldly as March ended, and the sharp nights with which it began, like those in March, tried the health of the men, notwithstanding the great improvement in that respect which had been experienced. Indeed, the very first consideration in the English army was the health of the men—reinforcements came slowly, and the sick who went to Scutari seldom returned; the hospital there was still a pest-house, and despair alone seemed to remain for those who entered its pestilence-stricken precincts. On the 3rd of April, Lord Raglan wrote to the minister of war, sending inclosures from the inspector-general of hospitals, containing important information in connection with this subject. The following is the despatch and the reports of Dr. Hall. From these the reader will be able to glean for himself the true condition of the camp, as to the health of the soldiers, and the hope that might reasonably exist in that respect:—

*Before Sebastopol, April 3.*

MY LORD,—I have the honour to transmit to your lordship a letter of this date from Dr. Hall, enclosing a weekly return of the sick of the army up to the 31st ultimo. Your lordship will see, with satisfaction, that the general health of the army continues steadily to improve. I have also to submit to your lordship, with reference to your despatch of the 26th of February, the copy of a letter from the same officer on the question of accommodation for wounded men in the event of any sudden emergency occurring. As the ships referred to by Dr. Hall are constantly on passage, and might all be so at the time they might be wanted for the wounded, I proposed to Sir Edmund Lyons to have some sailing-vessels got ready for their reception; and accordingly, with his sanction, the following transports are under preparation:—*Orient, St George Pollock, St. Hilda, William Jackson, and Poitiers* and it is calculated that they will hold from 100 to 15 men each.

I have, &c.,

RAGLAN.

*The Lord Pannure, &c.*

INCLOSURE No. 1.

*Before Sebastopol, April 3.*

MY LORD,—In transmitting the weekly state of sick to the 31st of March, I have the honour to state—and I am sure it will be pleasing to your lordship to learn—the general health of the army continues steadily to improve; and, although fevers and bowel-complaints continue to prevail, they are both assuming a milder character, and the latter are of much less frequent occurrence. During the present week the admissions to strength have been in the ratio 3.93 per cent., and the deaths to strength 0.38 per cent. Last week the admissions to strength were 4.35 per cent., and the deaths 0.52 per cent., which make a decrease of 139 in the admissions, and 43 in the deaths during the week. Fever continues to prevail in some particular regiments more than in others; but I am hopeful change of locality will correct this. The comfort of the men are greatly improved in every respect, and is evinced by their cheerfulness and more healthy appearance. The rations are good and abundant, the men a

well clothed, and due attention is paid to the sanitary condition of the different camps. The supply of water is ample at present, and means are being adopted to insure it in future, by constructing new tanks, cleaning out those that already exist, and digging fresh wells. Indeed, so far as the physical wants of the men are concerned, I am of opinion the force is as well provided as any army can reasonably expect to be when employed on active service in the field. The hospitals are on a respectable footing, not crowded, and amply provided with all that is necessary for the comfort and welfare of the sick; and, if the casualties of war do not fill our hospitals, we may fairly look forward to have a diminished sick list in future. But, should the chances of war unfortunately reduce wounded, I calculate we shall be able to accommodate 1400 on shore, and arrangements are being made for the reception of between 500 and 600 on board ship, which I sincerely trust will be more than sufficient for our wants.

I have, &c.,  
J. HALL, Inspector-general of Hospitals.

To Field-marshal Lord Raglan, G.C.B., Commanding-in-chief.

INCLOSURE No. 2.

Before Sebastopol, March 23.

SIR,—With reference to the question of accommodation for wounded men in the event of any sudden emergency arising, I have the honour to state, for the information of the field-marshal commanding-in-chief, that, in addition to the accommodation which the regimental establishments of the divisions in front will afford—say from 250 to 300—I propose to occupy thirty of the new huts in rear of the third division, at present in possession of the 14th and 39th regiments, which would afford comfortable accommodation for 480; and as these huts are built on dry, elevated, clean ground, with water not very distant, I calculate thirty more of the huts might be given over in case of any very great emergency, and the troops put under canvas, which would afford room for 480 more. At the Sanitarium at Balaklava I calculate on accommodation for 200 wounded, in addition to the convalescents there at present, when the huts now in course of erection are completed. From the crowded state of the general hospitals at Scutari, the length of time they have been occupied, and the amount of fever that has prevailed in them lately, I am most unwilling to send wounded men there. I can possibly avoid it; but should necessity compel me to resort to that measure, the

Seyn .....	180

620

camers are already fitted as hospital-ships, and would be capable of transporting, with ease and comfort, 620 wounded. The hospital establishments at Smyrna, Rhodes, and Gallipoli, are full; and, as typhoid fever is reported to have made its appearance in the hospital at Smyrna, it would not be desirable to send wounded men there during its continuance. If compelled to form another hospital establishment out of the Crimea, I should suggest, from what I have heard, that Sinope be selected. I speak from hearsay, for I have never been there myself; but perhaps the commander-in-chief might be pleased to have it surveyed by some competent person, and a report made of its capabilities. Our accommodation for wounded, fixing minimum numbers, will therefore stand thus:—

Regimental hospitals .....	250 to 300
New huts occupied by the 14th and 39th regiments .....	480 to 960
Sanitarium at Balaklava .....	200
Additional .....	930
On board transports .....	620
	2080

I have, &c.,

J. HALL, Inspector-general of Hospitals.

To Major-general R. Airey, Quartermaster-general.

About that period General Forey's command of his division was accepted reluctantly by the French emperor. At first his majesty refused to accept the general's resignation, but the latter, feeling his honour hurt by certain reports affecting his loyalty raised in the Crimea, persisted in giving up his command, and the emperor appointed him to "the Oran division" in Algeria. The general did not retire from the Crimea until a later date.

It was determined by the allied commanders to renew the bombardment on the 9th of April; accordingly the labour of their soldiers for that object became incessant as the time approached, so much so that the French, whose numbers enabled them to have regular reliefs up to April, were now in the trenches three nights out of seven. From 12,000 to 14,000 men were on duty each night. The English still suffered dreadfully from over toil; the numerical strength of the English army was perilously and even preposterously small in comparison with their works; and the officers of engineers and artillery reported perpetually to the commander-in-chief their inability to execute works or work batteries without men. Still the English wrought on, and endured their fatigue without a murmur; they made a trench much nearer the enemy's works than they had yet approached, and the pickets were within sixty yards of each other, and frequently joked one another. It was strange that the Russians did not interrupt the progress of the British, although their shells burst perpetually over the working parties of the French. The enemy appeared to have inexhaustible *material* of war, and used heavy charges of powder beyond precedent in gunnery—the balls were driven with great force against the allies. The English suffered more from the balls than from the shells.

On the 1st of April there was a dangerous fire at Balaklava, but it was extinguished, chiefly by the exertions of the 71st Highlanders.

Major-general Scarlett left on the 2nd for England, summoned home by the dangerous illness of his wife. Lord G. Paget assumed the command of the cavalry.

The benefit of the railway began now to be felt in a new way: the sick and wounded soldiers were carried down by it to Balaklava in half an hour, without subjecting them to jolting, fatigue, or exhaustion. It was, alas! too frequently necessary so to employ it; yet not a man could be spared, for the total strength of the British army was but 22,000, and of them only 15,000 rank and file could be brought together for defensive or offensive operations. The English formed as to number a strong division of the French army,—this was their real position; but their lines and batteries

were very powerful, their artillery far superior to the French, and their fighting qualities unequalled by any army in the world. It could be said of them in every engagement, whether a combat or a battle—

“ Nothing could daunt, nothing dismay  
Those island warriors on that day,  
Through all the changes of the fray,  
No matter how the battle sped,  
Unbroken stood the line of red  
Majestically firm.  
The line of red that never yields,  
Victorious in a hundred fields !”

On the 2nd the French lost a very superior officer of engineers; he had previously been wounded by a rifle-ball, and the wound proved mortal.

On the 3rd a working party of the English effected a very important object, that of connecting by a trench the advanced parallels of the two attacks. Not a man was lost during this operation, although the men worked within range of the Russian riflemen, and of discharges of grape and canister from some of the Russian guns: it was moonlight—still more increasing the hazard; yet not a wound was received. As day dawned the Russians brought down two fieldpieces, but an English nine-pounder was opened upon them, and speedily silenced them. Several men were killed and wounded when daylight enabled the Russians to take surer aim.

On the 4th several officers and some of the staff had a very narrow escape: they were collected in a group near the British mortar battery, and several French officers joined them. A shell from the enemy fell into their midst, but did not explode until the officers, throwing themselves down, had rolled to a considerable distance; none of the party were hit, but a splinter wounded a French soldier fifty yards off. Most of the gentlemen hastened away as soon as the explosion took place; others remained, and were joking at the flight of their companions, when another shell fell amongst them, but all escaped, and became fugitives like their forerunners.

On the evening of the 5th the English threw two rounds of 13-inch shells from their mortar battery, each round cast three shells; the first fell in different parts of the Round Tower, and still further promoted the destruction of that dilapidated building. The effect could be distinctly seen from the British lines; a bystander thus graphically, and yet humorously, relates it:—“ Beams of timber, trunks of bodies, legs and arms of human beings, were seen to fly up in the air, and after a time a blaze of fire ran along a portion of the work, which appeared to spring from one of the enemy's mines. The second salvo must have been very destructive also. On the whole, the

result was so satisfactory to the feelings of a sailor in the battery, that he then and there expressed his decided determination to Captain Grant to reward him for his conduct with the entire use and possession of his whole ‘go of grog’ for that day.” There was heavy firing as the shades of evening fell; and during the night a party of British workmen accidentally encountered a party of Russians: a confused fight with picks and spades ensued, the English driving the Russians up towards the allied lines. At this juncture the Russian pickets advanced, and the English workmen were taken by them in the rear; the British picket advancing, the Russian workmen were placed in a similar predicament. The result, after a combat which frequently ebbed and flowed, was the defeat of the Russians with a loss of 150 men; the British loss was 37.

The 6th of April was signalised by a railway accident. A party of the 71st Highlanders went down to Balaklava from head-quarters, whither they had gone up for Lord Raglan's inspection; the train by its own momentum rushed down, rendering the breaks useless, and only for the skill and courage of the director of the train the casualties would have been heavy: as it was, one was killed, and a dozen or more wounded; several had to undergo amputations.

It was generally expected that the bombardment would open on that day; the French urged it, forgetting that the English could not be in the same readiness as themselves, engaged as they had been for days bringing up shot, shell, and other material of war to their allies.

The next day Lord Raglan sent home a brief despatch:—

*Before Sebastopol, April 7.*

MY LORD,—Some interchange of troops has taken place since I addressed your lordship on the 31st ult. Battalions and considerable convoys have entered the town, and other bodies of troops have been seen to leave the north side. The garrison has been constantly engaged in adding to the works, and particularly in connecting the rifle-pits in the immediate front of our right attack; and as we have pushed forward, the fire upon our advance has occasioned more loss, I deeply regret to say, than we have sustained since the sortie of the 23rd of March. Lieutenant Bainbridge, of the Royal Engineers, was, I lament to have to add, killed on the morning of the 4th of April, while in the execution of his duty, by the bursting of a shell. He was a young officer of much promise, and, though he had not long been here, he had acquired the esteem and good opinion of his brother officers, and his loss is greatly deplored by all. I enclose the return of casualties to the 5th inst.

I have, &c.,

RAGLAN.

*The Lord Panmure, &c.*

The convoys to which his lordship referred were immense trains of carts, loaded with provisions and various matters of utility in the defence—such as supplies of tools for the workmen, and Liege rifles with which to arm the

HERBERT GORDON EARL GORDON, BAR. OF GORDON, G.C.B., &c.

*From a Daguerotype by* [illegible] [illegible] [illegible] [illegible]

batteries of infantry, and the "equipages" of the navy, as the crews were called.

For the remaining days, until the bombardment, the Russians seemed to concentrate their attention on the Mamelon, which they fortified in great strength. The English brought up their fourth parallel within sixty yards of the rifle-pits; it was then intended to arm it with cohorn, to dislodge the Russian firemen from their ambuscades. By these and other batteries they prepared to clear the whole ground in front of the Redan and the Mamelon of those "concealments."

On the night of the 8th the French lost a lieutenant-colonel of infantry, a gallant man, killed by a rifle-ball. On the morning of that day Lord Raglan received instructions from home, which it was alleged compelled him to open the bombardment sooner than his own judgment approved. He ordered the artillery to be in readiness; they remonstrated, on the reasonable ground that the notice was too short. The orders were repeated and made empty; and the artillery, imperfectly prepared, after all, put forth wonderful efforts for the emergency. Too much at home had been expected from the services rendered by the railway, and the government seemed strangely to overlook the paucity of numbers in their army. The mortality from sickness had, indeed, diminished to one-fifth of what it had been when it had reached its highest point, but the men were still suffering from debility, the result of loss of sleep and overwork. It was determined, however, to renew the bombardment, an account of which is reserved for another chapter. As Sir John Burryne, upon whom so much of the responsibility of the plan of the siege rested, had retired from the army before Sebastopol before the second bombardment, and was no longer accountable for any engineering failures or successes, this seems an appropriate place to introduce his own justification of certain matters with which he was connected, and which were the subject of comment at home. In consequence of inaccuracies in a report of his evidence before the Sebastopol Committee, he directed a letter to the *Times*, which conveys substantially his evidence, and his vindication of himself in the matters to which public reference had been made:—

*Ordnance-office, Pall Mall, May 4.*

"SIR,—It has been generally stated by the press that my tone of voice in giving evidence before the Sebastopol Committee was so low and indistinct, that it was difficult to catch my expressions. It may have been partly owing to this defect of mine that in one of my articles of this day I am understood to have uttered sentiments and to entertain opinions which I do not acknowledge; but as your

desire is, no doubt, to allow the utmost latitude of discussion on matters of such importance as the proceedings of the army before Sebastopol, I feel great confidence that you will admit some explanations on my part, which I will make as concise as possible. I do not wish to enter into any controversy on the subject; my only desire is to offer an explanation of some points where my meaning appears to have been misunderstood. My reason for not commencing the construction of a road during the fine weather cannot in fairness be said to have been because I was 'in hopes we should take the place at once,' when I have constantly urged before the committee, that, from the first to the last, we had no means for constructing such a road. The censures that have been passed on 'the neglect in constructing a road between Balaklava and the camp' would seem to imply that it was no very difficult matter, but I would put it to any civil engineer to calculate what would be the requisite means for such construction, in a very short time, in soil of deep clay, for a distance of seven or eight miles. It certainly was late in the season before reflection could be turned to the advantages, among other remedial measures, that would be derived from a good road, and it was undoubtedly one of the most difficult to execute. The frightful failure in the loss of transport animals was the principal source of ill convenience as regarded the hardships of the troops. Of this I would give one instance:—The very small supply of mules furnished to the engineer field service having been carefully attended to, enabled that corps, with the Sappers, to be never without full rations throughout the winter; when warm clothing was available for them, it was brought up without delay, and nothing baffled them but the conveyance of the huts (which I would submit was not the most advantageous provision, if there had been time for full consideration); that conveyance certainly exceeded the capabilities of any reasonable amount of transport. I do not think that the period of my hopes and fears about the reduction of Sebastopol is clearly understood. After the battle of the Alma, and before we reconnoitred the place, I was in great hopes, from distant observation from the sea, and from common repute of its being an open town on the south side, that it would have fallen at once; but when I saw the natural strength of the position of which the enemy could avail himself, and the nature of the localities, so well adapted to resist a *coupe de main*, and witnessed the bold countenance which the Russians put on in consequence of that advantage, and the strength of the garrison which we had good reason to suppose was in the place, I at once altered my opinion. We were then, however, engaged in a struggle from which there was no escape; it

was necessary to do something, and while we were actively engaged in carrying on our endeavours, it would have been weak to abandon hope of success. Not long after the failure of the first cannonading in producing the desired impression, I certainly began to have misgivings that we should be detained a considerable time before the place, under many disadvantages. But no change in our plans could take place; it was still necessary to persevere in our efforts; we had no alternative. And here I must pause in my explanations, as the proceedings were so intimately connected with those of our allies, and I cannot presume to discuss any matters to which they have been parties. I would, however, observe that it was utterly out of the question to reduce the extent of our trenches, so as to withdraw men from that work, as has been often suggested, for the purpose of making a road. It was necessary to occupy the position; had we narrowed our limits, the Russians would have advanced theirs, and the actual effect of our retreating from our advanced position would have been to bring the whole of our camp under cannonade.

"The impossibility of pausing in our progress of active measures will account for many subjects of remark in attempting what appears to have been beyond our means. I would submit, however, that the want of the road, which has been so much pressed, was not of the vital importance that has been represented. The want of food—that is, to the extent of the authorised ration—was very slight. The warm clothing was brought up by degrees—I admit, with much labour; all this would, no doubt, have been greatly alleviated by a made road, but a good supply and due maintenance of transport animals (without which the best road would have been useless) would have been of more value, and that essential want has arisen from defective equipments and organisation. If great fault is to be found, I think it should be attached to those defects. To retire to

Balaklava was utterly impossible, and the other alternative of taking the field was a impossible by the British with their very small force. Turks or other natives for work were proved to be unavailing. 500 Turkish soldiers (by far the best native labour at our disposal) under the guidance of engineer officers, were employed several days in attempts to improve the road, but they were found quite inefficient. They could make no impression on the deep compact clay of which the country was composed, and Lord Raglan at length ordered the work to be discontinued. Much censure has been cast, as I think, most unduly, upon Lord Raglan. With regard to the operations, his lordship having done me the honour to place much confidence in my opinions, I am quite willing to take as large a share of the responsibility on that head as a subordinate officer can presume to do. The faults of equipments and organisation in several essential departments could not possibly be rectified by him in the midst of his difficulties. The example of the Duke of Wellington has been quoted, but it will be observed that even his wonderful talents could only be exerted in remedying these evils at some quiet time, after his army had suffered by the evil. Every one who knows Lord Raglan intimately must be sensible of his resolution, his ability, his unceasing labour, and his most anxious feeling for the welfare of the troops. I will acknowledge that I have met with great consideration, and even personal kindness, from his lordship, for which I am deeply grateful; but, while that consideration would prevent me, under any circumstances, from joining in any direct or indirect attack upon him, I hope I may have credit for truth in declaring that neither would I enter into any praise of him on that account that I did not most conscientiously believe to be correct.

"I have the honour to be, &c.,

"J. F. BURGOYNE,

"Lieutenant-general

## CHAPTER LXXV.

NAVAL OPERATIONS IN THE BLACK SEA, AND THE SEA OF AZOFF, IN THE OPENING WINTER MONTHS, AND THE SPRING OF 1855.

"Oh for a lodge in some vast wilderness!  
Some boundless contiguity of shade,  
Where rumour of oppression, and deceit,  
Of unsuccessful, or successful war,  
Might never reach me more. My ear is pain'd,  
My soul is sick with every day's report  
Of wrong, and outrage, with which earth is filled.  
There is no flesh in man's obdurate heart—  
It does not feel for man—the natural bond  
Of brotherhood is severed as the flax,  
That falls asunder at the touch of fire!" COWPER.

IN entering upon the war with Russia, we were especially vainglorious of our fleets, which, up to the spring of 1855, had scarcely

effected anything that was expected of them. If it be said in reply, that they effectually blockaded the Russian ports, we affirm the

ven this, which would seem to follow as a matter of course from their presence in the unprotected seas, was not accomplished. The trade of Russia had not materially suffered—Odessa was still a *point d'appui* for the Crimea, and the Danube was still under the control of Russian forts and gun-boats. The horrible butchery of Sinope had, in consequence of our want of maritime vigilance, an ominous effect on our disadvantage. Nothing had been attempted by our naval forces in the Sea of Azoff. In the Pacific, Russian ships eluded our cruisers, and Russian forts repulsed our squadrons. A power confessedly inferior in maritime resources and character to either of our Western enemies, kept their fleets at bay; protecting one navy safely within her belted harbours, and sinking another with her own hands, as a successful obstruction to the attack of its rivals upon the city that sheltered it. The commercial navy of England was a matter of as much pride as her military navy; what our ships could carry was almost as much a theme of boasting as what our ships could destroy. Never was boasting more foolish and empty. Our transport service was the world's wonder for its disorganisation, dirt, and delay; and the efforts of private firms, however well-directed, were abortive under the general mismanagement. There had been hardly any exception to the waste, extravagance, business incompetency, stupidity, and corruption. Never did men act a more unprincipled and reckless part than the officers, superior and subordinate, in all the civil departments of administration in the late campaigns. Dr. Hamilton, in his sermon on the Fast Day, put it admirably to his hearers when he said (we do not quote his exact words), "That we generally believed our soldiers, after a forty years' peace, would be found inefficient, while our material organisation would effect wonders; but the reverse had been the case: our army, about which there was no boasting, did everything men could do, while the departments concerning which we were so full of self-congratulation had humiliated and disgraced us." Our French neighbours were considered the first military engineers in the world; we went to school to them, literally, in such matters. The subjugation of fortresses, or the defence of them, was French work *par excellence*; yet here they also especially failed, where they were most vainglorious; and French engineering was long and ignominiously baffled before Sebastopol by the barbarians whose military science France so much despised. It is likely that no war, except the invasion of Russia by Napoleon I., and the Spanish Armada against England, had ever been undertaken with so much boasting; and never, by Providence, since the days of the destruction

of Sennacherib, was boasting more sternly rebuked, excepting in the instances already named.

Both in the Baltic and the Black Seas the incompetency of the Admiralty to direct the navies of England was signally displayed. In the beginning of 1855 the hopes of the country were considerably excited in connection with naval matters; it was believed that with the winter would terminate the inaction of the fleets, and that the year 1855 would be one of naval glory.

During the winter nothing could be effected in the Black Sea of an effective character. The first intelligence of any activity came from a Russian source, and was quoted by a French paper as follows:—"A letter dated Theodosia, the 20th of December, transmitted via Odessa, speaks of the appearance of a British steam-frigate there in the bay on the 18th ult., at eleven in the forenoon. It was doubling the cape, and steering in a northerly direction. This was the first enemy's cruiser the inhabitants had seen since the 28th of July. It was followed shortly after by a second steamer. The frigate lay to five versts off the town, probably for enabling its consort to join it. At last both were alongside of each other, and the last comer furled her sails. After remaining stationary for some time both stood towards the east, they then wore round to the left, and steered along the coast before the town. They were both three-masted screw vessels, sailing under the English flag, but the second ship was a smaller steamer than the frigate. In the latter there were twelve port-holes for guns, but half of them were closed. The smaller steamer was black, and had mortars on deck. About two o'clock they approached the batteries, but were received with a salute of solid shot, upon which they put off to sea in great haste. A little while after they came into the bay again, lay to before the batteries behind the quarantine, opened their fire, which lasted perhaps for about an hour, and then returned to the offing, where they remained in sight till it was dark. The cannonade (says the Russian writer) did us no injury whatever, although some of their shots came from 36-pounders, and others were 12-pounder shells. One bomb, weighing eighty pounds, was found near the batteries, and it had not exploded. The enemy came near us. It seemed as if he thought the town was defenceless; but, in fact, all our towns near the shore, without exception, are defended by strand batteries."

During the winter of 1854-55 it was impossible for the admirals to do more than remain in observation of the enemy's coasts and harbours; and this was often attended with great danger, in consequence of the stormy weather which prevailed. Perhaps there is no

sea so motionless and beautiful in calm weather as the Euxine, and none is buffeted more fiercely by the storm; the poet's lines to the ocean are more appropriate to it than to any other sea:—

"Yet most I love thee, when, from low brow'd cave  
I watch, as sheds the moon her golden path,  
That leads to heaven across thy slumbering wave;  
But I abhor thee when, in senseless wrath,  
Thou swallowest up the gentle and the brave,  
In sight of home, and friends, that throng to save."

The vessels which performed the duty of watching the enemy's ports were:—

The *Moniteur* contained the following notice of some of the earliest signs of any activity on the part of the navy of our ally:—"Admiral Bruat, in order to ensure an uninterrupted

supply of provisions to the French troops, has just decided that, for the future, all the stores that may be required from Constantinople shall be brought in steam vessels only. But that means there cannot well be any irregularity in the service. A little incident took place two days back in the Bay of Strelets, where provisions are frequently landed for the French army before Sebastopol. A transport vessel by some mischance went ashore within the range of the Quarantine Fort, and at once the batteries opened on her. But Admiral Bruat gave the necessary orders, and two steamers soon went in and got her off. Fortunately, notwithstanding the warm fire of the enemy, we had no one either killed or wounded. The two sorties lately made by the Russians were on the French works before Sebastopol, one in the night of the 19th of January, and the other in that of the 3rd. The allies have occupied the position of Kamara, opposite Inkerman, where the advanced guard of the corps of General Liprandi was established; these last named troops have retired to M'Kenzia. The service of the supplies of every kind, in provisions, clothing, camp equipage, &c., for the army, deserves notice for the activity displayed and the excellent results obtained. The following is a list of all the clothing sent which has arrived at the camp of the French troops in the East from the 20th of October to the 22nd of January:—23,562 camp blankets, 42,050 pairs of sabots, 30,720 pairs of socks, 100,000 pairs of worsted stockings, 34,400 flannel waistcoats, 62,806 pairs of gaiters, 72,275 great coats with hoods, 12,960 sheepskin coats, 84,504 pairs of worsted gloves, and 55,760 red worsted felt caps."

It was during the inactivity of the winter that our brave sailors, and their comrades in the French navy, heard of the votes of the British houses of parliament doing honour to their courage and persistent discharge of duty. On the 6th of January Admiral Dundas received the official communications at Malta:

*Britannia, at Malta, Jan. 6.*

MY LORD,—I have had the honour this day to receive your letter dated the 18th ult., transmitting the resolutions of the House of Lords expressive of the high estimation it entertains of the valuable services rendered by myself and by the officers, seamen, and marines of the fleet lately under my command.

Having, on the 31st ult., transferred my command to Rear-admiral Sir Edmund Lyons, I have transmitted a copy of your letter to him, and the resolutions of the House of Lords have been made known to the several officers who were serving under me.

I have also, in obedience to the order of the house, forwarded to Admiral Hamelin the resolutions, thanking that officer and the French navy for their cordial co-operation in the various services in which the combined fleet have been engaged, and as Admiral Hamelin has also transferred his command, I have sent copies to Vice-admiral Bruat for communication to the French navy.

The high honour and distinction the House of Lords has thus been pleased to confer on myself, the officers, seamen, and marines of the fleet lately under my command, will be received by all with deep gratitude and respect, and I have to beg your lordship will be pleased to accept my sincere thanks for the generous terms in which you have conveyed to me the resolutions of the house.

I have the honour to be, my lord, your lordship's most obedient, humble servant,

J. W. D. DUNDAS, *Vice-admiral*.

During the session of parliament the Speaker acquainted the house that he had received the following letters from Sir Edmund Lyons, acknowledging the vote of thanks of the house:—

*Agamemnon—off Sebastopol, Jan. 30.*

SIR,—Having succeeded Vice-admiral Dundas in the command of this station, the honour has devolved upon me of communicating to Rear-admiral the Hon. Montagu Topford, and to the several captains, officers, seamen, and marines in her majesty's fleet in the Black Sea, the unanimous expression of the thanks and approbation of the House of Commons for the services rendered by them during the present war, and of communicating to them, so, the unanimous acknowledgments of the distinguished valour and conduct of those who have perished in the struggle, and the deep sympathy felt for their relatives and friends. All are deeply impressed with the honour conferred upon them. All are encouraged in the performance of their duty to their queen and country, and the seamen and marines more so, I believe, than on any former occasion, for the blessing of education enables them to appreciate better than their predecessors the thanks and approbation of parliament.

I have the honour to be, sir, with the highest respect and regard, your most obedient and humble servant,

E. LYONS,

*Rear-admiral and Commander-in-chief.*

*Agamemnon—off Sebastopol, Jan. 30.*

SIR,—I have the honour to transmit to you herewith a letter which I have received from Vice-admiral Bruat, who has succeeded Admiral Hamelin in the command of the French fleet, showing how highly the French navy is honoured and gratified by the thanks of parliament. I have the honour to be, sir, with much respect and regard, your most obedient and humble servant,

E. LYONS,

*Rear-admiral and Commander-in-chief.*

*Vaisseau le Montebello, le 21 Janvier, 1855.*

MONSIEUR L'AMIRAL,—Je transmets aujourd'hui même aux équipages de l'Escadre de la Méditerranée les remerciements publics qui leur ont été votés par les deux Chambres du parlement d'Angleterre. C'est un honneur digne et rare qui leur est décerné. Je l'accepte pour eux et pour le digne chef qui les commandait au début de cette grande expédition, comme une précieuse récompense de leurs services, comme le gage d'une alliance intime encore, et comme l'heureux augure de nouveaux succès.

Je vous prie d'agréer, Monsieur l'Amiral, l'assurance de ma haute considération,

BRUAT, *le Vice-amiral*,

*Commandant en Chef l'Escadre de la Méditerranée.*

*Rear-admiral Sir Edmund Lyons, Bart., G.C.B.,*  
*Commander-in-chief, &c.*

On receiving from Admiral Lyons the thanks voted by the two English houses of parliament to Admiral Hamelin and the French navy, Admiral Bruat issued the following order of the day to his squadron:—

VOL. II.

*Montebello, Jan. 21.*

OFFICERS AND SAILORS,—The army, by the voice of its chief, has, on more than one occasion, rendered justice to your courage and devotion. The British parliament now awards you the great and rare honour of public thanks voted unanimously by the House of Commons and House of Lords. Admiral Lyons has requested me to transmit these thanks to you, as also to Admiral Hamelin. I have accepted them for you and for the worthy chief who commanded you at the commencement of our great expedition as a precious recompense for your services, as the pledge of a still more intimate alliance, and as the happy augury of new successes. On the 15th of December, 1854, it was unanimously resolved, in the House of Commons and in the House of Lords, that the thanks of both houses should be given to Admiral Hamelin and to the French navy for their cordial co-operation with the fleet of her Britannic Majesty in the transport and landing of the allied forces on the coast of the Crimea and during the siege of Sebastopol. Vice-admiral Dundas was charged to convey that resolution to them. This order is to be posted up at the batteries, and read to the crews at muster-roll.

BRUAT,

*Vice-admiral, Commander-in-chief.*

Although so powerful a fleet was supposed to exercise due vigilance during the winter, it was painfully obvious that proper precautions had not been taken until an advanced date in January, as the following document reveals:—

*Admiralty, Jan. 22.*

The following telegraphic despatch has been received from Rear-admiral Sir Edmund Lyons:—

“Being informed that considerable consignments of munitions and contraband of war have taken place from neutral ports of the Mediterranean to those of Odessa and Kertch, the admirals of the English and French squadrons have determined on establishing an effectual blockade of the principal Russian ports in the Black Sea, and to notify the strict enforcement of this blockade from the 1st of February, 1855. Steps have been taken to provide for an efficient force being, prior to that date, stationed before the principal ports which are to be blockaded, furnished with due authority for the purpose in the names of the two governments.”

In the increased activity which appeared at the British military head-quarters at the close of January, the admiral energetically co-operated, as his despatch of the 27th showed:—

*Agamemnon—off Sebastopol, Jan. 27.*

SIR,—I have the honour to report, for the information of the lords commissioners of the Admiralty, that since my last general letter, of the 23rd inst., the weather has been particularly fine. The health of the army has been much benefited by the change. A good deal of progress has been made in hutting the troops and distributing the clothing which has been so liberally sent out from England, so that the men express themselves as being comfortable.

2. The health of the fleet and of the Naval Brigade is excellent. The men are well supplied with fresh meat and vegetables, and also with oranges, sent from Malta by Rear-admiral Stewart.

3. The fire from the batteries of the allies has increased during the last week, and that of the enemy has not slackened. New guns have been mounted in our batteries during the last four days.

4. On the 24th inst. I passed the day at Balaklava, to superintend the service going on there, and to make inquiries and examine into matters connected with the duties of the port and the transport service. I met Lord Raglan there by appointment, and we made some arrangements which will, I trust, have a beneficial effect.

I have, &c.,

E. LYONS,

*Rear-admiral and Commander-in-chief.*

*To the Secretary of the Admiralty.*

The services of the Naval Brigade had given great satisfaction in England, and her majesty bestowed liberal rewards, which, it may be truthfully said, gave the gallant fellows more pleasure because of the approval of their conduct thus signified by their queen and country, than from any professional benefit derived.

The following are the terms in which the intentions of her majesty, with reference to the Naval Brigade, were announced to that meritorious corps:—

*Camp, Naval Brigade, Feb. 12, 1855.*

It is with feelings of pride and pleasure that I communicate the following copies of letters from Rear-admiral Sir Edmund Lyons, Commander-in-chief, and which announce the numerous promotions the lords commissioners of the Admiralty have conferred on the officers of the Naval Brigade. I take this opportunity of thanking those officers for their gallantry and untiring energy in the execution of their duty, and I feel certain that in congratulating them (to use the words of the commander-in-chief) on their richly-deserved promotions, their good fortune will be considered by the remaining officers and seamen as a proof of the deep interest taken in our conduct and success by our gallant commander-in-chief, and that it will excite them to increased exertions and zeal in her majesty's service, with the certainty of meeting their due reward from the lords commissioners of the Admiralty. The senior officers are also requested to take this opportunity of pointing out to the crews of their respective ships the deep interest taken in their welfare by the commander-in-chief, as well as by the lords commissioners of the Admiralty, and also by our gracious sovereign Queen Victoria. Her majesty has conferred a medal on every sailor landed in the Crimea, and a clasp for such as were present on the 5th of November, 1854, whose conduct shall have been good; and has, in like manner, conferred a medal and clasps upon the nearest relative or representative of such as may have fallen. The lords commissioners of the Admiralty have granted extra pay to all petty officers and seamen of the brigade, as well as a liberal supply of warm clothing (gratis), as already communicated to them, and the commander-in-chief has further notified that the services of the petty officers and seamen are duly appreciated by the Admiralty, and will meet with further reward. I consider this a fitting opportunity of also pointing out to the brigade the deep sympathy felt for our privation and services by our countrymen and women, who have made private subscriptions for the use of the brigade, such as warm clothing and other comforts, as their means permitted.

STEPHEN LUSHINGTON,  
Captain commanding Naval Brigade.

*To the Officers of the Naval Brigade.*

(MEMORANDUM.)

*Agamemnon, Sebastopol, Feb. 12, 1855.*

It is with no small feelings of gratification that I enclose for your information a copy of a letter addressed to the lords commissioners of the Admiralty, and of the reply thereto which I have just received, and I request that you will convey to the officers of the Royal Naval Brigade my sincere congratulations on the promotions they have so richly deserved:—

“Your own meritorious services, as well as those of the captains under your immediate command, will no doubt receive their due reward, and I request you will inform the petty officers and seamen that their services are duly appreciated by the Admiralty, and will also meet with their reward.”

E. LYONS,

*Rear-admiral and Commander-in-chief.*

*To Captain Lushington,  
commanding the Naval Brigade.*

The following accompanied a return of officers who had been or were then employed with the army in the Crimea:—

*Agamemnon—off Sebastopol.*

SIR,—In compliance with the directions contained in your letter of the 15th ult., I beg leave to transmit, laid before the lords commissioners of the Admiralty, a list of all officers who have been or are now employed on shore with the army before Sebastopol, showing the period they have been so employed.

2. As I could hardly consider myself in a position to make observations as to the merits of each officer directed Captain Lushington, who has commanded the brigade ever since its formation, to do so, and their lordships will observe that the remarks against each name made by him; but I may be permitted to say that the zeal, efficiency and gallantry of the Naval Brigade have been the theme of universal admiration. Nor have they been less conspicuous for the manly and cheerful manner in which they have borne up against the sickness, exposure, and privations incidental to a life in camp at sea.

3. Vice-admiral Dundas has no doubt brought to the notice of the lords commissioners of the Admiralty the defatigable exertions of the commandant of the brigade, Captain Lushington, the chivalrous gallantry and zeal of Captain Peel, and the well-known merits of that talented officer, Captain Moorsom, under their lordships' favorable notice, and I would beg leave to call their attention to the fact that commanders Burnett, of the *Queen*, Hillyar, of the *Agamemnon*, have been with the brigade during the whole period, upwards of three months, during which time they may be said to have been continually under fire. Commander Borlase's meritorious conduct in the battle of Inkerman has been specially reported to their lordships. Commander Lord John Hay rejoins the brigade, where his valuable services and inspired leadership are highly appreciated.

4. Many of the lieutenants, mates, and midshipmen, as well as lieutenants of Royal Marine Artillery and medical officers, have been with the brigade from the first. Captain Lushington's remarks are so explicit that the lordships will have no difficulty of judging of the merits of every officer of each class; and I will only add that those who have been wounded bear a high character for their profession, and that no set of officers ever deserved their lordships' liberal considerations more than those who have served in the Royal Naval Brigade before Sebastopol.

I am, sir, &c.,

E. LYONS,

*Rear-admiral and Commander-in-chief.*

*The Secretary of the Admiralty, London.*

The blockade of the Danube was soon raised, and was a very close blockade kept up until the autumn, where in these seas up to the period of winter we write:—

*Foreign Office, March.*

It is hereby notified that the Right Hon. the Earl of Clarendon, K.G., her majesty's principal Secretary of State for Foreign Affairs, has received a despatch from Rear-admiral Sir Edmund Lyons, G.C.B., commanding her majesty's naval forces in the Black Sea, dated 12th of February, 1855, in which he announced that the lords commissioners of the Admiralty, in conjunction with Vice-admiral Bruat, commanding the French squadron in the Black Sea, he had, on and from the 18th of February, raised the blockade of the Danube, which was established on and from the 1st day of June, 1854, and which was notified in the *London Gazette* of the 13th of June, and which has since been duly maintained.

It is hereby notified that the cruisers of the allied fleet are, and will remain, stationed off the mouths of the Danube to capture any vessels laden with contraband war destined for the use of the enemy.

On the 11th of February a very general blockade of Russian ports was declared:—

*Foreign Office, March 3, 1855.*

It is hereby notified that official information has been received from Rear-admiral Sir Edmund Lyons, G.C.B., commanding her majesty's naval forces in the Black Sea, dated H.M.S. *Agamemnon*, off Sebastopol, February 11, 1855, that from the 1st of February last, "the mouth of the River Dniester, the Ports of Akerman, Ovidiopol, Odessa, all the ports situated between Ochakoff Point and Kinburn Point, including the Ports of Nicolaiëff and Cherson, the Rivers Bug and Dnieper; also the ports between Kinburn Point and Cape Tarkan, including the ports in the Gulf of Perekop, the Port of Sebastopol, the ports comprised between Cape Aia and the Strait of Kertch, including those of Yalta, Aloushta, Soudak, Kaffa, or Theodosia. The Port of Kertch, the Strait of Kertch, the entrance to and all the ports in the Sea of Azoff, including especially the ports of Berdiansk, Taganrog, and Arabat; the River Don, and also the ports of Anapa and Soujak, were strictly blockaded by a competent force of the allied fleets of France and England. That the ports of Eupatoria, Streltzka, Kamiesch, Kazatch, and Balaklava were, and are, and will remain open and free from all blockade until further notice; and it is hereby further notified, that all measures authorised by the law of nations, and the respective treaties between her Majesty the Queen of Great Britain and Ireland, and his Imperial Majesty the Emperor of the French, and the different neutral powers, will be adopted and executed with respect to all vessels which may attempt to violate the said blockade."

Soon after the declaration of blockade the allied admirals prepared for operations in the Sea of Azoff. Before noticing these proceedings it is necessary to give some account of this sea. It is connected with the Black Sea by the Strait of Kertch, formerly called the Cimmerian Bosphorus, from which, to the Biéloserai Spit, to the entrance of the Gulf of Azoff, into which the river Don falls, is more than ninety miles; from the entrance of the Gulf the sea reaches still farther about two-thirds of that distance; the whole extent from south to north being about 150 miles. From east to west, taken from Ieshtskoi Liman to Genitschi, the distance is not much less. The eastern shores are flat, and broken by lagoons; the western, or European coast, is formed by "the Spit of Arabat"—a long narrow neck of land which separates the Sea of Azoff from the inland waters called the Putrid Sea. The northern shores are broken into bays, which have narrow entrances, in consequence of currents caused by the waters of the Don driving sand across their mouths; the ground is sometimes elevated on this side, but never bold or picturesque. The southern boundaries are—the Strait of Kertch, by which this sea communicates with the Euxine, and on the European side of that Strait the peninsula of Kertch—on the Asiatic side the peninsula of Taman. The depth of its waters is at most fifty feet, and shoals skirt nearly the whole line of coast: its waters sink every year, rendering communication with the coasts by ships more and more difficult. The Putrid Sea, or "the Sivash," enters the Sea of Azoff at the Strait of Genitschi (or Yenitchi). The shores of this sea are several considerable towns, and all around corn is produced in

large quantities, constituting them the granaries of Southern Russia. Much blame was cast upon the fleet in England for not sooner penetrating that sea, and cutting off the supplies which the enemy derived thence, and which, obtaining from the Don, he husbanded on the European shores of Azoff, and near the Putrid Sea. There were, however, difficulties which were not understood then at home. Independent of the shallow waters along shore, and the want of gun-boats in the fleets during the autumn of 1854, which would have rendered operations within the sea difficult at any time, the Russians had obstructed the passage of the strait, as they did the entrance to Sebastopol, by sinking a double line of ships. During the winter that sea is entirely frozen over, so that large bodies of men may pass across the Strait of Kertch. As soon as the ice breaks up, a current gradually sets towards the Black Sea; and when later the Gulf of Azoff yields to the increasing temperature, and the Don is free, a powerful rush of waters bursts forth through the strait into the Euxine. Such was the case in 1855, as at other times; and so powerfully did the waters flood through the strait, that the sunken ships were swept into deep water, and before the Russians could sink others, the allied fleets entered and began their operations, which, during the summer, were attended with such important results.

There was a very general opinion in the English fleet that the Sea of Azoff was deeper, and that larger craft could approach its shores, than was the case. Several authorities represent the Spit of Arabat as being without wells, and the sea as affording fresh-water on the surface in the vicinity of the spit. The sea, all along the spit, from Genitschi to point Kayantis, is perfectly saline; there are wells of fresh-water, but frequently brackish, at the spots marked in the Russian maps, and in Wyld's map of the Sea of Azoff. The only parts of that sea where fresh-water is procurable is in the Gulf of Azoff, and there not until after passing the Crooked Spit (or Krivia), in the upper part of the Oukliant Liman, and at the edge of the Delta of the river Cuban in some places. The general impression in the English navy, that there was a nine feet channel from Tchongar Bridge to Genitschi, and a constant current running from Genitschi to Perekop, was thus confuted by Captain Sherrard Osborn, R.N.:

"1. If such a channel exists, why did not the Russians convey the provisions, corn and store lighters, which we found them unloading at Genitschi, up to the bridge, instead of disembarking the stores, and using waggons and arabas to convey them by land over that very bridge by a road which nearly doubled the distance? To get those lighters and small craft into Genitschi harbour they had to pass a bar,

whereon was never found more than 6½ ft. and often as little as 4 ft. 6 in. When that difficulty was surmounted, surely ascending a 9 ft. channel would have been easy work.

"2. I, with two intelligent officers and eight seamen, spent two days and nights trying to find a channel out of the wide marshes, improperly marked Putrid Sea, into the narrow part over which the bridge of Tchongar is thrown. We landed on the Tchongar peninsula, and stood within a few feet of their road; yet the deepest water we ever found in any part of that sea was 4 ft. 6 in., and for miles it was quite as much as we could do to get our light boats through sea-weed and slime. I believe there is 7 ft. or 9 ft. of water under the centre of the bridge, but there is either a bar or a most tortuous channel between it and Genitschi. That there is a space of water between the peninsular of Tchongar (at its northern part), and a point three miles west of Genitschi, few who have looked at it from a ship's masthead can doubt; and, indeed, we often saw Russian boats traversing it. With respect to the current always setting into the Sivash or Putrid Sea, we found it vary very much, and depend mainly upon the direction of the wind. An east wind would cause the water to flow into it from the Sea of Azoff, and raise the depth about two feet upon the bar; whereas with the lightest air from the westward, the current immediately turned and the waters fell.

"In the southern part of the Sivash, the wind, blowing from eastward, heaped the water up as it were on the western shore, and *vice versa*, the difference of depth at such times between the two coasts being, according to Tartar accounts, nearly two feet—a point difficult to determine, for the bottom of the Sivash slopes very gradually towards the centre; although, as your correspondent observes, the Crimean coast is everywhere abrupt, being indeed, the vertical edge of a steppe."

The first act of any importance on the part of the fleet was the blockade of Kertch, and the annoyance of the enemy there, in various ways calculated to harass and alarm. On the 22nd, the French vessel *Fulton* proceeded to the Bay of Kaffa, on the European shore of the Black Sea, near the strait; while Capt. Giffard, in H.M.S. *Leopard*, proceeded to the Asiatic coast of that sea, also near the strait. As the captain sailed thither, he observed large bodies of troops passing from Anapa to Taman. He steamed in, anchoring in 4½ fathoms water, and opened fire upon them, compelling them to deviate from their course. The enemy returned, bringing fieldpieces to bear upon the ships and boats. Being joined by the *Fulton*, both vessels opened fire upon the Russian troops, silencing the fieldpieces, and sending

destructive charges of shell among the Cossacks. A division of boats, under Lieutenant Graham landed their crews; and, after examining the place, and finding stores and barracks in dilapidated condition, and guns and munition which were intended to be landed by the enemy at Kertch, the lieutenant set about the removal of such as might be taken away, and the destruction of the remaining stores within the buildings. A sudden snow-storm rendered it impossible to execute this work, and unsafe for the boats' crews to remain on shore; Captain Giffard accordingly recalled them. The British and French commanders hovered about the place, vigilantly watching it; and, on the 24th, both the *Leopard* and *Fulton* rode in and shelled the enemy, who, although mustering 500 men, fled precipitately, without offering any resistance. They returned, however, as before, and placed field-batteries in commanding and well chosen positions, which threw an incessant discharge of shot against ships and boats. As their fire became somewhat formidable, the advanced their pieces, but the *Fulton* twice drove them from their positions, and the *Leopard* compelled them to abandon the most distant post from which their fire could be effective. The boats' crews then landed, and the place was soon in conflagration, by which seven large boats for carrying troops, two ranges of barracks, a provision store, and a small magazine were consumed, and ten new 50 cwt. 6-inch guns were captured. Not a man was lost by either ship, nor did they receive any damage, nor their boats, except the *Fulton*, which received a shot in her hull. The Cossacks literally fell in groups as they pushed down their fieldpieces, and as they retired from the advanced positions. It was a gallant little action, creditable to the sea-service of both the allied nations, and exceedingly useful in destroying the enemy's resources, interrupting his communications, and depressing his self-reliance. Sir Edmund Lyons, in sending home the report of Captain Giffard, highly complimented him, but not more than his skill and promptitude of action merited.

Royal Albert—off Sebastopol, Feb. 27.

SIR,—With reference to my letter of the 20th inst. reporting the highly creditable proceedings of the blockading squadron off Kertch, under the command of Captain Giffard, of H.M.S. *Leopard*,

I. I have now the honour to enclose copies of two letters which I have received from that active and intelligent officer, reporting his further proceedings; and of a third, having, in conjunction with H.I.M.'s steamer *Fulton*, captured and destroyed ten 50 cwt. 6-inch guns, a burnt seven large boats, two ranges of barrack buildings, also a quantity of military stores and provisions, near Boghaz, on the Cuban Lake, on the 22nd inst. And I leave to call their lordships' particular attention to the fact, that this gallant service was performed during weather which must have rendered its accomplishment exceedingly difficult; and that Vice-admiral Bruat can consider that it reflects the highest credit on Captain

Giffard, Captain Lebris, of the *Fulton*, and on the officers and men of both nations employed on the occasion.

2. The enemy appears to have lost a considerable number of men on the occasion, whereas no casualties have occurred on our side.

I have, &c., E. LYONS,  
Rear-admiral and Commander-in-chief.

To the Secretary of the Admiralty.

Inclosure reporting the capture of enemy's guns, and destruction of military stores.

*Leopard—off Kertch, Feb. 25.*

SIR,—I have the honour to inform you that on the 22d inst. H.I.M.'s ship *Fulton*, having gone to Kaffa to reconnoitre, I proceeded towards Anapa in H.M.S. *Leopard*, but on passing the Boghaz of the Cuban Lake, we observed numbers of troops crossing the passage in boats from Anapa to Taman, so I ran in, and anchored off the passage in 4½ fathoms. The troops had landed, but we opened fire on them, and drove them to the hills. I sent a division of boats, under Lieutenant Graham, to examine the buildings on the points, which proved to be guardhouses, barracks, storehouses, and stables, some of which were burnt, but, a heavy snowstorm coming on, I recalled the boats. Lieutenant Graham reporting he had seen some guns and other military stores, which he had not time to destroy, and which the enemy were transporting from Anapa to Kertch, I again proceeded there on the 24th inst., in company with the *Fulton*. A few rounds of shot and shell drove the Cossacks and other troops, 400 or 500 in number, to the hills; when the boats under Lieutenant Graham landed, and M. Lebris, in the *Fulton*, took up a position to the north-west, to check the advance of the enemy, who soon after brought some field-batteries on the hills, and opened a heavy fire of shot and shell upon the ships and boats. The very accurate fire of the *Fulton* drove them from two positions, and the *Leopard's* shell from a third, after which they retreated behind the hills. After three hours' work the boats returned, having captured and destroyed ten new and handsome 50 wt. 6-inch guns, and burnt seven large boats, two ranges of barracks and buildings, also a quantity of military stores and provisions. The *Fulton* received one shot in her hull, but I am happy to say no casualties occurred. The loss of the enemy must have been considerable.

I have, &c., GEORGE GIFFARD, Captain.

Rear-admiral Sir Edmund Lyons, Bart., G.C.B.

The squadron of British and French vessels cruising off Kertch made various little expeditions during March against the establishments on the adjoining coasts. Some of these might appear to be of no importance—so few casualties occurred, and the places attacked being so small; but in the aggregate there was a large amount of property destroyed—corn, ammunition, wood, fuel, naval and military *materiel*, and some fine pieces of ordnance. As an instance of these destructive attacks on a small scale, the demolition of the tower at Djimieta may be given. Lieutenant Armytage, of the *Viper* steamer, having on the early morning of the 5th March examined the mouth of the Cuban Lake, dispersed a small force of Cossacks—his shells falling among them, causing a considerable loss of men and horses. Proceeding to the south-east he took a Russian coaster, freighted with charred timber, corn, and various articles of less value. After a few hours' sailing he came opposite the tower, and, anchoring bow and stern 500 yards from shore, opened fire, killing or dispersing the few men who constituted the garrison, and destroying the

martello tower itself, without losing a man or receiving any damage to the ship. Near this were many valuable buildings, a barrack, store, and granaries, to the whole of which the boats' crews of the *Viper* set fire. Lieutenant Armytage's own report, to Admiral Lyons, of this promptly accomplished affair, was as follows:—

*Viper—off Kertch, March 8.*

I HAVE the honour to report, that I left this anchorage at 5.30 this morning, for the purpose of examining the mouth of the Cuban Lake. I arrived off there at nine, and observing a small force of Cossacks on the north spit, opened fire and dispersed them; then examined the lake in the whale-boat of this ship, but observing nothing of consequence, proceeded along the coast to the south-eastward. I had just previously taken possession of a small vessel laden with charcoal and other goods, which I have brought in with me, with three prisoners on board. I enclose you her papers, &c., as they may be useful to his excellency the commander-in-chief, and request your directions in reference to the prisoners. At 1.50 P.M. I arrived off the martello tower, at Djimieta, anchoring bow and stern at a distance of 500 yards from the beach, and at 2 P.M. opened fire upon the fort, dispersing the few Cossacks that remained. It is now my pleasing duty to inform you that I have effectually destroyed the fort, barracks, and granaries (having set fire to the latter), spiked and disabled the two guns, destroying the ammunition; and all, I am happy to say, without any casualty on board the *Viper*. I beg to bring under your notice the conduct of Mr. James Roche, second master, who commanded the landing parties; and Mr. R. Moss, master's assistant, who aided him in destroying the guns; both having performed their duty much to my satisfaction.

WM. ARMYTAGE, Lieutenant and Commander.

Captain Giffard, who commanded the little squadron before Kertch, maintained incessant activity in annoying the enemy by attacks similar to that so well executed by Lieutenant Armytage. Reconnoitring in the neighbourhood of Soujak Kaleh, with the greater part of his squadron, he received a request from the Circassians (we employ the term generically) to attack the place, as many men and guns had been withdrawn to meet the wants of the Russians elsewhere. The captain eagerly assented to the proposal, the Circassians promising, at the same time, an attack by land. These warriors, generally so valiant, did not, however, make their appearance when the time for action came. The captain shelled the place at a distance of 1000 yards, and having driven out the garrison and dismounted some of the guns, without obtaining the co-operation of the mountaineers, sheered off. It does not appear that very much mischief was done to Soujak Kaleh; some little was done to the squadron. Admiral Lyons, who possessed the art of investing with interest, in his despatches, even the most trivial incident, thus communicated his view of the matter to the authorities at the Admiralty:—

*Royal Albert—off Sebastopol, March 17.*

I HAVE the honour to enclose, for the information of the lords commissioners of the Admiralty, a letter which has been addressed to me by Captain Giffard, stating, that while making a reconnaissance near Soujak Kaleh, with her majesty's ship *Leopard*, under his command, and accompanied by her majesty's ships *Highflyer*, *Swallow*,

and *Viper*, and also by his imperial majesty's steam-ship of war, *Fulton*, he was informed by the Circassians in the neighbourhood, that the enemy had so reduced the strength of that fortress by the removal of men and guns to Anapa, that they were ready to attack it by land if he would do so by sea; and that he, wishing to encourage the natives, and to embarrass the Russians, had assented to the proposal, and moved the ships to within 1000 yards of the south face of the fort, where he performed his part; but that, on finding the Circassians did not perform theirs, he withdrew, after having driven all the garrison out of the place, with the exception of a few gunners in the earthen batteries, and having also dismounted several guns, and done considerable damage to the arsenal and public works, leaving the garrison, about a mile from the place, surrounded by Circassians, who were collecting reinforcements. The ships appear to have been well placed, and to have fired with great effect; and Captain Giffard expresses his thanks to Captain Lebris, his able coadjutor on former occasions, as well as to Captain Moore, Commander Crauford, and Lieutenant Armytage, and their respective officers and ships' companies, for their support. Of Captain Giffard himself, I may perhaps be permitted to observe, that this is not the first time that his zeal and gallantry have been conspicuous since he has been under my command.

I am, &c.,  
E. LYONS.

Captain Giffard's own report to the admiral is less highly coloured:—

*Leopard, Soujak Bay, March 13.*

SIR,—I have the honour to acquaint you that, from the information I had received from the Circassians, at Ghe-lenjik, and also from the observations of M. Lebris, of his imperial majesty's steam-vessel *Fulton*, as well as my own, on the 6th inst., in Soujak Bay, I was led to believe the Russians had sent many guns, stores, &c., away from that fort, and would probably leave if a force appeared off it. Wishing to have more certain information for you on my return to your flag, I, on the evening of the 11th inst., when the *Highflyer* joined me, proceeded with the *Swallow* and *Viper* to Soujak Bay, where we anchored on the morning of the 12th; but a fresh gale, with a heavy swell, prevented our closing the batteries. I therefore threw some shells into the place; and the Circassians, who soon appeared in numbers, at the same time attacked the small fort at the head of the bay, opposite the town, drove out the garrison, and burnt it at 8 A.M. This morning the Circassians informed me they had a sufficient force, and would attack Soujak Kaleb by land if I would do so by sea, and, wishing to encourage them and

embarrass the enemy, I immediately moved the squadron to within 1000 yards of the south face, and opened fire on it. From this point the enemy only had ten guns to be on the ships, but the light wind and damp weather made the smoke hang over and conceal them from our fire while our masts above were conspicuous to them. We soon drove all the inhabitants and troops out of the place except those in the earthen batteries, but I was much disappointed to find that the Circassians did not advance to attack them when out of the town, as they had promised. I therefore moved out again, as with our small force of men it would have been too great a risk to land the main body of the garrison being close at hand. The arsenal and public buildings are much injured, and several of the guns were silenced and dismounted. Our loss, I am happy to say, has been small, and some injury has been done to the masts and hulls of the ships.

I was much pleased with the able way in which all the ships took up their assigned positions, and have to thank M. Lebris, of the *Fulton*, Captain Moore, Commander Crauford, and Lieutenant Armytage, commanding the *Viper*, for their able support, as well as all the officers and men.

The Russian force, apparently 1600 or 2000 men, and the other inhabitants, are now encamped about a mile north of the town, having left a few men in the batteries. They will have great difficulty in communicating with Anapa, being surrounded by the Circassians (who were collecting reinforcements), and should they return to the town, a small naval force can at any time drive them out again.

I enclose a list of casualties among the ships.

I have, &c.,

GEORGE GIFFARD, Captain.

Rear-admiral Sir Edmund Lyons, Bart., G.C.B.

The operations of the vessels thus cruising about the Russian coasts were of a similar character, but still less important, until the first expedition to Kertch, which was dispatched early in May, only to be inopportunately recalled. The circumstances attending it had much to do with the resignation of General Canrobert a commander-in-chief of the French armies in the East. The events connected with the Kertch expeditions were so important in themselves, and their direct and indirect consequences involved so much, that their narrative must be reserved for separate chapters.

## CHAPTER LXXVI.

### HOME IN THE SPRING MONTHS OF 1855.

“Who will go about  
To cozen fortune, and be honourable  
Without the stamp of merit? Let none presume  
To wear an undeserved dignity.  
Oh that estates, degrees, and offices  
Were not derived corruptly; and that clear honour  
Should be purchased by the merit of the wearer!  
How many then should cover that now stand bare!  
How many be commanded that now command!”—SHAKSPEARE.

AFTER the death of the Emperor Nicholas, speculation became rife everywhere, not only as to the policy of Russia, but as to the policy of the nations allied against her. Turkey was represented to be tired of the war, suffering much from the drain of her resources, and not over confident in the zeal or sincerity of her allies. The French emperor was declared to

be warlike exceedingly, but that his people had very little taste for an alliance with England against Russia, especially where it involved such sacrifices as were demanded. The warlike manifestoes of the new czar were not supposed to be correct indices of his policy, and it was alleged that no inference concerning the real intentions of anything said or done by the

Russian government could be safely drawn, even by the keenest statesman; that the issue of the Vienna conference could alone reveal whether the future should be brightened by the halo of peace, or darkened by the frowns of war. Opinion in England was very much determined by the views taken of the premier. By one set of politicians he was represented as so bellicose that he was resolved to exact terms from Russia, at Vienna, which she could never concede while a man or a rouble remained; by another class he was described as a heart sympathising so much with all despotic governments, that he would accept a peace if only some specious appearances of concession were made.

His lordship's real leanings were liberal, but of so liberal as many supposed. He was always hindered by party ties, and incapables, in the cabinets of which he was a member, when advocating liberal measures; but his own leanings were aristocratic, and provided England's interests and honour were safe, he would make very little exception to the political peccadilloes, or crimes, of foreign tyrants. No one wished to see him play the knight-errant, and treat liberty as the knight-errants treated their lady-loves—going about in quest of any who would not do her homage, and challenging them to deadly combat; but if that balance of power of which he spoke so much during the session, to the advantage of Austria, were of any importance, England could never look upon the demolition of the independent governments of free nations, by the inroads of despotic states, without alarm for her own safety. To interfere with the governments of other nations is impolitic and wrong, but when a constitutional state is attacked by a despotic nation because of its constitutionalism, it is an attack upon our own liberties. It is a bold proclamation to us that we, in our turn, shall be attacked whenever the game has a chance to be played and won. In many cases, of late years, the moral influence of England could have saved the freedom of oppressed countries, but it was not exerted. In this respect the government of Sir Robert Peel was a disaster to the nation; and the diplomacy of his foreign minister, Lord Aberdeen, so timid, time-serving, and truculent, that it is a matter of amazement how any free people could have been content to see him at the head of affairs. But Lord Palmerston was far from blameless; he certainly did espouse the principle that England ought to interpose in favour of constitutionalism, and the independence of independent states; but he was very easily satisfied with the amount of popular liberty to be conferred. Spain and Portugal bear witness against him in that. Still, his mere recognition of the principle brought him

vast political opposition at home. The high-tory party ran him down for it as an incendiary; the Quakers attacked him as the very incarnation of the war spirit; the Manchester school denounced him as dangerous, because they require a peace-at-all-price policy, in order to secure cheap provisions and cheap labour, the two grand essentials of the cotton manufacture; the court was jealous of him, as our foreign cousins had no objection to try a little despotism on their own account; and thus the fair development of his political views, and the free action of his comprehensive foreign policy never had fair play. This admission is due in Lord Palmerston's behalf, whatever his shortcomings, or even his sins.

While the opposition offered to his lordship's government at this juncture was pertinacious and petulant in some directions, the country, as a whole, offered him a hearty support, and events soon proved that he deserved it. He watched the proceedings of Russia alike on the field of war and in the circles of diplomacy, and confirmed his great reputation for vigilance and energy. The most persevering of Lord Palmerston's antagonists were the peace party, aided by a powerful and numerous section of the Manchester school. Hired lecturers, some of them most eloquent and popular men, perambulated the country, calling public meetings and urging the people, for the sake of religion, and as they valued plenty to the people of these realms, to insist upon a peace being concluded at the Vienna conference. The common text of all these lecturers, and of a class of writers also hired to support this cause, was "Mind your own affairs, and let others alone." It would be impossible for any English government to adopt such a policy for their motto; and much as Lord Palmerston felt the pressure of the agitation of this party, he persevered in his energetic proceedings. It is very essential to the future honour and welfare of the country, that while peace should be followed for its own sake, and the Christian duty to seek it, which men and nations ought alike to cherish, should be conscientiously cultivated, yet the necessity of answering force by force, where moral suasion fails, should be clearly understood. The foreign interests of England are at all times—in peace or war—too comprehensive for peace not to be prized, and its disturbance provided against. So ramified are our political and commercial relations with the political and material condition of all nations, that there can scarcely be a hubbub of any kind, from an *émeute* in Paris, or street fight in Barcelona, to a regicide in Central Asia, or a piracy among the Malays, that does not somehow affect us. It is very easy for certain gentlemen in and out of parliament to say, that "we should mind our own affairs,

and let other people alone;" but they will not let *us* alone, and we cannot, however so inclined, shift off the connection. If a madman were dancing round his own haystack with a lighted torch in his hand, and if his stack-yard were adjoining ours, it would be very difficult to bring ourselves to the belief that we either ought or could "let him alone." We should at all events be under great temptation to plead the contiguity of our ricks to his, as a reason for putting out his brand, civilly if he would allow, roughly if he would not. We can no more be indifferent to the proceedings of neighbouring nations, in their convulsions or their infringements of one another's rights, than we could be to the freaks of an insane, or the malice of an incendiary, neighbour. Whether he were a lunatic, or had a pyrotechnical taste on a large scale, would not affect our view of policy and prerogative in *not* letting him alone. To this sort of argument the spirit of the replies made by the lecturers and writers before referred to was after this sort:—"Yes, but we English are not content with looking after our neighbours! In Burnah or Bushire, among the dark denizens of the banks of the Orange River at the Cape, or among the companions of Kangaroos in Australia—on the shores of the Don, or among the defiles of Afghanistan or Peshawur—it is all the same; we are everywhere, and everywhere telling the people about British interests, and persuading them or beating them into the idea that we are a great nation, and are considerably engaged in looking after their welfare." Our replication to all this is—that it is very difficult for us to go anywhere without finding some next-door neighbour to our own colonists. Putting western and northern Europe out of view, which are the vicinities to our own isles, we have made in our past proceedings homes by commerce or conquest nearly all the world over. Those who hold Malta and Corfu are near neighbours to Italy, and to Austria as an Italian power. Gibraltar gives us a position in Spain, and a vicinage to northern Africa. The protectorate of the Ionian Isles brings us into an intimate contiguity to the unreasonable King of Greece, and his amiable antagonist, the sultan. Happening to have a bit of property at Bombay, and an out-house at Aden, at the head of the Persian Gulf, we are in a certain neighbourly relation to Egypt and Persia. Bengal and Hongkong are places from which to take a friendly run into China now and then. And how could we possess the Sikh territory and Scinde without such Asiatic relationships in general, as involve a great many amiable talks with the people about their own affairs and ours? The larger part of the northern portion of the American continent belongs to us—and our

neighbours in these regions will hardly pretend that they have to protect themselves against any filibustering propensities on our part. As has been said, in reply to remarks of the description, that the English had no right originally to be in all these places; the rejoinder is that a nation of shopkeepers are always on the look out for customers. It may be laid to our charge that we are "queer customers," and went as often to take as to sell: we must answer, "Very likely;" there is much of the sort to be said truly to our disadvantage; but it is a matter of fact that we are in all these out of the way places: and it is a fact not less obvious, that, if the nation became ever so penitent, it would be very hard to ascertain now, to whom we should make restitution—at all events, in a great majority of cases. Continents and islands, swamps like British Guinea, and rocks like Gibraltar, the snow-fields of Northern America, the gold fields of Australia—all have had something inviting for us—and *there we are*. What is to be done? Will our excellent friends of the Peace Society pass a resolution that we are to gather up our effects, and bring these and our people home, from beneath all constellations—those who wear the southern cross, and those who dwell beneath the polar star? Or shall we keep our footing, and behave ourselves well where we keep it? If the former be "the resolution passed," we wash our hands of its advocacy, as too difficult for us; we could offer no advice upon so stupendous an undertaking. It would require the administrative genius for spoiling everything, frustrating everything, not spoiled, and confusing everything neither spoiled nor frustrated, which so eminently characterised in this war our Lord of New castle, Mr. Sidney Herbert, and their doctor and officials in the East, to venture upon the task with any tolerable appearance of self-sufficiency. If, however, our peace brethren and their energetic coadjutors in Lancashire deem that we are to make the best case we can of our position in every land, then they who offer this advice must be prepared for a great deal of discussion with all who hold contiguous positions. However enlightened are our ideas of *meum and tuum*, past, present, and to come many exceptions will be taken, and many strange grounds will be laid down on which to take them, by various descript and non-descript neighbours of ours in all directions. There are Caffres, Hottentots, Bosjesmens, Bechuanas, Fingoes, and Boers; Sikhs, Burmese, Afghans, Nepaulese, Beloochees, Cashmerians, and legions of Asiatic nations white, black, and every shade between! Our Australian bushmen, and gold-diggers; the sons of the flowery land on our Indian confines, &c. &c. &c.! All these peoples hav

tions and modes of discussion if not very original, yet very discordant with any that are ascertained by our justly esteemed brethren, the benevolent Society of Friends. We are proud that the neighbours—European, African, Asiatic—of our possessions in the Mediterranean, have ideas upon which no logical impression is ever made with such celerity as when a British admiral carries on the discussion from “the point of view” (as the phrase the day is) of a British fleet. In fact, it is our knowledge, somehow very intimately acquired by most nations, that we have usually resort to heavier arguments than “notes” and “protocols,” which gives them such a facility of conviction when our envoys do reason with them. The justice of our cause is not the first thing that strikes the litigants in cases of quarrel with us, but the mode by which we erst were in the habit of enforcing it. It is perfectly plain to any one, “with a grain of salt” (as the Bechuanas say), that along the vast boundaries of an empire so diversified—in multitudinous parts of a commerce so extensive—in the vexed complications of alliances and treaties which we are bound to keep and enforce, in the result of so ancient and complicated a history, we cannot “let everybody have his say,” and that our policy is to busy ourselves with enforcing all just claims with promptitude, and listening to all just demands with moderation. The danger of indifference to what occurs on our frontiers, or to our allies, is at least as perilous as unnecessary meddling: the latter may put us to expense and trouble, the former involve us even in war; the former will shake our credit, dispel the prestige of our power, and invite enemies to coalesce, and reach or menace us, in proportion to the *faiblesse* of our policy.

In both houses of parliament incessant and ungenerous attacks were made by the opposition party; and frequently independent members brought damaging statements and arguments to bear upon the government, both in the ministerial and opposition benches. Mr. Layard was, perhaps, the most formidable opponent of the government; he knew the history of the events of the war from personal observation, and he was well acquainted with the East, its habits, character, wants, and prospects. The Peelites were very bitter against the honourable member, as his speeches had contributed so much to break up the Aberdeen government.

The death of Captain Christie (to which in her chapter reference has been made) led to a discussion of great importance in the house, disclosing the injustice to which faithful servants were subjected unless surrounded by powerful interest, whenever the sinister interests of party require, or appear to require, their sacrifice; the debate also showed the

acrimony with which independent members of parliament were pursued, who complained of the conduct of the war; and the utter want of principle and honour which characterised the artifices and parliamentary tactics of men who had held high offices, and claimed to be the rulers of the nation. A general attack against Mr. Layard seemed to have been contrived for the purpose of extinguishing his public usefulness, or of at least deterring him from proceeding in his intrepid course of parliamentary opposition to the maladministration of all the war departments. So general was the “cry down” in the house, that Sir James Graham was emboldened to make one of his rash and enterprising speeches, such as had so often embarrassed the parties to which he had belonged on either side of the house. He resolved upon giving the *coup-de-grâce* to his formidable antagonist, especially as the rules of the house would not allow Mr. Layard then to rebut the statement which he intended to make. This was no other than a direct charge that the death of Captain Christie was hastened, if not occasioned, by charges alleged against him by Mr. Layard, and which constituted the ground of the court-martial ordered to be held upon his conduct, which circumstance broke Captain Christie’s heart. We have no doubt that Sir James Graham’s intention was that this error—for such it proved to be—should go forth to the country, and make its full damaging effect upon Mr. Layard’s character, before this gentleman could have an opportunity of rebutting it in the place where it was uttered. With all the sly sophistry with which the Cumberland baronet is accustomed to “make the worse appear the better cause,” he displayed the deepest sympathy for Captain Christie, and dwelt much upon the rankling and incurable wound inflicted upon him by Mr. Layard’s “charges,” which, he repeatedly asserted, had produced the court-martial,—winding up the pathetic appeal by declaring that he did not envy Mr. Layard his feelings in having been instrumental in hastening the death of an innocent and deserving officer. The old proverb declares that “one story is good until another is told,” and so it turned out in this case. The “thing which was not,” as they say in Turkey, so pathetically proclaimed by Sir James Graham, was not long allowed to remain unanswered and disproved; Mr. Layard did not, it is true (and we think he acted with both judgment and spirit), attempt to set himself right with the public by an explanation in the assembly in which the charge was made, and where probably he would have been hooted down and silenced, as had been attempted on two previous occasions. He took the more sensible

and direct course of stating the whole truth in a letter to that terror of ministries, the *Times* newspaper, and thus at once completely cleared himself so far as the case lay between him, Sir James Graham, and the late Captain Christie. And what was the case, and in what respects did the real facts bear out Sir James Graham's specious and insidious appeal to the House of Commons? Why, that so far from the court-martial on Captain Christie's conduct having been the result of any charges brought against him by Mr. Layard, that gentleman had alleged nothing against him, but that he considered him near seventy years old, and far too infirm for the position he held at Balaklava. And, moreover, he proved that the court-martial had been ordered, and Captain Christie removed from Balaklava by Sir James Graham himself, weeks before Mr. Layard's allegation, and consequently on totally different grounds, with which Mr. Layard had nothing to do! In fact, by Sir James Graham's own admission, if any one was accessory to Captain Christie's death, by the instigation and appointment of the court-martial, it was Sir James Graham himself, and not Mr. Layard, whom he so unblushingly accused of it. The idea that the unfortunate but gallant captain could have been affected by what the honourable member said, was too absurd to be entertained for a moment by any reasonable man. It reminds us of a charge of cruelty brought against a gentleman by his wife, in a case of divorce, in which the most heinous instance alleged, was that he one day said to her in the presence of a gentleman, "Why, my dear, you look forty years old!" Now, we can understand why such an allegation should affect the temper and ruffle the pride of a lady, yet we much question whether one of the fair sex would absolutely die under such an imputation. But that a fire-eating captain should do so, or that his death could by any possibility be accelerated by it, was a monstrosity too great for Sir James Graham himself to believe, or for any one but himself to assert. We should be surprised that the House of Commons did not resist the indignity of having been imposed upon by so false and shameless a charge, were it not that we have known many, quite as many, disreputable matters overlooked or quashed by that honourable assembly. Finding that the letter to the *Times* had done its work, and placed his character in not the most favourable light for veracity, Sir James thought it expedient—as he could not deny Mr. Layard's statement, which was confirmed by public documents, with any hope of being believed—to "explain," as it is called—that is, he ascribed the "mistake" to a lapse of memory. But he was compelled to admit the truth of Mr. Layard's statement, and the falsehood of his

own; so that, so far as Captain Christie's death was concerned, Mr. Layard was completely exonerated, whilst he himself, by implication and by the gist of his charge against his opponent, stood convicted of the very offence which he accused his antagonist. This stance of tergiversation, perpetrated for the worthy purpose of bringing down a high opponent, was quite of a piece with the general course of Sir James Graham's political conduct. Many cases will occur to the reader's recollection, in which "Peel's little dirty boy" *Punch* designated the baronet) involved ministry in disgrace. Yet such is the versatility of his genius—shall we say rather, of his character—that although it is notorious that he has so frequently changed his principles, that, like the mixture of colours producing colour, the result has been no principle at all; he is pretty sure that, whatever party comes to power, they may find in him a ready man-of-all-work. We much question whether, if the charts were to gain the ascendancy, and form a cabinet, Sir James Graham would not become the most strenuous supporter of the five points. We suppose his having "boxed the political ear" so constantly in Downing Street, to be deemed a qualification for the office of First Lord of the Admiralty.

In the last chapter upon home events, we did not allow of our introducing an important parliamentary matter. On the 2nd of March, Mr. Roebuck—who, it will be recollected, carried a motion in the House of Commons calling for an inquiry into the causes of disasters before Sebastopol—moved that the sittings of the committee appointed in result of that motion should be secret. Mr. Roebuck wished secrecy as a protection to numerous officers who were likely to be examined, and who would be intimidated from giving their evidence openly with that delicacy which they would privately, from fear of offending the military authorities at the Horse Guards, where the administration was now, be short of a grinding and vindictive despotism. It was also desired to meet in secret, so as to give any offence to the French government which had been held in *terrorum* by the Peelite section of the Aberdeen cabinet. Mr. Roebuck's motion was resisted by the whole cabinet, and by members of the late cabinet—the "ins and the outs" alike contending that the persons examined would tell what they said; and as Sir James Graham afterwards suggested, "between No. 17 up-stairs, in the Printing House Square, a whispering gallery will be established, which day by day will disclose to the public what takes place before your committee of secrecy!" Mr. Roebuck withdrew his motion. His conduct—often centric and crotchety, as it is thoroughly fit

honourable, in political affairs—excited this occasion much public animadversion. The decision that the committee should be an one satisfied the house and the country. The motives of the official parties on both sides were in all probability not patriotic, sinister; they desired to have an authentic report of every man's evidence, so that it might be remembered in the proper official quarter, and leave him no loop-hole for escape from the responsibility to their arbitrary superiors. The proceedings of the committee are reserved for a more appropriate portion of our history.

An interesting act of sympathy with her majesty, on the part of the queen, gave the troops great satisfaction. Fifty of the Guards, who had been invalided from the Crimea, were commanded by her majesty to stand in the grand hall of Buckingham Palace, under inspection by the queen and prince. Twenty of these men were Grenadiers, and the remainder were composed of an equal number of Fusiliers and Riflemen. The commanding officer and chief non-commissioned officer of the regiment attended, and explained the services of the men, and the wounds they had received. Her majesty was accompanied by her children, except the youngest. The Prince and Princess of Saxe Coburg, and the Duchess of Leiningen, were also present. No words could describe her majesty's kindness of heart and deed to her poor brave fellows. Some of these were among the men she had seen from her balcony, when, in the dim morning of 1854, their cheers echoed through Buckingham Palace as she waved them adieu. The author had his inspection of the noble fellows, not within the precincts of the palace, but from a suitable situation in the park. They were weather-beaten, wounded, maimed, yet trying to move proudly erect the mien of men who had fought and conquered. They seemed neglected—their coats threadbare in some cases, and there was an appearance of dilapidation about them which would not fail to annoy her majesty, for whom blood had so freely and bravely flowed. As she said that she was greatly affected, and struggling with her emotions,—firm and true as the royal lady is,—she turned her head and gave free vent to her tears. The course of these pages has seen much of warriors, the pomp and trappings of gaudy military array, but never amongst the exciting scenes which transpired in the metropolis during the progress of the campaign, did he see his heart so stirred with sympathy for soldiers, and with admiration for the dignified bearing of men who, except that victory glory crowned their efforts, were so unadorned. Signs of deep personal sufferings

blended with tokens of neglect in their appearance, and some had a sad expression, especially one poor fellow, who had lost his right arm; but the prevailing expressions in every face were dignity, resignation, and fortitude.

Attempts were now made, under the auspices of the Palmerston premiership, and Lord Panmure, to correct the abuses of our military system. Lord Palmerston displayed great energy in this as in everything else. Lord Panmure made some very judicious arrangements, but both were impeded by the crushing despotism of the Horse Guards, where antiquated and corrupt practices were defended with desperate tenacity. It is painful, however, to record of two such able and liberal men as the premier and the war minister, that they did not grapple with the evils with the firmness that was expected; and by degrees Lord Panmure fell away from his reform zeal, and trod quietly in the old track. But for the sittings of the Sebastopol committee, it was plain that nothing would have been done, and when they came to an end, so did the energy of the War-office, such as it was, for reformation. After the war terminated, Lord Panmure made a very ungrateful speech, denouncing the public agitation for right and justice—which placed himself in office—as unjustifiable and unnecessary, and applying to the popular action epithets of disrespect. His lordship even expressed it as a great pity that the Duke of Newcastle, so efficient and competent for the post, had ever been dismissed from it. It is scarcely necessary to say, that Lord Panmure would have speedily followed him, had he not carefully concealed his real sympathies and opinions during the progress of the conflict. It was marvellous that the English public should permit a man to remain in such an office, even when war had ceased, who so insulted their generous and patriotic efforts, and whom they had treated with so much forbearance and deference. Truly, the English people are very patient of their lords!

A great display of official importance was made in connection with a camp at Aldershot, formed somewhat after the model of the camp at Beverloo, in Belgium. The camping ground is covered with heath, and to the extent of 3000 acres. It is undulated and picturesque, and promised to be a healthy place for the encampment of soldiers. Parliament voted £100,000 for the land, and a quarter of a million sterling for barracks. The tents were estimated to cost £100,000, exclusive of their foundations: drainage, well-sinking, parade grounds, roads, &c., were items of additional expense. It was alleged that by quartering there some 10,000 regular troops and 20,000 militia, the system of military training would be greatly improved, and the general officers gather some

experience as to the command of brigades, divisions, and of larger bodies of men.

On the 7th of March a very interesting meeting was held in the metropolis, on behalf of the wives and orphans of soldiers. It was attended by great numbers, and was characterised by unusual enthusiasm. The Duke of Cambridge presided, and spoke with his usual frankness and honesty, prudence and good taste. His speech made a very great impression in the assembly, and afterwards received a large share of favourable public notice.

On the 26th of March an address, in reply to a message sent by her majesty to the House of Lords respecting the convention lately made with Sardinia, was voted on the motion of the Earl of Clarendon.

In the commons the house went into committee to consider her majesty's message in respect to that treaty. Messrs. Bright, Cobden, and Mr. Bowyer disparaged the treaty; Mr. Bowyer bitterly attacking the Sardinian government, that gentleman being the only openly avowed abettor of Austria in the house. Mr. Bright also impugned the motives of Sardinia as interested; Mr. Cobden complimented that government and nation, but expressed his regret that it should be "dragged into an alliance with Austria." To these strictures Lord Palmerston and Mr. Gladstone made eloquent and effective replies. Mr. Disraeli denounced the convention, but in a spirit so purely partisan that his speech brought neither conviction nor moral influence, notwithstanding his brilliant abilities. An address to the queen, in harmony with the policy of the government, was carried without a division. "Out-of-doors" these proceedings were hailed with unbounded popularity.

The accession of Sardinia to the Western alliance would excite a smile on the countenance of a subject of "one of the great European powers," as they are styled *par excellence*. Austria, indeed, did not smile at this insolence, as she considered it, of her democratic neighbour, but rather showed a spirit like a ruffled wolf or hyena, which shows its teeth and erects its mane. The presumption of a petty state, just emerging from despotism like her own, was galling to Austria in the extreme. This example of independent action was dangerous to the peace of the oppressed dependencies of the house of Hapsburg, and gladly would it crush Sardinia as it crushed Hesse-Cassel, if it dared, rather than see her admitted a member of a confederacy of free states against a power with which all her sympathies were allied, and which she treacherously endeavoured to save from the fate that awaited it, by thwarting and procrastinating the efforts of the Western powers. But Sardinia was acknowledged by England and

France with a cordiality that did honour both; and with a promptness that bore resemblance to the pusillanimity and treachery of Austria. Sardinia sent her contingent troops to the seat of war, consisting of as a body of men as at any time landed in Crimea.

And what was the value of this accession of Sardinia to the Western league? This question best replied to by stating her relation to the West, her geographical position, and the political condition of her people, as compared with those of the nations around her. With respect to the first, she lay on the west, Austrian Lombardy on the north. Her population on the main-land did not much exceed five millions; but they are of a bold and warlike race, and she maintained a standing army of 60,000, and a militia of 40,000 men.

But in regard to the second point, small as Sardinia appeared in a territorial point of view, she was the representative of a principle which completely isolates her from the surrounding kingdoms and states. The events of 1848 obtained for her a constitution similar to our own, placing the subject at equal distance from the licence of republicanism on the one hand, and monarchical despotism on the other. And whatever might be thought of the theory of the first, as the most perfect form of government, the instance we have had of late years of the attempts to establish it, proved that the people were unfit for it—that it required a far greater amount of public virtue than was to be found in any European nation. Sardinia, therefore, was placed under a constitutional monarchy of her own; nor was her constitution allowed to remain a dead letter, to be cancelled on the first favourable opportunity. With an earnestness and sincerity that bespeak a high sense of the value of freedom to the governor as well as the governed, to the prince as to the people, the King of Sardinia goes hand-in-hand with the representative bodies of his kingdom, in the reform of abuses, the consolidation of national rights, the development of the constitution, and, above all, the cutting down of ecclesiastical power where it interferes with civil rights. This latter policy, beyond all others, incurred the wrath of the Viennese government; and if Austria did not menacingly show her disapprobation, it was through fear of England and France, not from consideration for Sardinia. That little kingdom stood a political oasis in the desert, a perfect contrast to the surrounding states; at once a terror and eyesore to the governments, and a pattern to the peoples. Sardinia was, in fact, the only state in Europe that reaped any permanent advantage from the outbreak of 1848. England and Sardinia are the only

ally constitutional states in Europe. Piedmont was a sacred name to Englishmen, and that country possessed the nucleus of freedom, that, if preserved intact, might prove the seed of the future freedom of Italy, if not of the whole of Europe. We trust that as Sardinia earned freedom in the school of England, the latter will support her pupil in the arduous struggle which most assuredly she will have to encounter some day with Austria, but which she will have no reason to fear with England back her.

Referring to an event which was so popular in England as the convention with Sardinia, the circumstances may appropriately be noticed, which space did not allow us to introduce in a chapter on Sardinia. An account of the constitution and modes of procedure of the Sardinian parliament will interest every reader who values parliamentary government. In a work entitled the *Sub-Alpine Kingdom*, by Henry St. John, we have the following account:—"The chamber in which the Sub-Alpine deputies meet is a magnificent one, very lofty, with a doomed roof. As in France, the form is that of a hemicycle; so that the members can divide themselves locally, as they do in name, into members of the right, the centre-right, the centre, the centre-left, and the left. A few democrats, who occupy places at the extreme left, are sometimes called the 'Mountain.' The seats rise one above the other, from a semi-circular floor, in the centre of which are placed tables for the official shorthand writers; and on the extreme verges of which, with their backs to the house, behind a long table, sit the ministers, who, as in France, may appear in the senate as well as in the chamber of deputies—without, however, the right of voting, except as members. Behind the ministers rises a tribune, from which no one scarcely ever comes to speak; and behind that the seat of the president, who is surrounded by a platform, on which sit numerous secretaries. The press has a gallery at its service, placed in a convenient position; and the diplomatic corps and municipal authorities are well provided for."

There is also the ladies' tribune; and, all round the base of the dome, is a gallery from which the miscellaneous crowd of constituents endeavour to catch what is going on below. The acoustical arrangements of the chamber are very imperfect. Most of the deputies speak in Italian, more or less pure. It is easy to see they are accustomed to address their wives, their servants, and their friends in that different idiom. The natives of Savoy and France speak in French; and the contrast of that weak succession of unaccentuated syllables perpetually disappointing the ear, with the deep, sonorous, musical sound of even bad Italian, sometimes produces a very comic

effect. An obstinate Codin starting fiercely up, whilst the house is still ringing with the musical periods of Brofferio, to express his indignation in words ending in *aiant* and *on*, always creates a smile; and every one is inevitably reminded of a giant speaking in the voice of a dwarf. By long living in France one gets accustomed to this simpering, and is able even to understand why those who use it fancy it is peculiarly masculine; but one hour in the Piedmontese Chamber of Deputies—to say nothing of Madame Ristori—re-educates the ear completely. The first debate I heard in the Piedmontese Chamber of Deputies was a grievous disappointment to me in many respects, as a friend of parliamentary government. The house was orderly and methodical, it is true,—perhaps too orderly and too methodical. Each member sat in his place with pen and ink before him, sometimes writing letters or reading newspapers; while an orator, whether of his own party or not, was impeaching the ministers. There is a coldness and stiffness in the manners of the members. They rarely cheer their friends, though they sometimes 'Oh, oh!' their opponents. A few attempts at good earnest speaking which I heard gradually subsided amidst general indifference. All this was explained by the desire of the Piedmontese to keep on their guard against their southern nature, lest they should imitate and exaggerate the boyish rioting of French deliberative assemblies; and also by the fact that, since the alliance, all warm parliamentary discussions were considered imprudent. Liberty, in fact, exists in Piedmont, they said, by sufferance; and there is always an immediate danger that, although Victor Emmanuel may be now resolved not to attempt a *coup d'état*, a powerful neighbour may come in and effect it for him. Piedmont, like Belgium, is a perpetual source of envious irritation to the people that have lost what it has retained. I was willing to accept this explanation of the dulness and want of spirit I noticed; but it was not these things that most disappointed me."

A curious letter was written to the Emperor of Russia by one of his own exiled subjects, a man of ability. This epistle excited so much attention at the time that we insert it:—

April 5, 1855.

"SIR,—You inherit the greatest empire which ever existed. Conscious of the difficulties of your task, you claim the assistance of Heaven, and it is the duty of every friend of humanity to assist you.

"I respect the sorrow you manifest on the death of your father; the praises you bestow on him are those of a good son. But let us hope that you will not pursue his policy in

all points; you could not do so even if you wished, for you have not his heart.

"Allow me to call your attention to the most important points of Russia's welfare.

"There are several millions of heretics who, with time, will revolutionise the empire if they are not helped. I always considered them as men misled by want of information. They by no means deserve the cruel measures employed by your father against them—measures which produce an effect quite contrary to their intention. The results of persecutions in religious matters, in all times of history, have been martyrdom. Let the heretics be instructed, kindly treated, and they will by degrees join the orthodox church.

"The synod is presided over by a general of cavalry, whilst you have metropolitans of the heart and intellect of Philaret. Encroachments of the Church over the State are no more to be feared in our times.

"Put aside, also, the persecutions of the Jews. All great sovereigns of all times have protected them—Constantine, Charlemagne, Peter I., Frederick II. Napoleon, and bad princes, such as Caligula, Philippe, Augustus, Edward I., have persecuted them.

"The question of serfdom in Russia is not as difficult as it seems to be. Decree, sire, that the ignominious expression of *souls*, in reckoning serfs, is not to be further used; that the possession of serfs, based only on *use and abuse*, is to cease, and voluntary conditions to take the place of the present forced ones.

"Your heart is good. Look on the sufferings of the recruits; consider that every day there are more than 100,000 lashes (blows) given to the soldiers, and remember that for each man who falls in the war, there is a mother in tears. Do not propagate orthodoxy by the sword, nor fight against freedom. What use was it for the late emperor to have saved Austria, which is now with the allies against Russia?

"Freedom is a holy thing on earth; alone it makes man resemble his Creator. Do not check it. Let thought, this dearest gift of God to man, be freely expressed in your empire. 'Give thought freedom, sire,' say I with Schiller; and convinced that if your Imperial Majesty will grant these trifling requests, you will earn glory and thankfulness,

"I remain, of your Imperial Majesty the most devoted servant,

"IVAN GOLOVIN."

Few incidents during the war excited more attention in England than the loss of the *Tiger* steam-ship near Odessa. The cruelty shown by the enemy in the attack, the death of her gallant commander, the boasting in Russia over the capture of a crew of a British man-of-

war, and the destruction of so fine a ship of her class, created painful feelings in England and excited something like a morbid interest concerning anything connected with the loss of the *Tiger* and her crew. The loss of the vessel having occurred so near the beginning of the war had also an unpleasant effect on the public mind. The captured crew was restored by exchange of prisoners, and on Thursday, 12th of April, a court-martial held upon the lieutenant of the watch on the night of the disaster, and upon the matter. This trial excited additional attention from the fact that Lieutenant Royer (who was upon his trial) had, on his return from Russian imprisonment, written a glowing account of his excellence and nobleness of everything Russian: so much was the lieutenant impressed in favour of Muscovite society and manners that no one who reads his book would fail to think it a pity he did not exchange his citizenship, and become the subject of a state with principles and tastes were so congenial to his own. The following is a correct summary of the report of this court-martial. The particulars elicited throw a light upon the transaction necessary to complete its history:—

"On Thursday the court proceeded to try First-lieutenant Royer, and Mr. Edington, master of the *Tiger*, for the loss of that ship. The court having previously acquitted all the other officers and ship's company of all blame in the said loss, they became necessary as witnesses.—Mr. Francis Edington, in answer to the president, said the log was burnt immediately after the capture of the ship.—Mr. William Elphinstone Stone sworn: I was third lieutenant on board the *Tiger*, and had the first watch on the night of the 11th of May last. The captain himself came on deck, and told me to alter the course to N. and by W.  $\frac{1}{4}$  W. and nothing to the northward; to be very particular about the look-outs, and to report any sail. Ascertained we were bound for Odessa. The master was on deck during the whole watch, with the exception of a quarter of an hour, at intervals.—Richard Maule sworn: I was captain of the maintop on board the *Tiger* on the 11th of May last, and it was my watch on the night before she was wrecked. I think the deep-sea lead was hove about seven fathoms, but I do not recollect. I do not recollect any of the men being called to heave it.—Frederick Hammond sworn: I was mate of the middle watch on the morning when the *Tiger* was wrecked. The master came on deck every hour. He was present when the soundings were taken. The weather was very foggy—very thick the whole watch.—Busby Nind sworn: I was midshipman of the watch on the morning her majesty's ship *Tiger* was wrecked. Land was not seen or reported to

heard, before the ship struck. The ship struck at about twenty minutes to six; she was under steam only. When she struck she was sinking, I should think, about four knots. Mr. Royer was the officer of the watch. The first thing done was we tried to back her off. We got the port paddle-box boat out. Got out the main bower, and laid it out by a boat. The main sheet cable was bent to it. We let go the anchor from the port quarter, took the cable to the capstan, and then tried to heave her off. This was about a quarter after six. The enemy commenced firing at us from the shore. This was about nine. We had been interrupted in our proceedings before by their firing musketry at us. We hove the main deck guns overboard fore and aft. All the water except six tons was started. Before she struck we had two look-outs—one on the port cathead and the other on the starboard middle-box. When the ship struck there were several signal guns fired from the ship and musketry as well. This was nearly immediately after she struck.—Charles Wilkinson, Corn: I was the mate of the watch. The soundings decreased gradually until we got eight fathoms, when I gave the order to go as slow as they possibly could without stopping, at the same time going down to call the captain. I called him, and told him we had eight fathoms. He asked at what rate she was going, and I replied, as slow as she possibly could at present, but that she was going four and a-half or five knots when I eased her. He then asked what kind of weather it was, and I told him very thick indeed; and he said, 'Go on about the same speed you were going before until you get five fathoms, and when you get five fathoms keep her west, and when you then shoal your water stop her immediately.' I then went on deck. We went on at seven fathoms for about six or eight minutes, and then struck. I had no exact idea of where the ship was, but I imagined we must be near to Odessa.—After the examination of several witnesses on Friday, which closed the case for the prosecution, the court adjourned.

"On Saturday the court re-assembled, when the president having called upon the accused to enter into their defence, Lieutenant Royer, addressing the court, having alluded to his services in the royal navy, extending over a period of twenty-eight years, remarked that the charges for which he, as one of the surviving officers of the *Tiger*, was then on his trial, were two, viz., the stranding of the ship whilst he was officer of the watch, and, secondly, his conduct after she got on shore, with respect to the endeavours made to float her off, and her subsequent surrender to the Russians. With regard to the first charge, he only to state that he took every precau-

tion in his power for her safe conduct, by having the leads constantly hove, by easing and stopping her to ascertain the correctness of the soundings, frequently visiting the look-outs, &c., and reporting to the captain when he thought it most requisite. When the water shoaled to seven fathoms, he ordered the engines to be eased, and at once reported to the captain. With respect to the second portion of the charges against him, he respectfully submitted that he acted in everything under the orders of the captain, who retained the command, and conducted the defence of the vessel, until he had ordered the Russian ensign to be hoisted, and an officer to land with a flag of truce. The accused then put in letters to his character from various captains in her majesty's service, and also called witnesses in support of his statements in defence.—Mr. Edington then addressed the court, stating that he believed the ship to have been set off her course to the westward by the current, which after her stranding was known to have set the paddle-box boat away from the ship in a south-westwardly direction, and at a rate of nearly four knots, particularly during the morning watch, whilst she was eased and stopped for the purpose of taking soundings. After reviewing various portions of the evidence, he concluded by stating that he felt the court would acquit him of all blame in the loss of the vessel.—The court was then cleared, and after a deliberation of four hours' duration, found as follows: 'That the ship *Tiger* was run on shore in consequence of having been rashly conducted as she approached the coast of Odessa, on the morning of the 12th of May last, and that after the ship had been run on shore the measures resorted to to get her afloat were very injudicious; but in respect to the surrender of the *Tiger* to the enemy, that as the ship was aground without any hope being entertained of floating her off, and as she was exposed to the enemy's guns, which had set her on fire, and upon which the guns of the ship could not be brought to bear, no blame attaches in consequence of such surrender. The court is further of opinion that no blame is imputable to Lieutenant Royer, since he acted under the immediate direction of his captain, and the court doth adjudicate him to be acquitted. The court is further of opinion that Mr. Francis Edington is blamable for the want of caution which was exhibited by him in approaching the shore near Odessa, but in consideration of his previous good character and long service, the court doth adjudge him to be only severely reprimanded; and the said Lieutenant Royer is hereby acquitted, and that the said Francis Edington be, and is hereby severely reprimanded.'—Both officers then retired with their friends, and the court broke up."

The subject of military promotions engaged the concern of the public, and was brought under the notice of the commons without much benefit resulting. The War-office was not filled in a manner to do justice to the service or to the country in this particular. It required a perpetual agitation out of doors to effect any reforms through the means of government or parliament. The following brief outline of the speeches of Major Reed and Captain Scobell, upon the motion of the former in the commons for a committee of inquiry, will at once illustrate the system, and show the reader the injustice to which meritorious British officers were exposed, and the way in which the country was deprived of efficient servants, while the rich, careless, and incompetent were thrust over their heads.

"Major Reed moved for the appointment of a select committee to inquire into the present mode of conferring commissions in the army, by purchase or otherwise, and to recommend a more efficient system for securing promotion to merit and long service. The existing mode of obtaining commissions and promotion by purchase was, he contended, pernicious to the service, unjust to the private soldier, and most oppressive to poor and deserving officers who had adopted the army as a profession, but could not afford to buy their advancement to its higher grades. The honourable and gallant gentleman proceeded to say, that Lieutenant Magnay was an officer in the 60th regiment; that a company became vacant to which he, as the senior lieutenant, was entitled; but, as he was not prepared to purchase, another who had more money was put over his head. He was present at the battle of the Alma, and was up to his knees in mud in the trenches before Sebastopol; but another officer, with more money and interest, obtained that to which he was by right entitled, to the disgust of the whole corps. The next case he would bring before the house was that of an officer who retired from the service in disgust, and who felt it to be his bounden duty to expose the frightful evil which resulted from the disgraceful system which existed at present. This officer stated that two-thirds of the officers in the army were crushed beneath the weight of interest and money.

"Captain Scobell, in seconding the motion, said that he was actuated by no personal feeling. His object was not to condemn the past but to amend the future, and he hoped the government would seriously consider whether some practical and beneficial result might not be obtained from an alteration of the present system of purchase. His honourable and gallant friend quoted instances enough to show the injustice of the present system; and it appeared from what he said that the royal

sign-manual was put up to sale between officer and officer at even a higher price than legal, the commander-in-chief of the army being the auctioneer. He would quote in confirmation of his view the opinion of a gentleman who lately occupied a seat on the treasury bench, but who since he left that applied it to his mind. The honourable member for Kidderminster, addressing his constituents, said, 'The cankerworm which caused the failure of this campaign is the vice of patronage.' There was a great deal of patronage in the army, but it was rampant in the navy. The honourable member for Kidderminster went on to say, 'Our statesmen are not identified with the public interests.' He hoped the noble lord would mark that. He knew there were secret influences which were holding him back, but he would not exempt his usual courage if he shrunk from discharging the duty he owed to his country in this matter.

Among the house episodes of the war was attracted public attention, was the presentation of the freedom of the City of Edinburgh to Major Nasmyth, one of the heroes of Silistria; and who took part also in the battle of Alma and Balaklava:—"Major Nasmyth is the son of a respected citizen of Edinburgh and was a pupil of the Scottish Naval and Military Academy there, was accompanied by his father. He wore the uniform of the Bombay Horse Artillery, and was decorated with the Turkish order of the Medjidie. The council chamber was crowded to excess, and the gallant officer was loudly cheered. The lord provost, having presented the burgess tickets to Major Nasmyth, with some appropriate remarks, the gallant major, in returning thanks, expressed his deep regret that his distinguished friend Captain James Butler had not been spared to reap similar rewards. In him the state lost a faithful servant, a gallant soldier, and an accomplished gentleman. It was a duty he owed to another brother soldier, and a pupil of the Military Academy, who was serving in the East, to mention the gallant services of his friend, Lieutenant Ballance of the Bombay Engineers. That officer, whose affairs in Silistria looked desperate, and whose prospect of relief all but hopeless, volunteered his valuable assistance, and essentially contributed to the successful defence of the forts. It was he who performed the last kind service on earth to poor Butler. He hoped he might be pardoned for taking that opportunity to correct what he conceived to be an erroneous impression prevalent in this country as to the qualities of the Turkish soldiers, and of bearing his testimony, after ample opportunity of judging of them, to their patient endurance and unsurpassed courage under circumstances of difficulty and of danger."

Considerable dissatisfaction was excited by the appointments to command in the Turkish contingent. General Vivian, a man of aristocratic connexions, but of no public services, gave him a claim for such distinction, obtained the chief command. Colonel Shirley was appointed to the cavalry division of the force, although he was a man utterly unknown to fame, and a number of officers of superior rank and great experience in the field were anxious for the appointment. The subdivisions of the cavalry were given to Colonel Smith, and Brigadier Mayne; the former an officer of as little military reputation as either Vivian or Shirley. Brigadier Mayne declined the inferior appointment, disgusted with the result offered to his experience as a well-known and distinguished officer. The *Times* newspaper, commenting on these proceedings, bitterly but most justly said:—"The appointments to the Turkish Contingents are a mere job. The sharp lessons of the Crimea have given no instruction to our public men. We verily believe that if the Russians were in the northward, the War-office would be looking out for some relation, friend, or *protégé* to whom alone would be entrusted the task of leading them move on." The scandalous partiality displayed in these arrangements was to be attributed to the Horse Guards, which was slyly made to bear the blame of all War-office delinquencies. Lord Panmure was answerable to the public and to posterity for the job." He had accepted the War-office to find what was amiss only so far as to keep a check what he afterwards called public clamour;" his own ideas were of the old school—he was less industrious, more experienced, and, on the whole, only a little better than the Duke of Newcastle. Both were good men, and desirous to do right, but both were under the influences of their class, especially Lord Panmure, to a degree dangerous to the public weal. It would, perhaps, be difficult to place in any office men more highly esteemed for their private virtues, but their political class prejudices and sympathies unfitted them for a position which, more than any other, required a stern patriotism, an inflexible resolution, and an entire freedom from all personal class partialities.

The recall of the Earl of Lucan from the command of the cavalry in the Crimea excited much discussion; and the energetic temperament of his lordship would not permit the matter to pass into oblivion. He urged his case in the House of Lords, and through that medium made a statement of it to the public. When recording the events of the battle of Balaklava, we expressed our conviction that the orders of Lord Raglan were such that Lord Lucan could not have disobeyed. Tak-

ing the written order in connection with Captain Nolan's own interpretation of it, we do not see how any officer could have done otherwise than Lord Lucan did—remonstrate, and obey. It seems that the noble earl is much dissatisfied with the light in which the event is narrated in these pages. But the rule of truth has been followed in this, as in every other case, to the best of the author's judgment. He feels obliged to the Earl of Lucan, as he does to other noble persons who have communicated with him, but if anything appear in a light unfavourable to him and them, impartiality and integrity so constrained. In the case of the Earl of Lucan, no other writer on the subject has regarded matters from a point of view so favourable to his lordship; even his distinguished relative, Lord Hardinge, in the correspondence which took place between them, and which Lord Lucan read to the House of Peers, decided the matter in favour of Lord Raglan. In concurrence with many officers, as competent to pronounce an opinion as Lord Hardinge himself, we have no hesitation in saying that the written order to Lord Lucan, given by his superior officer, did not clearly express what that officer afterwards declared to be his meaning; and that to the obscurity of the document, by which Captain Nolan as well as Lord Lucan was misled, the fatality of Balaklava is to be attributed. It was unfortunate that Lord Lucan did not use his prerogative as a lieutenant-general, and on his own responsibility decline the charge; but he was so peculiarly situated, both to Lords Raglan and Cardigan, that his hesitation to assume any such responsibility may be easily accounted for.

While all these incidents passed before the public view, the heart of the nation was penetrated by anxiety as to the proceedings before Sebastopol, and in the conference at Vienna, then sitting. It was felt that if the second bombardment terminated in a failure, Russia would be less willing to negotiate; and when such was the unfortunate result, the public anxiety as to the effect likely to be produced in Vienna was very great. "Vienna or Sebastopol—which?" was in every mouth. On two distinct, and it might be said rival, theatres of conflict steel and thunder were at work. In the Crimea the 18-inch mortars and the battery were employed for their sanguinary purposes from night to night; while at Vienna, although the steel pen only gave point to the enemy, and protocols alone fulminated, the contest was also keenly waged. The attention, not only of the English public, but of "the kings of the earth, and of the whole world," were divided by these separate conflicts; yet, separate as they were, both as to the scenes upon which their parts were enacted, and as to the parts themselves, their influences were re-

ciproacative. A prompt settlement at Vienna would have silenced all the thunders that boomed around Sebastopol, and sheathed the sword; a decisive victory, where the beleaguered city and beleaguered camp threw up their embankments, and worked and counter-worked their mines, would have as certainly shut up the portfolios of the ministers, and stopped the nimble steel of the writers. Well might the English public listen for foreign intelligence with suspense, and ask, "Which first?" Public hope was undoubtedly turned to Vienna, although doomed, both there and at Sebastopol, for the time to be disappointed. A wag suggested, in one of the public journals, that the English representatives at Vienna and Sebastopol should change places: Lord Raglan wrote nice letters, which would come gracefully from Vienna; whereas Lord John, whose self-sufficiency no one doubted, might as well try the direction of affairs in the Crimea. Every day during this part of April men opened the public journals eagerly, expecting to read that the Zouave and the Connaught Ranger, the tartaned Highlander and the burly Guardsman, had planted the ladder, clambered the silenced earthworks, mounted the trench, and pressed down the slopes of the defences to the barricaded streets, already swept for them by the guns pushed forward to clear their progress. It was felt that, come when it would, it must be an awful tragedy, but one more likely to settle down Europe into the equipoise of its various powers than any other which was ever enacted, not excepting sanguinary Waterloo. If that deed were accomplished, the minor diplomatists might enjoy themselves with Count Buol; while Drouyn de Lhuys could return to his cabinet, Lord John to Chesham Place and the Colonial-office, and Gortschakoff and Nesselrode go home, and give the knout to their serfs. All "the points" would have then resolved themselves into one—the point of the bayonet; terms of peace would have been within the comprehension of Lord Westmoreland, although even then his lordship would be more at home in a high mass, or an oratoria. Russia would have to make peace on the terms proposed, or her flag would be expelled from the Euxine; and there could be no doubt to which alternative she would submit.

When the intelligence arrived in England of the failure of the second bombardment (which will be recorded in another chapter), the public despondency as to the issue of the campaign was most marked, while the determination to prosecute the war was not diminished. The general opinion (not in every respect verified by events) was expressed substantially in this way:—"There is no hope of terminating the war in the East by the tactics

hitherto pursued: a vast fortress, open to supplies, and half invested (and an army auxiliary to it in the field, perhaps equal to that of the besiegers), cannot be stormed, if even storming be practicable, without the assaulting army encountering at the same moment peril from the army of relief too terrible to risk." As Wellington, supposed to be one of the first Napoleon, said that "the science of letting fortification alone" was very important in a campaign, was very much quoted. He certainly put his remark into practice in his invasion of Italy by the Alps. So did Wellington in the memorable case of Burgas. These great commanders violated the rule of never leaving well-appointed fortress behind an advancing army: they advanced to victories, which determined results of such magnitude as to leave the positions in their rear, which they did not tarry to conquer, no longer of use to the enemy. These things were the topics of conversation in the clubs and *cafés* of London, and in the exchanges and news-rooms of the provinces. It was urged that the Russian army should be driven from the Tehernaya and Bagtché Seraï, and their basis of operations made a basis for the allies themselves in the advance upon Simpheropol and Perekop. It was argued that, if in the defiles and on the slopes of the Southern Crimea the Russian army in the field were defeated, and driven across the great steppe of its northern side, they were finally expelled from the Crimea, the more men in Sebastopol the sooner its fall, and the more complete the loss to Russia, all must become prisoners of war, or fall under the successive shocks of bombardment and assault, unless famine itself were employed where arms could not conquer; but, in either way, it was alleged there could be but one issue to such a policy—the city must fall. Confident as the various sections of the English public appeared to be in the plans and projects they were willing to patronise, and eagerly tried, yet all felt that they were wandering in obscurity. Providence had hung over the "Armageddon," and its surrounding "Valley of Death" (the singularly prophetic name of the deep vale into which the allied position looked), a cloud of perplexity and mystery. It remained for that Providence to afford the solution of the mystery, by events which rapidly hurried on in the progress of the struggle.

The arrival in England of the news that the Vienna conference, like the second bombardment, was a failure, roused the nation and quickened the pulse of its military fervor. The progress and issue of that assemblage of plenipotentiaries will be noticed in a separate chapter.

Murmurs, loud and general, against the statesmen filled the country. The peace

arty took advantage of this, and Mr. George Thompson, their eloquent and almost ubiquitous lecturer was heard, in most beguiling language, persuading large assemblies of the people that the war was never necessary—that no danger was then, or at any time, to be apprehended from Russia, and that the Vienna Conference, only partially closed, should be at once formally re-opened to accept the terms of peace. The author of this History, reviewing these circumstances at the time, replied to Mr. Thompson and his coadjutors in an eminent London journal in the following terms, which constitute an appropriate notice on this page of his narrative, of the party, their arguments, and the tendencies of those arguments at that juncture:—"If our diplomacy at Constantinople and Vienna, and our foreign-office in London, had been thoroughly honest and enlightened, we need not have gone to war. Our ambassador at Constantinople had been regarded as a very able man, and, doubtless, he was well aware of the signs both of the Greek community in Turkey, and of Russia; but he had been gradually losing that energy which formerly characterised him, and was sinking down into the secure possession of a very dignified and stately embassy. Still the necessity of checking Russian designs upon the Turkish empire somehow became a necessity to European independence. This is not the place to go into elaborate proof of such a proposition, but it must be obvious that if the Russian eagles soar above the Bosphorus, Russia will command the straits, and, from the straits of the Dardanelles, menace Southern and a large portion of Western Europe. It is true England would hold Malta and Gibraltar; and they are impregnable. France would hold Toulon and Algiers; and so long as she did, Russia could not emerge with impunity through the straits of Gibraltar, but the free navigation of that great arterial sea of commerce, the Mediterranean, would of course be lost to Western Europe. Egypt would soon be, in the case supposed, the prey of Russia; she would then hold all the great granaries of the world, excepting the United States, where the increase of population so keeps pace with production, that we can hardly take her into the account as a granary for Europe. By way of the Red Sea, India would be menaced; while nothing, under such circumstances, could prevent Russia from advancing upon Persia and all Central Asia, until her arms should gleam in the deserts of Afghanistan. The world would eventually be at the feet of the czar. We own as much apprehension from the possession of Finland, and the encroachments by arms and connexions upon Sweden and Denmark, as we do from the advance of Russia upon

Europe by the Euxine. In fact, if the world has not more to apprehend from her advance in that direction, England has. Sir Charles Napier has pronounced, not only Cronstadt, but Revel and Helsingfors, impregnable by land and sea! Russia has secured, both on the Baltic and in the Black Sea, a *point d'appui* of the utmost strength and importance. Safe in her interior, she has laid a base of aggressive operations at Cronstadt, at Sebastopol, and at Warsaw, upon or near the extremities of her empire, so that, in case of any war, she has only to throw an army forth upon the territory of her neighbours, and, if worsted by a powerful coalition, as in the present case, she can skulk into her hiding-places, and from these fastnesses bid defiance to those from whom she has carried thither the booty gathered in her foray. Either the aggressive policy of Russia must be abandoned, or the balance of power thus disturbed must be restored. The independent existence of the nations of all Europe demand this. That the policy of Russia is aggressive her most specious apologists must admit. Her czars and czarinas have successively avowed it. Her progress has been an uninterrupted career of conquest. In the direction of Constantinople, the great prize, this has been most especially the case. Only 154 years ago Russia made her first treaty with Turkey—the treaty of Azoff, by which each became pledged to send an envoy to the other, and thus 'diplomatic relations' began between them. The treaty of Kainardgi, of which we hear so much, and which was ostensibly for the security of certain immunities to the Greek Christians, was not signed until 1774. And it only *formally* secured privileges which, for seventy-five years, the sultan had been accustomed to accord without it. So early as 1699, Austria, Venice, and Poland, extorted the treaty of Carlowitz, securing protection to those professing the Latin faith; but what he was thus bound by treaty to give to the Latins, the sultan conceded also to the Greeks, and Russia had no real cause for interference. To interfere, and be felt as a power, and thus find a pretext for promoting her own views of aggrandisements, were the true objects of Russia. Every step in the path taken by the Emperor Nicholas was for the same destination, and hence Sebastopol became what it is—the wonder-fortress of the world."

It is unnecessary to dwell more on the progress of events in England, during the spring of 1855, which bore upon the war, especially as the relation of one most interesting episode, pleasing alike to France and England, and significant to the rest of the world, is reserved for a separate chapter—the visit of Napoleon and Eugenie to the Queen of England.

In France there were no events during the

spring to interest the English reader, except such as incidentally came under notice in connection with English affairs, or will be recorded in the next chapter. Rumours of the emperor's proceeding to Sebastopol, to take the command of his army in person, were rife through the month of March; and it was believed that, on the 6th of April, he would take his departure, the first, as a French wit said, being too remarkable a day. Instead of an expedition to the Crimea, he, more prudently advised, paid a visit to England.

The movements of troops to the seaports were incessant during March—among them, the Guards, amounting to 12,000 men. The embarkations of reinforcements were incessant—English ships rendering great service to the French government in conveying their troops.

In the *Courrier de Marseilles* of the 20th, were the following announcements:—"Embarkations in our port for the East continue with great activity. The steamer, *City of Manchester*, which sailed to-day, had on board the first battery of the Imperial Guard, with its officers, a detachment of sixty artillerymen of the 4th regiment, and 300 horses, of which 259 belonged to the first battery of the guard. This vessel will probably reach Kamiesch in eight days. On her return she will convey wounded soldiers to Constantinople, and take in from the hospitals of the city the men in a state of convalescence, and bring them back to Marseilles. The *Glasgow*, not having yet made the requisite fittings, will not be able to put to sea before Saturday. Thanks to the kindness of her intelligent captain, Mr. Cuming, and of the amateur, Sir George Alexander, our soldiers will find in that splendid vessel of the Scotch company every comfort they can wish for; the medical department, confided to Dr. Dunbar, leaves nothing to be desired. The *Glasgow* will likewise transport sick and wounded from the Crimea. The magnificent packet *Bresil* will leave to-night for the East: this is her first trip. General Herbillon, commander of the tenth division of the French army, and his staff, General Marguenat, commander of the first brigade of that division, M. Herbillon, junior, and several other officers, are to take passage in the *Bresil*, which carries, besides thirty-four horses, and a large quantity of bombs, and incendiary rockets. The steam-packet *Hydaspes* sails this afternoon direct for Constantinople, having on board a number of officers going to join their respective corps; the second battery of artillery of the 4th regiment, consisting of 124 men, and the third battery

of the 2nd regiment, 265 men strong. The large steamer *City of Baltimore*, of the Liverpool Company, to which the *City of Manchester* belongs, and the steamers *Natal* and *Cleat*, are on their way from England to Marseille. The first two have in tow the clippers *Tico*, *deroga* and *Emma Jane*. The Sardinian steamer *Vittorio Emanuele*, of 2800 tons, built in London by Messrs. Mare and Co., left this capital on the 11th, and is hourly expected at our port. These vessels will convey at least 1100 horses and 1500 men. The American clipper *Ocean Herald*, which astonishes our population by her gigantic proportions, is remarkably fast sailer, having performed the passage from England to Gibraltar in five days and a half. The beautiful yacht *Enchanteresse*, belonging to an English baronet, who is travelling with all his family, has arrived in the port of La Joliette, on her way to the East. Two additional batteries of artillery, destined for the Crimea, are expected at Marseille. The screw ship *Charlemagne* arrived at Toulon from Algiers on the 20th instant. On the 19th the steam corvette *Volta*, of 400-horse power, was launched at L'Orient."

The justice and generosity of the French government in conferring honours and promotions upon deserving officers was very striking, and formed a remarkable contrast to the English government, whose plan was, according to an eminent London journal—"favour first seniority next, and merit as it might be."

The *Moniteur d'Armée* published imperial decrees, promoting Generals d'Allonville, D'Aurelle de Paladines, and D'Autemar d'Erville, commanding in the Crimea, and two others, to the rank of generals of division, and eight colonels, mostly serving in the East, to that of generals of brigade. The same journal contained a number of appointments in the Swiss Foreign Legion, up to the rank of lieutenant-colonel, of officers hitherto in the service of the Helvetic confederation. An imperial decree elevated Vice-admiral Romain Desfosses, formerly minister of marine, to the dignity of senator.

In April, embarkations of troops and promotions of officers continued, but the great events of that month were connected with the departure of the emperor and empress for England, their return, the attempt upon the emperor's life, the state of public feeling succeeding that crime, and the renewed demonstrations throughout France of confidence in the emperor's government, and loyalty to the person and throne. For a faithful account of these incidents the reader is referred to the next chapter.

## CHAPTER LXXVII.

VISIT OF THE EMPEROR AND EMPRESS OF FRANCE TO THE QUEEN OF ENGLAND.—WATERLOO AVENGED.—ATTEMPT TO ASSASSINATE THE FRENCH EMPEROR ON HIS RETURN TO FRANCE.—LIFE OF NAPOLEON III.—STRANGE FORTUNES OF THE FRENCH AMBASSADOR TO THE ENGLISH COURT, THE COUNT WALEWSKI.

"I well might lodge a fear  
To be again displac'd; which to avoid,  
I cut some off; and had a purpose now  
To lead out many to the Holy Land;  
Lest rest, and lying still, might make them look  
Too near unto my state. Therefore, my Harry,  
Be it thy course to busy giddy minds  
With foreign quarrels; that action, hence borne out,  
May waste the memory of the former days."

SHAKSPEARE. *Henry IV.*

A VISIT from their imperial majesties to the Queen of the Isles" had been for some time talked of in England and France. This was at last resolved upon at the court of Paris; and on the 15th of April the imperial pair left the Tuileries in an open carriage, escorted by the Cent Gardes. However suitable the day might be to the taste of the Parisians, his majesty showed, by selecting it, that his residence as an exile in England had not taught him all the peculiarities of the people whose sovereign he was about to visit—many of whom received the intelligence of his Sunday journey with dissatisfaction, as it appeared to them to show some deficiency in his majesty's consideration or the feelings (or prejudices, as he might deem them) of the vast majority of the British nation. The emperor was accompanied on his journey by Marshal Vaillant, Minister of War, and Grand Marshal of the Palace; the Duke de Bassano, Grand Chamberlain; General de Montebello, Colonel Fleury, and the Marquis de Foulangeon, his aides-de-camp. The empress was attended by the Princess Essling, grand mistress of her household; the Countess de Montebello and the Countess Maralset, ladies of the palace; and Count d'Archer de la Pagerie, first chamberlain to her majesty.

The departure from Paris was attended by every demonstration of popular good wishes and respect. The Parisians were proud to see their emperor set forth to such a destination. At Calais the imperial suite proceeded to Messin's Hotel, where apartments were fitted up in great state for their reception. The old town of Calais was literally festooned with flowers, and brilliant illuminations lighted up the quaint dark streets. The next morning they embarked on board the *Pelican*, war-steamer, where they were received by the French admiral, the British ambassador to the court of Paris, Baron Rothschild, Sir Robert Peel, as a lord of the British Admiralty, Marshal Bugey d'Hilliers, the British consul at Calais, and various other persons of minor note, whose official position bestowed the privilege, or im-

posed the duty, of being present. Admiral Chabannes conducted the empress on board, the emperor condescending to offer the support of his arm to the Princess d'Essling. The emperor was dressed in the uniform of a marshal of France; the empress wore a small chip bonnet, and a broad silk plaid dress, with a pretty grey hood, giving her the appearance and air of "a bonnie Scotch lass" of the higher ranks of society. It was an appropriate attire—her majesty being of Scottish lineage; and her style of face, complexion, and the tint of her hair, bearing strong resemblance to the more delicate types of Scottish beauty, the dress she patronised exceedingly became her. The *Pelican* was attended by a royal squadron. Scarcely had the imperial flotilla cleared the harbour, when a dense fog obscured the horizon, which rapidly became more dense, until the ships were separated, and danger to the vessel which bore the imperial charge was apprehended. After considerable delay, however, the *Pelican* reached Dover Harbour at a quarter past one.

Prince Albert, and a retinue of royal attendants, were waiting at the landing-place; and as the time for the imperial arrival passed away, and the delay became protracted, the royal party grew very apprehensive of accident, for the fog hung gloomily over Dover, and out at sea. At last all alarm was dissipated by the *Pelican* looming through the fog, in which could be barely discerned, even at the landing-place, the tricolor at the poop, the standard of England on the foremast, and the imperial flag at the main. Before the ship could be well seen, the music of the splendid band on board was wafted on shore over the hazy atmosphere, and "*Partant pour la Syrie*" thrilled through the hearts of those who waited to receive the longed-for guests. As soon as the music was heard, it was answered by a loud British cheer, the most appropriate, cordial, and, to the imperial guest, no doubt, pleasing welcome; for he understood English manners better than most foreigners, and knew that, when an English cheer greeted a public man, it was sincerely

given. A vast concourse had assembled, dim as the afternoon was, but there was no disorder; the ground was kept by detachments of militia; and the East Kent mounted rifles, a beautiful corps, appropriately formed the escort when their majesties landed. Before that event various interesting incidents occurred. It was known, by the electric telegraph at Dover, that their majesties had set sail almost as soon as the royal squadron moved from Calais, and immediately all the bells in Dover were made to give forth their merriest peals; vessels of all sorts made their way through the fog to give the imperial guests a joyous welcome; the band of the Royal Bucks Militia poured forth its best melody.

As soon as the *Pelican* came alongside, a gangway was run out, and his Royal Highness Prince Albert took his station upon it. The emperor and the prince shook hands, the empress and her train gracefully courtseying to his royal highness, who was not deficient in those gallant attentions appropriate to his position. The Count and Countess Walewski, who had been amongst the anxious expectants of the emperor's arrival, and had requested Lord Alfred Paget to put off in a man-of-war's boat on a cruise of investigation, were amongst the first persons noticed by the emperor, and all the bystanders were struck by the cordial and familiar greeting which his majesty vouchsafed to him. The Mayor of Dover presented his respectful congratulations upon the safe arrival of the emperor, who acknowledged the attention in a manner which showed his familiarity with English habits on such occasions.

After the ceremonies attendant upon the landing came to an end, the whole party proceeded to the Warden Hotel, where a luncheon was prepared in a style worthy of the occasion. On the way, the populace and multitudes of visitors at Dover, from far and near, raised their joyous acclamations. The empress had known England, having received a portion of her education in Bath, so that the mode in which the imperial pair acknowledged the gratulations of the people, showed their appreciation of the welcome they received.

After luncheon the corporation of Dover waited upon his majesty to present an address, which was read by Mr. Bodkin, the recorder of the borough, and listened to with marked attention by the imperial pair. The document itself was without any particular feature of interest, resembling most other provincial corporate addresses to royal personages.

The reply of the emperor was off-hand, and delivered with almost volubility: a slightly foreign accent gave interest to the expression. As the first words addressed by Napoleon III. to any public body of Englishmen, that brief

speech ought to be recorded on the pages of history:—"I am exceedingly grateful to your queen has allowed me to find such an occasion to pay my respects to her, and show my sentiments of esteem and sympathy for the English people. I hope that the nations will be always united, in peace and war, for I am convinced that it will be for the welfare of the whole world, and for their prosperity. I am exceedingly grateful to you for the sentiments you have expressed towards myself and the empress, and I hope you will be the interpreter of my sentiments and hopes to your countrymen."

Immediately upon the withdrawal of the corporation, Prince Albert conducted his guests to the railway-station, which adjoins the hotel, where an apartment, elegantly decorated, received them for a short time, until the carriage was in readiness to convey the royal group to the capital. During this interval, Mr. Child, with gallantry and good taste, presented the empress with a very beautiful bouquet. When the train started, a loud and hearty cheer from the vast multitude rang forth, and the royal train dashed off at full speed. The fog at this juncture cleared off, and the undulated landscapes of Kent were revealed to the admiring visitors. Along the whole line ovation awaited their majesties. At every station crowds pressed forward; the embankments of the railway were, at numerous recurring intervals, topped with eager groups whose cheers greeted and followed the rapidly passing train. Sometimes the children of public schools waved their tiny hands, and raised their shrill voices; labourers, workmen, rustics, anon flourished their headgear, and bellowed loudly a boisterous welcome; tasteless flags danced in the light, gay air; and here and there inscriptions of compliment showed how hearty was the popular reception. At Tonbridge the train stopped for a short time, and a vast concourse of persons pressed their way through every barrier, and cheered—as if cheering was the only way to convey any proof of demonstration of their gladness. The Adolphus Cadets were drawn up at Croydon; the band played the French national anthem, and the cheers of the young soldiers greeted heartily the nephew of the greatest soldier the world ever produced. The imperial suit were much delighted as they approached the Crystal Palace, which gleamed beneath the white sunshine like the "Koh-i-noor," or "mountain of light." Perhaps that fairy structure never appeared so advantageously to travellers on the rail as it did that day; and the beautiful arrangement of upland and dale around it, looking so cheerful in the spring light, enhanced the beauty of the palace of crystal. At six o'clock, some hours after the time expected

the train reached the terminus. There the queen of England's carriages awaited its arrival; and in these the guests proceeded *en route* to the Paddington Station of the Great Western. From the Bricklayer's Arms Station, on the Old Kent Road, along the whole line of procession to Paddington, the footpaths were thronged with eager crowds; and the whole resources of London, in vehicles, private and public, were brought into requisition. Flags hung from the windows and housetops; the Tricolor flirled with the Union Jack in the most public thoroughfares. Across streets triumphal arches, decorated sometimes with taste, sometimes with a profusion which taste rejects, were intended to tempt the imperial eyes to behold the loyalty and good faith of the Londoners, and their purpose to do all that belonged to them in maintaining the *entente cordiale*. While the multitudes along the course traversed by the royal *cortège* were everywhere great, at some places the crowds were overwhelming. Perhaps the first of these specially multitudinous assemblages met with was at the "Elephant and Castle." As soon as the carriages turned from the New Kent Road, the scene which met the gaze of their occupants was extraordinary: every window, numerous scaffoldings, and the very house-tops swarmed with human beings: all the roads converging upon that spot were filled with great blocks of people—as at a little distance they appeared. From the countless masses wild hurrahs arose, like the voice of many waters; it was sublime—for the shout of an excited, joyous, or triumphant multitude is sublimer than the sounds of sea or storm. The line of progress was by the Westminster Road to Westminster Bridge: many banners flaunted on high on either side; and Astley's Equestrian Theatre was nearly hidden by British, French, Turkish, and Sardinian flags.

The poor old bridge of Westminster, over which many a gay cavalcade and triumphal procession had passed, was supposed to be too frail to sustain an unusual crowd. Measures were taken to prevent a concourse there, or it would have been one of the most closely-occupied spots in the long line of progress. The bridge was profusely decorated with the flags of the allied nations. Parliament Street was most tastefully ornamented, throughout its extent flags and floral displays were richly and elegantly exhibited. From this point of view the appearance of the multitudes all along Whitehall to Trafalgar Square was very striking, for there is no sight so commanding as a multitudinous people, as there is no sound so sublime as their voice. On this occasion, we could not but feel that the sight of the mighty concourse was even awing. No city in

the universe could assemble such well-dressed numbers, nor such numbers of any degree or quality. London had poured out that day all that were available of her three millions; and whatever may be the grandeur of the gay and gaudy capital of continental Europe, it could produce no such sight as met the eyes of the emperor, and those of the fair partner of his triumph, on that day. In Whitehall there was a grand display of the flags of all nations, the enemy's alone excepted. The government buildings were very gay. Over the portico of the Admiralty a military band performed French and British national airs. The Chapel-Royal, Horse Guards, and other public buildings, and the line of Richmond Terrace, were fitted up with seats, which were occupied by the *élite* of English society. Their reception of the imperial guests, especially of the empress, was most enthusiastic, and her fair face glowed with satisfaction as she bowed in acknowledgment of their plaudits. Trafalgar Square afforded a convenient stand-point, from its wide area and the facility afforded by its elevation: it was literally packed with an excited but most orderly multitude. Both the emperor and empress were struck with the vast concourse which came within range of their vision; and the acclamations which shook the air greatly affected the imperial visitors, who expressed to his royal highness their sense of the great cordiality shown to them.

The line of carriages passed through crowded streets—crowded from the kerbstones to the housetops—until they reached Hyde Park Corner. It is said that the emperor pointed out to the empress the street leading into St. James's Street, where he had humble lodgings, when, seven years before, he was an exile residing in London. On the 10th of April, 1848, he turned out, baton in hand, to serve as a special constable, when the Chartists, under the guidance of the unfortunate Fergus O'Connor, threatened an invasion of London. Seven years and one week, save a day, had elapsed since he was thus obscure; and it was reserved for him to pass through the streets of the great city, guarded by the household troops of her majesty, her guest, and the companion of her consort, while her whole people turned out to confirm her invitation, and add to the honours she had reserved for him. *O tempora mutantur, et mutantur cum illos!* When the illustrious visitors entered Hyde Park, an entirely new scene awaited them. Comparatively few of the lower classes were there; but nowhere else in Europe could such an array of carriages and horsemen be presented. The writer of this History took up his position near the Magazine, where a tolerable opportunity of seeing the procession was offered; but so dense were the carriages and the equestrians,

that persons attending on foot were much impeded. The imperial pair, with Prince Albert, were seated in an open barouche. Six of the royal carriages, each drawn by four horses, and attended by outriders, conveyed the visitors and suite to the Great Western Station. The pace was too rapid for the gratification of the people, and the respect due to their efforts to make them welcome. This, of course, was no fault of their imperial majesties. Immediately on the arrival of the royal and imperial party at the Paddington Station they proceeded to Windsor, where they arrived at seven o'clock. The Queen, accompanied by the Prince of Wales, the Princess Royal, the Duke of Cambridge, and the Prince of Leiningen, received her guests, who alighted at the grand hall. The band of the 94th regiment played the French national anthem. In passing from the railway-station at Windsor to the castle, the illustrious company occupied several beautiful pony-carriages, and the population welcomed them with the same enthusiasm as in every other place since their landing. The yeomen of the guard lined the guard hall and staircase, under Captain Macdonald, the exon in waiting—the other officers of the corps being also in attendance. The great officers of state, and of the household, in levée-dress, and the ladies and maids of honour in waiting, were in attendance with the queen at the grand hall. Viscount Palmerston and the Earl of Clarendon were the members of the cabinet present. The royal and imperial group passed up the grand staircase, through the music-room, into the throne-room, where the younger members of the royal family were assembled, and where the ladies and gentlemen of the household were presented. The members of the different households then retired to their private apartments. Her majesty gave a dinner in the evening in St. George's Hall, which was attended by the band of the Grenadier Guards. The queen's private band afterwards performed in the music-room. The state apartments of the castle were appropriated to the royal guests.

The next day was one of the finest April days ever seen in England. The Emperor and Empress, the Queen and Prince Albert, walked upon the slopes. The approaches to the castle were crowded. Every train from London brought down new accessions to the numbers which, from all the surrounding country, thronged Windsor. At three o'clock the mayor and corporation arrived at the castle to present an address. They were conveyed in nine carriages, the first of which was a superb equipage, and was occupied by the mayor and recorder; then followed the state-carriage of the Lord Mayor of London, with those of the sheriffs, and members of the court of lieutenancy.

The following address was read by the recorder:—

"May it please your imperial majesty,—We, her Britannic majesty's loyal and dutiful subjects, the mayor, aldermen, and burgesses of the borough of New Windsor, most respectfully beg leave to approach your imperial majesty with our sincere and hearty congratulations on the arrival of your majesty and your imperial consort in our country, and on your visit to our gracious monarch at the long favoured seat of the sovereigns of this country.

"We avail ourselves of this auspicious occasion to assure your imperial majesty that we have witnessed with the highest satisfaction the alliance which has been formed between your majesty and our beloved queen in defence of the sovereign rights of an independent state which have been unjustly violated. We feel that the war, in which your majesty has exhibited so much judgment, ability, and disinterested generosity, is just in principle, that it was not rashly or hastily commenced, and is now only pursued in defence of an oppressed people, and for the establishment and maintenance of a safe and durable peace.

"We have not failed to observe, with sentiments of respect and sympathy, the admirable skill, indomitable courage, and extraordinary endurance which have been manifested by the valiant soldiers of France in the present struggle, whereby they have more than maintained that glorious renown which their forefathers reaped in a hundred battles; nor have we been indifferent spectators of the kindness and cordiality which so happily exist between the armies of France and England, now fighting together in one common cause; and we earnestly hope that the warriors of both nations may henceforth be found contending side by side for the honour, safety, and advancement of France and England, and the peace and happiness of the world. We trust that now, under the guidance of your imperial majesty and our illustrious sovereign, a union will be formed which will bind the two countries in an indissoluble bond of cordial and lasting friendship.

"We are sensible, sire, that to the wisdom and vigour of your imperial majesty's councils and to your unceasing endeavours to promote the truest interests of the powerful and generous nation which Providence has committed to your care, may be attributed that prosperity and happiness which your country now so fully enjoys; and we venture to augur that by encouraging a friendly and personal intercourse between your imperial majesty and the sovereign of Great Britain, your majesty adopt the surest means, not only of strengthening the happy and stable alliance between the two

untries, but of sustaining the liberties and civilisation of Europe.

"May your imperial majesty and your illustrious consort long live to enjoy every domestic and personal blessing, and the loyalty and attachment of an admiring and grateful people.

"Given under the common seal of the said Mayor, aldermen, and burgesses, at the Guildhall, in the said borough, on the 9th day of April, in the eighteenth year of the reign of our sovereign lady Victoria, by the grace of God, of the United Kingdom of Great Britain and Ireland, queen, defender of the faith, and the year of our Lord, 1855."

To this his imperial majesty replied:—

"MR. MAYOR,—I am very much pleased with the sentiments contained in your address; and I trust that the alliance so happily formed will last for many, many years. I thank you for the hearty reception I have met with in your town; but I am sure I cannot take it to myself much as to the circumstance of my being a guest of your queen. I was much gratified by what I witnessed last night in your town; and I beg that you will express to the inhabitants of Windsor how highly pleased I was with their kindness and attention."

The lieutenantcy, deputations from the London merchants and bankers, and the representatives of other public bodies, then presented dresses, which were not of sufficient historical interest to publish here. In each case his majesty delivered an appropriate extempore reply.

After the withdrawal of the corporation and the deputations, there was a review in the Great Park of a small brigade of cavalry, consisting of the 2nd Life Guards, the Royal Horse Guards Blue, and the 6th Dragoon Guards, or Carabiniers, and two troops of Royal Horse Artillery. The ground was kept by the 94th Regiment of the line. The queen and empress attended in an open carriage. The Earl of Cardigan commanded the troops. The French emperor rode between Prince Albert and the duke of Cambridge. His imperial majesty and the prince consort were attired in the uniforms of field-marshal of their respective nations. The number of persons on the ground was enormous, and they received with great enthusiasm the illustrious *cortège*, the military bands playing "*Partant pour la Syrie*." After the review there was a sham cavalry action; and the emperor highly complimented Lord Cardigan on the manner in which the manoeuvres were conducted.

In the evening there was a grand dinner-party in St. George's Hall; and the evening party which followed was most numerously attended with aristocratic guests.

On Wednesday her majesty held a chapter

VOL. II.

of the garter, for the purpose of investing the emperor with the insignia of the order. The queen wore on this occasion her celebrated diadem of brilliants. The *Court Circular* afforded the following account:—

"The knights companions were called over according to their order of seniority:—The Marquis of Exeter, the Duke of Richmond, the Marquis of Lansdowne, the Duke of Buckingham, the Marquis of Salisbury, the Duke of Cleveland, Earl de Grey, the Marquis of Hertford, the Duke of Bedford, the Earl of Clarendon, Earl Spencer, Earl Fitzwilliam, the Duke of Northumberland, the Earl of Ellesmere, and the Earl of Aberdeen. The officers of the order present were—the Bishop of Winchester, prelate; the Bishop of Oxford, chancellor; the Hon. and very Rev. the Dean of Windsor, registrar; Sir Charles George Young, garter king-of-arms; and Sir Augustus Clifford, gentleman usher of the black rod. The knights appeared in the mantle and collar of the garter, and the officers wore their respective robes, with their chains and badges.

"The knights companions and officers entered the throne-room, and took their seats at the table, the queen being seated in a chair of state at the head, a second (vacant) chair of state being on the right hand of her majesty. The prelate of the order stood on the right of the queen, the chancellor on the left, while the registrar, garter, and black rod, remained at the bottom of the table. The ceremony commenced by the chancellor reading a new statute, by command of the queen, dispensing with the existing statutes of the Order of the Garter, in as far as was required for the especial purpose therein mentioned, and ordaining and declaring that his Imperial Majesty Napoleon III., Emperor of the French, be declared a knight of this order, any statute, decree, rule, or usage to the contrary notwithstanding.

"By the queen's command the Emperor of the French was conducted from his apartments through the music-room, and grand reception-room, between his royal highness Prince Albert, and his royal highness the Duke of Cambridge, the two senior knights companions present, preceded by the garter king-of-arms (bearing the ensigns of the order upon a crimson velvet cushion), and by black rod. The queen and the knights of the garter received his imperial majesty standing; and the emperor, passing to the head of the table, took a seat in the chair of state on the right hand of her majesty.

"Her imperial majesty the Empress of the French, his royal highness the Prince of Wales, her royal highness the Princess Royal, his royal highness Prince Alfred, her royal highness the Princess Alice, and their royal highnesses the Duchess of Cambridge and the Princess Mary, had been conducted to the

throne-room before the entrance of the queen, in order to witness the ceremony.

"The empress and the Duchess of Cambridge were ushered to seats near the throne. The queen announced to the emperor of the French that his imperial majesty had been elected a knight of the most noble Order of the Garter. Garter king-of-arms, kneeling, presented the garter to the sovereign, and her majesty, assisted by his royal highness Prince Albert, buckled it on the left leg of the emperor, the chancellor pronouncing the admonition. Garter king-of-arms presented the riband with the George, and the queen put the same over the left shoulder of the emperor, the chancellor pronouncing the admonition. The queen then gave the accolade to the emperor, and his imperial majesty received the congratulations of his royal highness Prince Albert, his royal highness the Duke of Cambridge, his serene highness the Prince of Leiningen, and each of the knights companions present. The chapter being thus ended, the knights companions were again called over by garter, and retired from the presence of the sovereign with the usual reverences.

"Her majesty accompanied the emperor to his apartments, followed by the empress and Prince Albert, and attended by the ladies and gentlemen of the royal suites. The queen and prince afterwards returned to their own rooms.

"A guard of the honourable corps of Gentlemen-at-arms, under the command of Major Harmar, the standard-bearer, was in attendance upon her majesty the queen at the chapter-room, and a special guard of honour of the honourable corps, under the command of Lieutenant-colonel Topham. The lieutenant majesty the emperor of the French at his apartments and at the chapter-room. The yeomen of the guard, under the command of Captain Macdonald, the exon in waiting, lined the grand staircase, the vestibule, and the music-room. The queen's footmen, in state-liveries, were stationed in the vestibule.

"The queen gave a state dinner in the evening, at which all the gentlemen appeared in uniform or court dress, the members of orders of knighthood wearing their respective ensigns. The magnificent service of gold plate was used on this occasion. The middle of the table was adorned with a number of beautiful *épergnes* and vases in gold, while on two buffets, at each end of St. George's Hall, in which the banquet was served, were displayed, on a background of rich crimson, a variety of beautiful specimens of art in the precious metals, in shields, tankards, jewelled cups, vases, tazzi, and other articles of *virtu* in the royal collection."

The buffets and the table were brilliantly lit by numerous wax-lights in candelabra of

silver-gilt, the St. George candelabrum forming the centre ornament. Opposite the candelabrum at the table were seated her majesty the queen, and his imperial majesty the emperor of the French; and on the opposite side his imperial majesty the empress, and his royal highness Prince Albert. The festivities of the evening were brilliant, exceedingly suggestive of some gorgeous fairy tale. It was remarkable that the insignia worn by the emperor on this occasion was that worn by Louis XVI. and Charles X., when similar honours were conferred upon them.

On Thursday morning their royal and imperial majesties visited the city. They left Windsor at a little after eleven o'clock, and proceeded by the South-western Railway to the queen's private station at Nine Elms. They were received there by the directors, the barons of the Coldstream Guards performing the national anthems of England and France. The Grenadier Guards kept the ground, and a squadron of the 1st Life Guards formed the escort. The illustrious party went along the Wandsworth Road to Vauxhall Bridge, along Milbank, Parliament Street, to the Horse Guards through the Horse Guards and St. James's Park to Buckingham Palace. Multitudes thronged the way, and their utterances of welcome rose in one perpetual shout. The state bands of the Life Guards were stationed in the front of the palace, and performed the national anthems dedicated to the two sovereign reigns. The Duke of Wellington, and other officers of the household, received their majesties with the appropriate ceremonies. The emperor and empress left Buckingham Palace at half past one o'clock, *en route* to the Guildhall, there to meet the citizens of London and accept their welcome. Their majesties and suite proceeded in seven of the royal carriages through the Mall of St. James's Park, the Horse Guards, thence to Charing Cross along Whitehall. The fineness of the day contributed to the glory of the scene which was presented in this triumphal course. From Charing Cross to Temple Bar, probably the greatest collection of persons were assembled which ever before thronged that approach to the city. Within the city, the gathering appeared, if possible, greater. All the way from Charing Cross, the royal carriages passed beneath a canopy of gaudy flags and banners which overhung the streets. The emperor and his delicate and amiable-looking empress were much affected by these demonstrations of friendship and cordial alliance. Their arrival at the Guildhall was the occasion for the grandest display of popular and civic hospitality. The Royal Horse Guards preserved order; military bands were duly stationed. A splendid canopy covered the whole area

the building, which was decorated in most costly style. The corporation was assembled, and many of the nobility, the ministers, the foreign ambassadors, and foreigners of distinction, obtained positions to witness the presentation.

At ten minutes past two their majesties arrived, and were at once conducted to the throne prepared for them. The recorder (who was surrounded by the lord mayor, aldermen, sheriffs, and various members of the court of common council) read the address which had been prepared by command of the corporation. It was as follows:—

“May it please your majesty,—We, the lord mayor, aldermen, and commons of the city of London, in common council assembled, desire to offer to your majesty our heartfelt congratulations on the arrival of your majesty and the empress of the French in this country as the guests of our most gracious queen; and on behalf of our fellow-citizens and ourselves, we humbly tender to your majesties the warmest expression of our gratitude for the welcome visit by which you have deigned to honour our city on this memorable day.

“The attention of Europe and the world is already fixed on the attitude of dignity and united strength displayed by France and Great Britain in the present war, and the coming of your majesty, invited by our beloved queen at such a time, will draw closer the bonds of mutual friendship and common interests so happily uniting the two countries.

“The cordial alliance of two such mighty powers, cemented and sealed by intimate and frank intercourse between their rulers, must way the destinies of all, will abate the pride of our common enemies, increase the confidence of our allies, and give new vigour to our arms.

“By the wise policy of your majesty’s reign, all our ancient jealousies have been appeased, and the flags of France and England now mingle their colours alike in the Baltic and in the East. Ranged together in a righteous cause, braving like hardships, and shedding their blood side by side in victory, the soldiery of our united armies, and the seamen of our combined fleets, have learned to regard each other with the love of brave and generous comrades, second only to the love they bear their respective countries; and while such are the feelings, we rejoice that sentiments akin to these are growing daily, and sinking deeply into the breasts of the people of these great and neighbouring nations.

“None can doubt that the allied forces thus animated, led in perfect harmony by commanders of tried skill and valour, and guided by united counsels at home, will achieve by arms the just and ambitious objects of the

present war; unless, as we may hope, the efforts of assembled statesmen shall yet avert the calamities of protracted warfare by the speedier negotiation of an honourable and enduring peace.

“This cordial reception, therefore, of the chosen and puissant emperor of the French by the illustrious sovereign who reigns over these realms, and lives in the hearts of the British people, we regard as a type of a close and lasting friendship between the two nations, and the happiest augury of a returning time, when, undisturbed in the onward course of civilisation, the nations of Europe may again lay aside the sword, and resume their exalted rivalry in the works of beneficence alone.

“We are earnestly anxious further to express to your imperial majesty the lively pleasure and respectful admiration with which we have seen you accompanied, on this happy occasion, by your illustrious consort, her majesty the empress of the French. We tender to your majesty the expression of our confident hope that you may ever find, in the affections of domestic life, the best solace and support this world can afford, under the cares and weights of the high destiny you are now fulfilling with such conspicuous power and moderation, and we fervently pray that life and health may, by the blessing of Providence, be vouchsafed to your majesties for many years to come.”

The emperor, having received the address from the hands of the recorder, proceeded to read his reply. He said:—

“MY LORD MAYOR,—After the cordial reception I have experienced from the queen, nothing could affect me more deeply than the sentiments towards the empress and myself to which you, my lord, have given expression on the part of the city of London; for the city of London represents available resources which its wide commerce affords both for civilisation and for war.

“Flattering as are your praises, I accept them, because they are addressed much more to France than to myself. They are addressed to a nation whose interests are to-day everywhere identical with your own. They are addressed to an army and a navy united to your own by heroic companionship in danger and in glory. They are addressed to the policy of the two governments, which is based on truth, on moderation, and on justice.

“For myself, I have retained on the throne the same sentiments of sympathy and esteem for the English people that I professed as an exile, while I enjoyed here the hospitality of your country; and if I have acted in accordance with my convictions, it is that the interests of the nation which has chosen me, no

less than those of universal civilisation, have made it a duty. Indeed, England and France are naturally united on all the great questions of politics, and of human progress, that agitate the world, from the shores of the Atlantic to those of the Mediterranean—from the Baltic to the Black Sea—from the desire to abolish slavery to the hope of amelioration for all the countries of Europe. I see in the moral, as in the political world, that there are two nations—but one course and one end.

"It is, then, only by narrow considerations and pitiful rivalries that our union can be severed. If we follow, then, the dictates of common sense alone, we shall be sure of the future.

"You are right in interpreting my presence among you as a fresh and convincing proof of my energetic co-operation in the prosecution of the war, if we fail in obtaining an honourable peace. Should we so fail, although our difficulties may be great, we may surely count upon a successful result—for not only are our soldiers and our sailors of tried valour—not only do the two countries possess within themselves unrivalled resources, but above all—and here lies the superiority—it is because they stand in the van of generous and enlightened ideas.

"The eyes of all who suffer rise instinctively towards the West, because the two nations are even more powerful from the opinions which they represent, than from their armies and their fleets.

"I am deeply grateful to your queen for affording me this solemn opportunity of expressing to you my own sentiments, and those of France, of which I am the interpreter.

"I thank you, in my own name and in that of the empress, for the kind and hearty cordiality with which you have received us. We shall take back to France with us the lasting impression made on minds thoroughly able to appreciate the very imposing spectacle which England presents, where virtue, on the throne, directs the destinies of a country under the empire of liberty without danger."

Their majesties, the Duke of Cambridge, the cabinet ministers, foreign ambassadors, and various distinguished persons were then conducted to the council-chamber, where an elegant *déjeuner* was prepared, and where the freedom of the city was presented to his majesty.

The queen, with the good taste so characteristic of her, was from the first opposed to an invitation to her and the prince, lest honours should be divided, which she desired to be wholly given to her illustrious visitors.

During the *déjeuner*, and afterwards, their majesties chatted familiarly, and with that grace which is so natural to all ranks in France,

among the groups of noble and civic persons assembled around them. His majesty noticed Sir Charles Fox among the spectators, who he beckoned to his side, and shook hands with him. While *en route* from the council-chamber to the hall, where many pictures of the Buonaparte family were hung, his majesty's eye caught a fine portrait of Hortense, the mother. He paused for a moment, gazed at it, and exclaimed, "This is indeed kind!" Their majesties proceeded from the Guildhall to the Albert Gate of Hyde Park, Knightsbridge, the residence of Count Walewski, the French Ambassador. The imperial *cortège* entered the Park at Hyde Park Corner, passing to the embassy from the park. This was probably, the most brilliant portion of the day's spectacle. The whole way through the park from the statue of Achilles to the French embassy, was lined with household infantry, and a splendid escort of the Life Guards relieve that which had attended the emperor to the city. The emperor appeared in high spirits and greatly pleased; the empress was pale and seemed fatigued; but her countenance was suffused with pleasure, while, during long detention of her carriage before the park aspect of the embassy, she was enthusiastically greeted by all assembled there. At the embassy, the emperor received the respects of all the foreign ambassadors. The occupant of that noble mansion, the Count Walewski, and his beautiful countess, partook largely of the popular good feeling. The ambassador has seen alternations of prosperity and adversity corresponding with those which the emperor had experienced. A Pole by birth, and by reputation connected with the Buonaparte family, he took part in the Polish revolution of 1831, arrived an exile in France, and there found a glorious elevation. Some time after the visit of the emperor to England, he became minister of foreign affairs, and presided at the peace conference, by which, in another year, the great war was terminated. An American review then contained the following striking notice of him:—

"Within the walls of a sumptuous mansion on the Boulevard des Capucines sits the Count Walewski, the Emperor Louis Napoleon's minister of Foreign Affairs. There is a costly banquet spread, and the minister presides. The band of Guides, in their ravishing uniforms, inspire the feast. On the right of the count sits the representative of Russia; on his left, the head-servant of Windsor Castle. Indiscriminately disposed, appear the various plenipotentiaries, members of the diplomatic corps, members of the imperial cabinet, and other high functionaries of state. The Count Walewski, the dessert being laid, rises with pictorial gravity, and, in the midst of all this

golden light, this military music, this fragrant confusion of the vineyard and Hyperides, promises to these dazzling notables and nobles, the durability of the peace they have just signed with the jewelled quill of the eagle of the *Jardin des Plantes*—the imprisoned bird of the Olympian master.

"Stealing through the city of Berlin in disguise, footworn and befouled, with blood-shot eyes, roving everywhere like a suspected thief, with ears erect, watching every syllable uttered in the streets through which, as instinctive genius prompts, he passes with quick or tardy pace, there is an outlawed man, dogged by the police of Monsieur de Manteuffel, the viceroy of the Prussian capital. A Polish rebel, to his neck in treason, he journeys to Paris, and Ignacio Commonfort came hither, a few months ago, for the sinews of war and sympathy. He gets clear of Prussia—baffles the police of Monsieur de Manteuffel—runs other risks—extricates himself from all—throws off his rags and mask—leaps, with the agility of Mazzaroni, into the renovated livery of the empire—and sits there on the Boulevard des Capucines, the minister of Foreign Affairs, the Count Walewski. Yet, on the police-sheets of Berlin, and many smaller towns, from the Visula to the Elbe, the written instructions of Monsieur de Manteuffel, to arrest 'an adventurer, styling himself Walewski,'—for these are the precise words,—still remain. Times change. Your old age, look out, Walewski, for the police of Berlin!"

In the evening, her majesty and the prince consort, with her guests, visited the Italian opera, London being gorgeously illuminated. The scene was especially grand as the royal carriages emerged from St. James's Palace into Pall Mall West. The clubs and private houses were brilliantly illuminated with every imaginable device indicative of alliance with France, and resolution to carry on the war. As the carriages left the palace gates of St. James's, the multitude, who crowded every available space, raised one of the most deafening cheers we ever heard on any public occasion, even when a mighty concourse of people were most enthusiastic.

On Friday the scene of imperial and royal interest was the Crystal Palace. About 30,000 persons were assembled on the terrace; and when the queen and prince, emperor and empress, appeared on the gallery overlooking the beautiful grounds, and the multitude below, it was indeed a scene to remember for ever.

In the evening her majesty gave a concert at Buckingham Palace, where a brilliant throng of the *élite* of the land, and brave men and women from many lands, were assembled. Her majesty was dressed in blue silk, with flourishes of white lace, and wore a small

crown of rubies and diamonds, with white feathers. The empress wore a brilliant head-dress of diamonds, and her attire was at once costly and chaste. The emperor wore the uniform of a French general officer. Prince Albert was dressed in that of the British Rifle Brigade. The emperor displayed, for the first time since his investiture "the garter." Supper was served on the celebrated gold plate, the display of which, on a lofty buffet lined with crimson, as well as in the supper-service, was dazzling in the extreme.

On Saturday the imperial guests took their leave of her majesty, and departed from Windsor, accompanied by Prince Albert and the Duke of Cambridge, who bade them adieu at Dover, amidst a salute from the guns of the fleet. Their majesties arrived safely at their destination; and who was there in France or England that did not feel that Waterloo was at last avenged? No Englishman who visited France, or elsewhere had much intercourse with Frenchmen during the previous forty years, but must have perceived that to avenge Waterloo had been the darling passion of the French nation. We doubt even if the army was actuated by this desire more strongly than the people at large. The *bourgeoisie*, as a class, would, for the sake of peace, by which their trade might improve, forego this vengeful wish; but even amongst them the memory of Waterloo rankled and festered at the heart. Nor can we wonder at this. That victory imposed upon France the government of a dynasty made hateful by bigotry and oppression. The Bourbons of 1815 were no better than those of 1792—indeed they were not so good; for in 1792 the royal family, whatever its sins, had a love for France, but in 1815 they cared for nothing but their own interests, which were propped up solely by foreign bayonets. Whatever the demerits of the great Napoleon, he was the man of the people's choice. He was thoroughly a representative man: he was the incarnation of the pride, passion, infidelity, intellect, and glory of France. He even represented in his own predilections, opinions, and policy, the strangely-blended despotism and freedom of the French mind. France did not understand liberty for herself, or toleration for others; and yet there was a hatred of tyranny, and a love of equality of citizenship, which are potent ingredients of social liberty. Napoleon represented everything that was French to so great an extent as to be the expression to the world of the national heart: where he failed to do this he failed to rule; and partly through this failure he ceased to reign. Had he, at the epoch of his fall, more completely regarded the national will, and been more completely its representative, humanly speaking, he had not fallen. Even Waterloo, if irreparable, and

although it had brought down the imperial eagle with broken wing, had not extinguished its life and power, if a large portion of the French people were not made to feel that the imperial policy was selfish, and that Napoleon was ceasing to rule for France, and waging only the war of a dynasty.

It is doubtful whether France would have ever seen a great military despotism, but for the mistaken policy of England. The French revolution was just. It was as righteous a revolt as our own revolution against James II. England was popular amongst the revolutionists, and they desired her co-operation, and, we had almost said, protection, in forming a government, which should be based on principles more nearly resembling her own (if that be possible) than even those of the American United States. But the policy of England was directed by a party inimical to all liberty—and there was no despotism too grinding amongst the nations of the Continent for that party to foster. England, thus controlled, spurned the alliance of free France, and leagued herself with continental absolutists against the young life and prospects of a country yearning to be free. The wealth of England was lavished in attempts to create confusion and conspiracy, and many of the horrid excesses which popular fury committed were the result of the exasperation thus created in the mind of France;—a fierce and terrible policy against all who favoured the despotic system upheld by England became necessary to the very existence of the French republic.

The foreign policy of the republic became necessarily propagandist; she did, as we do ourselves with our constitutionalism, and as Russia and Austria do with their absolutism—she encouraged the republican tendencies in surrounding nations, and sought to increase her own strength by their sympathies, and their successful revolt against their own oppressors. Out of this state of things solely grew the wars of French aggrandisement and conquest, upon the fiery chariot of which Napoleon stood, the wonder and the terror of the world. England was obliged ultimately to battle for her own national integrity, in a war which she did much to originate, for the destruction of every liberty claimed by the nation against which at last she had to summon all her resources to make head. Waterloo was the final stroke of England, therefore, in a contest which not only secured her own freedom, but struck down that of France. England and the Bourbons became to France the great obstructions, not only to her glory but to her liberty, and Waterloo was the *shibboleth* of her oppressors. Whether her own government might be republican or monarchical—and, if the latter, whether hereditary and constitu-

tional, or imperial and elective—were questions for her to settle within herself, and the word “Waterloo” at once repressed hope of her ever realising that power. In the views of the theory of public feeling in France toward England, we have the support of the most competent men of the past and present generations. Henry Lord Brougham, himself endorsed them; and that enlightened politician James Montgomery, the bard of Sheffield, battled through many years of his political life to enforce them, and even endured incarceration under the allegation of having sung treason when it was treason to recall England to consistency with herself and justice to France. These views have been recently confirmed in the way of narrative, by the author of *The Reign of Terror; or, the Diary of a Volunteer of the Year II. of the French Republic*, translated by Mr. Samuel Copland; in fact, the time arrived when the injustice of the attitude upon the first French revolution was admitted by the general sentiment of England, and proclaimed by her policy.

The restored Bourbon was hurled from the throne; a younger and more corrupt branch of that house—that of Orleans—in its turn deceived France, and was swept away. Again, republic arose, the success of which would have undoubtedly been certain, but for the intrigues of a section of the priesthood. While the ultra-montane party contemplated a *coup d'état*, which must have consigned liberty and Napoleonism together to persecution, the representative of the house of Buonaparte seized the reins of power; and, amidst the acclamations of France, and of the liberal portion of the clergy, proclaimed his government as that of Napoleon III. England changed her policy. She had expended countless millions to put down republicanism in France without success, and at last public opinion there, without foreign interference, raised an empire upon its ruin. England had added to the expenditure of her treasure and her blood wasted in warring against the republic, a fresh drain of both to put down the empire; and seizing its mighty chief with mightier hand, chained him, as a fettered eagle upon the loneliest rock in the ocean. The empire was re-established in the person of a legitimate successor, and England made alliance with him; her armies and his confronted together a common enemy; her fleets and his mingled their pennants within the sinuous Baltic, the embosomed Euxine, and far upon the boundless Pacific. And after a brilliant visit, in which a hospitable welcome was accorded, he and his beautiful empress came as guests whose departure was regretted—in the halls of Windsor, where the ancient line of English royalty had held their proud estates.

ages! Verily, Waterloo was avenged!—avenged in the most noble way a people can—vengeance on an injury—by obtaining the honourable and peaceful recognition of all they had sought to gain. Yes, it was true that multitudes assembled in Trafalgar Square, at the foot of the monument erected to England's mightiest naval chief, by whom the fleets of France were scattered as wrecks before the storm—and from the voice of that multitude a shout of welcome arose, as the heir of the once-vanquished Napoleon emerged from Whitehall! What must have been his feelings, and hers who shares his destiny, when passing under the statue of the great Wellington, to and from Buckingham Palace, they beheld so gorgeous a proclamation of the fact that all the policy which England's mightiest military hero conquered to accomplish, was thus peacefully and harmoniously ignored? Was it for this that the pride and chivalry of France were rolled back from the heights of Busaco to the gates of Toulouse—and from ensanguined Waterloo to the gates of Paris—that beneath the arch which bears the statue of the conqueror the heir of the vanquished should ride in triumph? Did the fair empress cast her eye upon Apsley House—upon the statue of Achilles, fronting within the park the arch before which the equestrian statue of the hero of Waterloo is so proudly elevated without—and remember that all these things were erected because of Waterloo; and that in the gay *corège* a Duchess of Wellington added beauty and honour to her train, without feeling that Waterloo was avenged?—and thus may such needs ever be avenged, amidst national friendships, hospitalities, and peace!

The author of these pages happened to see, on the Friday, the emperor and his queenly side alight at their own house at the Albert Gate—the house of the French embassy. We stood below, while a British band played the national air of France, and while the emperor and his bride (of British lineage), from the windows of the drawing-room, stood, and returned salutations to the crowd of fashionable persons who waved their hats and offered their greetings from the park beneath. Happy sight!—to behold the resolute brow of a Napoleon illumined with pleasure by English cordiality, and his hard features softened and relieved by the reflection of her sweetness, grace, and beauty who stood beside him—we hope the emblem of future France—the very expression of modesty, taste, and gentle goodness. Yes, Waterloo was avenged, and we, upon whom it was avenged, share the glory and aid the triumph.

In a week after the emperor left the English shores, he was fired at by an assassin. His majesty, accompanied by his equerries, Colonel

Ney and Valabreque, left the Palace of the Tuileries, about five o'clock in the afternoon of Saturday, the 28th of April, to take his customary ride in the Champs Elysées, and overtake the empress, who had preceded him, and was then in the Allée Dauphine, in the Bois de Boulogne. While riding slowly through the grand avenue, a man advanced from the throng, on the promenade, to within five or six paces of the emperor's horse. The intended assassin saluted, and the emperor raised his hand to return the salutation, when the man drew from beneath his paletot a pistol, and fired; the shot missed, but the pistol had a double barrel, and the fellow immediately rested the pistol on his arm, and fired again. In all probability, the horse saved his majesty; the animal shyed at the report of the first pistol, and, by this means changing suddenly the position of his majesty, averted the aim of the second shot. The man was prepared for such a contingency; for drawing a second pistol of the same form from beneath his coat, he was about to discharge it, when the spectators rushed upon him, and a police-agent being at hand, he was at once secured. The ruffian desperately struggled, endeavouring to fire into the faces of those who held him, so that the officer of police was twice obliged to wound him with a poignard before he was rendered incapable of mischief. The people would have killed him, but for the presence and authority of the emperor. When taken to the civic guard-house, at the Barrière de l'Etoile, he was found to be an Italian, named Pinari, and a shoemaker by trade. The emperor displayed the greatest coolness and courage; and as he rode slowly on to the triumphal arch, the crowds of respectable persons who were assembled greeted him with loud acclamations, and every available demonstration of joy, on his escape. Before his majesty overtook the empress, one of his equerries galloped forward to assure her majesty, and offer a detailed relation of the incident. The emperor then gave his horse to a groom, and placing himself beside the empress in the carriage, they drove to the Tuileries, the people hurrying along by the carriage, and uttering shouts of congratulation. Eugénie was overcome by these demonstrations of respect, and the event that caused them, and wept, and laughed hysterically, as the crowd waved their hats, and uttered their hearty congratulations. In the evening, their majesties visited the Opéra Comique, and the house rang with the hearty acclamations of the people upon their entrance.

The next day the gentry of Paris hastened to the Tuileries, to congratulate his majesty on his escape. The representatives of the senate delivered a congratulatory address, to which the emperor made the following most

remarkable extempore reply, and with a tone and emphasis which betrayed the deep earnestness and solemnity of his mind in uttering it:—"I thank the senate for the sentiments it has just expressed to me. I fear nothing from the attempts of assassins; there are existences which are the instruments of the decrees of Providence. As long as I shall not have fulfilled my mission, I run no danger."

The assassin, for such he was in purpose, was a young man, and had borne arms in Italy during 1848-9. His motive, in the criminal attempt he made, was to revenge the destruction of Roman liberty, which had been accomplished by the emperor when president of the French republic. His trial took place on the 7th of May, according to the forms usually observed in criminal cases. The government desired to have him tried for high-treason, but the emperor sagaciously replied, that "the criminal should be proceeded against just as if he had perpetrated the offence against a journeyman plasterer of the Plain of St. Denis." The prisoner was remarkable for his personal beauty; he had a high intellectual forehead, dark expressive eyes, his throat, which he wore bare, was fair and rounded, his hands small, and exquisitely kept. He denied any connection with secret societies, and disclaimed all accomplices. He had evidently no control over his passions, and was in any state of society a dangerous person. He was sentenced to be executed for parricide, for which in French law there is a peculiar punishment. As the emperor would not have him indicted for treason, the judges, less wise and merciful, adopted this legal fiction. It met with general disapprobation, although all men were willing that he should suffer death for his crime. He was led to the scaffold on the 14th of May. As soon as he ascended it, he shouted "*Vive la république!*" and was about to repeat the cry, when the axe fell upon his neck, severing his head from the body.

A glance at the history of the remarkable man, who, escaping the shot of the assassin, only passed through one of the many perils of an eventful life, will here be appropriate. Charles Louis Buonaparte is the third, and only surviving, son of Louis Buonaparte, King of Holland, and brother to the great Napoleon. His mother was Hortense, daughter of Josephine, the wife of De Beauharnais, afterwards his widow, then the wife of General Buonaparte, and in course of the vicissitudes which filled up his changeful career, Empress of the French. Victor Hugo, in his intense hostility to Louis Napoleon, endeavours to disgrace Hortense, and to represent the emperor as the child of her intrigue with another than her husband. For this no proof is offered, and, if true, ought not to be used as Victor Hugo

so spitefully and meanly employs it. It alleged that the infamous Fouché, so long the great emperor's minister of police, is the author of this scandal, and that the separation of Hortense from her husband gave so plausible support to the allegation.

The subject of this notice was born in Paris on the 20th of April, 1808, seven months after the final separation of his parents. He was the first prince born of Napoleon's house and the birth gave the illustrious uncle great joy; all France was called upon to rejoice, as the thunders of her cannon announced the great event to the empire and the world. He "was born" said the emperor, "on the step of a throne."

In 1810 he was baptised at Fontainebleau. The emperor and the new empress (poor Josephine, ever loving and faithful, was basely and inhumanly repudiated) stood sponsors for him and the church lent all its pomp to the occasion.

In 1816 the Bourbon dynasty having been restored by the victory of Waterloo, Hortense, having at that time the style and title of Duchess of St. Leu, was exiled, and took up her residence in Bavaria, devoting herself to the tender and anxious culture of her boy. They were persecuted by the Bavarian government, and took refuge in Switzerland. The Bourbons, unwilling to have them in such near neighbourhood, menaced the Swiss government, and Hortense, to avoid being the cause of any calamity, took her son to Rome. Here the education of the future emperor was committed to very unworthy hands. A certain M. Lebas, son of a confidential partisan of Robespierre, was the tutor; and this political fanatic, rather than survive so glorious a republican, committed suicide.

When, in 1830, a new French revolution expelled the Bourbons once more, the house of Buonaparte assembled in counsel at Rome. There were there associated "Madame Mère," Cardinal Fesch, Jerome Buonaparte, Hortense and her son Louis Napoleon. The result was the expulsion of Hortense and Louis Napoleon, then of age, from the Papal States. Louis Napoleon resisted, but an escort of mounted *carabinieri* conducted him to the frontier, beyond which he was compelled to pass. At this time Louis' elder brother was alive, and both the young men took an active part in the revolutionary agitation which broke forth after the French revolution, which seated the infamous Louis Philippe upon the throne of France. The insurgents in the Papal States and other parts of Italy, looked to the young Buonapartes as leaders. The young men showed courage, and, joining themselves to General Lenognani, repeatedly repulsed the army of the Pontiff. A French fleet, sent out by Louis Philippe, and an Austrian army

NAPOLEON III

*Emperor of the French*

son decided the fate of the Italians. From the very beginning "*Egalité*" was a traitor to principles he avowed in ascending the French throne. The young Buonapartes were expelled from Italy, but the elder was placed beyond the vengeance of "the powers"—he sickened and died at Faenza, in March, 1831.

Hortense fled from Rome, and her son Louis, disguised as her servant, escaped with her to Cannes. Here Hortense resolved to hasten to Paris, and claim the protection of Louis Philippe from the dangers which surrounded her. Hortense had reason to calculate upon a generous reception, for it was through her influence that the mother and aunt of the Duke of Orleans were permitted to reside in France, during the days of the empire. Nor were her benevolent efforts confined to that, for the emperor, in answer to her entreaties, granted them an income of 600,000 francs to maintain their dignity. Louis Philippe was addressed by Hortense in one of the most touching letters ever written by a mother, a fugitive, and an unhappy woman; he answered by slyly endeavouring to induce her, of her own accord, to leave France. Louis Napoleon begged permission to enter the French army as a private soldier, which was of course refused. Finally, a peremptory and haughty order to mother and son to leave the kingdom, sent them once more wanderers on the face of the earth. They passed over to England. Preferring the Continent, they again found their way to Switzerland, and resided at Arnenberg. In April, 1832, he was elected by the Canton of Thurgovia to the rights of citizenship. He entered the military school of Thun as a volunteer, and studied closely the theory and practice of artillery. He also gave himself to the study of history, added to the policy and opinions of his illustrious uncle. He wrote a work on the subject of artillery, which so pleased the Bernese government that it conferred on him the commission of captain in its regiment of artillery. Thus matters went with him until 1835. During this time Hortense was one of the most affectionate of mothers, and Charles Louis Napoleon one of the most filial of sons. When Madame de Gerardin was married, April 26th, 1834, a letter was addressed to her by Hortense, which is full of sweetness and tenderness, revealing her interesting character; it is also curious from the reference it makes to her son:—

"I found you whole and entire in your charming letter, my dear Delphine," writes Hortense Beauharnais; "tell your husband not to be angry at my calling you by that name—it is the one you bore at Rome and in Switzerland, when you used to repeat to me

your pretty verses, and that I rejoiced in listening to your voice, so expressive and so truly French. You have not then forgotten me? I thank you for it—for I thought that in Paris, people forgot everything. I am glad to hear that the distrust we inspire—too well founded, perhaps, alas!—is not so general as I feared. Certainly I shall be charmed to receive often your works and your letters. You cannot doubt of my pleasure at any mark of your remembrance. I have so often asked, 'Is she married?—is she happy?' You really owed me a reply as satisfactory as the one I have received. I will think over the proposal you make to me. The difficulty will be to find some article that will seem naturally brought about. At this moment my son is writing a work upon artillery—that would not be interesting. Afterwards he means to write something on his uncle; then we may see what he could send you. He is altered since you saw him—grown to be a man; and he makes me very happy by the kindness of his disposition and his noble resignation, which modifies the vivacity of his opinions. I dare not wish our native country for him—for I am too fond of peace; and besides, there where you are feared you cannot possibly hope to be beloved. Assuredly resignation, to no matter what injustice, to no matter what deception, is the virtue best adapted to us. Believe in the delight I should feel in seeing you once more, in making your husband's acquaintance, and in repeating to you the assurance of my affectionate sentiments.

"Hortense."

In 1835 a rumour prevailed in Europe that the Queen of Portugal, then a widow, desired Louis Napoleon for a husband. The queen was the widow of his own cousin, the Duke of Leuchtenberg.

In July, 1838, Napoleon resolved to invade France. At Baden he became acquainted with Colonel Vaudrey, commanding the 4th Regiment of Artillery, then at Strasburg, which was the regiment in which the emperor served before Toulon, in the first display of his skill. Vaudrey was a Buonapartist; he had fought at Waterloo, and it was the grand idea of his existence to avenge it. M. de Persigny, so well known since to history, joined his counsels. A number of other persons, officers, nobles, gentlemen, and even ladies, were in intimate association with the project. His gentle mother knew nothing of these plots.

At eleven o'clock at night, on the 28th of October, he arrived at Strasburg, where the conspirators had prepared a small apartment for him, in the Rue de la Fontaine. On the following morning he called on Colonel Vaudrey, and submitted for his approbation a plan

of operations. The colonel would not support it, but adopted one more romantic and less patriotic. At eleven o'clock that night, Louis Napoleon, dressed as a French general of artillery, met the conspirators at a rendezvous agreed upon: they were all in uniform, and had the eagle of the 7th regiment of the line. At six the next morning a message from Colonel Vaudrey was to summon them to action. The prince consumed the night writing proclamations. A few minutes after the clock chimed six, a message arrived that Colonel Vaudrey awaited him. He issued forth—on one side of him M. Parquin, wearing the uniform of a general of brigade, and M. de Quérélles that of a *chef de bataillon*, and a dozen officers followed. They entered the barracks, and found Colonel Vaudrey, with his regiment under arms, and his sword drawn. Advancing to the soldiers, and pointing to the prince, he exclaimed—"Behold the nephew of the Emperor Napoleon!" He harangued them on the right of the nephew to succeed the uncle, and how much it would be for the glory of France and of the army. He then demanded if the prince could rely upon them, and was responded to by shouts of "*Vive Napoléon !*" "*Vive l'Empereur !*" The prince also addressed the soldiers; and snatching the eagle from M. de Quérélles, he presented it to the regiment as the emblem of past and coming glory. They then proceeded, with the band playing, to the quarters of General Virol. *En route* the prefect was arrested, and the prince's proclamations were sent to the printers. The movement was popular; the prince was everywhere received with enthusiasm. General Virol refused to join the movement, and endeavoured to bring back the troops to their loyalty; but his authority was defied, and shouts of "*Vive l'Empereur !*" rent the air. The general took to flight.

The expedition—if we may now call it so—quitted the high street, and entered the Barracks of Frükematt by a narrow lane. Here he was hemmed in as in a trap; and should the inmates of the barrack prove loyal to the government, the cause of the prince was desperate. The soldiers flocked out and listened to his harangue, and then rushed in for their arms to rejoin him. Their officers suggested doubts of his identity, and the troops hesitated; this ruined all. An ignominious *fracas* followed, in which the soldiery on either side were unwilling to wound one another, but which issued in the arrest of the prince and the whole body of the conspirators. Colonel Vaudrey destroyed the chances, which were many, in the prince's favour, by his incompetency. Had Napoleon's own plans been followed, and with the promptitude he desired, the probability was great that he would soon

have been at the head of the French army. The whole party were conveyed to prison, and were interrogated after the manner customary in criminal inquisitions in France. The conduct of the prince before the tribunal was frank, bold, and heroic. His civil jailers treated him barbarously, but his military captors behaved with the greatest consideration. On the 9th of November he was conducted from Strasburg to Paris. On the 21st he was put aboard a French frigate, which conveyed him ultimately to America.

The French vessel of war having conveyed the prince to the United States, and landed him at Norfolk, he employed himself there as a good citizen. His private character in American society has been since often inveighed against, especially at New York, to which city he repaired at once, as the most convenient place for prompt communication with his friends in Europe. According to his standards he frequented places of the lowest and worst resort, and altogether conducted himself disgracefully. Very recently a satisfactory refutation has been given to such allegations through the columns of the *National Intelligencer*, by a United States' officer of distinction whose name is well known to Europe, and who was in frequent, almost constant association with Louis Napoleon, during the whole period of his short residence in the States. The following extracts from this vindication will interest the reader:—

"His favourite topics, when we were alone, were his uncle, the emperor, his mother, and others of his immediate family, in whom he had been deeply interested; his own relation to France by birth and imperial registry; the inducements which led to the attempted revolution at Strasburg; the causes of its failure and his chief support under the mortification of the result: 'The will of God,' to use his own words, 'through a direct interposition of his Providence; the time had not yet come.'

"He seemed ever to feel that his personal destiny was indissolubly linked with France, or, as his mother, Hortense, expressed it, her will, 'to know his position;' and the enthusiasm with which at times he gave utterance to his aspirations for the prosperity, the happiness, and the honour of his country, and to the high purposes which he designed to accomplish for her as a ruler, amounted, in words, voice, and manner, to positive eloquence. Had I taken notes of some of these conversations, they would be considered now, when his visions of power and earthly glory are realised, scarcely less epigrammatic and elevated in thought, and as related to himself, less prophetic than many which have been recorded from the lips of the exile of St. Helena.

"He was winning in the invariableness of his amiability, often playful in spirits and manner, and warm in his affections. He was a most fondly attached son, and seemed to idolise his mother. When speaking of her, the intonations of his voice and his whole manner were even as gentle and feminine as those of a woman. It had been his purpose to spend a year in making a tour of the United States, but he might have a better knowledge of our institutions, and observe for himself the practical workings of our political system. With this expectation, he consulted me and others as to the arrangement of the route of travel, so as to visit the different sections of the Union at the most desirable seasons. But his plans were suddenly changed by intelligence of the serious illness of Queen Hortense, or, as then called, the Duchess of St. Leu, at her castle in Switzerland. I was dining with him the day a letter conveying this information was received. Recognising the writing on the envelope as it was handed to him at table, he hastily broke the seal, and scarce glanced over a page before he exclaimed, 'My mother! I must see her. Instead of a tour of the States, I shall take the next packet for England. I will apply for passports to the minister at every embassy in London, and, if successful, will make my way to her without delay.' This he did, and reached Arnhem in time to console by his presence the long hours of the ex-queen, and to receive in her bosom her last sigh.

"After such opportunities of knowing much of the mind and heart, and general character of Louis Napoleon, it was with great surprise to me for the first time read, in a distant part of the world, when he had become an emperor, representations in the public journals of his life in New York (and New Orleans, too, though he was never there), which would inspire a belief that he had been, when here, no better than a vagabond—low in his associations, intemperate in his indulgences, and dissipated in his habits. In both eating and drinking he was, so far as I observed, abstemious rather than self-indulgent. I repeatedly breakfasted, dined, and supped in his company, and never knew him to partake of anything stronger in drink than the light wines of France and Germany, and of these in great moderation. I have been with him early and late, unexpectedly as well as by appointment, and never saw reason for the slightest suspicion of any irregularity in his habits.

Louis Napoleon may have had some associations in New York of which I was ignorant; he, like Dickens, and other distinguished foreigners, may have carried his observations, under the protection of the police, to scenes in which I would not have accompanied him. If

he did, I never heard of it, and have now no reason to suppose such was the fact. But that he was an *habitué*, as has been publicly reported, of drinking saloons and oyster cellars, gambling houses, and places of worse repute, I do not believe. I can recall to my recollection no young man of the world whom I have ever met, who, in what seemed an habitual elevation of mind, and an invariable dignity of bearing, would have been less at home than he in such associations.

"There was, however, in New York; at the same time, and for about the same period, a Prince Buonaparte, who was, I have reason to think, of a very different character. His antecedents in Europe had not been favourable, and his reputation here was not good. He, too, was in exile, but not for a political offence. He may not have been received in society, and may have had low associations. I met him, but, from this impression, formed no acquaintance with him. For the same reason the intercourse between him and his cousin was infrequent and formal. All that has been said and published of the one may be true of the other; and in search for reminiscences of the sojourn in New York of Louis Napoleon, on his elevation to a throne fifteen years afterwards, it is not difficult to believe that those ignorant of the presence here at the same time, of two persons of the same name and same title, may have confounded the acts and character of the one with the other. This, I doubt not, is the fact; and that however general and firmly established the impression to the contrary may be, the reproach of a disreputable life here does not justly attach itself to him, who is now confessedly the most able, the most fortunate, and the most remarkable sovereign in Europe.

"C. S. STEWART, *U.S. Navy.*"

On the 5th of October Hortense died. If one dare wish the decrees of Providence altered, it would be matter of regret that the daughter of Josephine was not spared to see the son of the one, and grandson of the other, on the imperial throne.

When his mother's funeral obsequies were over, he plunged into political life with renewed vehemence, and the French government became alarmed for his residence contiguous to French territory, and much embarrassment was caused to the confederation in consequence. His partisans in France became bold, and openly justified the attempt at Strasburg. Louis Napoleon employed his pen with much effect, in France and on the Continent. In England his writings were simply ridiculed. The arch-traitor, Louis Philippe, was then the idol of the English middle classes. Success in England gives popularity; merit is unnoticed until it acquires power. In England, of all

places, the scripture sentence is verified—"Men will praise thee when thou doest good to thyself." In September, 1838, Louis Philippe sent a French army to compel the cantons to expel Louis Napoleon. These brave free states prepared to defend themselves; but Napoleon quitted the territory, and the French army marched back again. The prince found a home in England, from which tyrants could not expel him; and he is represented as exclaiming, when he landed on her shores—"Cette grande et généreuse terre d'asile de l'Europe."

He was not long in England, when an insurrection broke out at Barbes. He was represented as having fomented the disturbance; but he, like many another of the great and fallen, made use of the *Times* newspaper for his defence. The affair at Barbes was unhappily sanguinary. He was not hospitably nor generously received in England. Louis Philippe was then one of the most popular men in England; he had not been "found out." The anomalous position of the prince threw him upon inferior society, and what was false as to New York, may have been, to some extent, true as to London. His habits were undoubtedly gay, but he did not abandon his reading and thoughtful ways: he also wrote much.

In August, 1840, he entered upon a new attempt against the throne of the "Citizen King," a title which the mercenary tyrant, who then filled the French throne, assumed for the sake of popularity. The prince embarked on board the *City of Edinburgh* steamer, at Margate. His companions were General Montholon, General Voison; MM. Conneau, Mesonau, Baccocchi, and others; in all nearly sixty persons. It appears that the party conducted themselves with great insobriety, as if they wished to verify the old song, "We keep our spirits up by pouring spirits down."

On the 6th of August, at dawn, the party landed at Vernereaux, where they were confronted by the officers of customs. The prince offered a splendid reward to the lieutenant of the guard if he would join him with his men; the officer declined. The party moved on to Boulogne, shouting "*Vive l'empereur!*" Money and proclamations were scattered among the fishermen and peasants. It was said that the prince brought with him on this occasion a tame eagle. Entering Boulogne, the invaders proceeded to the heights above the town, and planted a flag, surmounted by an eagle, near the Napoleon Column. The National Guard beat to arms, and the 42nd regiment of the line marched against the expedition, which retreated, endeavouring to gain the vessel in which it came; this was frustrated, and the

whole party was arrested without any resistance, except such as the prince himself made, who fired his pistol close to the face of the commanding officer of the 42nd, which happened to miss the officer, but wounded a grenadier who was behind him. One of the prince's attendants got into the sea, and struggled hard against captivity, that he was killed; those who endeavoured to secure him: several others were wounded, and some severely.

The captives were brought to trial before the court of peers. The prince made an eloquent defence. Perhaps the most remarkable sentence in it was—"One word in conclusion to gentlemen. I represent before you a principle, a cause, and a defeat. The principle—the sovereignty of the people; the cause—is that of the Empire; the defeat—Waterloo. You have recognised the principle—you have served the cause—you would avenge the defeat!"

The eloquence of the defence did not soften, or, at all events, avert the judgment. The prince was given on the 6th of October, when all the prisoners were convicted, and condemned to various terms of imprisonment: one officer was transported for life. Louis Napoleon was condemned to perpetual incarceration. When he heard the sentence, he replied, "At all events I shall have the happiness of dying in France."

The fortress of Ham was selected for the imprisonment of the unfortunate but intrepid adventurer. His friends, Montholon and Conneau, were incarcerated with him. The treatment he received was vindictive. The cruel and spiteful "Citizen King" would have gladly worn him down by hardship. For nearly months every form of indignity was offered him, and he then complained of the severity he endured. The chambers occupied by the prince were dilapidated, and were those which Polignac, and the other ministers of Charles X., had been imprisoned: *they*, however, were treated leniently; he, "although the son of a king, nephew of an emperor, allied to all the sovereigns of Europe" (using his own language), "was pursued by every form of mean and vindictive persecution. Some mitigation of the indignities to which he was exposed was demanded by public opinion in France, to which Louis Philippe was obliged to defer."

The prince engaged himself in journalism, contributing articles to the *Progrès du Pas de Calais*. He also wrote an *Analysis of the Sugar Question*, an essay on the *Extinction of Pauperism*, and *Historical Fragments*.

For five years Napoleon was shut up in obscurity. Royal amnesties were put forth, but there were none for him. The people of Corsica petitioned that he might be set at liberty: Louis Philippe discarded the petition.

towards the close of the year 1845, the prince's father, then called Count de St. Leu, requested permission to see his son before his death, which impended. Napoleon appealed to the clemency of the French government for his permission, and pledged his honour that he were allowed to go to Florence to see his dying father, he would return to his prison-gates again whenever commanded to do so. Louis Philippe, who could do nothing in a manly, open, honourable, straightforward way, began to wriggle over this request, and to contrive some personal advantage from it; he accordingly ordered a paper to be placed in the hands of the prince for his signature, in which he could renounce all pretension to the throne of France, and express his penitence for the attempts at Strasburg and Boulogne. In terms of great boldness and dignity he spurned the command. Odillon Barrot, and other time-servers of his class, members of the Chamber of Deputies, endeavoured to persuade the prince thus to dishonour himself; but he was firm. He concluded his reply with the remarkable words, "The path of honour is narrow and slippery, and there is but a hand's breadth between the firm ground and the abyss." The king was obstinate; the prince must not be respited for even so long as to see his dying father.

Three months after he made a successful attempt to escape from the fortress of Ham. His fort was garrisoned by 400 men, furnishing daily sixty soldiers as sentries around the walls. There were three jailers who guarded the principal gate, two being always on duty. It was essential that the fugitive should elude their observation, then traverse the main court before the windows of the residence of the commandant, and thence pass through a gate before which there were sentries. At the time of the escape several rooms were undergoing repairs, so that it was easy to assume the dress of a workman, which the prince did, accommodating his hair and face as much as possible to the apparel: he then took a plank on his shoulder. This occurred on the 25th of May, 1840. The valet took the workmen some drink immediately on their entering, so that Napoleon should not meet any of them. He also was to call one of the jailers, while Dr. Conneau conversed with the keeper. Scarcely had the prince left his room, before he was spoken to by one of the workmen, who took him for one of his fellow-workmen. For the rest of this eventful incident the facts may be best learned from the pen of the fugitive himself, as he afterwards related to M. Degeorge, then editor of the *Journal la Somme*:—"At the bottom of the stairs I and myself face to face with the keeper. Fortunately, I placed the plank I was carry-

ing before my face, and succeeded in reaching the yard. Whenever I passed a sentinel, or any other person, I always kept the plank before my face. Passing before the first sentinel, I let my pipe fall, and stopped to pick up the pieces. Here I met the officer on duty; but as he was reading a letter, he paid no attention to me. The soldiers at the guard-house appeared surprised at my dress, and a drummer turned round several times to look at me. I placed the plank before my face, but they appeared to be so curious that I thought I should never escape them, until I heard them cry, 'Oh, it is Bernard!' Once outside, I walked quickly towards the road of St. Quintin. Charles,\* who the day before had engaged a carriage, shortly overtook me, and we arrived at St. Quintin. I passed through the town on foot, having thrown off my blouse. Charles procured a post-chaise, under pretence of going to Cambrai. We arrived without detention of any kind at Valenciennes, where I took the railway. I had procured a Belgian passport, but it was nowhere demanded. During my escape, Dr. Conneau, always so devoted to me, remained in prison, and caused them to believe that I was ill, in order to give me time to reach the frontier. It was necessary to be convinced that the government would never set me at liberty before I could be persuaded to quit France, and I would not consent to dishonour myself. It was also a matter of duty that I should exert all my powers to be able to console my father in his old age. Adieu, my dear M. Degeorge. Although free, I feel myself to be most unhappy. Receive the assurance of my sincere friendship, and endeavour to be useful to my kind Conneau if you can."

Dr. Conneau had proved a faithful friend. He had been sentenced for five years, which were about to expire, yet he fearlessly flung himself back again into the hands of the law, in order that the prince might escape. Dr. Conneau's attempts to conceal the prince's departure, so that he might be able to pass the frontier, were ingenious and successful. Our space does not admit of their relation. He was tried, and sentenced to three months' additional imprisonment; the valet, who was captured, to six; the commandant was tried but acquitted. Louis Napoleon did not feel himself quite safe until he was once more in England—"that country" as he had written to Lady Blessington from Ham, "in which I have spent too many happy days not to love." On his arrival in London, he wrote to the French ambassador to assure him of his peaceful intentions, his desire being to see his dying father. The English government informed him, in reply to his request, that he was quite free to live in England if he pleased; but the

\* The valet was not treated as a prisoner.

Austrian ambassador would not sign his passport to Italy, and so effectually did the foreign despots hunt the unfortunate fugitive, that his father died in July, without the possibility of the prince reaching his bed-side. Louis Napoleon owes nothing to Austria, but the remembrance of its relentlessness, cruelty, and petty spite. How this power cringed to the same man, when at last he reached the throne!

The prince remained in England until the revolution of 1848 brought him again upon the stage of French affairs. He, in common with the other members of the Buonaparte family, hurried back to France, their proscription being virtually abolished; and Louis Napoleon addressed a sagacious letter to the provisional government, announcing his presence, and proclaiming his loyalty to the new order of things. The provisional government did not believe in his loyalty to republicanism, and they advised him to quit France until the constitution should be established. A few weeks after, it was proposed in the assembly that he was to be excluded from France for life. Against this he protested in language of devotion to the republic. The deputies would not listen to this protest; they showed more jealousy of Napoleon than of the house of Orleans. Public opinion, however, soon compelled them to listen to the prince. During the elections the Seine, the Yonne, and Charente Inférieure placed his name at the head of the poll, the electors shouting "*Vive l'empereur!—à bas la république!*" A number of newspapers were started with expressive titles, such as were very ominous to the republic:—*Le Petit Caporal, Le Bonapartiste, Napoleon Republicain, La Constitution Bonapartienne, La Redingote Grise.*

On Monday, the 12th of June, crowds collected in all the approaches to the Chamber of Deputies, attracted by the expectation that Louis Napoleon would take his place in the assembly. Much uneasiness was felt by the government; the *generale* and the *rappel* were beaten, and the national guard, supported by troops of the line, occupied various positions in Paris, for the purpose of suppressing disturbance. Demonstrations in favour of the prince had been made for several successive evenings previously; the government vigorously suppressed them all, the people dispersing amidst shouts of "*Vive l'empereur!*" "*Vive Louis Napoleon!*" During the evening of the 12th combats occurred in the streets, and Lamartine, rushing into the assembly in an excited state, called out, "Blood has been shed, and the cry is '*Vive l'Empereur Napoleon!*' a law should at once be passed to put a stop to this." Lamartine was only a brilliant theorist—he was not a practical politician, or he would have known that no law

could have "put a stop" to the popular sentiment, for the election of Louis Napoleon, the assembly, and afterwards to the presidency, and finally to the throne.

On the 13th of July the populace renewed their demonstrations in favour of the prince and the walls of the National Assembly were surrounded with cannon. The people crowded up to the muzzles of the guns, and were on dispersed by charges of cavalry. They then attempted to erect barricades, but were hot pursued by the troopers and compelled to desist. After protracted discussions in the assembly, a majority decided upon the right of the people to elect whom they pleased to represent them, and as a consequence affirmed that Louis Napoleon could not be refused a seat in the assembly. The prince, however, declined to accept a seat at the cost of distraction and disturbance to France. Soon afterwards he was chosen by the electors of Corsica but again declined the honour.

On the 17th of September the new election took place for the places for which he had refused to sit, and he was again elected for a fourth time. He determined no longer to defer to a minority in the assembly, but to demand his right. At the opening of the sitting on the 25th of October, he accordingly appeared in the assembly, and took his seat. He was declared representative.

The election of president was fixed for the 10th of December, and Louis Napoleon Buonaparte was elected by an overwhelming majority; five and a half millions of Frenchmen voted for him; no other candidate possessed half the number. It has been the fashion to represent this as the result of bribery, or extraordinary efforts on the part of the Buonaparte family and faction. Such representation is simply absurd; he was elected because the majority of the French people preferred government *à la Napoleon* to any other. On the 20th of December he was called upon to take the oath to the republic. Victor Hugo thus describes the scene:—"It was about four in the afternoon; it was growing dark and the immense hall of the assembly, hitherto become involved in gloom, the chandeliers were lowered from the ceiling, and candles were placed upon the tribune. The president made a sign, a door on the right opened, and there was seen to enter the hall and rapidly ascend the tribune a man still young, attired in black, having on his breast the badge and riband of the legion of honour."

The form of the oath was as follows:—"In presence of God, and before the French people represented by the National Assembly, I swear to remain faithful to the democratic republic, one and indivisible, and to fulfil all the duties imposed upon me by the Constitution."

He afterwards addressed the assembly, declaring that "the suffrages of the people and the oath he had taken imposed duties which as a man of honour he would fulfil." He then shook hands with General Cavaignac, who had so worthily held the reins of power, until the votes of his fellow-citizens deprived him of them in favour of another. The 900 representatives shouted "*Vive la republique!*" and the two great men shook hands together at the foot of the tribune.

From that day the president and the assembly disagreed in every thing; each plotted against the other; and scarcely anything could be more imbecile and unprincipled than the conduct of the assembly. Some were for bringing in the elder Bourbons, some for the Oranians, others for a democratic and social republic; a few only trod the path of consistency or liberty. The assembly was eager for a *coup d'etat* against the president; the latter accomplished the like against them. They initiated the hostilities; he accepted them, and conquered empire.

One of the acts of the assembly sealed its fate. It was elected by universal suffrage—abolished it. Most of the representatives made a pretence of liberty to crush it. Napoleon perceived this, and demanded the restoration of the people's charter, becoming thereby the people's champion. The assembly ridiculed the demand, the measure, and the president, and threw out the proposal.

On the 1st of December a proclamation was put forth dissolving the assembly, and calling on the people by universal suffrage to accept government identical with the scheme of Napoleon I. when first consul. The proclamation made known the desire of the president to surrender his position into the hands of the people, or to accept the headship of a new government on the plan he proposed, and putting on universal suffrage. These proclamations were posted on all the walls of Paris by the night of the 2nd of December; all the leading members of the assembly were arrested; Paris was filled with troops. After struggles on the part of the assembly, and many casualties in

the streets, the eventful day of the 2nd of December wore away. On the 3rd the people awoke from the stupefaction with which the suddenness of the *coup* struck them, and preparations were made by the republicans and red republicans for resistance. On the 4th that resistance was offered; barricades were erected, and every token of a fierce contest quickened into life. Whenever an opportunity occurred, the soldiery were assassinated, and the military retaliated with savage vengeance. Men, women, and children were swept from the streets by discharges of musketry and grape. By the night of the 4th, the conflict was over. The president ruled all things. The "ticket" put to the electors was as follows:—"The French people wills the maintenance of Louis Napoleon Buonaparte's authority, and delegates to him the powers necessary to frame a constitution on the basis of his proclamation of the 2nd of December." This was to be carried by a simple affirmative or negative by all Frenchmen twenty-one years of age, in possession of their civil rights. On the 20th and 21st of December the ballot took place, and the result was that more than eight millions of men voted in the affirmative. The votes of the army were taken separately. The army in France voted almost unanimously for Buonaparte; in Algiers a large majority was against him. Before twelve months the empire was proclaimed.

On the 22nd of January, 1853, the emperor announced to the senate his intention of marriage with the Countess Téba, a Spanish lady, not of royal descent. He had previously made overtures to several royal families without success. On the 29th of January the civil service was performed in the Tuileries, and on the next day the ecclesiastical ceremony. This lovely and accomplished woman has proved equal to her situation. Eugénie Montijo, Countess Téba, is by birth a Spaniard, and by one line of ancestors is of Scottish descent. She is as amiable and benevolent as she is elegant and beautiful. Whatever be the future of France and the emperor, the name of Eugénie will shed a lustre on both.

## CHAPTER LXXVIII.

### TURKEY DURING THE SPRING OF 1855.

"I saw my sons resume their ancient fire;  
I saw fair freedom's blossoms richly blow."—BURNS.

THE language of the Scottish bard very fully applies to the sultan and his subjects at the period of which we now write. The marauding expeditions of the Russians across the Danube had been chastised, although they still pressed the Pruth into the territory garrisoned

by Austria, and inflicted every species of evil with impunity. New dispositions of the Austrian troops, however, prevented these razzias, to some extent—as it was not the policy of Russia to bring her troops into collision with those of Austria, especially while

the conferences at Vienna were approaching or proceeding. Except upon the Armenian borders, the Cossacks did not venture to set foot upon Turkish ground; while a Turkish army invaded the Crimea, and had recently won an important battle there, increasing the moral power of the Turkish government, and inspiring the Osmanli troops with renewed military spirit. Their ancient fire was rekindled, the independence of their country was for the present secured, and confidence was felt that Russia, beaten and baffled, would be compelled to surrender all pretensions to interfere with the Porte.

The tidings of the czar's death had been received throughout the Turkish empire with a composure and gravity most becoming, although, for some days after the tidings reached camps and capital, the excitement produced was very great. The people generally expressed no unseemly joy, but quietly repeated that "Allah was great—greater than the czar who was gone to render his account." The sultan received the tidings in a manner as praiseworthy as his people, but it created in his mind false hopes. He believed that peace was at hand—that the successor of Nicholas would desire no unjust concessions, and would not refuse to make such as reason and justice demanded. These impressions caused the Porte to enter upon the Vienna negotiations more willingly, for, previous to the announcement of the czar's death, there was a strong repugnance to negotiate; it was judged that the sword alone could decide the conflict; and that while Turkey had her allies in the field she ought to strike. The incompetency of the representatives of France and England in the previous diplomacy at Vienna, and the subtle treachery of Austria, made the sultan and the government unwilling to send thither any envoy; besides, the cry of the provinces, oppressed by the Austrian occupation, was literally ringing in his ears.

If Russia had a successful competitor in perfidy, Austria was that rival. Both these powers will find their places, on the roll of history, among the most bloody, relentless, rapacious, and treacherous that ever cursed mankind. Austria had throughout the war played a selfish and dishonourable game. Her object was as much to outwit Russia as the allies; her only motive was to gain a disreputable advantage for herself. Even her sympathy with Russia was not one arising from love, or sanctified by principle. She desired the success of Russia to a certain extent, because the Russian form of government was absolute; and in its existence she had always a pledge for her own, by community of interests. She knew that Hungary, Italy, and Poland must

remain chained at her feet, so long as Russia was mighty. Still that power was dangerous for Austria knew that no principle or sympathy would form an obstruction in the way of Russian plunder and bloodshed; but then Russia has still so many to rob, who were all more easily deprived of their own than Austria was that the czar could not be so much an object of fear as the liberal and enlightened power of the West. The people of Austria, to a considerable extent, were friendly to liberal measures; but partly from religious prejudices and partly from the prejudice of race, the Austro-Germans had no love for the Western powers. The aristocracy of Austria hated "the Greek schism," when they had religion enough of its kind even to hate any system or principle of a religious nature; but their love of despotism, and their mortal rancour against popular freedom, prevailed more with them than all other considerations—except that of their pecuniary prosperity. They were as greedy of lands and plunder as the Russian soldier or official. Whatever enlightened ideas the Emperor Francis Joseph may have fostered, and however a portion of the middle-class citizens of Vienna may have shared such ideas with him, Vienna, and Austria generally, were with whatever of heart they had, thorough despot, bigoted, selfish, and aggrandising. The policy of Austria in forming a treaty with Turkey for the occupation of the province was with the hope of keeping them, and in order to prevent the pursuit of the Russian army by Omar Pasha. The retreat from Silistria, it became well known, was more perilous to the Russians than at the time Western Europe had supposed. The plans of Omar Pasha in pursuit were worthy a great general; and had he been allowed to execute them, he would have destroyed the Russian army. Austria obstructed their execution; Baron Hess and Count Corinini stepped in between the pursuer and the pursued, and robbed the former of his prey. Lord Clarendon admitted, in his place in the House of Peers, that such was the case, and he softened down the occurrence by alleging that the Austrian government had "explained" (a convenient diplomatic phrase), and that Count Corinini had made a mistake, and the Austrian government had "disavowed" his conduct. Of what use is the disavowal of a policy which accomplishes first all that which it was meant to answer? Did the Austrian government punish, or even censure any official for exceeding or disobeying orders? Not one! Was it not well known that it was a feature of the Austrian system to have an officer, civil or military, at hand, to disobey orders which the Austrian government deemed it convenient to have disobeyed? If our statesmen knew all this, their policy should have

n regulated accordingly—their language could have been open, honourable, and explicit, instead of a mere cant of official courtesy and political hypocrisy. If they did not know that this had been the policy of Austria, how wretchedly was our country served by their class! Every man of political and literary reputation in the middle walks of English life, knew well that this was one of the most commonly practised dodges of Austrian political artifice; and it was time that the legislators knew it, or, knowing it, acted honestly out what they believed. They could not have outdone Austria in lying and hypocrisy, had our diplomatists used their skill in these qualifications with ever so much address. The straightforward, honest policy—of Milton and Cromwell—alone becomes England and Englishmen—alone stands to our interests and objects, and will alone receive the blessing of God. The whole conduct of Austria, in Wallachia and Moldavia, had been in harmony with her act in intercepting the pursuit of the Russians by Omar Pasha. She had already had her advanced to Bucharest, than a insult to his person and hinderance to his progress were shown by the Austrian officers and officials everywhere. From Bucharest to Jassy, from Jassy to the Russian frontier, a whole of Austrian spies conveyed intelligence of every movement, and almost of every word uttered by the distinguished general of the Russians. He then left the provinces, breaking his way through a net-work of treachery, calumny, and spite, which Austrian hands wove for him. The conduct of Austria in forcing Stirbey, the ambitious hospodar, upon the Turkish government, was itself sufficient to have opened the eyes of the allies, if the Aberdeen-Graham-Stoddard-Herbert cabinet, and the French Minister of Foreign Affairs, had not been so tender and delicate to “the conservative government of Austria.” We will admit that the allies had turned the Austrian occupation to a good account: so far Austria out-generalled herself. Russia, with whom it was engaged in Germany the plan of the Austrian occupation originated, remained very doubtful of Austrian fidelity, and kept large bodies of troops on that frontier; but after all, the benefit, and the sum total of the influences exercised upon the war by that occupation, was not much in favour of the Western powers. Had it not been for the presence of Austria there, we should not have been in the Crimea; but we should not have had Bessarabia, and made Odessa the basis of our operations upon the Black Sea. Our position would have been more commanding towards Austria, and not less commanding as to Russia. Our fleet could have effected the blockade of Sebastopol; we could have driven the Russians from the eastern shores of the Black Sea.

Black Sea, as we afterwards succeeded in doing; and we could have ravaged the Sea of Azoff, on either shore, from Sebastopol to the strait of the Putrid Sea, and from the mouth of the Cuban to the mouth of the Don. After Austria took possession of the provinces, rapine and tyranny reigned there; the religion of the people was insulted, and the attempts at proselytism were scarcely any longer covert—an object certainly not provided for in the convention, and not honourable under the auspices of an army in friendly and allied occupation. Under the Russian rule the people were sorely tried, but there was at least ecclesiastical sympathy, of which Prince Gortschakoff made the most. The Austrians, not only oppressed with as high a hand as the Muscovites, but added insult to oppression, and carried the religious animosity existing between the professors of the Latin and Greek rite into all their oppressions and affronts, that would in the least degree admit of that element.

According to the convention between Turkey and Austria, in 1854, the army of the latter was simply to garrison Wallachia and Moldavia, in order to prevent the return of the Russians, who had been expelled by the victorious arms of Omar Pasha. This compact was never observed. The moment Hesse, Corinini, and their troops were firmly established in their quarters, the whole country was virtually placed under martial law. Quarrels were fomented with the boyards and citizens—with Omar Pasha and the English commissioners in his army—with, in fact, every person and party where a quarrel might tend to give Austria a pretext for military dominancy. There was not a line in the convention, in virtue of which the Austrians were there, at all to afford the slightest title for the assumption of government which Austria entered upon.

Most of the illegal proceedings of the chiefs of the occupying army were done in the names of the hospodars. This tempered matters in Moldavia, where the real authorities were not so compliant; but, in Wallachia, the conduct of the hospodar tended to make the kasir as effectually sovereign of the province, as he is of the duchy of Austria. Prince Stirbey held the hospodariat in spite of his suzeraine, the sultan. That man had lived in Vienna in exile for some time, where, with the help of the Russian minister, he intrigued with the Austrian Foreign-office, promising to rule in the interest of Austria for ever, if, through her means, he should be brought back to the government of the province he had so long and so cruelly plundered and oppressed, and from which the sultan, his legitimate master, at last drove him out. He had been a traitor to the sultan, and a tyrant to the people, and was detested by both. The Porte and the

people were desirous to co-operate in the appointment of a hospodar, and both desired a member of one of the old families of the country, in whom confidence for justice, ability, and loyalty might be placed. All these wishes were well known to Austria, and all were set at defiance. Stirbey—a man of low origin, but affecting the pride and pomp of the most ancient houses and powerful potentates—having no claim to the position which, by corruption he attained—was eventually brought back to Bucharest by Austrian bayonets, and Turkey and the allies must either submit to the indignity, or quarrel with Austria. The English government saw and regretted all this; remonstrances were made by the English ambassador at Vienna, and representations were made to the French Foreign-office by the English ambassador at Paris; but all in vain. The Austrians persisted steadily and determinedly in their course, as if conscious that they had some support in these transactions, unknown to the English cabinet. There was, no doubt, much Austrian gold spent among the corrupt and venal pashas at Constantinople, and no small portion of it in the neighbourhood of the Turkish office for foreign affairs. The French consul at Bucharest connived at the doings of Count Corinini, with whom he was on excellent terms; while between the count and the British consul there was the most unreserved personal hostility, as well as the most serious political and practical differences. Both the French and British consuls were supported by their governments in thus taking courses the most opposite! The *entente cordiale* was as little exemplified amidst the intrigues and treacheries at Bucharest, as under another French sovereign, who boasted much of maintaining it—it was exemplified in the Spanish marriages. Lord Palmerston disapproved of the conduct of the Austrians, from first to last. The French emperor expressed neither approbation nor disapprobation, no matter what the Austrians did, either in Italy or on the Danube. The conduct of his imperial majesty at that juncture naturally suggested some especial compact between himself and the emperor, Francis Joseph. It was impossible to conceive of the Austrians daring to treat England as they did, if they were not sure of some countenance, or, at all events, great forbearance, from the chief of the French government. It was alleged on the Continent—especially in Paris and Brussels—that German influence in the English court was the key to the riddle. The French emperor was described as exceedingly vain of his recognition by the Queen of England; and anxious to do anything which he knew would be pleasing to her or to the prince, however it might be regarded by the English people or the Eng-

lish cabinet, much as the emperor undoubtedly respected both. Believing that a conciliatory spirit to Austria would be well received by the English court, it was affirmed that he withheld support from the policy of the English Foreign-office, where Austria was concerned, unless where co-operation, real and ostensible, was a *sine quâ non* to the English alliance. Lord Palmerston was reputed to be averse to all tampering with the German coalition, but was restrained, it was said, by the personal influence of the French emperor from adopting any course which might bring him or his cabinet into collision with the court—the emperor persuading him that, in the long run, they would be able to outwit Austria by a more astute policy.

Whatever was the amount of truth in these rumours—which certainly circulated in the very best circles for political intelligence in London and on the Continent—the Wallachs and Moldavs turned once more with hope to Russia, as their only succour against the intolerance and tyranny of the despotic and cowardly power that ruled them. During the spring of 1855 this feeling grew in the provinces, causing uneasiness everywhere but in Russia. The Austrians made the manifestation of this feeling a pretext for additional severity; and the French seemed to take the same view of it, for the French consul and other French political *employés* acted more as the agents of Austria, or of a power in active exclusive alliance with Austria, than as servants of a power in close alliance with Great Britain, and sharing with her the danger of war, upon the field and on the wave. Roumans found sympathy at the English consulate; but Mr. Colquhoun, the able consul for her Britannic majesty, was powerless; the intrigues of the French in favour of Austrian tyranny thwarted him in every step he took. The Roumans at last openly cursed in the streets the hour when the Russian army retreated before the victorious lieutenant Omar Pasha.

Frequent and anxious conferences between the English ambassadors and the Porte arose out of these transactions: whatever the hopes of the sultan and the Turks in the spring of 1855, the state of the provinces—the doings and aggressions of the Austrians there—the dealing of the French agents, and the content between these latter and the official agents of England and Turkey—caused much disquietude at Constantinople, and for an important and dark element in the changing influences and circumstances which affected the feelings of the belligerents, and the events which ensued.

The only powers which Austria at that juncture seemed to treat with any respect

dance and Russia: to every other power she was arrogant and insolent; to Turkey overbearing in the last degree. She took no warning; from the coalition against Russia to bear herself humbly. The czar felt in the Kremlin the blows struck by British and French hands in the Crimea; Peterhoff felt the vibrations sent afar through the empire by the cannons before Sebastopol; from Cronstadt to the Caspian, Russia had learned that it was dangerous to "let slip the dogs of war," for they might turn and rend the hands that held the leash; Russia was not yet beaten, but keenly felt the chastisement, and would willingly resort to the *status quo ante bellum*, permitted to do so, promising to be a good neighbour to Turkey for all time to come:—but Austria had learned nothing. Seldom do great calamities to one nation teach another. "They will not see," was the lamentation of Judah, when national judgments were abroad, and the blazing ruins of one mighty city sent their lurid rays upon the palaces and towers of another. Austria took no warning from the sufferings of Russia; she continued to be the pest and firebrand of Europe; from her, political miasmas swept forth over all Germany, Italy, and Eastern Europe; her torch of discord and terror was flung forth over every realm where her hand was strong enough to cast it. On the scripture principle of representing a despotic empire by the emblem of a beast, a creature more ferocious than formidable would best depict that of Austria. She exhibited at this juncture not only a desire to play the tyrant in the face of all consequences, but a taste even for submission to dictation herself, where it might tend to strengthen her own hand for dictation elsewhere. The legations were garrisoned by the troops of the empire, while Vienna was dominated by the legate; the axe and the rope were the instruments of her government at Ferrara, while the nuncio forbid the burial of Austrian subjects in their own sepulchres, and the use of their fathers. Throughout the whole Austrian empire, and wherever her troops had intruded beyond its confines—as in the Rouman provinces and the Roman states—oppression was rampant. There was either disorder without law, or law which itself was the origin of disorders, because of its obvious injustices. Thin and without what was once called the glory of the Roman Empire, men felt that it had become the curse of Christendom—the anomaly of European civilisation—the political anachronism of the nineteenth century. A furious persecution against Jews, Greeks, Protestants, German Catholics, &c., raged throughout the dominions of the kasir, and a relentless political bondage fettered his circumjacent provinces. Poor bleeding Hungary repined in the

weakness of exhaustion and despair; pillaged Poland had nothing left worth fighting for; Italy panted, with eager desire, to be free—as the eagle seeking scope to fill its wings ere it rises in its power and pride. In Padua, Parma, Tuscany, and the Roman states, the people were maddened by foreign interference and oppression, and the oppressor was Austria. It was a monstrous inconsistency on the part of the Western powers, that while a war was waged to rescue provinces from the clutch of Russia, nations and independent states were trampled with impunity by the hoofs of the Austrian Croats. The kasir was allowed to occupy his throne of many ill-cemented pieces without an effort to compel him to respect the independence of surrounding states, while a dangerous war was directed against Russia for perpetrating the same offence. The kasir was the most malignant enemy of England, and the plunderer of the most fertile realms of Europe. It was not likely that Turkey would take any vigorous steps against a power which robbed her subjects, under pretence of protecting her territory, when the Western governments allowed her to do the same thing in Italy, under the same pretence. In fact, Turkey was afraid even to remonstrate, except with bated breath; and her remonstrances, such as they were, were met with haughty disdain and derision. Besides, the French ambassador at Constantinople was the friend of Austria, as well as the French consul at Bucharest; and the French minister of Foreign Affairs at Paris was equally partial to Austrian interests. This view of the relations, as well as of the character of the Austrian government, will explain the apparently tame submission of Turkey and England to the injuries inflicted on the provinces, and the insults offered to the dignity and sovereignty of the sultan. The political effect at Constantinople was to enrage the Turks, and inflame their animosity against Giaours in general, and their eager wish that the war should be brought, by arms, to a speedy termination, and the troops of the allies be removed from every portion of the Ottoman empire.

The monetary condition of the Turkish empire was deplorable; the prices of all imported commodities, as well as of those the production of the countries constituting the sultan's dominions, rose to an extraordinary rate, and the distress experienced was general and severe. Another earthquake at Broussa awakened the superstitious feelings of the populations everywhere throughout Turkey, and entailed heavy calamity upon all that neighbourhood. Broussa and its vicinity were exceedingly picturesque, and historically interesting. A traveller, who visited it after the second earthquake, describes it in these lines:—"At last Broussa was

plainly visible, its showy mosques and dark-red houses standing out against the green sides of Olympus, which towered up above with its crown of snow. Perhaps no more romantic spot can be found in the world than this, which has been the site of an imperial city for more than 2000 years." On the 28th of February an earthquake occurred at this ancient city, which was noticed in the last chapter on Turkey. On the 11th of March a still more serious visitation of this kind occurred, although only few lives were lost as compared with those lost by the former catastrophe, precautions having been taken against a recurrence of the danger. On the last occasion a succession of shocks occurred, by which the whole city and all the surrounding villages were destroyed. The accounts of the number of shocks vary so much, as to render it impossible to obtain any tolerably exact idea of their direction, duration, or number; some stating them at forty, and others—probably computing those on the 28th of February, and those which intervened between that date and the destructive scenes on the 11th of March—at 150. On the morning of the 12th of March hardly any public building remained standing in Broussa. The bridges—massive stone structures—were all broken: two of them dated from the time of the Romans. The great mosque—once the Convent of the Virgin, which was erected in the time of Justinian, and was only exceeded in the empire by the Mosque of St. Sophia—was made a ruin. The tomb of Sultan Urchan, son of Othman, one of the wonders of the place, was utterly crushed. Masses of solid rock went rolling down the mountain, crushing everything against which they came in contact. A visitor to this theatre of demolition shortly after the event, represented the Jews as the principal sufferers, and described their wretchedness as mournfully picturesque—"The Jews, with their lofty head-dresses, were to be seen sitting round their fallen walls, destitute and desolate." The wretchedness of the poorer fugitives—Jews, Christians, and Mussulmen—was extreme, as they journeyed, footsore, hungry, deprived of all things, and, perhaps, sick or wounded, or bearing with them their sick and wounded relatives. The foreign consuls and residents were borne away in steamers, sent by their respective embassies. Shortly after the earthquake a fire broke out among the wooden huts, which escaped the concussion better than the public buildings; the conflagration raged until mouldering ashes alone remained of the humble tenements of the poor. Rear-admiral the Hon. F. W. Grey sent home to the British Admiralty such details as bear out the narrative here given of a calamity which ruined so fair and antique a

city, and desolated the houses of 70,000 persons.

Among the events which produced much excitement at Constantinople, were the rumours of an approaching visit from the French emperor, on his way to the seat of war in the Crimea. The sultan and his government made every suitable preparation to receive so distinguished a guest; but the common people regarded the purpose of his coming with suspicion, and saw in it the fulfilment of some ill-defined prophecy, which predicted the subjugation of the empire; and when Colonel Belville, aide-de-camp to the emperor of the French, inspected the palaces of Begler Bashi and Balta Liman, on the Bosphorus, the consternation of the old Turkish party was as great as when Prince Menschikoff made his demands, which provoked the war.

The interference of the allies in favour of the religious contentions of the sultan's subjects increased the commotion of feeling which this party struggled to suppress. The *tanzimat* was cursed and secretly resisted, and several villages Christians were massacred. The fury of the high Mussulmen, unable to restrain their bigotry, was enkindled by the liberal measures dictated to the sultan by his allies. France was distrusted much more than England; but distrust and dislike were felt extremely to both powers, by Mussulmen and Christians. Indeed, the only persons in the sultan's dominions that sympathised with the allies, were the Jews. The Greek Roman Catholics were well disposed to the French, but stood aloof from the English; while the Armenians cherished partiality for the latter, so great as frequently to offend the subjects of the other Western powers.

The sanitary commission sent out from England did much good in connection with the hospitals, and the convalescents rapidly improved as the spring advanced. Perhaps no country is spring so exhilarating to invalids as in Turkey. The mud and filth, so overwhelming in winter, in field and city, dry rapidly under the sun of March. Wildflowers of every hue luxuriantly burst forth by the public ways, and spread out in the richest profusion; shrubs of wonderful variety put on their rich and diversified bloom; fruit-trees of almost every species rapidly assumed their gay apparel of many-tinted blossoms; the vine puts forth its vitality, and the fig-tree becomes rapidly rich in blossoms and fruit: the whole earth seems redolent of beauty. The British and French invalids at the Bosphorus felt the genial opening of this beautiful Turkish spring; and hope succeeded to the dreary fears and despondency, which even Miss Nightingale and her companions

did not cheer away. The miserable routine officialism which had ruined everything in connection with the hospitals, were still the great impediment; and the accounts given of obstructions presented by gentlemen in place to anything rational which was attempted on behalf of the invalids, would pass belief, if they were not accredited so as to make all doubt unreasonable. The following seems too good to be true—yet it is too true for the honour of the country and the service:—"The mortality still diminishes, and now does not average more than twenty a-day. On the 6th it was as low as fourteen. The weather exercises a wonderful influence over the men. The convalescents, on a fine day, are different beings to the same men when fog and rain beat on their eyes on every side. All seem, however, to want amusement, and would, doubtless, be much benefited by any light occupation or pastime suited to their strength. While the nation may be congratulated on the improved state of its brave defenders, it is impossible to convey to it any hopes that the spirit of routine and official folly is about to be eradicated. One anecdote, which may be added upon, will serve to give a conception of the Scutariote medical mind. Five officers are in a bad state of health, and must be sent home. Recourse is had to Dr. Menzies for a remedy, to which that gentleman sees no objection; but an unexpected difficulty occurs—a duplicate application must be made on scrap paper in every case, and Dr. Menzies's stock of foolscap is exhausted. Dr. Cumming, however, on being applied to, declares that there is none in his possession. In short, it is discovered that the department is destitute of an indispensable implement in its action, and must remain in a state of collapse until some supply arrives from home. The unhappy invalids hasten over to Pera, and ransack the shops of the Jewish stationers—but in vain. Foolscap is a British production, while the Turkish capital is mostly supplied with writing-materials from Paris or Vienna. At last it is discovered that 'Stampa' has foolscap, and the medical department receives notice of the fact. But, if Dr. Menzies purchases a quire, it will possibly be at his own expense, and at least another quire will be taken up in correspondence relative to reimbursement; therefore hesitates to take the step. One day the officers then says that he will buy some, but is at once met by the objection that the medical department cannot receive stores of any kind, except from the properly constituted authorities. The invalids have missed a summer, and are now at the twelfth day of their detention! What solution of the difficulty ingenuity may achieve is in the darkness of the future; but I have just seen one of the

sufferers, who is very desponding as to his chances of speedy departure."

In a previous chapter we gave a very favourable account of the Smyrna Hospital; but even there confusion ensued upon the arrival of the nurses who departed from England in the beginning of spring. "On Saturday, the 3rd March, a party of forty nurses, selected by Mrs. Sidney Herbert for duty at the Smyrna Hospital, one half ladies, the other paid attendants, left the London Bridge Station of the South-eastern Railway, under the superintendence of Mrs. Holmes Coote, attended by one of the medical officers and a courier, to proceed, *via* Folkestone, Boulogne, and Marseilles, to their place of destination. They received throughout their journey the most marked courtesy and attention. The proprietor of the Hôtel des Bains, at Boulogne, provided for them a handsome repast, for which he declined to receive payment—his servants also refusing any gratuity. They reached Marseilles on Tuesday, and proceeded on the Thursday following in the French steamer *Sinai*—the wind during the whole passage being favourable, though generally boisterous. When, on the morning of Thursday, the 15th of March, at 7 A.M., the handsome sea frontage of the Smyrna Hospital became first visible—even under all the disadvantages of an eastern rain—a feeling of surprise and pleasure pervaded the entire party. It is a spacious building, three storeys high, built of stone, coloured red, except round the windows, and constructed in the form of three sides of a square, the side towards the sea being open for the advantage of the breeze. Behind lies the Turkish quarter of the town, and still further back a series of hills, upon one of which stood the remains of an old castle. It will, doubtless, appear incredible that no adequate provision should have been made for the nurses on their arrival; yet such is the fact. The directions from the government were misunderstood, and for some considerable time the ladies were indebted for a home to the hospitality of a Smyrna merchant, M. Guidicy, who came on board the vessel, and made them an offer of his house. To Mr. Whittall and others especial thanks are also due, for the most prompt and kind attention under this embarrassment. The military commandant, Colonel Storks, when acquainted with the nature of the emergency, proceeded immediately to encounter it with an energy and independence of action, which proved him equal to his laborious post. A Turkish official's house was speedily put in order; a suitable table was provided; the paid attendants had their rooms allotted to them within the hospital, and the medical officers, of whom about twenty had arrived by different routes, were authorised to arrange themselves in such an order as ap-

peared most calculated to enable them efficiently to discharge their respective duties. In twenty-four hours this numerous party was in great measure organised upon a preconcerted plan, as sketched out by Dr.

Meyer, the superintendent, whose departure from England was necessarily delayed, the duties of his office, for a few days as he had taken leave of the last of the hospital staff."

## CHAPTER LXXIX.

### VOICES FROM THE BATTLE-FIELDS DURING MARCH.—THE SECOND BOMBARDMENT OF SEBASTOPOL.

"Strange to say, the prolonged resistance of Sebastopol to the fleets and armies of England and France, by opening our eyes to its exhaustless resources, supplies the best reasons why it should be levelled. The magnitude and secrecy of its warlike preparations in time of peace, betraying designs, if not now, yet in future, inimical to the East, or against that Turkey, the integrity of which Russia has guaranteed."—M. C. SEYMOUR.

BEFORE opening our narrative of the second bombardment of Sebastopol, a representation of the feelings, condition, and hopes of the soldiery at that juncture—as seen by a few extracts from letters written by themselves—will be appropriate.

Corporal Macdonald, Scots Fusileer Guards, thus wrote:—"Our health and appearance is much improved since we have been here. We begin to look like guardsmen again. Indeed, our brigadier-general gave us praise yesterday for our appearance on parade. We have the wooden houses to live in now, but we ought to have had them four months ago, and then many of our poor fellows might have been saved. The condition of the army is improving a little. The weather is very fine, and has been for the last ten days. It is not so bad in the trenches now as it was two months ago. We have got our last year's clothing, and we look quite smart again. We are expecting an attack upon this place from General Liprandi's army, but I think he had better leave it alone."

From James Cooper, 1st Royal Dragoons:—"I never enjoyed better health at home than I do in this country, which is one of the greatest blessings we have here. I must acknowledge we have had fighting here most fearful to relate. I can clearly say we have been for a fortnight together, and never had a dry thread to our backs, with scarcely a bit of shoe to our feet, and the mud half way up to our knees; but, thank God, the worst of the trouble is over now. We have good boots and good clothes, which will keep out a good storm. We were all turned out this morning (14th of March), expecting an attack to be made on us by the Russians. They showed a very good front, supposed to be about 30,000 of them, to attack Balaklava, but they were not game to try their luck; if they had, they would have met with a very warm reception from our batteries, which we have erected. We have got wooden houses to live in now during the fine weather. We ought to have had these good things a long time ago, and that would

have been the means of saving the lives of many thousands of our poor comrades: they have lessened our army greatly. But with our losses, we can still 'wallop' the Russians for all their superior numbers."

Sergeant Robert Bentley, Royal Artillery gave the following account of the price of provisions:—"I don't care what I suit and go through while I am here, so that I am able to bear it all, also that we beat the Russians, and I live to come to old England again all safe and sound; and I live in hopes of doing so—in fact, I feel sure of doing so; but we have a great deal to do yet to beat the Russians. If I had to live on my bare ration only every day, I should not have been so well as I am at present. Our rations are daily 1 lb. of salt beef or pork, 1 lb. of biscuit, coffee, and morning, and now we have got some potatoes, perhaps three times a week, and we find them do us a great deal of good; but we have lived on salt meat and biscuit for so long that I cannot take it now, so I buy bread, butter, &c. &c., with my pay, and I think it is that that has brought me round so well; but we have to pay very dear for everything we have to buy. The French bake their own bread, and we buy a loaf of them when we can, but we have to give 3s. 6d. for a loaf of more than 3 lbs. weight, and if we send for Balaklava, and that is about seven miles from our camp, we give 2s. for a loaf not more than 1½ lbs. weight, and glad to get them at that price; butter (salt, of course) is 3s. lb.; English cheese, 3s. lb.; sugar, 1s. lb.; flour 1s. 6d. a porter, 2s. 6d. a bottle, about a pint and a half in the bottle; ale, 1s. 6d.—if they call it beer I call it small beer. I heard the other day that there was some red herrings to be got, and I thought I should like one, so I sent for one and they only charged 4d. for it, and it was a very small one! Oranges are also 4d. each, so what money we do get it does not go far for a few comforts, but I find they do me good, and as long as I have money, and there is nothing to be got, I will get them."

ergeant Selby, of the 50th, writing to his mother, said:—"We now want for nothing old England can send out, and we are as off as any one can wish to be. We all thank the ladies of England for their comforts, if we had not had them all the soldiers in country would have died before this. We have everything ready for a good fight, which are to take place one of these days; but I think we shall be victorious, for they (the Russians) are afraid to come out and fight us fully, for they know that we can beat them. Dear mother, be not faint-hearted about me, for I will do all I can for my country, and the ladies that are in it, for their kind-ness towards us. But my time is short; it is twelve o'clock at night, and the post closes in the morning at five o'clock, so I must conclude."

An old soldier wrote from before Sebastopol the 17th of March:—"Sickness and the want of food have not carried sufficient mortality in our ranks; but now that we are close to the town we must pipe-clay our belts, to make us a perfect target for the enemy, who are within one hundred yards of us. All are of the same opinion. Are we not as good soldiers as though we were pipe-clayed for general inspection at home? Cannot we fight as well as though we were polished up for a medal of honour? For proof, look at Alma and Inkerman; we were then both dirty and yet because we have got a few fine days we are harassed with pipe-clay and blacking. I am not a grumbler or discontented soldier, but I should like to see the people of England with this in hand, for it would greatly ameliorate our condition. Another thing which is much disliked is, that Sir George Brown has ordered us to wear stocks on parade, an article which we now hate to see, and especially in the summer is coming on."

A letter from the French camp contained the following romantic story:—"For some days nothing has been talked of but the arrest of a young Russian woman; she had been released several times before, as her favourite had appeared to be in the trenches. The rumour was related for some time, and the general was at last informed of the fact. He ordered a watch to be kept, as he thought it would be only a spy disguised in woman's dress. At six o'clock on the morning of the 1st, the same woman presented herself in front of our men while they were at work. She was of tall and majestic stature, and held an unextinguished lantern in her hand, and begged to examine the works with much attention. Some perceived that she held a roll of paper, half open, in which, probably, she noted the observations she could collect. At the sight of our soldiers and officers she quickened

her pace, and entered a sort of ravine which is at the extremity of the French trenches. As soon as she reached that spot she began to run, but the commandant sent two Zouaves in pursuit, and they soon overtook her. Two hours after she was conducted to General Canrobert. Her examination was not long; she constantly replied that it was for the good of her country, and to avenge the death of her husband, Boninoff, killed at the Alma, that she acted thus, and, moreover, that she felt no regret. She was then searched. The searchers found in one of her pockets a paper book, containing several details on the state of our batteries, the number of men employed, the number of guns in the batteries, &c.; and in another pocket a double-barrelled pistol, and a letter addressed to Prince Menschikoff. After the visit she was shut up in an apartment of the general's head-quarters, under the guard of two soldiers, until such time as she can be sent to Malta."

In the last chapter on the siege the death of Admiral Istomine was recorded. The following interesting communication concerning him appeared in the *Invalide Russe*:—"On the 7th of March (19th) the garrison of Sebastopol had the misfortune to lose Rear-admiral Istomine, chief of the 4th section of the line of defence. At ten in the morning, after the inspection of the works in the Kamtschatka Redoubt, Rear-admiral Istomine was returning to the Korniloff Bastion, when he was struck on the head by a ball directed against the said redoubt. The loss of this young general officer, endowed with such brilliant courage and zeal, and who promised so well, is severely felt by the Russian fleet and the garrison of Sebastopol. Vice-admiral Nachimoff had selected a place in the Cathedral of St. Vladimir, near the tomb of Vice-admiral Korniloff, but Istomine having gone before him to eternal life, he gave him up his place, soliciting permission to bury there the young rear-admiral who had so gloriously fallen for his faith, his sovereign, his country, and a just cause."\*

Previous to the opening of the bombardment, copies of a Russian order of the day were brought into the British camp by deserters. It was issued by Prince Gortschakoff on assuming the command, and discloses alike the spirit of the Russian government, army, and people:—

**SOLDIERS!**—His majesty has deigned to appoint me to the command of the sea and land forces in the Crimea. Brave warriors, all Russia is proud of your heroic courage, and our great emperor, Nicholas I., on his death-bed turned his last looks towards you with gratitude. His worthy successor, his majesty the reigning emperor, Alexander II., has deigned to express himself as follows, in letters addressed to me on the 3rd and 7th of March:—

\* According to some Russian accounts, Nachimoff was first killed (see page 185); according to others he survived Istomine: we have no means of reconciling this discrepancy.

"Tell the brave defenders of Sebastopol, in the name of our immortal benefactor, that the Emperor Nicholas was proud of them, and that he thought of them on his death-bed, in sending them, through me, the expression of his last and cordial gratitude. Tell our brave soldiers that I thank them in his name by these letters, and that I am perfectly convinced that they were always worthy of his paternal solicitude."

Soldiers! the most difficult time is over. The roads are better, transports of every description arrive easily, and considerable reinforcements sent to your support are on the way. In taking the command of this army I am sincerely convinced that, with God's blessing, success will finally crown our efforts, and that we will certainly justify the hopes of our august sovereign. Adjutant-general Osten-Sacken, who directed the defence of Sebastopol with so much honour, and his companion the brave Admiral Nachimoff, resume to-day their former functions.

At last the preparations for the second bombardment were brought to a close, and orders were given on Easter Sunday, the 8th of April, to open fire the next day. Unhappily the allies were not in a condition to overcome the defence, and it is difficult to conceive how they could have been in ignorance of this fact. The English general was unwilling to enter upon the task until the attacks were far more formidable; but the French commander literally goaded him to begin the bombardment, even while the English were arming the French batteries with their most useful pieces of ordnance, and were incessantly engaged in bringing up shot and shell to the French lines. The English had only 150 cannon mounted in all their attacks; their advanced attacks were badly armed, and General Jones, the chief engineer, was chagrined beyond measure by the unfit state of many of the batteries, which was such that a number of powerful pieces could not be brought into play. The cause of this was chiefly the overworked state of the men; their fatigue was almost beyond human endurance; their numbers bore no proportion to their work. The French had 200 guns, many of which were lent by the English; but the force of the British batteries, with fewer guns, was superior to that of the French, because of their greater solidity, and the heavier weight of metal which they carried. The number of Russian guns was much greater than that of the British and French together. At least 500 pieces were mounted upon the defences, and those defences, from the extraordinary labour which had been bestowed upon them, were more solid than the allied attacks. The Russian engineers—and especially Todtleben, the engineer-in-chief—displayed amazing skill, dauntless courage, and untiring industry, and their efforts were seconded by the whole Russian army with the utmost alacrity and zeal. Nationality, military pride, and fanaticism, all lent their inspirations to the Muscovite host.

The works of the allies were very much extended, but the batteries formed by them were constructed with science, manned by a

brave soldiery, and directed by very skilful as well as most gallant officers. The attacks were connected by parallels, and the advanced batteries were connected by zigzag approaches, affording shelter to the reinforcements which might be required. The town itself was protected by earthworks, sustaining ponderous batteries, and giving proof, by their elaborate construction, that the enemy was prodigal of his labour. General descriptions of the lines of the defence have been already given, and every fresh effort to strengthen that defence was noticed as it proceeded in detailing the events of the siege.

During the morning of the 9th, soon after midnight of the 8th, some sharp skirmishes occurred between the French and Russian pickets, and the reports of musketry fire came so considerable at one time, as to lead many in the English camp to suppose that a sortie was being attempted. The night of the 8th was one of rain and storm, which continued through the morning of the 9th, began to dawn, with great fierceness; so that when daylight arrived, heavy mists obscured its struggling rays, and hid the works of the contending hosts from one another. At a given moment three shots were fired by the batteries, and immediately the cannonade opened along the whole line of batteries.

Woods represents the moment of opening the bombardment at half-past five, and describes the enemy as so taken by surprise, that half an hour after he did not return the shot. Colonel Hamley, who, as a major of artillery, was engaged on the occasion, and was likely to time the events, represents the besieging batteries as not opening their fire until twenty minutes past six; and the Russians as not recovering from their surprise for twenty minutes after. The Baron Bunsen describes the Russians as replying to their assailants in a few minutes, and stating that the French first opened fire without signal, then the English. Colonel Hamley says that the English first fired, and soon after the French joined the cannonade; while Mr. Russell describes the allies as simultaneously opening their fire at daybreak. We prefer Colonel Hamley's account; it is more consistent with the orders given, and with the course of events. The orders were not to discharge a gun until the objects to be aimed at could be distinctly seen; and so dense was the mist, and so protracted the struggle of the rising sun, that it must have been quite as late as the colonel states before the British signals could be given, and even then objects could scarcely be discerned through the drizzling mists which hung over the hostile batteries. Very soon after almost instantaneously—the English lines opened one blaze of fire: this speedily extended to the French works, and through the thick fog

shes seemed to run along the whole course of the batteries, in a continuous current of flame. When the enemy somewhat recovered from their surprise, their reply was comparatively feeble; and it was not until noon that they seemed to regain their confidence, and effectually answer the guns of their assailants. Until two o'clock the artillerymen of the allies were directed to fire at discretion—and their “discretion” was to pour, with astounding rapidity and precision, shot and shell upon the ramparts of the besieged. After two o'clock the number of discharges for each gun was limited, and probably the damage done to the enemy was as extensive by this mode. To the Russians the cannonade must have appeared more awful than to the allies, for a strong south wind bore the detonations over the city, while it checked the reverberations of the cannon of the besieged which fell with rattled and heavy sound over the camps of the besiegers. In consequence of the stormy state of the weather, the smoke of the batteries and the drizzling rain were driven into the faces of the Russian gunners, rendering it difficult for them to take aim, and throughout the day their fire accomplished very little. According to Colonel Hamley, there were 360 French guns engaged against the town defences and the outworks; while Mr. Woods, and other English correspondents, computed them at little more than 200. The effect of such a cannonade, as its report was suddenly swept over the city by the storm, must have been such as to appal the unfortunate inhabitants of Sebastopol, and awaken anxiety in the hearts of its stoutest defenders.

The loss sustained by the English was chiefly among the artillery and the sailors—especially the latter, who fought with the most forward courage. That the killed among either should be so few arose not only from the obscurity of the morning, which was chiefly disadvantageous to the enemy, but also from the precautions taken by the engineers. The mines in the ravine close to Chapman's Battery were used as magazines; these could not be reached by the explosives which so often destroyed trench-magazines. The parapets, and other protective works, had been enlarged and made stronger. During the first bombardment, many of the wounded were killed in the efforts to remove them—and those who attended to them also fell victims; but, on this occasion, bomb-proof cells had been formed in the rear of the trenches, to which the wounded were instantly removed, and securely deposited. Notwithstanding all these precautions, there were guns dismounted, and men slain in various batteries—especially when at intervals the fog drifted past the city, and gleams of sunshine fell upon the allied works, enabling

the enemy to take more precise aim. Not a man of the British trench-guards fell: they were removed as the artillery took up their positions, and so placed as to insure their safety.

The loss of the enemy was very serious: numbers of wounded men were seen borne across to the northern side during the bright intervals which occurred, and when, in the afternoon, the day became generally clearer. The day's work was summed up by one who saw the conflict from the British position, in the following terse manner:—“The allies commenced the bombardment this morning during a storm of wind and rain very unfavourable to the Russians. The Russians, surprised, responded slowly—the Flagstaff and Garden Batteries excepted. These doubled their fire up to noon, when the superiority was on our side. At three o'clock the fire of the Mamelon was silenced, and only four guns were fired from the Round Tower. The Redan continued to fire six guns. The French have silenced the Flagstaff Battery. The loss of the allies is insignificant. The rain has ceased, and the night is fine.”

In the French lines more inconvenience from the weather was experienced than in the British: the trenches became almost impracticable, being nearly choked with mud or filled with water. In the lower positions of the French batteries, the hindrance from these causes was very serious. The Russians directed several tremendous salvoes of artillery against the French, who replied in a similar manner, and with more effect. The journal of the siege-corps has this entry:—“At two o'clock our fire had acquired a positive superiority; already a breach is made in the long-crenellated wall: everywhere the hostile batteries bear the traces of our fire.”

The correspondent of the *Impartial* of Smyrna communicated to that paper a very exact and well-described account of the first day's bombardment, as follows:—

*Before Sebastopol, April 9.*

“This morning, at 5 A.M., the fire along the whole line of the allies opened against Sebastopol. Despite the most fearful weather—an ice-cold beating rain and a violent wind—I proceeded to the English camp situate in the centre of the general attack.

“At 8 o'clock I was standing with a small group of officers, sheltered by a fragment of a wall, on the summit of Green Hill, the highest point in the rear of the English batteries. From here I was able to take in the whole *ensemble* of the attack and defence. The sky was of a dark slate colour, and, in the midst of small white puffs of smoke, flashes of fire were darting out of the Russian embrasures and

KK

from the batteries of the allies. But the wind—or rather the hurricane—was so violent that it almost drowned the noise of the artillery.

“On the left attack, from the Quarantine to the Flagstaff Battery, 300 French cannon and mortars were hammering at the place, and, considering the proximity of the works, must have caused great destruction. It is clear that in that point of the attack great efforts have been made on both sides, especially at the Flagstaff Battery and at the Central Bastion. A shell, which fell in the latter, blew up a powder-magazine at 6 A.M., only an hour after the opening of the bombardment. Can it be that the Flagstaff Bastion is now regarded as the key of Sebastopol, instead of the famous Malakoff Tower? Everything seems to say so, for, compared to the attack on the left, the works on the right are insignificant. It is true fire has been opened against the ‘White Works,’ against the Mamelon, and against the Malakoff Tower; but the fifty siege-pieces in the Careening Battery will not do much against the formidable artillery of the enemy on that point; nor has the firing assumed that intensity as on the left attack, where admirably constructed and powerfully armed batteries are accumulated before the Central and Flagstaff Bastions, which they are battering with magnificent ardour.

“From the so-called English ravine to that of the Karabelnaia, the English, with 100 guns of heavy calibre, most scientifically placed, are keeping up a terrific fire. Notwithstanding the very considerable distance which separates their batteries from the batteries of the town, they are causing great damage. The attack on the centre has hitherto gone on admirably. The Russians reply slowly, and their range, either too small or too great, does little harm. A man who has this moment come up from the trenches says that he has only seen one killed and two wounded, and that everything is going on admirably.

“Ten o’clock.—I have approached the left attack, evidently at the present moment the most important. From a point a little in advance of the Observatory, I am able to judge of the progress of the fire. It appears to me slacker, especially on the side of the Russians. Perhaps this is owing to the beating rain, which soaks the ground, and renders the handling of the siege-pieces difficult, notwithstanding the wooden platforms on which they move.

“Eleven o’clock.—Men just come up from the trenches inform us that most of the French batteries have scarcely suffered; nearly all the shots of the Russians went over them. Batteries 26 and 28 are alone somewhat damaged, without, however, having been silenced. Various Russian batteries are nearly

silenced, and the embrasures of others considerably damaged. Our loss in killed and wounded is insignificant.

“Noon.—The fire still continues to the advantage of the allies.

“Four P.M.—The ‘sailants’ of the Central and Flagstaff Bastions appear to be ruined, their embrasures; many of the guns are dismounted; the enemy’s fire is slack.

“Five P.M.—The English have committed great ravages in the barrack batteries, which reply very slowly. The Malakoff Tower and the White Works on the right attack do not appear to have suffered much.

“Six P.M.—On the left attack, French Battery No. 28 has been seriously damaged: two or three times the Russian shot have swept through it. Lieutenant Brillant was cut in two by a cannon-ball. In the French batteries the number of killed and wounded, although considerable, is not so in proportion to the mass of projectiles fired by the enemy.

“Nine P.M.—The cannonade continues, and is to be continued night and day until the fire of the enemy is silenced. The weather still atrocious. It blows a hurricane, and the cold rain pours down in torrents. This morning an attempt at a diversion was made, to alarm the Russians, by feigning a descent on the Katcha, on the other side of the port. For this purpose a Turkish division was embarked on board English and French steamers; but did not succeed: the failure is attributed to the weather. As yet, the allied fleet has not taken any part in the attack; it is still at anchor, either in the roadstead at Kamiesch or at Kazatch.”

On the 10th of April Lord Raglan sent home to his government his account of the proceedings:—

*Before Sebastopol, April 10.*

MY LORD,—In accordance with the arrangement made between General Canrobert and myself, the batteries of the French and English armies opened upon Sebastopol soon after daylight yesterday morning. The weather was extremely unpropitious. Much rain had fallen in the course of the night, and it continued during the day, accompanied by a tempestuous wind and a heavy rain, which obscured everything, and rendered it impossible to ascertain with any degree of accuracy the effect of the fire, which has been continued with little or no interruption from the commencement, and has been superior to that of the enemy, who were evidently taken by surprise, and, except upon the extreme left, did not respond to the attack for nearly half an hour. This morning has been hazy, and for some time there was a drizzling rain, but it is clearing this afternoon, and there is again prospect of fine weather. The country yesterday was covered with water, and the ground was again very muddy. The trenches were likewise extremely muddy, and this condition added greatly to the labours of the men employed in the batteries, who consisted chiefly of sappers, artillerymen, and sappers. They conducted their duty admirably; and I am sorry to say that the two foreign regiments, particularly the navy, sustained considerable losses. We have not yet received the returns of the casualties between the 9th instant, which are herewith inclosed; but the death of Lieutenant Twyford, of the royal navy, a

omising officer, and greatly respected by all, has been killed to me; and Captain Lord John Hay, who has taken a most active part in the gallant and distinguished services of the Naval Brigade, was wounded almost at the very moment, I believe by the same shot. I hope the injury he has received is not very serious; but the loss of his assistance, even for a time, is much to be regretted. The Russians have not shown themselves in any force in front of Balaklava.

I have, &c.,

The Lord Panmure, &c.

RAGLAN.

As darkness descended, the allied fire slackened, and all who observed it were satisfied that the result of the day was greatly in their favour. Night did not, however, terminate the conflict, nor give rest to the combatants: they did not wait for day to dawn, and gave them light to conduct a more precise cannonade; the mortars still kept up an intermittent attack. The rain ceased about eight o'clock, but the night continued gloomy; and the fiery light of shell and rocket, as seen against the dark background, had a magnificent effect. Throughout the night the English threw shells to the Malakoff and Mamelon, the explosions which could be distinctly heard in the British lines—so still was the night, and so silent everything in the contending hosts, except these hissing and exploding shells. The Flagstaff and Garden Batteries received a continual shower of bombs from the French. The Russian guns occasionally replied. The loss of the besieged in men, and the toil necessary to repair the damaged *matériel* through the night, must have been most trying to their fortitude and perseverance. Towards midnight skirmishes occurred at the advanced posts; but the musketry gradually slackened on both sides. The English experienced much disappointment throughout the day and night, and in a lesser degree during the remainder of the bombardment, by the bad condition of the fuses of the shells. Such of these projectiles as fell before exploding were proved to have been well aimed, and showed the skill of our gunners; but a large proportion burst in the air, in consequence of the wretched manufacture of the fuses. Thus, at every point, our brave soldiers were impeded by the neglect or incompetence of the departments at home.

On the 10th, at dawn, the "duel of artillery," as so many have called it, was renewed: progress for the first few hours was thus described by the correspondent of the *Impartial* of Smyrna:—"Two Russian batteries in advance of the central bastion have been destroyed by French shells and balls; and abandoned by the Russians. The results obtained in the left attack are highly satisfactory. All the embrasures of the Central and Flagstaff positions are demolished; most of the guns are picked over, and the carriages broken. The enemy's fire is slack and feeble. I am ignorant

of the results of the attack upon the centre and right. I am compelled to close my letter, as the steamer leaves in an hour, and I must hasten to the camp. The weather has somewhat cleared; the sky threatens rain, but the wind has fallen."

The day became fine. The Russians, as if by magic, had repaired their broken works and embrasures: even under fire, throughout the 10th, they worked at the parapets. Their shots were, however, irregular, and their guns were worked in a manner calculated to leave the impression with observers that they were short of men or ammunition. After eight o'clock in the morning, the Mamelon was silent all day. Salvoes from the Malakoff or Redan would burst forth occasionally: the artillerymen were seen moving among the batteries, passing from one to another—the same bodies of men working the guns in different batteries, according to the extent and character of the fire directed upon them. In the evening they withdrew their guns from the embrasures, leaving the allies comparatively unopposed, to exhaust their labour and ammunition against the earthworks. Subsequently, the cause of these remarkable proceedings was discovered: the garrison was short of men; it is alleged that only 18,000 were left in Sebastopol. The withdrawal of troops from the city was occasioned by the arrival of Omar Pasha and his Turks from Eupatoria. The Russian chief thought that a good opportunity was afforded for striking a final blow at Eupatoria. All the forces available were collected for that object, and actually were on their march, when the bombardment suddenly opened, to the surprise of the garrison. Todtleben, who had the direction of the defence, immediately dispatched couriers after the absent army, to bring them back by a forced march, lest the allies should attempt an assault. Meanwhile, the Russian engineer had not half men enough to man his batteries adequately to reply to so terrible a bombardment. The army in the field returned, and the garrison, reinforced, was prepared for a more vigorous contest; but the resistance offered was only made as effectual as it was by the skill of Todtleben, and the energy of the defenders.

On the night of the 10th an effort was to move down six 32-pounders to a battery prepared for them in an advanced position on the left; but the mud was of such tenacity that the guns all stuck fast, 300 men scarcely being sufficient to move a single gun. The ropes broke—the Russians opened fire, and the first gun moved was struck by a Russian ball and disabled: several men were killed and wounded. The commander-in-chief of the French army wrote:—"Since the arrival of Omar Pasha and his picked divisions, we

think that the most advantageous thing that could happen for our allied armies, would be to be attacked by the Russian army in the excellent positions which we occupy. We have for a long time supposed that his intention was to march against our lines at the opening of the fire against the place, consequently, in order to excite the enemy in the town, and to provoke him to exterior aggression, we have judged it useful to have the fire opened yesterday, with the whole of the French and English batteries. The commanders-in-chief agreed to continue that fire, without precipitation, but also without hesitation, and to profit by the favourable chances which it might offer, either against the place or against the relieving army."

On the 11th the allies opened their cannonade with great vigour—the air was continually cleft by shot and shell, and the earthworks of the defence gave tokens of yielding under the iron deluge; the Mamelon especially suffered. The French plied their shot from the Inkerman batteries, and the English mortars sent their messengers of death continually. The riflemen in front were engaged with more than their usual alacrity, and the sharp ring of their pieces could be heard all over the lines in the intervals of the uproar of the cannonade. The expedition to Eupatoria having been recalled, the troops re-entered Sebastopol, and fully manned its batteries. In the early part of the day, however, the Round Tower only fired occasionally, but the guns of the Redan and the Garden Batteries fired with the utmost rapidity. The aim was not precise, and the allies suffered comparatively little: destruction was poured by the latter among the men by whom these batteries were so vigorously worked. For a time rain and fog impaired the facility with which the English more especially dropped their shells into the enemy's lines; but the rain ceased late in the evening, and the fight was renewed with the same fury as before. The Round Tower had by this time exhibited considerable dilapidation, and the embrasures in the Redan were in various places cut up. It was, however, evident, at the close of the day, that the batteries of the allies were not yet near enough to make such an impression upon the huge earthworks as would open the way for an assault. Several incidents of interest occurred in the English lines. One of the splendid 13-inch mortars burst, the fragments sweeping the traverses, and yet not a man was even wounded. General Bizot, accompanying General Niel to the English works, was struck by a rifle-ball, which inflicted a mortal wound. This officer had distinguished himself very much in the Algerine wars of France. He had much of the respon-

sibility of the engineering mistakes in the earlier part of the siege, when his opinion was permitted, most unfortunately, to overrule that of our own chief officer of engineers, Sir John Burgoyne. The remaining Lancaster gun was burst by a shot, putting six men *hors de combat*. The officers considered the gun no loss, from its irregular action; but this partly arose from prejudice, for no other description of gun was the works of the allies effected so much destruction upon the works of the enemy. The Naval Brigade were the chief sufferers during the day, the enemy having directed upon them a hot and sustained fire. During the bombardment, up to the evening of the 11th, the brigade lost forty killed and wounded. After nightfall the French threw shot and rockets into the western portion of the town, the British continued incessantly to shell the opposing batteries. During the three days the bombardment lasted, Lord Raglan, Sir John M'Neil, Colonel Tulloch, and Generals Brown and Pennefather, visited the front, inspecting the works, and watching the progress of the cannonade.

The *Invalide Russe*, of the 22nd of April gave the Russian account of these first three days of the bombardment, and of the evening immediately preceding, in terms as follows:—

"From the 25th to the 26th of March (6th to 9th of April), the operations of the enemy continued the same, that is to say, by their approaches they have advanced slowly towards the Kamtschatka lunette, and on other points they constructed batteries in the approaches already existing; as regards their fire, it was very weak, and directed almost exclusively against our works of counter-approach of Vakhnia, Selinghinsk, and Kamtschatka.

"On the 26th of March (7th of April) they attempted, by mining galleries, to approach nearer Bastion No. 4, but their subterranean works were not of great importance. To oppose them we opened new mines on our side.

"On the 27th March (8th of April), during the night, we confined our labours to repairing the damage done to our works, to deepening our trenches, and to increasing the thickness of the epaulments and the height of the traverses. The enemy worked in the trenches beyond the cemetery, and opened embrasures in the new grand epaulment. When the mist cleared it was observed that the enemy had prolonged their trenches against the salient angle of Bastion No. 3. During the day the firing of musketry was not continued along the whole line of the fortifications.

"On the 28th of March (9th of April) at half-past five in the morning, the enemy opened a tremendous cannonade from all their batteries (250 guns in all), which continued

evening. On this occasion 20,000 projectiles were thrown into the town. During the night the enemy carried on a brisk bombardment. On the same day the enemy's fleet got its steam, but did not weigh anchor, owing to the heavy sea running.

"On the 29th of March (10th of April), in the morning, the enemy renewed the cannonade: their object was evidently to dismount the guns of our fortifications. On our side we replied with success; we did great damage to many of their batteries, and in less than four hours we silenced fifty of their guns. To judge from this circumstance their loss must have been considerable. On the same morning the enemy's vessels again got up their steam at an early hour, stood out to sea, and then drew up in front of the bay beyond range, but did not open fire. In the evening the frigates formed in two lines; the frigates and steamers formed a third line, and the whole fleet cast anchor. In these two days we had 4 officers and 141 men killed, and 15 officers and 673 men wounded. Among the killed are the brave and worthy commandant of the battery, the captain of corvette *Schemiakine*, and the midshipman Povalo-Schveikosky, who gave great promise. Among the seriously wounded are three distinguished naval officers, Lieutenant Lyoff (since dead), Lieutenant Valischine, and Lieutenant Krassovsky; also Lieutenant-colonel of artillery Rosenthal, and Major Volotskoi, of the infantry regiment Ziesse-Litevski—both of them very brave and intelligent officers.

"In the days of the 28th and 29th of March (9th and 10th of April), the enemy dismounted one of our guns and gun-carriages, but they were immediately replaced by others; all the damage (moreover, small) done to our epaulets and batteries was also successfully repaired.

"In the night between the 29th and 30th of March (10th and 11th of April) the enemy again bombarded the town with great vivacity, but without doing us much harm. On the 11th of March (11th of April), six chosen companies of French made a bold attack on our positions (*logements*) in advance of Bastion No. 5. They got temporary possession of them, and immediately set to work to convert them into trenches, but we drove them out with grape. Two hand-to-hand combats followed with sword and bayonet, after which our sharpshooters re-occupied the positions. In the morning of the same day the enemy opened a most violent cannonade from all their batteries, which slackened after a short time, but was renewed, with great vivacity, towards evening. Our garrison behaves in the most heroic manner. Our loss on the 30th of March (10th of April) has not yet been exactly ascertained."

In the above quotation reference is made to a combat between the French and Russians on the 11th. It was necessary, at the commencement of the bombardment, to carry several of the enemy's ambuscades, so as to allow the French engineers to enclose a portion of the cemetery in the circuit of their works, and by this means to command the bank of the ravine which was in front of the town. It was found, however, impossible to attempt the execution of this on the night of the 9th, in consequence of the dreadful state of the weather. The next night the French workmen actually accomplished this task, but appear to have fled, under the influence of unaccountable panic, when the advance companies became engaged with the enemy, who mustered strongly to interrupt the progress of operations so important. The Russians, almost unopposed, found opportunity by this shameful conduct to destroy 200 metres of gabionade immediately after it had been laid down, and remained masters of the situation. On the night of the 11th it was resolved to recommence these works, and the workmen were reminded that they were strongly supported, and must not give way in the presence of the enemy. At nine o'clock the French troops advanced, and the Russians, perceiving them to be in considerable force, retired, after a single discharge. This was frequently the case, when an obstinate contest had been determined upon. While the French sappers were filling up such works as were not comprehended in the tracing of their own engineers, the Russians returned, and, dispersing among the craggy and uneven ground, opened a galling rifle-fire upon the French supporting companies. The 48th French regiment was that in support: in a few minutes it lost seventy-three men. The Russian reserves, meanwhile, collected in the ravine, which, the French perceiving, threw from their batteries a storm of balls, which fell among the troops there thickly massed. The cries of the Russians could be heard above the din of the cannon and the rattle of the fusilade. Commandant Mangin bravely attempted to carry on the works, but the fire of the enemy was too close and fatal for his success. Throughout the whole night the combat flowed and ebbed and eddied, with this result, that the French could not accomplish the work undertaken, and many brave men perished on both sides. Mangin was carried wounded to the rear. The dawn of day saw our ally retire, baffled and beaten, leaving 250 men upon the field: many men were wounded and borne to the rear, or staggered back with the retiring troops. The freshly turned up earth of the works which the French thus pertinaciously attempted to execute was literally red with the

blood of the sappers and supporting soldiery. This repulse was felt to be so important, that a grand consultation was held the next day by the generals in chief and chief officers of engineers, in the house of the clock-tower. It was resolved by two distinct attacks to accomplish the operations which were considered to be essential to the conduct of the siege. The works towards the cemetery were comprised in one, and the works in front of the T approaches were comprised in the other. General Breton was to superintend the former; General Rivet, chief of the staff of the first corps, the latter. On the night of the 12th these undertakings were attempted. Towards the cemetery the Russians occupied six different posts, all of which were to be carried. The 98th regiment of the line was expected to accomplish this task. This corps was divided into two detachments, one led by Major Grémion, and Captain Manuist led the other. Both parties adopted the plan by which the British uniformly succeeded in this description of warfare, in which our allies were so frequently unsuccessful. Without firing a shot, they rushed forward at their utmost speed, confusing the calculations of the defenders by their rapidity of movement, and before the Russians could recover their self-possession, they were put to the bayonet. Captain Manuist fell dead across the intrenchment; Captain Bouresch had scarcely leaped within the enclosure when he also was slain. The Russians took to precipitate flight; but when they reached their reserves they rallied, and their whole force opened fire upon the victorious French, who, reinforced by two companies of chasseurs, returned the Russian fire with effect.

The Russians, according to their custom with the French, filled the air with their shouts, braying of trumpets and beating of drums; but this time the workmen were not frightened, but plied the spade and the axe, erecting works, or destroying those of the enemy. In the other direction, General Rivet sent four companies of the 46th, under Major Julien, supported by a regiment of chasseurs, against the ambuscades in his direction, the defences of which, although so lately destroyed, had been reconstructed. The French were astonished at the ingenuity and activity the enemy had thus shown. At that point the French rushed forward, as at the cemetery, but not with such spirit and promptitude, and were quickly driven back upon their own trenches. Reinforced they again rushed forward, the enemy disputing the posts with heroic obstinacy; but reinforcement followed reinforcement rapidly on the side of the French, and the Russians, overwhelmed by numbers, retired, still obstinately fighting. Reinforced in turn, they charged the French: but the

Foreign Legion, and the 42nd regiment, which had so often distinguished itself in these combats, placed themselves between the tired French and their advancing foes, receiving and returning their fire. Again and again the Russians assaulted the conquered positions; but unable to make the least impression, staggered back, as if drunk with defeat, upon their own lines. The fire then directed upon the French in occupation of the captured ambuscades was incessant; and but for the shelter afforded by the works, and of which they skilfully availed themselves, it is hardly to be conceived that they could have endured such a constant and close discharge of musketry. It was, however, impossible to take aim, and our allies suffered less than could have been deemed possible under such circumstances. The ambuscade had become, as a French officer observed, *re ramparts*.

French writers represent this as a victory over greatly superior numbers; but it appears that by superior numbers only were our allies enabled to conquer works so well and so resolutely defended. The Russian dead were numerous, but the loss was still heavier on the part of the victors, who had five officers killed and twelve wounded. The official report recorded 200 men "disabled." The number slain was not reported, which, in a probability, comprised twice that number; the usual proportion of killed and wounded was in this case reversed, from the proximity of the combatants, and the obstinacy of the engagement. A great number of barrels, sandbags, and tools, were found on the spot, showing that the occupants of these posts had intended to form there a line of bastions. From the concealments the enemy had kept the French perpetually annoyed; and, although only fifty or sixty riflemen occupied them at a time they picked off great numbers of the French—as many as 100 men had fallen in a day from the fire of these rifle-pits. It did not redound to the glory of our gallant allies that this murderous fire was suffered so long. Neither skilful nor daring adequate to the necessity of the case had been shown up to the time of the conquest above recorded. When day broke on the 13th, the Russians directed an artillery fire upon the place; but the French secured themselves—the victory was complete. The French loss in engineer officers, within a few days, was very heavy. Not only Bizot, but commandants Masson, and Lieutenant Laurens, and Captain Mouhat, also fell. These losses distinguished and scientific officers gave great concern to the French army. General Canrobert penned the following bombastic and absolute eulogy upon Bizot:—"It is because Bizot was of noble character, offering to all every day a model of courage, of duty indefatigably accomplished,

of self-denial;—it is because Bizot had every virtue and every manly quality;—that God has granted him the supreme honour of dying as a soldier on the breach in face of the enemy.”

During the day of the 12th the cannonade went on along the whole line, as if the batteries were conscious of their power and eager for destruction;—volcanoes of fire and sound leaped from every embrasure, and missiles of immense force were flung against the opposing obstructions. It was obvious on the morning of the 12th that the Russians had laboured hard all the previous night to repair their broken ramparts, and replace their disabled guns. After the dawn broke, haze and rain obscured the objects of the gunners, and checked the work of destruction; but at noon the sun burst forth in the glory of an April day, and the work of havoc went forward with more certainty. Turkish, English, and French infantry officers crowded the heights, and all regarded with deep anxiety and suspense the issue of that dreadful day. Among the spectators, an English lady on horseback suddenly made her appearance, and was soon “the beheld of all beholders,” fairly competing with the battle for the attention of the spectators.

The batteries were ordered late in the afternoon to limit their firing to 120 rounds per day each gun. The British Sailors' Battery was the best worked in all the line; and those who manned it suffered severely, for the enemy made ceaseless and prodigious efforts to silence it, but in vain: it was, however, much damaged. The enemy's batteries were severely struck; the Round Tower and Mamelon were silenced. The French were as successful in their part of the common task. The town opposite their batteries was in the evening a heap of ruins. They bombarded the batteries on the north side of Sebastopol, those of the Inkerman caves, and of the Lighthouse. No. 2 of the latter they demolished. The Garden Battery and the *Batterie du Mât* again yielded to the ponderous metal of our allies. Late in the evening the battery at Careening Bay was destroyed by the British fire; and the rifle-pits and their magazine were literally swept by the continual fire from the English lines. When night rendered the aim of the gunners imperfect, shot were no longer discharged, but bombs were used with increased energy, and their fire was kept up through the night. The British loss up to this date was only 100 men, while that of our ally, since the morning of the 9th, could not have been less than 1200, and that of the Russians probably three times these amounts united.

During the night of the 12th the British, working hard, got the six 32-pounders into position in the advanced battery; but in the

morning, when great things were expected from these fine pieces, the Russians concentrated the fire of twenty cannon upon them, breaking and dismounting them, and damaging the battery itself; as an Irish artilleryman observed, “it was silenced before it opened its mouth.” The riflemen complained very much during the last few days of the construction of the Enfield rifles; the men were often unable to return the fire of the enemy from the bad construction of those weapons. During the 13th the Sailors' Battery bore, as the day before, —and, indeed, every day since the cannonade opened,—the brunt of the battle. Their losses were heavier than those of the whole of the siege-train. Two officers had been killed, two wounded, three contused, and seventy-five men put *hors de combat*. The sailors worked thirty-five heavy guns, inflicting extensive mischief upon the enemy, who directed his hottest fire against the tars. Their heavy losses were partly to be attributed to the reckless courage with which they exposed themselves. The two British 9-pounders which swept the rifle-pits, were both struck with the enemy's shot, and one severely injured.

A daring feat was performed by one of the gunners in the Round Tower. He crept through the embrasure, descended, and examined the profile of the work, clambered up again, and re-entered the embrasure: this he did slowly, and with the greatest composure. As he descended a ball struck within a yard of him, and a shell burst close to the embrasure by which he re-entered.

An officer corresponding with the *London Morning Post* under this date thus wrote:—“A convoy of at least from 1000 to 1200 horses arrived from the north, on the opposite side of the harbour. They appeared to be laden with ammunition; if so, an important arrival for the enemy at this juncture. The orders issued last night to those in command of the trenches, by General Jones, was that ‘the fire from every mortar and gun which can bear upon the Redan, Malakoff, and Mamelon Batteries, should be kept up steadily—the former *only* by night. Rapid fire not required.’ At daylight this morning commenced one of the most furious cannonades ever yet heard since we have been here. The heavy firing of the allies continued up to 10 A.M., when it slackened. Since then it has gone on moderately, but with good effect. The Crimean Army Fund gave 1000 gallons of porter and ale to the men at work in the trenches—a very handsome present indeed. I took a walk this morning to the French picket-house, on the left of our left attack, from which place I could get a general view of the siege from Inkerman to the sea on the left. It strikes me with wonder the vastness of the undertaking. Clouds

of white smoke along the line of works of the allies spoke their position. It really was a beautiful sight to witness the firing from so many deadly weapons almost as far as the eye could reach. I am thinking that it is the intention of the commanders to carry the place by storm, and that very shortly—at least to try. Sealing-ladders were taken down last night, and more go to-night into the trenches in readiness. I also am told that the general to lead the party will be Sir Richard England."

On the night of the 13th, and early morning of the 14th, a sortie was made from the Flagstaff Battery upon the left of the French. The outposts were driven in, and the French advanced works actually entered; but our ally, who had his supports so placed as to be immediately available, advancing, the Russians were driven upon their works, and bayoneted in their own trenches in considerable numbers. Supported in turn, the French were driven back once more; but, reinforced, they pushed back the enemy, fighting desperately as he slowly retired upon his works. Fresh troops still arriving from the French, the Russian works were again entered, and their guns might easily have been spiked had the French, in anticipation of their success, been provided with the means of doing so. They attempted to hold possession of their conquest; but the Russians directed upon them so furious a fire of grape and canister, that they had to retire. The whole of the Russian lines opposed to the French then blazed with fire, which was responded to with even superior energy, the French firing "bouquets" from their mortars—a name given to discharges of four or five shells at a time from the same mortar. The French loss was very heavy—six officers killed, nine wounded, and 300 men killed or disabled. This report was probably beneath the reality. The Russian loss was considerably more.

The *Invalide Russe*, reporting telegraphic despatches up to the 15th, thus describes the course of events:—"From the 30th of March (11th of April) to the 3rd (15th) of April, a report from Aide-de-camp General Prince Gortschakoff of this latter date announces that the enemy continue to cannonade the fortress with the greatest energy during the day, and to bombard it during the night. Notwithstanding the rapid firing and the concentration of the fire of their batteries, which mount 350 guns, of which eighty are mortars, the loss of our garrison cannot comparatively be considered very great. We have not had many guns dismantled, owing to our fortifications having a sufficient number of traverses, and to our batteries being sheltered by blindages. During the day the fire of our artillery is also incessant;

thanks to the coolness and skill with which it is served, many of the enemy's guns have been dismantled, and the embrasures of some of the batteries knocked in. All our damage is actively repaired during the night. The dismantled guns are replaced by new ones, and the loss of the garrison made good by reinforcements which arrive; so that on the 3rd (15th) of April Sebastopol was as strong as before the bombardment."

The fleet rendered good service during the dark nights. The bearings of the entrance of the harbour being well known, ships got under steam, ran in, poured broadsides into the southern portion of the place, and got out again before much mischief could be received. The *Valorous* went in too close, and received a shot through her paddle-boxes; she had some difficulty in hauling off.

On the 14th Lord Raglan wrote home to Lord Panmure; but his despatch throws no additional light on any of these transactions.

On the 15th our allies had planned the explosion of sixteen chambers in their mines containing 25,000 kilogrammes (50,000 lbs.) of gunpowder, and nightfall was appointed for this important event. At eight o'clock the train was exploded; the report was not heard but the effect was that of an earthquake which was felt by the troops at a great distance. The earth was torn above the place of the concussion, displaying deep fissures, and pieces of rock were hurled high into the air. As seen from the British lines, vast columns of fire shot up into the air, as if a volcano had suddenly burst forth. One of the mines was too near a Russian mine for the explosion of it with safety to the French sappers. Only a portion, therefore, of the contemplated work was accomplished. The Flagstaff Battery was rent and shattered, and the French promptly made a lodgment among the outer ruins. Two picked companies of the 39th regiment, attended by engineers, sappers, miners, and a large body of men bearing military tools of every construction, occupied the most formidable positions which they could secure. The Russians were of course taken by surprise; all southern Sebastopol felt the shock, and the whole garrison simultaneously flew to arms. A tremendous cannonade roared along the whole line of the defence, such as had not been heard during any previous artillery-combat around the place. The ground along the attack and defence was cut by the bounding ball and bursting shell. The appearance was described by a French officer, spectator, as that of a great city in conflagration. The French gunners having previously retired for a time, escaped this tremendous hurricane of artillery; but at the proper moment returning to their own guns, the terrible can-

ade of the enemy was answered as terribly. While this general fire raged around the town, the Russians directed an especial attack on what the French called the *entonnoirs*—the rows formed by the miners. But the troops were bravely maintained themselves, and worked indefatigably while death rained upon them. Many fell; but those who remained fought on until they formed two ditches, one to five yards in depth, and of length proportionate for military purposes. They then asked to unite the ditches nearest to the third parallel with that parallel. While this herculean labour was proceeding, the day appeared on the horizon, and the unfinished works had to be abandoned, for, being only twenty yards from the Russian batteries, their position was untenable in the imperfect condition of their labour upon which the day depended. One company did not, from some error, receive the order to retire, and was obliged to remain in the shelter of one of the mines which had fortunately been completed. To relieve them during daylight was impossible; and meantime a terrible fire of cannon shot the precincts of their shelter. When it returned the work was resumed; and from night to night, this war of work and combat went on until the parallel and the mines were connected, and our ally succeeded in pushing forward his approach. In the journal of the French siege-corps there is a record of the proceedings in connection with the prosecution of this particular enterprise from the 15th to the 22nd, of which the following is an extract:—

*April 15th to the 16th.*—At eight o'clock in the evening they blow up the chambers of the mines prepared before the Flagstaff Battery, about seventy yards from the third parallel. Some of those mines have not taken effect. Others have opened, by the union of the *entonnoirs*, two ditches, from four to five yards in depth, of which one is on the left and the other on the right separated by a distance of from thirty to forty metres. Not being able to finish the tunnels of communication between the third parallel and the *entonnoirs*, on account of the difficulties of the ground, nor having been able, on the other hand, to connect the *entonnoirs* with one another, it was necessary at daybreak to leave one company in the ditch, and abandon the work of communication.

*16th to the 17th.*—The works continue. At daybreak we abandon the left and centre *entonnoirs*. The one on the right has remained in the occupation of one hundred men.

*17th to the 18th.*—During the night we

have connected the *entonnoirs* forming the two posts of the fourth parallel, by a sap of thirty-seven gabions, &c. At daybreak the communication between the third parallel and the *entonnoirs*, damaged by the enemy's artillery, has remained in very great danger; a guard has been left there.

*"18th to the 19th.*—We have endeavoured to improve the communications leading to the *entonnoirs*. The fire of the enemy's artillery was regular until two o'clock in the morning, at which hour the Russians attempted a sortie upon the two companies placed in the *entonnoirs*. The enemy, received with vigour, retired into the place, leaving some dead upon the spot. Towards three o'clock the enemy attempted a new sortie, which was repulsed with the same energy as the first.

*"20th to the 21st.*—There remains only a space of from seven to eight metres to reach the *entonnoirs*.

*"21st to the 22nd.*—We explode two mines upon the ground forming the space between the *entonnoirs*. The Flagstaff Battery and the batteries at the back have thrown quantities of grape-shot, grenades, and stones."

On the 16th the firing was diminished to eighty rounds per day. In the evening the French rocket-battery set fire to a ship, and did some damage to the Dockyard buildings; but the Russians, as usual, by vigorous hard work, averted any serious consequences. A squadron of the 10th Hussars landed, and were a welcome accession to the British cavalry. During the night the town was set on fire in several places by shells from the British steamers. On the 17th the cannonade relaxed on both sides, and the allies pushed their approaches still nearer to the enemy.

Murmurs among the soldiery began now to be painfully manifest; the army despaired of victory by the artillery, and were eager, almost clamorous, for the assault. The period became one of great suspense and anxiety to the commanders-in-chief. Conferences between the generals and admirals had been frequent, and despatches of importance were transmitted by the chiefs to their respective governments:—

*Before Sebastopol, April 17, 1855.*

MY LORD,—The fire of both the French and English armies has been continued upon Sebastopol since I addressed your lordship on the 14th inst., and though superior to that of the enemy, it has not produced that permanent effect which might have been anticipated from its constancy, power, and accuracy. The guns of the Russians have been turned upon some of our advanced works in vast numbers, and in one particular instance the injury sustained by a battery was so great, that the unremitting exertions of Captains Henry and Walcot, and the gallantry and determination of the artillerymen under their orders, alone enabled them to keep up the fire and to maintain themselves in it. In another battery yesterday a shell burst close to the magazine, which,

in consequence, exploded, killing, I am much concerned to say, one man, wounding two most severely, and seven in a less degree. Both the batteries I have mentioned have been repaired, and restored to their original condition.

I enclose the list of casualties that have arisen between the 13th and 15th instant. I have to lament the loss of two young and promising officers, who had only lately joined the army, Lieutenant Preston, of the 88th regiment, and Lieutenant Mitchell, of the artillery; and I regret to add that two others have been severely wounded, Captain Green, of the East India Company's service, who had been employed throughout the siege as an assistant engineer, with great credit to himself and every advantage to the service, and Captain Donovan, of the 33rd, who has most zealously served from the commencement of the campaign.

The French blew up several small mines in front of the Bastion du Mât after sunset on Sunday evening, with a view to establish a parallel upon the spot. This operation greatly alarmed the enemy, who at once commenced a heavy fire of cannon and musketry in every direction from that part of the town, which they kept up for a considerable time. It occasioned no harm upon our left attack, upon which a part of it was directed, and I hope did little injury to our allies.

Several hundreds of the Russian cavalry and a small body of Cossacks appeared on the low range of heights in front of Balaklava this morning, and remained about an hour, when they retired, the greater portion by the bridge of Traktar. The object of this movement was probably a reconnaissance.

I have, &c.,

*The Lord Panmure, &c.*

RAGLAN.

General Canrobert, in his despatch, thus addressed the French Minister of War:—

MONSIEUR LE MARÉCHAL,—I have the honour to render you an account of our successive operations before this place. After having maintained a fire during the day with a marked superiority over that of the enemy, we advanced our approaches during the nights between the 9th and 12th in the direction of the Flagstaff Bastion, struggling all the time with success against the posts, supported by strong reserves, which the enemy keeps in his ambulades. In the night between the 13th and 14th, General Pelissier took efficacious measures to assure to us the possession of the ground upon which the engineers were to advance towards the Central Bastion. The operation was divided into two parties—that of the right directed by General Rivet; that of the left, towards the cemetery, directed by General Breton. First of all, the enemy's ambulades were carried with great vigour by four companies of the 46th, commanded by Chef de Bataillon Julien, and a company of the 5th Chasseurs (Lieutenant Copri). The resistance of the enemy was most energetic, and the reserves made two or three vigorous attacks, but which could not overcome the resolution of our companies engaged. Supported by a detachment of the Foreign Legion (Captain Robert), two companies of the 42nd (Captain Beauregard), and a company of the 14th (Lieutenant Saure), they valiantly maintained their ground. The ambulades, notwithstanding the solidity of their construction, were razed. On the left and in the rear the work of the engineers was protected by three companies of the 26th, under the orders of Captain Michael, whose arrangements were most excellent, and who was wounded at the head of his troop. While these events were taking place, General Breton caused to be carried on the left, with the same energy and success, all the Russian ambulades of the cemetery, by six companies of the 98th, commanded by Chef de Bataillon Grémion. Those companies, reinforced during the action by two others of the 9th battalion of Chasseurs, gave proofs of the most remarkable intrepidity and solidity. The 98th (23rd *Léger*) made here a brilliant *début*. The enemy gave way after a very sharp fire, which did not cause our men to retreat even for a moment. These ambulades were occupied and destroyed like those on the right. Protected by this vigorously conducted double

operation, the engineers were enabled to complete levels, and push on their works with activity. A parallel was formed; we propose to turn it to great advantage. In this nocturnal affair, which was very bold and which does the greatest honour to our troops, we 40 men killed, of whom 4 were officers, and 117 wounded. As regards our approaches on the Flagstaff Bastion, the effects of the enemy's artillery, acting at a very distance, almost rendered them impossible, or at least they were only practicable at a considerable loss. In these circumstances we endeavoured to form a trench halfway between our third parallel and the salient of the bastion with the assistance of our mines, which had been conveniently placed for that purpose. The train was fired on the evening of the 15th. The operation was fully successful. The engineer officers and sappers immediately enabled to lodge themselves in an immovable fosse, of an average depth of four metres, the possession of which was not disputed by the enemy. Their trench lined the fortification, and kept up a sharp fire of musketry and cannon. Our mortars, on their part, sent a shower of bombs upon the thickly-massed troops; and I am informed by a non-commissioned officer who descended that the garrison there suffered considerable loss. The workmen, though in a difficult position, worked actively all the night on the disputed ground, to complete as far as possible the crowning of the shafts, and to connect a new trench with the third parallel. That night the troops continued their labour with ardour; 1000 men of the 74th now occupy this fourth parallel during the day. In the midst of these combats and labours, the troops have always conducted themselves with the greatest firmness and shown the best spirit. General Pelissier, who commands the left, is satisfied by the measure. To the right, on the side of the Malakoff Tower, the superiority of our artillery has also been maintained, but without succeeding in silencing that of the besieged, except, however, in the two works of counter-approach of Careening Battery, which have not fired a gun for the last two days. In this part of our attack, on the other, we advance slowly, perfecting our external trenches, and leaving nothing to chance. A new battery established opposite the counter-approach, called *Mamelon Vert* (Green Hill Battery), the fire of which was opened yesterday morning, has produced good effect. According to deserters, the garrison has suffered considerable losses, especially the marine artillerymen, who form the most vital link, and show the greatest moral courage. The Central and Flagstaff Batteries are seriously damaged. Their armament has been repeatedly rendered unusable; but the almost inexhaustible resources of the garrison in artillery do not yet fail them, and every night thousands of workmen repair the damage which our operations require.

Prince Gortschakoff also communicated to his government at this juncture, concerning the state of affairs from his point of view:—The 16th, 17th, and 18th, the fire of the enemy was not so sustained as on the preceding days. Our batteries have replied successfully, particularly by their cross-fire in front of the 4th position, directed against the works which the enemy is actively executing against that fortified position. The injuries caused by the day's fire are repaired during the night. In the night between the 18th and 19th, one of our battalions successfully and at a very slight loss, effected a sortie, with the object of destroying the enemy's most advanced works of approach. In general, the loss of the garrison has been much less within the last two or three days than at the commencement of the bombardment."

## CHAPTER LXXX.

BOMBARDMENT CONTINUED.—RECONNAISSANCE ON THE TCHERNAYA BY OMAR PASHA AND THE TURKISH ARMY.—CONQUEST OF RUSSIAN RIFLE-PITS BY THE BRITISH.—FAILURE OF THE BOMBARDMENT.—GENERAL OPERATIONS BEFORE SEBASTOPOL TO THE END OF APRIL.—DIFFERENCES BETWEEN THE FRENCH AND ENGLISH GENERALS.

"We talk, and do nothing; 'tis shame for us all:  
so God sa' me, it is shame to stand still; it is shame,  
by my hand: and there is throats to be cut, and works  
to be done; and there is nothing done!"

SHAKSPERE. *Henry V.*

DURING the night of the 17th, and the early morning of the 18th, the bombardment was very heavy, but the cannonade was not renewed on the 18th with the energy of previous days. The French opened a warm cannonade, which they gradually slackened; the English relaxed theirs still more. The Russians seemed to regulate the strength of their fire by that of their opponents, and during the latter portion of the day they molested the English very little, who principally occupied themselves repairing works and guns. Our artillerymen were quite worn out; and it was evident that without reinforcements to that arm of the service, the energy of the bombardment the English lines could not be maintained. The great wants of our army were proper chiefs of men, well-constructed weapons, and good tools to work with. A nation that is disposed on principle to a standing army, may easily and honourably account for its inability to meet the demand for men on the breaking out of a great war; but the arms and implements with which its troops are furnished ought to be honestly manufactured; and there should be at least intelligence enough in the civil and military departments at home to examine carefully all arms and tools sent out to the army in the field. In this particular, perhaps, no nation was ever so disgraced as ours was during the years 1854-5. Neither the army nor navy was equipped as both should have been; and the neglect and incompetence were a curse to the country, and murder to the people by whom that country was so nobly defended. During the remaining period of the bombardment the British were put to great disadvantage by the bursting of shells before they reached their destination, and from a cause which in a lesser degree impeded success in the previous days of the bombardment, namely the imperfection of the fusees; but many of the shells were found to have *no fusees*. In wet weather the Enfield rifles became altogether useless, and the tools of the sappers often broke after a few hours' use. On the 19th the allies determined upon a reconnaissance of the Russian army in the field, and the duty was assigned to Omar Pasha and a large force of Turks, supported by French

and English detachments. The enemy had been seen in considerable numbers around Tchorgoum, and it was deemed desirable to discover his object. Twelve battalions of Turkish infantry, four squadrons of cavalry, and about thirty guns, constituted the force led forth by Omar Pasha, to which the French added a few squadrons of horse, and a battery of horse artillery; and the English sent two squadrons of heavy cavalry, two squadrons of the 10th Hussars, lately landed, and a half troop of horse artillery. General Forey, of the French service, and Colonel Pariby, of the British, were attached to this force, which was under the sole authority of the Turkish general. He was, however, accompanied by General Canrobert and Lord Raglan, and by other officers of eminence. Omar and his troops left the right of the allied positions early in the morning in the direction of Kamara. The Cossack pickets fled in disorder. Everything in the village, except the church, was destroyed by Omar Pasha's advanced guard. From Kamara he proceeded in the direction of the hills by the Woronzoff Road, so as to command a view of the whole valley of the Tchernaya. A few sotnias of Cossacks were dispersed on the hills; their videttes kept a sharp look out, and the whole fell back without coming in range of the English horse artillery, which displayed a laudable disposition to scatter a few shots among them. As the Turkish advance-guard ascended the hills, they found huts in which the Cossacks had taken shelter, and considerable quantities of good forage for their horses: huts and forage were immediately destroyed. Omar Pasha placed six battalions of infantry and the field-batteries on these hills, and descended down the road to Tchorgoum with the cavalry, horse artillery, and a British rocket-battery which had joined him, the remainder of the infantry closely following. Not an inhabitant was to be seen; but a corps of Cossacks dodged the force, always keeping out of gun-range. The rocket brigade, however, contrived to outwit them, and sent a shower of rockets among them, which sent them precipitately in every direction but that of the brigade. The object of the reconnaissance having been accomplished, Omar

Pasha fell back slowly. The movements of the Turkish army, and their warlike appearance attracted the admiration of Lord Raglan, General Canrobert, and the other notables of the French and British who accompanied the advance. No one would suppose, from the appearance of Omar's troops, that the exchequer at Constantinople ever incurred depletion: the men were well clothed and well accoutred; their artillery was excellent, both as to men and material; discipline reigned mildly but firmly throughout the host. The gay uniforms looked well in the searching spring light; the sheen of the lances, bayonets, and musket-barrels could be seen far off from the allied lines; their banners were like cloth of gold, and the star and the crescent brilliantly decorated the standards. Their movements were martial and regular, and no body of men in motion could appear more soldierly. The Turkish slipper, was a very great impediment, which, although it gave lightness to their movements while passing over the Tchernaya valley—then richly clad with wild-flowers, and fragrant with thyme and other sweet odours—yet exposed them to suffering when they ascended the rocky hills, where loose fragments of sharp stones abounded everywhere. Great numbers of the infantry marched back with bleeding feet, and many sustained severe lacerations. As they marched over the old ground contested at the battle of Balaklava, the soldiery displayed more curiosity than is usual with Turks. They saw the body of a Tunisian lying across one of the redoubts, where he was killed in his efforts to escape at the fatal moment of the attack there. The field of battle was strewn with cavalry caps, trampled turbans, broken swords, shreds of the fez and Turkish tunic, shattered firearms, fragments of gun-carriages, and the *débris* of such material as is always strewn upon a field of battle. Many skeletons of horses remained, with the saddles of the riders or the harness of the artillery adhering to their bleached bones, the flesh having long before been devoured by dogs, foxes, and vultures. The bones of the fallen brave were also there: the Russians inhumanly neglected their burial. Alas! little did many a widowed and orphan heart in England think that the carrion bird, and the wild-dog of the Crimea, would feast upon the kind form which had been so often clasped close to them in the tenderest embrace. The conduct of the Russians in this war has won for them no praise on the ground of humanity; they were only humane when it was politic to be so, when the opinion of Europe constrained.

An incident occurred as Omar's rear-guard retired, which illustrated Russian blood-thirstiness. A poor Tartar wandered out with the

Turkish troops; he was unarmed, and had not committed an aggression upon the Russians. The Cossacks caught him as he lingered upon the field: six of them dismounted, tied his hands and shot him as a criminal. This vindictive and bloody atrocity occurred within view of the rear-guard. Several British officers selected a few men, and were about to make dash for his rescue, but their own force rapidly retiring, and their orders to do the same had been peremptory. There was little time to debate the matter; the Cossack officers settled the question of his fate before anything could be done for his deliverance. The Cossacks ventured upon a few long shots when it was quite plain that there was danger of a chase to be apprehended.

The Turks captured a man armed with bow and arrows! who called himself a Tchege. He had, however, an old pistol, and his coat was literally padded with cartridges. The alarm when caught was ludicrous.

The whole army was cheered by this reconnaissance, for it was generally supposed that it would lead to operations in the field—the troops having lost all confidence in the practicability of subduing the earthworks of the enemy by any power of artillery.

On the night following, a gallant exploit was performed by the British against certain redoubts, from which the Russians annoyed the front. The enemy did not make this mode of obstruction so effective against the English as against the French. Our riflemen contrived to find shelter and pick off the enemy in their ambuscades the moment they lifted their heads, and, when necessary, the English dashed into the ambuscades, driving out the bayoneting their occupants. The British gunners had for several days suffered from some well-established pits, within between six and seven hundred yards of their batteries. Rifle-balls constantly entered the embrasures, and too often effected some mischief. The British 9-pounder fieldpieces were well worked and caused considerable loss of life to the men occupying these concealments, but they gradually increased their protection, and the ground favoured them in so doing. An advanced battery was about to be opened which would necessarily be exposed to the fire of the sharpshooters in the pits, and it was solved to dislodge them, and, perhaps, occupy a portion of the ambuscades. The accomplishment of this stern task (as our allies had often found similar undertakings to be) was committed to one of the finest officers in the English army—Lieutenant-colonel Egerton of the 77th regiment. Soon after dark he led a party of his own regiment, supported by a wing of the 33rd (or Duke of Wellington's own), under Lieutenant-colonel Mundy.

ness of the night favoured the assailants; gusts of wind also gave hope that they noiselessly approach the pits and fall on the enemy. The Russians were never surprised; no troops could be more silent. Their sentries heard the foot-sound of the English as they passed along the trenches; the Russian sentries, upon the slightest suspicion, were accustomed to cast themselves on the ground and listen, with the instinct of dogs, for every sound. Scarcely had Colonel Egerton deployed his men when a fire of rifles was directed upon them, which was most galling; the 77th fired one volley, and dashed on with bound upon the pits, where they were repulsed by the bayonets of the garrison with violence; but the impetuous rush of the 77th over all opposition: it was as a flood-gate, overflowing, penetrating everywhere, sweeping all resistance away. The Russians were borne down or fled, and the 77th cleared the two formidable pits from which so much approaching damage to our new battery apprehended. The British engineers and sappers were in an instant at work, demolishing, creating, altering, adjusting, in every way which the pits could be turned to the account of the captors. A gabionade was run up with amazing celerity, such as even the Russians could not equal; the bags and baskets were faced towards the enemy, so as to make the pits defensible against them by their own sapper labours. The trench of the nearest rifle-pits was sufficiently near to the advanced sap of the British to inspire the hope that our sappers, by hard work, could connect them before morning. The Russians determined that the conquest achieved should not be followed with impunity, and accordingly a terrible fire of shot and shell, grape and canister, was showered upon the pits. The English still looked on, sheltering themselves as best they could under so determined an attack of artillery: no peril, however, deterred the brave sappers from exposing themselves wherever the execution of the work required. The British, perceiving that the stroke of the English went on despite their cannon, crowded their parapets with musketeers, while their sharpshooters filled the broken ground behind with abattis; but the night was too dark to aim, and the bullets generally flew over-head, or were flattened against the rocks. The Russian officers urged their soldiery forward, never since the battle of Inkerman could Russian soldiers be induced to advance with the bayonet against the English, with zeal or courage. They would not charge the pits, nor make any hand-to-hand attempt to reduce them, however great the numbers which the officers were willing to launch against the intrepid little band. The officers

advanced again and again, waving their swords, but there were none disposed to follow. The dashing manner in which the pits were carried seemed to damp the courage and hope of the enemy in any attempt at recapture by close combat. The conquerors neglected the lesser pit, and mustered their strength in the larger. It was telegraphed to head-quarters that the fire of artillery under which the men worked was tremendous; the reply of General Jones was—"Keep the pit at all hazards." They did keep it, and worked on with prodigious strength and rapidity, as if every man dug and worked for his life, and that the successful issue of the siege depended upon his pick or mattock. At last it became obvious to the Russian general of the night that he too must do something "at all hazards." A strong column of men were gathered together and harangued upon the glory of "dying like martyrs for their holy religion," and they were led against the pits, encouraged in every way by the noble and dauntless bearing of their officers. The English received them, using all the advantages conferred by the labours they had bestowed upon the position; a close and deadly fire was directed into the mass of approaching men, every shot of which seemed to tell as if fired into a woolpack. The Russians hesitated, but were pressed on by fresh troops behind, to storm the pits; they were received by the bayonets of the 77th, and all that attempted to enter the ambuscade were pierced by these formidable weapons. Still numbers came thickly on; but the engineers and sappers seizing muskets and bayonets, instead of their own implements, charged the assailing enemy with desperate determination. The fight was fierce, and the cries of the Russians, as they received their death thrusts, rose wildly through the blustering night. Beaten back from the pits, they were thrown into confusion in the darkness; and while yet their officers, with laudable zeal, sought to reorganise and rally them, the 77th leaped out from their ambuscades, poured a sure volley into the undecided mass, charged them with the bayonet, and drove them in full flight up to their very batteries. A chance shot struck a very young officer, Mr. Audley Lempière, entering his lungs. This youth was a favourite in the regiment. He called to Colonel Egerton as he fell, who took him up and tenderly carried him to the trench, where he died in his arms. This done, Colonel Egerton, turning to his men, began to speak to them with words of encouragement, when a rifle-ball struck him upon the upper lip, passed through the neck, dividing the vertebrae, and he fell dead. He was a magnificent officer. Mr. Woods tastefully and philosophically wrote of him:—"The death of Colonel Egerton was most

deeply and sincerely lamented, not alone by the light division, but by all who had either the honour of his acquaintance, or who knew the high and well-deserved reputation which he enjoyed in the service. He was a skilful soldier, an accomplished scholar, and with the bravery of an English officer united those warm and gentle feelings which, *except in the highest natures, so rarely survive long practical acquaintance with the world.*" This encomium is true; he was a patriot, a hero, and a gentle, loving man. The words of Burns might be justly applied to him:—

"My patriot falls; but shall he be unsung,  
While empty greatness saves a worthless name?  
No; ev'ry muse shall join her tuneful tongue,  
And future ages hear his growing fame."

Colonel Egerton and Mr. Lemprière were not the only sacrifices to the duty of that night among deserving officers, Lieutenant Baynes, of the engineers, was also mortally wounded.

The pits were bravely held, and the British not only made good their conquest, but succeeded in connecting the trench with the advanced sap, and poured a biting fire of musketry and rifles into the flank of the nearest rifle-pits, which lay beyond the circuit of their works.

The sailors' brigade still suffered; 135 men were killed and wounded from the 9th to the 20th. Up to this date the English artillery had only five men killed, and thrice the number seriously wounded; but many were hit who made no complaint, and almost all suffered from contusions and fatigue. The engineers and sappers and miners lost very few; but, like the artillery, contusions, which were not complained of, almost disabled many, and all were borne down by relentless labour—one man doing the work which properly belonged to three.

The French still pushed on their works, and their loss was severe; every night 100 men were put *hors de combat*. The French engineers openly expressed their anxiety concerning this terrible drain upon the French army. Reports were spread in the French lines of various kinds, some encouraging and others the reverse, which kept the minds of the French troops in agitation. It was generally believed that the Russians were suffering so much from the French artillery, that they were determined upon a grand sortie, which would decide the siege one way or the other. The Baron Bazancourt describes the perturbed feeling of the French army thus—"If among certain parties impatience was great, apprehensions were not less so." The feelings of the commanders-in-chief can hardly be gathered from their despatches. Lord Raglan, writing home on the 21st, referred to the reconnaissance of Omar Pasha and the battle for the rifle-pits, but was silent as to general affairs, and the impatience and dissatisfaction which prevailed among the soldiery:—

*Before Sebastopol, April 21, 1855.*

MY LORD,—Omar Pasha having considered it expedient to make a reconnaissance in front of Balaklava with the view to ascertain what force the enemy had at the Tchernaya, he proceeded at daylight on the instant, by the extreme right of Sir Colin Campbell's position, towards Kamara, with about twelve battalions of Turkish infantry, having in the plain on its left a body of French cavalry and a battery of horse artillery under General Forey, and two squadrons of heavy cavalry and two squadrons of the 10th Hussars, the whole of which regiment have, I am happy to say, arrived, half a troop of horse artillery, under Colonel Parib, and detachments of French and English troops having been placed at his highness's disposal by General Canrobert and myself. The enemy showed only a few Cossacks on this side of the river, who remained on a height overlooking Chagouria till driven from it by a few discharges of rockets by the French artillery, and on the other behind the village, a small force with four guns only visible. Omar Pasha did not think it desirable to cross the river, but withdrew, after he had satisfied himself that the enemy was not in strength, and the troops returned to their camps, the infantry covered by cavalry and artillery. The appearance of the Turkish army was very satisfactory.

The rifle-pits, in front of the approach from the advance of our trenches on the extreme right, were attacked and carried by assault the night before last in the most gallant manner, by a detachment of the 77th regiment, under Colonel Egerton, forming part of the additional force sent to reinforce the guard of the trenches in the evening. The resistance of the enemy, although obstinate, was speedily overcome by the impetuosity of our troops, the pit, which it was desirable to retain, was, with the loss of a moment, connected with our approach, thereby furnished protection to the working party to pursue its labours without interruption for a considerable time. At the interval, however, of about three hours, the enemy brought a heavy fire of artillery and musketry upon the party in advance of the pit, into which they retired, and which they effectually defended and maintained; but this brilliant achievement was not accomplished without considerable sacrifice of life, and it is painful to me to have to announce to your lordship the death of Colonel Egerton, of the 77th, who was unfortunately killed when forming troops for the support of the trenches on the extreme advance, and of that of Captain Lemprière, of the same regiment, who fell in the first attack in which also Colonel Egerton received a contusion which only incapacitated him for duty for a few minutes; five officers were wounded, three of them dangerously so. Colonel Egerton was an officer of superior merit, conducted all his duties, whether in the camp or in the field, in a manner highly to his own honour, and greatly to the advantage of the public; and her majesty's service could not have sustained a more severe loss, and it is felt in this army and in the 77th where he was so beloved, and is deeply lamented. Captain Lemprière was a very young and most promising officer. Captain Osburn, whose leg has since been amputated, and Lieutenant Baynes, are both most valuable officers of engineers, and Captain King, of the same corps, who was wounded the night before. Brigadier-general Lockyer, who was general officer of the trenches in the right attack, Lieutenant-colonel Mundy, of the 33rd (who succeeded to the command of the troops engaged in the operation on the death of Colonel Egerton), and Captain Gwilt, of the 34th, deserve to be most favourably mentioned, and Lieutenant-colonel Tylden, the officer of engineers in command of the right attack, distinguished himself, as he has on many previous occasions, in a remarkable manner. The conduct of the troops was admirable.

In my despatch of the 17th I informed your lordship that a magazine had exploded in one of our batteries, but I omitted to state that Captain Dixon, of the Artillery, availed himself of that opportunity to evince the noble judgment and most determined gallantry, by instantly opening a gun upon the enemy, notwithstanding the confusion which the bursting of the shell had occasioned. The number of men who had suffered from it, and the great damage the battery had sustained.

I have the satisfaction to report to your lordship

of the 48th and Royal Regiments from Corfu, in S. *Leopard and Sidon*.

I have omitted to mention in the body of this letter, two squadrons of Turkish cavalry were also in the

I have, &c.,

Lord Panmure, &c.

RAGLAN.

In the early morning of the 21st, the English resolved to storm a formidable rifle-pit, and to make their right attack. The troops told off for this enterprise were the 41st (Welsh) Regiment, and a strong party of engineers and sappers. They ran at the rifle-pits as fast as they could run, at the same time preserving order, and at once dashed into them, the Russians running away at the first touch of the bayonet. No effort was made by the fugitives to support their supports to recapture it; but the English opened such a fire at dawn upon the rifle-pit, that in a few minutes fifteen men of the 41st who held it fell under the cannonade. It was as obvious that the guns of the Redan so commanded the spot as to make the pit untenable: the men of the 41st, however, did not abandon it to the enemy, but entirely destroyed the rifle-pit, and filled it up with earth, leveling it down. This was effected so completely, and with such coolness under a heavy fire, as must have shown the foe the impossibility of again establishing himself there—it could no longer be occupied as a “concealment.” The French established themselves securely upon the flanks of the Flagstaff batteries.

These nightly combats were harassing to both armies engaged, and many a deed of valour was performed which has never been recorded, much less rewarded as it deserved. Mr. Russell says that all descriptions of such contests must be purely imaginative, as each detachment and scattered fragments of a detachment, not perceiving in the darkness how others are engaged, considers the peril as endured, and the chief feats as performed, by themselves. We cannot do the justice of this remark: the roll of the batteries around them would sufficiently attest that others also were deeply engaged, and performing their parts. Nor are these tasks perceived at random: night attacks are conducted by a few men generally, on single points, or on points connected upon ground pretty well known at least in its general character; and never difficult during the progress of the war, it may be for any one to estimate what can be accomplished out of his own section of operations, the historian who compares the present reports may often, without much fault, obtain a connected view of the whole. The imagination is as likely to exaggerate the difficulties, and underrate what is performed at every spot, and the value of its relation to general operations, as it is to claim any special glory for what is accomplished there.

Frequently great services have been rendered by even intelligent officers in night combats, who were astonished afterwards to find that they had been engaged in anything of such serious importance.

On the morning of the 21st the Cossacks and the Turkish outposts skirmished in the plain of the Tchernaya, but the Cossacks were much inferior in spirit to the irregular cavalry of our ally.

By the 25th the bombardment was nearly suspended, and the despondency and disappointment of the English artillerymen were extreme, while our infantry openly expressed their impatience, and desired to be led against the intrenchments of the foe. On the 24th, another reconnaissance was made by the Turkish infantry and the English cavalry and horse artillery, a brigade from Bosquet's corps being held in support. Both French and English extended their saps. The English guns, although only firing thirty rounds per day, still did considerable execution. The French cannonade was conducted with more energy, as our ally had plenty of men to relieve the gunners. The Russian army in the field was proved by the reconnaissances to be very small. Our enemy always keeping in view the importance of frequent relief to the gunners and workmen, preserved a sufficient garrison; the sharpshooters in the ambuscades were the hardest worked, and most useful portion of the Russian army. This force grew up, like the earthworks, in the presence of the besiegers; the Muscovite riflemen at the beginning of the siege were far inferior to the French, and still more so in comparison with the English, but by the date of which we write they were in every respect equal to either, except in courage. On the 24th, Lord Raglan sent home a despatch, in which, after naming the men who captured and destroyed the rifle-pit, on the evening of the 21st, he expressed his apprehension of greater loss of life in the future conduct of the siege.

*Before Sebastopol, April 24.*

MY LORD,—Nothing material has occurred since I made my report to your lordship on the 21st inst. The Russian rifle-pit, immediately in front of that which was taken on the night of the 19th, was destroyed by a party of volunteers on the morning of the 21st inst. These were headed by Lieut. and Adjutant Walker, of the 30th regiment, who is stated to be an excellent officer, and to have conducted himself on the occasion in the most spirited manner. The pit was found to be empty, and being useless was immediately levelled and filled in. The enemy did not interrupt the work.

I enclose the list of casualties, which, I regret to say, is heavy. The nearer we approach the place the more loss is to be apprehended. Hitherto it has been less than might have been expected.

I have, &c.,

The Lord Panmure, &c.

RAGLAN.

The correspondent of the *Smyrna Impartial*, already quoted, furnished the most correct summary of the intervening events given to the public:—

*Before Sebastopol, April 21 to 24.*

"At the centre and the left the fire of the allies has considerably slackened, as it is not judged desirable to exhaust too quickly the store of ammunition, which so many months were required to accumulate. But the question is, whether the enemy will not take advantage of this nearly total suspension of our fire to repair the ravages made in his fortifications and to remount his batteries?"

"*Sunday, April 22.*—The fire of musketry was very warm on the left attack the whole of last night, and cannon-shots boomed in quick succession. We have sprung several mines in the cemetery, between the Central Bastion and that of the Quarantine, in order to bring our new works nearer the crenellated wall. Unfortunately these mines did not produce their effect on the side intended; the explosion was rather towards us than towards the enemy, and the fragments which were set flying killed and wounded several of our own men. We set to work immediately in the craters, notwithstanding the fire of rifles and grape. The works made good progress last night. We shall soon have there, too, a fourth complete parallel at less than 150 metres from the crenellated wall. In the angle of that wall and the left flank of the Central Bastion there is at present an open breach, that is computed to be about 150 metres broad. All the adjoining houses are dismantled and riddled by our shot.

"*Monday, April 23.*—The night has passed at the trenches with the greatest calm. Guns have been fired at rare and distant intervals. All is equally quiet this morning. The enemy does not appear to be more desirous than ourselves of continuing the fire. A spectator might say that both sides were in an attitude of expectation. And yet no one here thinks peace at all likely. But if the Russians do not fire a great deal, they work very hard. I have just paid a flying visit to the left attack, and seen nearly the whole of the English one; I was amazed at the rapidity with which the enemy has repaired the injuries sustained by his defensive works. The huge breach, for instance, that I had seen with my own eyes in the angle of the crenellated wall near the Central Bastion, hardly exists any longer; sacks filled with earth and piled on each other rise like buttresses to within a third of the regular wall in height, and thus stop the gap.

"The land fortifications which terminate the defences of the place on the Quarantine side, the Quarantine Bastion itself, the Central and Flagstaff Bastions, the faces of which, together with the parapets and embrasures, seemed one mass of ruins, and the batteries of which were silenced, are now in a state for re-opening their fire. At first sight, their outside appearance is much the same as it has been for some days

past, but when we examine them with the we discover that, amid the dismantled or terred terraces, the enemy has made openings for embrasures. It is just the same the batteries of the barracks and the arsenal front of the English attack.

"Fresh reinforcements reach the Russian every day. We see from the heights north of the town their tents, which are pitched in vast squares. In the Inkerman Wood at the mouth of the gorge in the mountain of Vofouska, near Balaklava, we can see the glass, large encampments which were there a fortnight ago. The enemy is evidently collecting his forces, and means to try if he cannot keep the allies shut up in the triangle of seven or eight square leagues we occupy in the Crimea. Perhaps it is with the object of compelling him to draw off some of his forces from our rear, that Omar Pasha has just taken his forces to Eupatoria. That appears to be more probable than the necessity of so long a return for the defence of that small place still held by nearly 25,000 men, and sufficiently fortified now to be secure against any sudden assault whatever.

"This afternoon, between three and four o'clock, the enemy hoisted a white flag on the Constantinian, at the mouth of the harbour. The flag remained there nearly twenty-five minutes. During this time the batteries of the place did not suspend their fire, and, of course, the enemy answered it. I don't know what is meant by this, could not even guess, for no flag was flying from the staff a little to the left of the Quarantine Bastion, where the flag of truce is generally run up.

"*Tuesday, April 24.*—All night long there has been a very hot fire of musketry, and a heavy cannonade going on, chiefly on the left attack. There has probably been some engagement between our troops and those of the enemy, either for dislodging the ambuscade for defending the workmen attacked by the Russians in their works, which are rapidly approaching completion, especially those facing the salient of the Flagstaff Bastion. In the evening, *standi* gained a week ago, we are actually constructing a formidable breaching battery, at a distance of only sixty metres from the bastion. The fortifications were of masonry, the result of such a distance would be infallible, but it will be the effect of breaching earthen terraces.

"P.S.—I have this instant received private information of what occurred last night in the Flagstaff Bastion. The Russians sprung a mine at 11 p.m., for the purpose of getting into the craters of the ground, where I told you we are constructing a breaching battery. The mine produced no effect. A second one, which exploded at midnight, was slightly more successful, but without killing many of our

t a third mine, fired at three o'clock this morning, did us a great deal of harm. Still the enemy was not able to penetrate our works, owing to the bayonets of our intrepid soldiers impenetrable rampart."

In consequence of the mining success recorded in the quotation from the correspondent of the Smyrna Journal, the Russians were enabled to dig rifle-pits close to the new French works, and to offer from them formidable obstructions to further progress. The French had 10 men killed and wounded in their efforts to take these pits, of which the Russians continued to hold possession; our allies being less fortunate in this description of combat with the enemy than in any other, whereas the British seemed to have a peculiar faculty for turning the Russians out of their ambuscades with little loss. On the 25th, the second battalion of the 1st Royal Scots joined the second division, which were reviewed by General Pennefather, and presented an appearance of which any general might be proud. Their discipline was perfect, and the air of hardihood, and the soldierly bearing by which they were characterised, gave satisfaction to all who took part in the inspection. The French commander-in-chief held 10 inspections on a large scale; one, of the corps commanded by Bosquet, the other, of that commanded by Pelissier. The whole of each corps d'armée, except the men required in the batteries and on trench-guard, turned out and marched past the general. The review of Bosquet's corps took place on the ridge of the plateau overlooking the valley of Inkerman. The Russians crowded the Inkerman heights, from which they could see the flashing bayonets, the glittering eagles, and the ponderous artillery pass along in grand and martial procession. The next day the other corps was reviewed, and similar ceremonies were gone through. The general was received in silence, the colonels raised a cheer of "*Vive l'empereur!*" as each battalion passed, which was caught up by the men; but it was quite evident that General Roberts had lost the confidence of the army, on his inability to deal with the grave circumstances in which the failure of the bombardment, now apparent to all, had placed the corps: even the officers, whom he called in groups from several battalions and addressed, listened in silence to his words. The difficulty of the situation was greatly increased by the total inability of the English to maintain the cannonade, their artillerymen not being a third the number sufficient for the undertaking, and their supplies of ammunition being scanty and uncertain.

The home management told fearfully upon the second bombardment at its close, as it did on its progress. Lest our readers should

suppose that we dwell on this theme beyond its importance, we shall authenticate our remarks by a quotation from one whose truthfulness, patriotism, and ability none question. Mr. Russell, under date of the last day of April, thus writes in his journal:—"Meantime the siege ought to be going on, and as far as our cannon and mortars are concerned, it is suspended. What is the principal reason? Simply because Woolwich is not next door to us, and shells and fuses are not forthcoming. Why some attempt has not been made to bridge over the seas between us and our arsenals, is not for me to say. The fact is, however, plain. There are no fuses for such shells as we have, and we have plenty of fuses for shells which we have not. There are lots of 13-inch shells and no fuses for them, and there are lots of 10-inch fuses and no shells for them. Where are the shells that belonged to the fuses, and where are the fuses that belonged to the shells. Has the Purveyor got hold of them, or the Auditor-general, or the Chairman of the Bank of England? Who sent them out, or who kept them back? Who are the traitors, or the knaves, or the fools? And if they are all wise men who manage these things, how is it that we undertake to reduce, by means of a bombardment, the strongest place that was ever attacked, and have no means of carrying on that bombardment after a few days' firing? Perhaps it is quite right that this should be the case, but neither artillerymen, engineers, nor soldiers think so out here. It may be only just to remark, that it is only in shells of a particular kind, and in fuses of a certain description, that we are short, but that very kind of shell, and that very sort of fusee, are both most useful in the siege. We have railways and steamers, a secure haven, a transport corps, admirable carts, horses, mules, ponies, buffaloes, camels, oxen, drivers of all kinds of beasts of burden, collected from all parts of the habitable globe within three thousand miles of us, and yet the supply of *matériel* has run out, and our military Oliver Twists are asking for more, to the great astonishment, no doubt, of our overseers at home. The supply of ammunition which our authorities relied upon from the railway has been far exceeded, and it has not only carried up more than the estimated quantity of shot and shell, &c., but a very great amount of stores and cargo of all kind, in addition, moreover, to throwing obligations broadcast all over the army, from the generosity, kindness, and zeal of Mr. Beatty, to promote the comfort of every officer who had any little impediments to be sent to the front. Up to the week ending the 28th of April, the average amount of tonnage sent up from Balaklava to the terminus was 240 tons per diem; and on that day 180 tons of ammunition alone were forwarded by rail towards the batteries, and

deposited at the terminus. The warm clothing (furs, &c.) is being collected and packed up, to be sent to Constantinople to be cleaned, &c., and made fit for re-issue. A large number of sheepskin coats have been destroyed, which, it is believed, had competent persons been consulted, might have been saved."

Such was the position of the besiegers: the bombardment a failure, the armies discontented, and, unfortunately—worse than all, if possible, although not then known in Europe—the two chiefs at variance. Of the two, Lord Raglan was the more competent to direct any great enterprise. Canrobert was capable of commanding either a small or large body of men in action better than the English chief, having had much experience in handling large bodies of men; the English general had no experience in the command of any bodies of men great or small, except what he had gathered after the landing at Gallipoli. But Lord Raglan was a man of superior mind and education, and much better fitted, if in health, and old age had not deadened his energies, for the transaction of a large amount of public business. Canrobert could execute better than Lord Raglan—the latter could take a far more comprehensive view than the former; Canrobert had more of what the English call "pluck" in actual battle—Lord Raglan's courage was calm, passive, and negligent of peril. As Sir Walter Scott said of Louis the XI. of France—"he neither sought danger nor shunned it." Lord Raglan would not move from his proper post, although a battery was especially directing its fire upon it—Canrobert galloped forward to the place where his troops seemed most exposed, and by his presence inspired enthusiasm. The two generals were differently constituted, were mutually courteous, but never really agreed. Canrobert was also hampered by communications from Marshal Vaillant, while Lord Raglan was left to his own judgment and responsibility, where the *politics* of the campaign did not require instructions from his government. At the end of April their differences of opinion became more active. Lord Raglan pressed upon Canrobert the expediency of an assault before the enemy could recover from the exhaustion and dilapidation experienced in the cannonade, and before reinforcements arrived to him. Certainly the Russian army in the field was then smaller than it had previously been, or was permitted during the war to become; nor was the garrison so strong as to render an assault from such numerous forces hopeless. So Lord Raglan thought, and urged the assault; various positions bearing upon the ultimate conquest might in the English general's opinion be carried, even if the body of the place could not be immediately stormed. The British chief seemed to have adopted at last the views previously pressed upon

his attention by Lieutenant-general Burgoyne. Canrobert opposed all idea of an assault, wished to detach a force to act in the field; Lord Raglan was unwilling to withdraw from before Sebastopol a large body of men, but urged Canrobert to unite with him in detaching a sea a moderate, but efficient force, with fleets to Kertch and Yenikale, so as to cut the Russian communications between Asia and the Crimea. His lordship had information that the Russians were about to sink ships across the straits of Kertch, which he deemed possible, although the straits were watched by a small British force. To these most reasonable and expedient demands Canrobert offered confused, puzzled, and murmuring resistance; the real reasons with him were, that he received despatches from Paris, announcing the emperor's intention to take the reserves at Marask, Turkey, and the Imperial Guard, with other troops then under General Canrobert's orders, such regiments as he might bring from France, and placing himself at their head, act in the field, whether in the Crimea, or from the Danube, or where else, was not then determined in imperial councils. These instructions fettered Canrobert's hands, and swayed his judgment. Bazancourt awkwardly endeavoured to apologise for these absurd orders from home, and the consequent indecision of the French chief in the following manner:—"Certainly there is room for great varieties of plan. The storming of Sebastopol would be terrible, and might occasion enormous loss, without any substantial result. The sanguinary struggles produced little impression in Russia,—but it was otherwise in France and England. The compulsory indecision of the generals-in-chief attributable to the singular circumstances in which they were placed. Beside their base operations, a large fortified place, within which the hostile army lies motionless; at Vienna a congress which is on the point of pronouncing for peace or war; and, finally, at Constantinople, an army of reserve, bound to act at a certain epoch, which was not positively fixed;—an army, nevertheless, the presence of which is essential to the obtaining of any important result."

At last Canrobert yielded to Lord Raglan's both points; he agreed to an assault, and to detach, in the meantime, a force with the intention to operate in the Sea of Azoff, in the hope of cutting off the supplies in that quarter, to prevent their virtually starving Sebastopol; for it was evident that as long as they could find gunpowder, and food for the men, Sebastopol would likely to be reduced by such force of artillery as the allies had at command. Canrobert was influenced in yielding the first matter of defence by intelligence from Paris that 40,000 men of the whole force at Marask, and other to

ould speedily arrive and re-inforce his army; but he wanted his ships to bring the troops from the encampment, and therefore wished to postpone the expedition to Kertch. Lord Raglan urged the latter upon him, while the reinforcements were coming, as his information convinced him, that if an expedition to Kertch were not undertaken very soon, the time would pass for any hope of success in that direction. In this his lordship was correct, for the Russians became alive to their danger, and had already made plans of gigantic dimensions to strengthen their interests there. As to the assault, it was determined to await the arrival of the troops from the neighbourhood of Constantinople, and that in the meantime the expedition should sail for Kertch. Amidst these vacillations a new element of complication arose from intelligence that the Russians were concentrating a large force at Eupatoria, and Omar Pasha and his Turks were ordered back thither with all speed, pending the arrival of the reinforcements from Constantinople and Marseilles the more necessary. The new French army—for such was the magnitude of the reserves that they might be said to constitute a new army—was to arrive early in May: previous to this information the assault was determined between the two generals to take place before the end of April:—

“The works of the allies have engaged them with the enemy to such a degree,” wrote General Canrobert, under date of the 24th of April, “that the assault will be made in four or five days, unless retarded by some of those unforeseen events which are incidental to a state of war. We should have wished to retard this operation until the arrival in the Crimea of the army of reserve; but we are so near to the Russians, that there would be danger in waiting; especially as the hostile army daily receives reinforcements. The general officers of the special arms of the service of both armies, and the chiefs of our two *corps d’armée*, have been unanimous in yielding to the cries of our soldiers (French and English), demanding the assault. Lord Raglan strongly shares in their

opinion. I thought it my duty to give my adhesion also.”

General Pelissier had already reconnoitred all the enemy’s positions, and the site suitable for the assaulting columns to occupy preparatory to the great event. 1st. In front of the great breach in the crenellated wall (already two-thirds filled up with sand-bags and earth); 2nd. Before the Central Bastion; 3rd. In front of the Flagstaff Battery. In the rear a convenient position was to be occupied by immense reserves; on the right, the Mamelon and the White Tower, or rather the works in front of it, were to be assaulted, and when carried the English were to assail the Great Redan; on the left, the French were to march in three columns against the Flagstaff Battery, the Central Bastion, and the Quarantine. After the first line of works were forced, these troops were to turn the second, and “penetrate into the interior by the gorge, and effect a solid lodgment there.”

While the council of generals sat to discuss the final arrangements for the execution of this plan, Admiral Bruat sent to Canrobert a despatch from the French minister of marine, announcing that orders had been given for the army of reserve to proceed to the Crimea. This determined the council to wait: they waited, and nothing was done in the result of the second bombardment. The minister of marine also announced to Admiral Bruat that the emperor had decided to embark for the Crimea, and to take the command of a separate *corps d’armée*, and act externally—the plan to which Lord Raglan was most determinedly opposed, while the strength of Sebastopol was as yet undiminished. But along the coasts of the Sea of Azoff, and at the Straits of Kertch, his lordship, and both the British and French admirals, maintained that great injuries could be inflicted upon the enemy. The soundness of this opinion was afterwards happily confirmed. Thus ended the second bombardment of Sebastopol: the siege still went on with tedious progress, but murderous conflict, and evoking great events which other chapters shall record.

## CHAPTER LXXXI.

### THE VIENNA CONFERENCE.

“I do the wrong, and first begin to brawl.  
The secret mischiefs that I set on foot,  
I lay unto the grievous charge of others.”—SHAKSPEARE.

THE opening of the Vienna conference was regarded with profound interest by all Europe. Many believed that Russia merely entered into the negotiations to gain time, and that Austria—with which power the proposal to hold the conference originated—was in connivance with Russia. It was a more general

belief that the great German power was desirous, without any connivance with the government of the czar, to gain time for herself, and to find some pretext for deferring her fulfilment of her engagements to the Western powers, resulting from the treaty of the 2nd of December, 1854. Whatever her

motives in proposing a conference, all the governments concerned acceded to it, and appointed plenipotentiaries, who assembled in Vienna, and opened the conference on the 15th of March. Count Buol, the Austrian minister, was unanimously placed in the presidential chair. The count opened the conference by a speech, in which he exhorted his fellow plenipotentiaries to a spirit of mutual conciliation and a desire for peace. This speech was remarkable for the declaration that "the Emperor of Austria had made up his mind as to the indispensable conditions of peace, and that nothing should prevent him—not even the most serious consequences—from fulfilling his engagements to his allies." These conditions were the four points, so well understood by politicians all over Europe. The Russian envoy expressed his adherence to the *principle* of these four points, and was ready to adopt them as a point of departure for the negotiations. The representatives of France and England expressed their instructions to be, not to discuss the principles of the four points—they were to be regarded as beyond discussion; but only the application of those principles, which it was hoped that conference would amicably determine. The order the discussion was to take was thus arranged:—

- I. The Danubian principalities.
- II. The navigation of the Danube.
- III. The limitation of Russian power in the Black Sea.
- IV. The state of the Christian subjects of the Porte.

The discussion of the first of these subjects was at once entered upon, and Russia expressed her concurrence with the demands of the allies. On the second point she not only conceded all that the allies sought, but declared that she had never asserted any right to overrule or interrupt the navigation of the Danube. Baron de Prokesch-Osten, one of the Austrian representatives, adroitly observed that while it was not for him to call in question the good intentions of Russia, the results upon the Danube had been practically at variance with her professions. It was agreed upon that the Danube should be free—that a commission of the great powers should formally open, and also take measures for the permanent protection of the free navigation of that river. Russia was not to establish her quarantine at the Sulina mouth, and no fortifications were to be erected between the channels named Sulina and St. George.

Lord John Russell then declared that his government reserved to itself the right of making such special conditions over and above the four guarantees as the general interests of Europe might call for, and as would be most effectual in preventing the recurrence of complications. The Earl of Westmoreland ex-

pressed concurrence in the views offered by Lord John Russell. The Turkish envoys repeated these declarations. The Russian representatives took exception to the declaration made—that other demands beyond the four points might be made, but frankly admitted that the fortune of war might entitle them to make such demands. The Austrian representatives not only supported those of Russia but rather went beyond them in desiring that the four points should strictly limit the negotiations. The plenipotentiaries present were—

For AUSTRIA .....	Count Buol-Schauenstein, and Baron de Prokesch-Osten.
„ FRANCE .....	Baron de Bourqueney.
„ GREAT BRITAIN ..	Lord John Russell, and the Earl of Westmoreland.
„ RUSSIA .....	Prince Gortschakoff, and Count Tietoff.
„ TURKEY .....	Aarif Effendi.

The first point was "developed" and embodied in the first protocol; but as the Vienna conference did not secure peace, it is unnecessary to encumber our pages with details which were not carried into effect. The second sitting of the conference was held on the 17th of March, when all the plenipotentiaries were present. Both at the opening of the first and second sittings the Russian ministers urged upon the conference the admissibility of representatives from Prussia: this the other powers resisted. The Russian representatives insisted upon introducing Serbia to the guarantee of the powers, for the security of its then present immunities. It will interest our readers to know what were the peculiar rights which the Servians claimed, according to the enclosure annexed to protocol No. 2. They were as follows:—

- Freedom of worship.
- Choice of the chiefs of the country.
- The independence of its internal administration.
- The consolidation of districts detached from Servia.
- The consolidation of different imposts into one.
- The giving up to the Servians the management of property belonging to Mussulmen on condition of paying the revenue, together with the tribute.
- Freedom of commerce.
- Permission to Servian merchants to travel in the Ottoman states with their own passports.
- The establishment of hospitals, schools, and printing presses. And, finally—
- The prohibition to Mussulmans, other than those belonging to the garrison, to establish themselves in Servia.

On the 19th the representatives again assembled. The Turkish plenipotentiary showed a disposition to delay the work, as it regarded the protection of the principalities, on the ground that his master, the sultan, was engaged in devising a satisfactory plan for regulating the

rests. The conference insisted upon proceeding with the task which they had commenced.

On the 21st the fourth sitting was held, when the second point came under consideration. The differences between the motives and objects of the various powers at once became obvious. France and England were agreed; Turkey was reserved, and did not render to the Western powers even so much support as Austria rendered, which latter power betrayed, nevertheless, a jealousy of all the others; the Russian plenipotentiaries made no real concession, and gave indication which did not appear to awaken the suspicion of the other plenipotentiaries, that she was not sincere in taking a part in these negotiations.

The sixth sitting was held on the 23rd of March. The discussion on the second point continued; all the four came to an agreement, the representatives of Russia raised quibbles and objections at every step, wholly inconsistent with the principle agreed upon.

On the 26th of March the seventh sitting was held, and the third point introduced for discussion. The plenipotentiaries were excessively polite, and abounded in assurances of convictions each felt in the sincerity and intentions of the other. This was carried to an extent which betrayed either some secretgivings of good faith somewhere, or the extraordinary credulity of the representatives of the allies. The representatives of Turkey and Russia sought delay; those of the other powers were for proceeding with the objects of the conference.

The eighth sitting was on the 29th of March.

The Turkish representative opened the business by repeating the observations he had already expressed, and desiring delay until he had joined by another representative of the empire. The tone of the Turkish plenipotentiary was calculated to provoke hesitation on the part of Russia. The representatives of the Western powers stated that instructions from their governments compelled them to hold by the order of discussion which had been agreed upon, and they therefore declined compliance with the wish of the Russian plenipotentiary to discuss the fourth point, until the third was arranged. Austria proposed that, meanwhile, preliminary information should be obtained and discussed in reference to the fourth point. The compliant representatives of France and England were willing so to engage themselves if their governments permitted.

On the 2nd of April the conference met for the ninth time. The ministers of Great Britain and France declined going into the fourth point until the third was adjusted; the ministers of Austria and Russia united in urging the immediate discussion of the fourth topic, until

tidings should arrive from St. Petersburg giving the Russian ministers more precise instructions concerning the third subject in the order of negotiation. The representatives of the Western governments were firm. The Turkish minister did not appear prepared to discuss anything, whatever its place in the sequence of diplomatic arrangement. The conference was adjourned to the 9th of April. At that sitting the ministers of foreign affairs for France and Turkey were present, but no business could be transacted, as the Russian plenipotentiaries had not received any answer to their message to St. Petersburg.

On the 17th of February the sittings were resumed, and the answer from the czar had arrived, declining to take the initiative in proposing any limitation of power in the Black Sea. In answer to questions from the French foreign minister, the Russian ministers declared that they would not consent to any diminution of the Russian fleet in the Black Sea, and intimated that Russia was not in the condition of a power subjected to disaster, and upon whom, therefore, severe terms could be imposed. The second bombardment of Sebastopol was by this time known to be a failure, and no doubt affected the terms which Russia was willing to accept. The plenipotentiaries of the allies proposed adjournment, to agree upon terms to be proposed to Russia, as the latter, after eighteen days' delay, was not prepared to offer any. To this the czar's ministers offered pertinacious obstruction, and the sitting broke up without coming to any definite conclusion on any subject.

On the 29th the sittings were resumed, and the Turkish minister for foreign affairs proposed a resolution as a starting point for the adjustment of the third point. As corrected that proposal was as follows:—

“Art. I. The high contracting parties wishing that the Sublime Porte should participate in the advantages of the system established by public law between the different states of Europe, engage themselves severally to respect the independence and territorial integrity of the Ottoman empire, guarantee together the strict observance of this engagement, and will in consequence consider every act or event which should be of a nature to infringe on it, as a question of European interest.

“Art. II. If a misunderstanding should arise between the Porte and one of the contracting parties; these two states, before having recourse to the employment of force, should place the other powers in a position to anticipate this extreme course by pacific means.”

The Russian ministers objected to guarantee the integrity of the Ottoman empire, but expressed their willingness to recognise the right. A warm discussion (caused mainly by an at-

tempt of the Russian plenipotentiaries to disengage the Turkish ministers from especial conference with their allies) then ensued, and the sittings were adjourned to the 21st. On that date the Russian plenipotentiaries formally refused to enter into the proposed engagement concerning the integrity of the Ottoman empire, and proposed that the Dardanelles be open to the war ships of all nations.

On the 26th of April the representatives of all the powers again assembled. They were convened at the request of Russia, who, by trifling modifications of her previous proposals, sought the acquiescence of the conference in her views. The Austrian ministers to a certain extent supported those views, as at least offering suggestions for a basis of peace; the Russian ministers urged the propriety of settling the matter with Turkey alone; the Turkish minister replied that, bound by a common treaty, the allies must act in concert.

The allies finally declined further to discuss terms of peace until Russia should consent to limit her power in the Black Sea, and the conference was broken up. Lord John Russell remained at Vienna for some time, and the French foreign minister for some time longer. During this interval Austria was especially busy in devising some plan, ostensibly to prove her desire for peace, but really to break through her own engagements of the 2nd of December. She proposed to the English and French ministers that Russia should be permitted to restore her fleet in the Black Sea to what it was before the war, but not to increase it; and that the Turks, French, and English should keep up an equal fleet there, and that Russia should be compelled to guarantee the integrity of Turkey. Lord John Russell and M. Drouyn de Lhuys consented to this, and induced the Turkish minister of foreign affairs to do the same; but the English and French cabinets repudiated the agreement, and continued firm in their original demands. Austria then declared that, having devised a fair adjustment, and the allies having refused to adopt it, she was not bound to go to war with Russia, and basely backed out of her most explicit engagements; yet Austria persisted in proposing one modification of these views after another. The last call which the Court of Vienna made upon the Western powers for negotiation was evidently in the spirit of sheer humbug. There was, too, an insolence about it in the presumption it implied of the weakness of France and England. Had not the Vienna politicians regarded the statesmanship of both France and England as credulous, they never could have dared to propose such terms of peace. Austria, while professing to negotiate, sought to betray, and did so in a manner to affront the self-respect of the allies. She had given her con-

sent to the four points, which were to be basis of a treaty of peace, and that the limitation of Russian power in the Black Sea, to secure the independence of Turkey, was one of these points, and that which was regarded as the most essential, and which Russia would be least willing to subscribe; yet the Austro-Russian solution of this problem was the *status quo bellum*. That Russian power should be limited "in the Black Sea was the basis of agreement, and the mode in which Austria proposed to effect that was by—first, the powers signing a declaration of independence of the Ottoman empire; and, secondly, by a treaty that Russia was not to increase her navy beyond the strength it possessed prior to the war. Russia—presuming upon the strength of so vast a navy, and such garrisons and places of supply as Odessa, Sebastopol, the granaries on the shores of the Black Sea—made the insolent demands of Prince Menschikoff, and Austria proposed that she should be restored to exactly the same position, only that her numbers of ships should be limited to what she then possessed. After the allies had driven the Russians out of the provinces, opened the Danube, cleared the Black Sea of Russian cruisers, shut up the Russian fleet in Sebastopol, and there sunk the *Prinzezen*, caused to be sunk the greater part of it, Austria proposed that we should withdraw our fleets and armies, and allow Russia to replace the ships destroyed, rebuild and strengthen all her fortifications, and repossess herself of the whole of the Circassian coast, to carry on a system of butchery, of which for so long the interests of the inhabitants of those realms had been the victims. The czar was to be at least as strong as ever in the Black Sea, except that the Dardanelles should be open to the fleets of the Western powers. The Austrian proposition, so viewed, was a monstrous attempt to act as the ally of Russia, under the guise of alliance with the Western powers. But this treachery had a worse feature than the above review of it brought out. If Russia had been permitted to retain a navy such as she possessed before, she would, under the circumstances, be the real beneficiary of treaty to her possession in the Black Sea of such a force; as it was, Turkey might object to it at any time, and if strong enough to do so alone, or in conjunction with America—say America—she might make its essence a *casus belli*; but if the Austrian proposition had passed, Turkey would have been tied down by treaty to recognise the right of Russia to appear any day at the entrance of the Bosphorus with her whole naval force in those waters. Against this, and the possible use of a power so great that the very existence of the empire would be a temptation to employ it, what guarantee did Austria provide? What

ration of the integrity of the Ottoman nations, and the right of France and England to send their squadrons to that sea! The foolishness of this would excite laughter, the faithlessness and impudence of it did kindle indignation. Why should the sea be at the expense of maintaining navies at distant sea? Of what use had all the declarations of Ottoman independence been, to which, over and over again, Russia had been a party? Of what avail would these declarations be if the Emperor Alexander II. should die, as his father so lately in effect said—"The man is sick; he will die; we must look to the effects; we must be prepared for the consequences—you may take Egypt and Candia the provinces." Should France and England be at war, or England and America, was there to prevent Austria uniting with Russia in a partition, on the ground that the "weak man" was then really very bad—so bad, worse that recovery was impossible; and if he had no legitimate heirs, they, his next of kin and best friends, had the most proper title to his estates? True, they did not violate the integrity of the dominions of the emperor; but as Servians, Bosnians, and Greeks all increased as he decreased, and some revolution somehow was imminent, they could not be troubled further about the integrity of the empire, and thought it best for the advantage of the occupying tenants to enter upon the empire as were near themselves! The proposal of Austria was actually an attempt to strengthen Russia for her meditated aggression against Turkey; for, although the number of Russian ships was restricted to what they had been before the war, Russia might make each vessel more powerful, and increase the comparative strength of her fleet enormously, in spite of any stipulations as to the number of guns or of ships—and the allied fleets could not be kept on the watch. The moral result of this proposal was to confirm in every fair judging man the suspicions of Sir G. H. Seymour, our ambassador to the czar at the breaking out of the war. He, in one of his despatches already referred to elsewhere, thus expressed himself concerning an interview which he had with the czar:—"It can hardly be otherwise but that the sovereign who insists with such pertinacity upon the impending fall of a neighbouring state, must have settled in his own mind that the hour, if not of its dissolution—of its events, for its dissolution—must be at hand. Then, as now, I reflected that the assumption would hardly be ventured upon by anyone, perhaps, general, but at all events by one, understanding existed between Russia and Austria. Supposing my suspicion to be well founded, the emperor's object is to strengthen her majesty's government, in conjunc-

tion with his own cabinet and that of Vienna, in some scheme for the ultimate partition of Turkey, and for the exclusion of France from the arrangement." The suspicions of Sir G. H. Seymour, most reluctantly entertained, were most substantially confirmed. Austria acted in concert with Russia, and appeared as if she only awaited the hour for the open declaration of her alliance. If her covert amity might save Russia from humiliation through the escape of a favourable treaty, she would, in the emergency, have best answered the end of "the intimate understanding." To this she directed all her arts, while she watched the progress of the war with an invidious vigilance. Yet her position was one which exposed her to the chance of being made use of by the allies, while she sought to abuse their confidence; and if any skill of statemanship had remained to the Western powers, they could, without the employment of any immediate force, have made her also obnoxious to the penalty of her baffled and beaten accomplice.

The unsuccessful termination of the Vienna conferences produced a great sensation in England and France, and murmurs were heard in both countries that their negotiators had laboured without results; and both the English and French plenipotentiaries were compelled by public opinion to retire from their offices in the cabinets of their respective countries. Count Nesselrode addressed an artful note to the ministers and agents of Russia in various states, the object of which was to represent the allies as resisting all conciliatory offers on the part of Russia. The tone and representations of the note were so identical with the arguments of Gortschakoff and Titoff at the conference, as to render its publication here unnecessary. The French plenipotentiary and foreign minister resigned his place in the imperial cabinet; the English plenipotentiary and colonial minister retained office until the cause of the French minister's retirement became known; and his conduct contrasted very favourably in English opinion to that of the English minister. Earl Clarendon and Lord Palmerston held back from the British parliament and public a correct knowledge of the facts, until it transpired, through Parisian gossip, that the French, English, and Austrian ministers were willing to accept peace on the condition of Russia and the allies keeping an equal naval armament in the Black Sea. The way in which Austria had hoodwinked the Western negotiators, and played into the hands of Russia, became at last evident; and Lord John Russell was forced to leave the English ministry. There were other results of the conference, and these rapidly developed themselves. It was no doubt a conviction on the part of the Russian government that its duplicity through-

out these negotiations, and its falsehood in accepting as a basis the four points, had deprived it of all moral influence in Europe, that led to the crafty and deceptive circular of Count Nesselrode, already referred to, in which he sought to persuade the world that Russia was—as some of the English peace lecturers frequently represented—a most ill-used nation. If no other result than that of unmasking Russia—even to the Peelites and their supporters—were attendant upon those conferences, it was so much gained for the prospect of a more united public opinion in England. But these negotiations tore the mask from Austria; she was evidently not an ally of the Western powers, but an accomplice of the foe; she dreaded Russia, but she was still more afraid of France. She for a long time had designs upon the Porte herself, which in the early part of 1853, were pretty plainly indicated by her support of the Montenegrin insurrection. At that juncture the demands of the Austrian ambassador at Constantinople were as insolent as those of Prince Menschikoff afterwards were, and excited the astonishment of the Russian ambassador, and even his incipient opposition, until Russia, to prepare the way for similar conduct on her own part, sent directions to her minister to support the Austrian demands. Austria was anxious to keep the provinces; to see Russia restricted without herself incurring expense or danger in the task; and to see the allies exhausted in the prosecution of such a policy. She would openly aid Russia and share the spoil, if she were not afraid of revolt in her Italian provinces, sustained by the armies of France, and the ships and gold of England. She had, on the other hand, no objection to see Russia humbled and beaten back from the Danube behind the Pruth, and even out of Bessarabia, if the allies would not ask her to expend anything, or fire a shot, and would guarantee for her the peace of Italy. Prussia only envied Austria for having something to barter on either side, and wished to see Russia—rather than her German rival, or the Western powers—gain influence and strength. She looked for compensation in the possession of the states of northern Germany for any extension of Russian power in the direction of Constantinople, but knew that Austrian influence was in the way of such a scheme, and, at all events, she preferred being a part of the Russian empire to an appanage of France. When we say Prussia preferred all this, we mean her king, her court, her aristocracy, her army, her government;—her people were too tame to resist what in great numbers they disapproved. The governing party in Prussia would have handed over the country to Russian protection, rather than see Poland resuscitated, or Prussia constitutional. The latter issue of

affairs is alike terrible to the government, clergy of Prussia, and will always lead to sympathise with the power of Russia, the best guarantee for an unrevolutionised Poland and against a revived Poland, which France would consider a far more formidable enemy than even Austria. The burst of indignation in Paris at the trimming of Count Bismarck, the dissatisfaction in the occupied provinces and in Constantinople with the conduct of the Austrian satraps in those provinces, alarmed Austria, and these things, taken together, with the disposition of the British and French to employ Poles and Hungarians in their army, drove Austria into a fever of fear and feverishness which induced her to feign alliance with the allies, and to attempt to re-open the conferences in order to patch up a peace, or determine upon more positive action. But when it was made known as we could not have known her but for the Vienna conferences, and whatever sense of disappointment or chagrin England and France might congratulate themselves upon so much. The effect upon the French emperor and government, and the French empire at large, of the breaking up of the negotiations, was electric. The emperor was known to be determined, however reluctantly, to evoke the nationalities which he oppressed, and, putting himself at their head, to tear the Austrian empire to pieces, if its emperor should prove faithless. France was of opinion that the way to St. Petersburg was through Italy, or over the Rhine, than through the Baltic. The appointment of M. Thiers to proceed to Vienna and Constantinople—to take place soon after the breaking up of the conference—could not fail to teach Austria no disguise would any longer save her from Napoleon. The employment of M. Persigny and the consignment of the foreign portfolio to Count Walewski, were the most significant hints which Buonaparte could give his ally short of the collection of an army of 100,000 men. Persigny was the Buonapartist of the party, and the favourite maxim of his was, “the old boundaries of the empire.” Walewski was a Pole as much as a Frenchman, and rumour ascribed to him the ambition of swaying the sceptre of reconquered Poland. The West, on the whole, was much more alarmed from the fall of the card-house of Vienna diplomatists. It was made clear that Lord Aberdeen was not the only procrastinator, and the mystery was cleared up how the petuous allies bore with the delays and the steadfastness of our government. M. de Lhuys was a good Catholic, and favourable, therefore, to Austria; he abhorred revolutionists and republicans, and would rather

ten by Russia than see Austria crushed with : he would never march over the ruins of "chief Catholic German power" to humiliate the Greek tyranny, however willing to strike directly at the latter; he wished the Greek places in Latin hands, and he desired to see splendid Catholic churches spring up in the cities of the sultan, and the Greek schism abolished; and he wished to have "Catholic Austria" as an ally in all this. Hence one of the games of diplomatic shuttlecock at which the allies had been playing. Nothing could have been more to the taste of Lord Aberdeen; he was, as he said himself, in a false application of the term, "a sort of an astro-Russian." In his opinion these states were the abettors of order—Russia was an elder sister, and Austria an affectionate sister, counselling the others: to reclaim the errant, and in-hand with the expostulant, was his duty. De Lhuys had no Russian sympathy—he hated the Greek schism; his sympathy was Austrian. Lord Aberdeen shared all the sympathies of his French coadjutor for the one, and out any of his disrelish of the other. De Lhuys' despatches were admirable, and his conduct statesmanlike and vigorous in all direct dealings with Russia; but dilatory when transacting any business with Austria likely to offend her, or where her promises were given. He even drove from about him, and from the employment of the emperor, when he dared, every one who had any doubt of Austria, or indifference to her interests. However contrary to the generally received notions of the public about these matters, such, in the end, is a true sketch of the policy of the emperor, and the ministerial revolutions in the government of our ally.

At no period since the peace of 1815 was there discussion of her European relations so intense in England. Although much light had been thrown upon the motives and policy of the various powers, still all was doubt: this was especially the case during the uncertain interval between the return of Lord John Russell from Vienna; and the disclosures which ejected him from the cabinet.

The fortunes of the war flickered, one day was hope of victory or peace, on the next country heard that the enemy had repaired broken earthworks and embrasures, and that categorical refusal of "terms" was given by plenipotentiaries to those of our allies and our own; while the shells scattered the bulwarks of Sebastopol, the heavy balls forced their way through the ramparts erected against them, and a fourth parallel was opened bringing troops nearer to the enemy, and exposing defences to a greater range of fire and a more powerful force of metal. The scaling-ladders, it was alleged, were dispersed, the ropes and

grapplings attached, and the men picked off for the impending assault. Such were the rumours in England at the close of the conference.

It was, however, certain, amidst so much doubt, that Russia once again proved utterly faithless: she accepted the principle of the four points, and entered into negotiations which would not have been conceded but upon such express acceptance of the principle as left misapprehension impossible. It became clear that she never meant to accede to them: upon the third matter in dispute the whole affair actually turned. Whatever possibility there might have been of patching up a peace upon the other terms, the limitation of the Russian power in the Black Sea admitted of no equivocation or explaining away; Russia refused to recognise in that point the very principle upon which she went into the conference. She played a part. She hoped to gain something by negotiating, and she calculated rightly upon the faculty of being duped which the allies had all along displayed. Austria had been evidently cooled down by these conferences; but for them she must have joined her arms to those of the allies, or plainly refused to do so, and thereby have thrown off the mask. That she agreed with the allies there was no doubt, for their demands were more in her interests than their own: that she wished the allies to obtain their demands by negotiations or arms was, therefore, sufficiently obvious; but that her aim was to secure the advantages in common with them, without fighting in common with them, every step of her procedure more and more plainly evinced. Even if she should by shame, which no one expected, or by fear, which was possible, be dragged to stand side by side with the Western powers in this war, there could remain no doubt as to the selfishness and cowardice of her policy. That Russia did not regard the future course of Austria with alarm, was proved by the freedom with which Russian troops were removed from the neighbourhood of her frontier, and poured into the theatre of battle. It was said that Austria was anxious to secure the support of the diet, and not to detach herself from the policy of Germany. It had been much overlooked in connexion with that excuse, that if these petty states really believed her in earnest, they would either follow in her wake or avoid all opposition: they would never dare to thwart such a power as Austria, if that power, in the name of German interests, threw herself into a war with such allies as France and England; but, like one of Dickens' characters, who put all the blame of his disagreeable measures upon his unseen partner, so Austria put to the account of Prussia, or the Bund, her own reluctance to expose herself in a cause which she wished to see gained and

paid for by the blood and treasures of others. The excuse was also urged for her that a powerful Russian army confronted hers, and that a chain of even impregnable fortresses, to which she could offer no parallel, were the points of support for this Russian army; that under such circumstances, and no corresponding force of the allies to reach her, she would be in danger of her empire were she to declare war. This excuse, if sound in everything, only proved that Austria was powerless of herself before Russia, and that the hour had arrived for her, with one heroic effort, to deprive her menacing enemy of his opportunity for ever. If she had everything to risk which the above excuse alleges, this would be the only course worthy of so great an empire, with half a million of soldiers at its disposal; but she had not all this to risk: already Russia had withdrawn those troops which threatened her frontier, and poured them into Bessarabia and the Crimea, to replace the hosts swept away by the terrible campaigns on the Danube and before Sebastopol, while already a numerous French army was encamped to march upon the Danube, the Pruth, or wherever else the interests of Austria and of war might call. From the beginning, the German powers had served Russia better than if in alliance with her. Had they been her allies, the Western governments would have revolutionised their provinces, and have paralysed their power: as it was, the position of France and England in the Crimea made it dangerous for them to throw Austria into the arms of Russia. She held our army there as a pledge of her own safety. If she joined Russia the allies must have withdrawn from the Crimea, and the provinces be wrested from Turkey. Should the allies change the theatre of war, all Germany would suffer; but, in the meantime, Turkey would be overrun and ruined.

Taking circumstances as they were, and all hope from negotiations having expired, the popular mind in Western Europe busied itself with anxious discussions as to whether, after all, peace could be conquered. In France especially many proclaimed the invulnerability of Russia, and the failure of the second bombardment aided much in producing that conviction. In England this idea prevailed to a considerable extent, even when the determination to risk all things in the struggle increased in strength. It is strange that so large a portion of well-informed persons in the two most intelligent countries in the world should have deemed Russia unconquerable. All who studied the subject closely must have perceived that if the allies remained patient, and did not attempt any grand *coup* upon the heart of the empire, but occupied territory on her boundaries, estranging the inhabitants of such territories from Russia,—generally an easy

task,—success would be sure. Tartar, Cossack, Bessarabian, Podolian, Finn, and Lithuanian, if armed, protected, and organised, would give Russia more trouble than any other invaders, and contribute as much to her subjugation. If the allies, like the first Napoleon, assembled 600,000 men, made the Germans and other unwilling mercenaries attempt to march upon St. Petersburg, Moscow, the results would be very similar. Russia was stronger for defence in 1865 than during the invasion by the great Napoleon. But if the Crimea, Bessarabia, Podolia, Poland, were all wrested from her—if Russia, Armenia and Georgia were torn from her dominions, and wisely held—if the Cis-Caucasian terrain were swept by the mountaineers and Turkish auxiliaries to the northernmost lip of the Caspian—if Finland were freed and joined to Sweden and Norway—and, if in those lands conquered by Russia, the allies set up free governments, each giving its contingent, and each contingent in its turn acting the *avant-garde* of the invading armies,—Russia would be subjugated, and her power and greatness perish from the earth. Much talk was talked during the first influences of diplomatic and siege reverses of the Russian as to their “falling back upon their forest and icy plains.” How was support to be derived thence? Salt cannot be manufactured from ice, cannon cannot be forged or cast from forest timber. De Custine says that the boasted resources of Russia are a great sham, even her forests can seldom supply timber for ships, and dwindle into patches of dwarf trees and stunted shrubs. If the Russian army shrank into hordes of wanderers on ice plains or in forests, the operations of the allies would be effectually done. Russia could be conquered just as other great nations were conquered. Her great cities could be picked or consumed by the torch of the invaders, or her own incendiary policy, her commerce cut off, the nations fringing the seas could be made independent—where would be the Russia of Nicholas I., or Alexander II.? She would have to begin her career of “development” *de novo*, without military resources or the means of procuring them. Without a sea-board, she would in every part of her vast area become subject or tributary to the new nations on the shores of the Black Sea and the Sea of Azoff, and the gulfs of Finland and Bothnia; while their people, superior in civil and religious information, and in alliance with them powers with which they could not maintain, meantime, connexion, would increase in strength, and prevent the possibility of Russia any more emerging upon contiguous territories. So far from its being impossible to subjugate Russia by invasion, perhaps no great empire could be more easily subjugated, except Austria.

the dismemberment of Austria is its conquest; the nationalities that compose it are allowed their own centrifugal tendencies, they will fly off from Vienna, and nothing will remain to it but the contemptible little duchy of which it is the capital, and which might be absorbed into any one of the disintegrated nationalities near enough to take care of it. Russia dismembered, and she too perishes. This is the sure way to war with her. Napoleon I. saw it, but refused to follow his own convictions. He wished a great and unbroken empire to sue at his feet, and its autocrat to be his ally.

The policy of engaging the bordering nations in his warfare ought not to have been overlooked. "You will want us yet," said a respectable Wallach to an English traveller. "You must give us the power to organise an army, and we will do more to aid you in weakening Russia than you could by an invading army of French or English." Wallach, and Pole, and Finn, *let them loose*, and call them forth as we advance, and in any future war Russia is lost. It could not have suited the policy of the allies, especially in their delicate relationship to Austria and Prussia, to have proclaimed the submission of the nationalities. The people of such territories as might be invaded, such as Bessarabia or Finland, if liberated in the course of such invasion, should not afterwards be abandoned, but their independence secured, and thus, by erecting the barriers of new nations, the allies would stem the future wave of the wave of barbarous aggression.

During these negotiations at Vienna, and the consequent political agitations in the eastern capitals, Prussia remained the ally of Russia through the will of their king, the nobility, the army, and the established policy; nevertheless, the people hated that alliance, and desired to be once more in unity and co-operation with their old and faithful allies, the English. An able writer gave the following sketch of the feelings of the Russian people in that respect:—"If anything had been wanting to the general conviction of the nation, after the campaigns of 1815 and the hard-fought battles of Ligny, at Waterloo, and at Breda, that England was Russia's sincerest and truest ally, it would have been amply supplied by the recollection of the treatment they had but lately met with from the Russians,—a recollection that is fully alive to the present day: two years after the Emperor Alexander had sworn undying friendship and alliance with King Friedrich Wilhelm IV. over the grave of Frederick the Great, he concluded the Treaty of Tilsit with the common

enemy, and consented to enrich his dominions with a portion of the territory taken from Prussia (Bailystock); when the Russians were in occupation of the Baltic coast as friends and allies, they left no stone unturned to secure to themselves that whole district up to the Vistula, and plundered and thoroughly spoiled the towns when at last they felt themselves compelled to evacuate them, and it is a common saying in Prussia, that they would rather see the Russians in the country as foes than as friends. It is notorious to every Prussian, no matter how illiterate, that the poverty and wretchedness which prey upon all the eastern districts of his fatherland are owing to the repeated breaches of customs' treaties by Russia, who persists in interposing to all interchange of produce and manufactures an insurmountable barrier by means of her tariff and her frontier regulations. The friendly relations that have grown up between the two courts of Russia and Prussia, in consequence of the matrimonial union of the then Grand-duke Nicholas with the Princess Charlotte, do not extend beyond the court, nor to the whole extent of the country; the holy alliance, which was another compulsory result of the disturbance of Europe, was long the object of the people's hatred, and its dissolution gave rise to universal expressions of joy throughout the press and the people. Ever since the accession of the present king the nation has been taught openly, by precept and example, to regard its future welfare as bound up in the English alliance. It was to England that the king first paid a visit after his accession, and for an intimate union with her, chiefly on the ground of religious affinity, he has been content and willing to make great sacrifices. All these feelings of personal regard, national tradition, and religious affinity have pointed out to the present royal family that the true policy of Prussia is that of the great elector, Friedrich I., Friedrich Wilhelm I., II., and III., and the whole nation on its part will hail with enthusiasm the *Neue Allianz*, the renewal of the old matrimonial alliances of the two royal families of England and Prussia, which is fixed for consummation, D.V., on the 18th of October, 1857."

However true the representations in the passage above quoted, that the King of Prussia feels friendly to England, he was dissuaded from an English alliance by his sister, the Empress of Russia, and deterred from it by the powerful position Russia occupies in reference to his kingdom by the possession of Poland. Such were the leading facts and discussions connected with the Vienna conference and its immediate consequences.

## CHAPTER LXXXII.

THE SIEGE OF SEBASTOPOL IN MAY, 1855.—NOTICES OF GENERAL NIEL AND GENERAL TODTLEBEN.—CAPTURE OF THE RUSSIAN WORKS BEFORE THE CENTRAL BASTION.—FIRST EXPEDITION TO KERTCH.—RECALL OF THE EXPEDITION.—RESIGNATION OF GENERAL CANROBERT AND APPOINTMENT OF GENERAL PELISSIER TO THE COMMAND OF THE FRENCH ARMY.

"Peace shall go sleep with Turks and infidels,"—SHAKSPEARE. *Richard II.*

MAY-DAY shone upon the beleaguered city, and the beleaguering camps, as brightly as in merry England when it is welcomed by the queen of the May, and the gay throng of happy English villagers. Spring had covered all around with its bloom, and the allied armies felt its cheering influence, and longed for more decisive efforts to subdue the stubborn city. General Niel, the new French chief of the engineers, showed prodigious activity, and more confidence was felt in his genius than in that of his predecessor. He was certainly a military engineer of great experience. A distinguished military French historian gives this sketch of his history:—"The important mission with which General Niel had been charged, the studies he had made of the locality of the attack; his high position in the engineers,—all naturally called him to replace the worthy general whom death had struck down. It was a heavy responsibility; for that period of the siege had arrived, when the engineers were obliged to confess that their hopes had been by no means realised, and that each day the attainment of the object of their efforts appeared to be still more remote. General Niel, now placed at the head of the engineers, was born in 1802. Pupil of the Polytechnic School, he was sub-lieutenant of engineers, at Metz, in 1823. In 1827, he was lieutenant, and already first captain in 1835. In 1836, he embarked for Africa, attached to the engineers' staff of the expeditionary corps against Constantine. Every one remembers this memorable siege, where General Valée—after the death of the commander-in-chief, General Damrémont—took the supreme command. A sanguinary and memorable achievement, where are already found in the first rank, among the most ardent to fight, those whose names, later, were to acquire a popularity so splendid, and to be raised, by the brilliancy of their services, to the first ranks of the army. General Niel distinguished himself in that arm of the engineers, which, in all sieges, was ready to brave the greatest part of the danger. He received, for his brilliant conduct at the assault of Constantine, the congratulations of the minister of war; and was, subsequently, named commander of the engineers of the citadel in that town. Major in 1837, he returned to France, and entered, at Metz, in the 3rd regiment of Engineers. A year had scarcely passed, when he became lieutenant-colonel, and colonel

six years later. This was in 1846. In different functions which he exercised, Colonel Niel had greatly distinguished himself, and was already classed among the most capable and the most enlightened of the officers of engineers. Therefore, when, in 1849, the expedition to Rome was decided upon, Colonel Niel was named chief of the staff of the engineers in the expeditionary corps of the Mediterranean. General of brigade two months afterwards, he was called to the command of the engineers of the expedition. He rendered signal services in discharging these important functions; and after the capitulation of Rome, the commander-in-chief, in evidence of his high satisfaction, gave him the honourable mission of going to Gaëta to carry the keys of Rome to the Holy Father. After this expedition, as chief of the service of engineers in the ministry of war, he was named member of a committee on fortifications, and afterwards general of division in 1853. General Niel possessed in the highest degree a passion for that arm of the service which he had chosen, and, in the high position which he owed to his services, still continued studies, which, in his own mind, he always regarded as incomplete. When war was declared in the East, and the emperor sent an expeditionary corps into the Baltic, under the orders of General Baraguay d'Hilliers, the choice of the minister was General Niel to command the engineers. The capture of the fortress of Bomarsund added another claim to distinction, to those which the general had already acquired in his active and laborious career. Appointed aide-de-camp to the emperor in 1855, he was sent on a mission to Sebastopol, to contribute, to this difficult and formidable siege, his share of intelligence and mature experience. Such is the military life of the officer who was to assume the command of the engineers. If he had laboriously studied in books this difficult and various science, he had, above all, often studied in the face of the enemy's cannon, at Constantinople, at Rome, at Bomarsund, and at Sebastopol."

The officer in charge of the engineer department in the British service was also a renowned officer, Major-general Harry Jones, whose services were noticed in another page of this History. Opposed to these skilful officers, no one in no way their inferior—the renowned Todtleben. "Francis Todtleben, whose m

the siege of Sebastopol was to render illus-  
trous, was at the commencement of his military  
career when the war in the East broke out. It  
was to this war, and to the genius which he dis-  
played in his indefatigable defence of Sebastopol,  
that he owes the high rank which he now holds.  
Son of a merchant of Mittau, Todtleben was  
born on the 25th May, 1818. After having  
finished his studies in the schools of Riga, he  
entered the College of Engineers at St. Peters-  
burg. At the commencement of the present  
war he was only a second-captain in the  
engineers. He distinguished himself under  
the orders of General Schilders, and was after-  
wards sent to the Crimea. What he has done  
before Sebastopol belongs henceforth to history,  
which will blend his name with the remembrance  
of that gigantic siege. In less than one year, he  
passed successively through the grades of cap-  
tain, major, lieutenant-colonel, adjutant-colonel,  
major-general, and adjutant-general, and re-  
turned from his sovereign the highest marks of  
esteem and consideration."

The garrison had been increased and supplied; the French army was about to receive fresh troops amounting to 40,000 men; efforts were being made in England to strengthen the expeditionary army,\* and reinforcements were slowly but surely "bit by bit" arriving. Everything foreboded that the failure of the second bom-

The following is a correct report of the divisional, brigade, and regimental arrangement of the British army in the Crimea, on the 5th of November, 1854. The reinforcements which arrived afterwards were noticed in the course of the narrative, and also the changes in command.

ST ("HEAVY DIVISION.")—Lieutenant-general the Duke of Cambridge commanding.

*gradiers*.—Major-general Bentinek (Guards); Major-general Sir Colin Campbell (Highlanders).  
 Madier Guards, 3rd battalion; Coldstreams, 1st battalion; Scots Fusileers, 1st battalion; 42nd Highlanders; 9th Camerons; 93rd Sutherland.

OND ("FIGHTING DIVISION.")—Lieutenant-general  
Sir De Lacy Evans commanding.

*adriers.*—Major-general Pennefather; Brigadier-general Adams.

, 55th, 95th, "Derbyshire;" 41st, 47th, 49th.

RD DIVISION.—Lieutenant-general Sir Richard England commanding.

*Brigadiers.*—Sir J. Campbell; Brigadier Eyre.

28th, 38th, 4th, 44th, 50th.

8TH DIVISION. — Lieutenant-general Sir George Cathcart commanding.

*Brigadiers.*—Goldie; Torrens.

, 21st, Rifle Brigade, 1st battalion; 46th,\* 63rd, 57th,\*  
th.\*

THE LIGHT DIVISION.—Lieutenant-general Sir George Brown commanding.

*adiers*—Major-general Codrington; Brigadier-general Buller.

23rd, 33rd, 19th, 77th, 88th, Rifle Brigade, 2nd battalion.  
ALRY.—Lieutenant-general the Earl of Lucan com-

*brigadiers*.—Hon. J. Y. Scarlett; Earl of Cardigan.

2nd Dragoons; 4th, 5th Dragoon Guards; 6th Dragoons; 4th Light Dragoons; 8th, 11th Hussars; 13th

ght Dragoons: 17th Lancers.

bardment would be followed by renewed efforts to conquer the obstinate defence of Sebastopol.

On the 1st of May, the French had a formidable and successful encounter. They attacked and carried a counter-guard before the central bastion, which covered the town, in which the Russians were labouring to place guns, and from which some small mortars had begun to throw shells into the French trenches. It appears that General Pelissier had been very urgent with the commander-in-chief to storm these new works, before they should assume a more formidable magnitude; with that excess of caution and deficiency of enterprise which characterised Canrobert, he resisted these importunities, until, at last, circumstances constrained him to alter his decision, when, with a bad grace, he gave his consent. Canrobert was still puzzled by incessant instructions from the French War-office; plans of complete investment, and exterior operations, rendered him more uncertain and vacillating than his own constitutional tendencies would have made him. At last, General Pelissier, as commander of the first corps, and who was to a great extent responsible if these Russian works increased to such magnitude as to cause much additional difficulty or loss of life, demanded from General Canrobert an authorisation to storm them. On the last day of April, Pelissier was thus addressed by his chief, in answer to his urgent requests for authority to act:—"Under existing circumstances, he would not consent to attack the work, unless it was demonstrated to him that it was of absolute necessity; not wishing to make a useless sacrifice of men, in order to occupy a point, the possession of which—exposed to the cross-fire of the two bastions—would cost still greater loss, if we should endeavour to maintain ourselves there."

Pelissier, knowing that the attack was indispensable, not only continued his importunity, but prepared to carry out the contemplated attack. To these renewed entreaties Canrobert replied: "My dear general, I adhere to the purport of the letter which I had the honour to write to you yesterday, on the subject of the works of counter-approach of the enemy, in front of our battery No. 40. These works must not be assaulted, except the impossibility of *not* doing so is materially or morally demonstrated to you. In such case only you will act; employing all expedients which your long experience may suggest to you. You will think, without doubt, that it will be necessary to employ adequate force, &c."

General Pelissier replied to the commander-in-chief:—"This work has been greatly enlarged, and soon it will be united with, and form a part of, the body of the place, and require a siege like the rest,—a veritable siege,

\* At Inkerman, but not at the Alma.

involving sacrifices really greater than the *coup de main* that I have proposed to you, and which our officers consider necessary for the security of our trenches and of our own batteries. If it rested with me to decide, I should not hesitate. The ardour of the Russians in thus pushing forward to create this obstacle, and in working even when under a hot fire of artillery and musketry, shows what importance they attach to this new creation. It forewarns us of the attention that we ought to pay to the matter." The general announced besides, "that the Russians extended themselves towards the Quarantine. It is not to be doubted," said he, in conclusion, "it is an advanced line of defence which they are establishing, with most daring activity. Day and night they are to be seen working unceasingly. If we do not march upon them, the enemy, emboldened, will be able to march upon us."

On the morning of "May-day," Canrobert issued his reluctant order for this enterprise. No time was required for preparation, Pelissier had already arranged everything, foreseeing the imperative necessity of accomplishing the object. The execution was committed to General of division De Salles, under whose command were placed Generals Bazaine, De la Motte Rouge, and Rivet. Lieutenant-colonel Raoult was also to take an important part in the work. These generals reconnoitred the ground during daylight of the 1st of May, so as to make their plans of attack on the spot itself. Canrobert accompanied them.

At five o'clock in the evening, the troops designated for the exploit arrived at the Clock Tower, and were massed near it in different detachments, each detachment accompanied by a proportionate body of workmen. The major of the trenches, and his aides-major distributed to the officers precise instructions as to the parts they were expected to perform. The troops moved slowly away, quietly entered the trenches, and stole furtively along in single file, so as not to attract the enemy's attention. The clearness of the night, which made the danger of detection by the enemy greater, also facilitated the exactness of every movement. The attacking mass was separated into three columns: General Bazaine, with the left of these, was to turn the work; General la Motte Rouge was to assail the position in front; the right column was of less importance, it consisted only of a battalion of foot Chasseurs, supported by two companies of the Fighting 42nd—as they well deserved to be called—and was led by Captain Villerman, supported by Captain Ragon.

At half-past six, a rocket shot up into the air, and instantly the French columns rushed on to the attack. They this time imitated the mode in which their English allies so rapidly stormed pits and trenches opposed to them—for

they ran on, with as much speed as was consistent with order, and, without firing a shot, scaled the parapets and dashed hand to hand upon the foe. On the left, the foreign legion, headed by Colonel Viénot, were the first troops of General Bazaine which reached the trenches, and they were received by a fierce fire of musketry. With shouts of "*Vive l'empereur*," they overflowed the parapets, and were hand to hand with the enemy, as was the case with the troops De la Motte Rouge on the centre, with the 46th, so often victorious, bore down the obstacles. The Russian officers, as usual, formed prodigies of valour, rallying the men to the rear of the work, where a *place d'armes* had been provided. On every point the defenders were forced to give way before the bayonet. Colonel Brégeot arriving with the 98th regiment, rendered vain all hope of a rally on any part of the vanquished. As usual in such cases, the Russian cannon opened to cover the retreat of the troops; grape-shot was showered on the place, but before the cannonade began the workmen had levelled, altered, and reconstructed much of the conquered position; and continued their work undauntedly beneath the storm of case-shot which swept over and among them. The parapets were soon so altered as to change the position, gabions were placed upon the bastions, and the work accomplished. Colonel Guilleminot of the engineers did honour to his country himself, by the skill and courage he evinced in the direction of this work. General Leboucq replied to the Russian artillery, checking their fire and punishing those who directed it. It was generally the case, many of the French soldiers were rash in the hour of victory—they pursued the enemy up to the Central Bastion, which they foolishly attempted to scale, the result was, destruction to most of those who precipitate bravery carried them so far. Some mines were sprung around the bastion, which tore up the earth in every direction, blowing to pieces the adventurous men, who in the hour of rash valour had found their way there. Still, however, the enemy recovered himself, and pushing forward his columns, attacked the French, but was repulsed: a second attempt, equally unfortunate, but that did not deter the Russians from a third, in which the repulse was so signal, and the attempt itself proved so costly in life, that the French were left in possession of their capture. They, however, did not relax their vigilance, but all night long five companies in front lying on the edge of the five deep, with fixed bayonets, ready to start into action at the first sound of the enemy's approach.

Canrobert watched the progress of this encounter from the observatory, but, unable to judge the state of affairs from the flickering and uncertain fire which ebbed from the

owed up towards the French lines with such constancy and fitfulness, he dispatched various officers to bring him some tidings of the fight; while they were on their errand, soldiers arrived from the combat bringing upon a litter the brave Colonel Viénot, slain at the head of his men: they announced to their chief the victory. This procession was speedily followed by two others, bringing upon litters Commandant Julien and Captain Dubosquet—both were dead.

When daylight dawned the scene of recent strife was strewn with dead, especially those of the enemy. Nine portable mortars, unlinked, were captured, many muskets, and a large quantity of artillery *materiel* and tools. Four hundred workmen occupied the morning making communications between the conquered work and the French approaches. The prize was worth the sacrifice—it brought the French 150 metres nearer to the Central Bastion. The importance of the conquest will be better judged by the private report of General de Salles to General Pelissier:—

GENERAL.—The orders which you gave me yesterday morning have been executed. The important work which the Russians have constructed at a few metres from the battery No. 40, has been vigorously carried at the bayonet's point by our brave soldiers; and the troops maintained themselves there. Under the direction of some officers of engineers, the parapets have been turned, and a communication with our approaches has been constructed during the night. We are able to retain the work by daylight. I am confident that it belongs to us definitely. This work presented a double line of works; its importance was immense. Its object was to crush, by the fire of its artillery, the battery No. 40 and the works which surround it; command two gorges which separate this battery from the Flagstaff Battery and from the crest upon which we have established the batteries Nos. 41 and 42. Almost entirely finished, it had already received an armament of mortars, and was defended by several battalions, backed by the cross-fire of the Flagstaff Battery and of the Quarantine, and exposed to the fire of the left face of the Central Bastion, and of the bonnet (*flèche*) which covers it. The work belongs to us; the defenders have been driven out at the bayonet's point; the artillery is in our hands. All the efforts of the enemy in attempting the recapture of this work have failed.

Next day at three o'clock, the enemy made a separate attempt to reconquer the lost ground. The position was defended by the troops who were left, and who were still weary from the heroic exertions which they had made. The foreign legion, which had acted so heroically in the assault, now heroically occupied the post of danger in the defence. The number of men which remained in occupation of the work was small—so was the number of the enemy who sought to recapture it, and never did the Russians behave better. They were composed of a body of picked men, chosen from volunteers; they penetrated the works, and fought bravely with broken muskets, picks, and stones, in one of the most desperate combats which had taken place during the siege. It was in the middle of daylight, yet so confused was the conflict,

that the combatants grappled one another in individual and deadly strife, as if in a night attack. The works were kept by the French, and the Russians, who so bravely attempted its recapture—or rather the few left of them—were driven back to their own lines. On the 3rd of May a white flag was hoisted on the Central Bastion, and a Russian officer demanded a truce for burial, which was acceded. In these two combats eleven French officers were killed, and twice as many wounded, some dangerously. Thus May opened for our allies in conflict and in victory. The first act of the British chief was to communicate to the army under his command the approval of her majesty in reference to a gallant transaction. The order of the day is dated April 30th, but was actually issued May 1st.

GENERAL AFTER ORDER.

*Head-quarters before Sebastopol, April 30.*

THE commander of the forces has the highest satisfaction in publishing to the army the copy of a despatch which he has received from the minister of war, conveying her majesty's gracious approbation of the conduct of the troops engaged in the repulse of the enemy, who attacked the trenches on the night of the 22nd of March:—

*War Department, April 9.*

MY LORD,—I received on the morning of the 6th instant your lordship's despatch of the 24th ultimo, in which you report to me the attack which was made by the Russians upon the intrenchments of the allied armies upon the night of the 22nd. I immediately laid this despatch before the Queen, and have received her majesty's commands to express to your lordship her admiration of the gallant conduct of her troops upon this as upon every former occasion. Her majesty desires me to express to your lordship, and through you to the troops under your command, the pride which she feels in the invariable gallantry displayed by them. The Queen deeply deploras that the repulse of the enemy was not effected without the loss of some gallant officers and men, whose devotion to their country's honour neither she nor that country can ever forget. I have the honour to be, &c.,

PANMURE.

*Field-marshal the Lord Raglan, G.C.B., &c.*

Lord Raglan avails himself of the opportunity to notice in terms of the highest commendation the distinguished gallantry of a detachment of the 77th regiment and other troops of the light division, under Colonel Egerton, in the capture of the rifle-pits, in establishing themselves in them under the judicious direction of Lieutenant-colonel Tylden, of the Royal Engineers, on the night of the 19th, and in their resistance to the fruitless attempt of the enemy to dislodge them from the one it was thought desirable to retain. It is a matter of deep regret to him that the army has, on this occasion, to deplore the loss of Colonel Egerton, whose conspicuous conduct and able and zealous devotion in every part of his duty rendered him one of the most valuable officers in her majesty's service.

(By order) J. SIMPSON, *Chief of the Staff.*

The following order of the day of the same date, shows how important were the contributions of science to the efficiency of war:—

*Head-quarters before Sebastopol, April 30.*

No 1. The use of the submarine electric telegraph is restricted to the following authorities, viz.:—

The commander of the forces of the British army.  
The commander of the forces of the French army.  
The commander-in-chief of the English fleet.  
The commander-in-chief of the French fleet.

The signature of any one of the above officers will be required to give authority for the transmission of any message by the telegraph. The telegraph arrangement is not yet in so complete a state as to admit of the transmission of any communications except those which are upon public service.

Lord Raglan was not exempt from anxiety concerning the health of the army when summer broke in brightness over the encampments. Crimean fever and cholera gave tokens of renewed activity, and various orders of the day, unnecessary for publication, were put forth, regulating the clothing of the army, and constraining attention to cleanliness. The food with which the troops were supplied was abundant and excellent; the bread was dark, but sweet and good, especially when not allowed to grow too stale. The arrival of M. Soyer some time after was of great service, as contributing to procure for the army better cooked and more nutritious rations. There were fifteen different kinds of food at this juncture distributed to the men, including wholesome fresh meat and varieties of vegetables. The following order of the day was most opportune, and produced effects the most salutary:—

WITH a view to maintaining the efficiency of the transport of this army, it is highly desirable that where the exigencies of the service will admit of the arrangement, one day in the week should be allotted for rest to both men and animals. General officers commanding divisions will accordingly be pleased to cause one-seventh of the transport establishments attached to their respective divisions to remain daily unemployed in their lines.

When Miss Nightingale arrived in the Crimea she was received as an angel of health, and her suggestions were very generally acted upon. The Crimean army fund agency wound up its affairs in the early part of this month, and the agents received high encomiums from Lord Raglan. The following communication to his lordship terminated the duties of the agency:—

*Crimean Army Fund Agency, Kadikoi, May 8.*

MY LORD,—We have the honour to report to your lordship that the operations of the Crimean army fund, of which we are the honorary representatives in the Crimea, have now closed. In announcing this officially to your lordship, we beg to express a hope that our endeavours to carry out the thoughtful and generous intentions of that association towards our noble and gallant countrymen in the Crimea have in some slight degree promoted the public service, and have not interfered in any respect prejudicially with the organisation of an army which we so love and admire.

We cannot conclude our mission without thanking your lordship, the quartermaster-general, and the authorities, for the kind countenance and support which we have received from the very commencement to the termination of our difficult but most grateful task. Your lordship will allow us to speak most highly of the quartermasters of regiments with whom we have been thrown in such frequent contact.

We have, &c.,

ALGERNON EGERTON.  
THOMAS TOWER.

*Field-marshal Lord Raglan, G.C.B., &c.*

On the 5th of May, the English commander wrote home referring to the victories obtained

by his ally on the 1st, and reporting casualties which had taken place under the fire of garrison:—

*Before Sebastopol, May*

MY LORD,—Since I wrote to your lordship on the instant nothing of importance has arisen; the enemy appear to be collecting troops upon the high ground the opposite side of the Tchernaya, in the neighbourhood of Sebastopol, and convoys are constantly seen moving that direction. The fire from the place upon our trenches has not been heavy, but, notwithstanding, I have casualties to report to you, as shown in the accompanying returns; and I have to lament the death of three promising young officers, Lieutenants Carter, of the Royal Engineers, Curtis, of the 46th, and White, of the 1st regiments. On the night of the 1st instant the French attacked a kind of counter-guard which the Russians established in front of the Central Bastion. The operation was quite successful, and the enemy were driven out at great loss, leaving behind them nine small mortars, and allies have remained in the work, notwithstanding heavy fire to which they have been exposed, and established themselves therein, frustrating the efforts made by their adversaries to dispossess them of it. The following day, when a vigorous sortie was repulsed and the Russians were again great sufferers. The conduct of the French troops was very brilliant.

I have, &c.,

*The Lord Panmure, &c.*

RAGLAN

Concerning the same event, Canrobert happily expressed himself when he wrote, 4th:—"This double combat characterises, in most happy manner, the qualities of impulse and ardour which are proper to our troops. They did they give proof—upon a theatre restricted, it is true, but where the drama of war manifested in its most thrilling forms—of valour and impetuosity."

On the 2nd of May, the Kertch expedition set sail, after much difference of opinion between the allied commanders, which laid the foundation for the ultimate resignation of General Canrobert. Lord Raglan renewed his former expostulations and remonstrances, and with persistency as successful as that of General Pelissier in reference to the attack on the works before the Central Bastion, Canrobert still urged that the French army of reserve, then encamped in Turkey, would speedily arrive, and that there would be time enough to attempt extensive enterprises. "Let us profit," said the chief of the English army, "by the time which remains to us before the arrival of the army of reserve to explore Kertch, and the Strait of Yeniköy, to separate Asia from Europe, and take from the Russians the means of re-victualling which they draw from the Sea of Azoff. It is the most urgent to use despatch," he added, "because the Russians are working to obstruct the passage, and each day of delay doubles the difficulties, and takes from this enterprise favourable chances of success."

It was on the 30th of April the steamer *Albatross* to sea, but purposely went in a wrong direction to puzzle the enemy, and sailed as if bound for Odessa; but that night beat backwards, and the whole fleet gradually joined, and the whole

destined for the enterprise, were at last embarked, and dispatched to their destination. The flotilla was to rendezvous lat. 44° 54' long. 3° 28', which they accomplished in safety, but, before anything could be effected, they were ordered back by express sent from Canrobert, which Admiral Bruat, by the laws of the French service, was bound to obey, and Admiral Lyons then ceased to be in a condition to proceed alone; he soon after received a message from Lord Raglan to bring back the troops. The force which embarked was 8000 French, under the command of General d'Autemarre, successor to Forey (to whom the French emperor assigned the presidency of Oran, in Africa); 1000 British, under Lieutenant-general Sir George Brown; and a Turkish brigade of about 1000 men. The extraordinary course adopted by Canrobert, established such an opinion of his weakness in the fleets and armies, that both were filled with murmurs, and squibs and caricatures were circulated from battalion to battalion in both armies. He, who in his private correspondence, since published, was always writing home complaining of the delays of the English general, even when the latter was arming the French batteries with his mortars, and carrying up their shot and shell by his railroad, was the dead weight of the campaign, so far as any enterprise of real responsibility was concerned. Nothing could have been better planned than the Kertch expedition. It was necessary, it was wise, and the recall of it by Canrobert was a sheer act of fruitless irresolution and military incapacity. None braver in the field than the brave Canrobert, none truer to his country; but he had not the resolution to assume large responsibilities, nor the capacity to embrace comprehensive plans and purposes. Gallant and disinterested, he was well suited to a less enlarged command. A man could be more free from mean jealousies, by which he was never actuated in his complaints of Lord Raglan; but he was restless and impatient until a project undertaken was accomplished; yet, so timid of responsibility, that he could be easily induced to command it. The cause of the sudden change of purpose with the French general, in this instance, was a telegraphic despatch from the French emperor:—

"On the receipt of this despatch, assemble your means in order to prepare yourself to attack the enemy externally;—concentrate immediately all your forces; even those at Maslak." General Canrobert immediately proceeded to Lord Raglan. "He had been able," he said to him, "in consequence of a certain latitude I gave him as to time, to profit by it," as the English general had himself said, "to send troops to Kertch; but in face of a positive order, emanating from the emperor, which

OL. II.

commanded him to assemble without delay all his means of attack, and to concentrate his forces, he could not allow any part of his troops and transports to be removed to any considerable distance."

It was in vain that Lord Raglan argued the urgent importance of that time for accomplishing the objects of the expedition, and the consequences that would ensue, if, after proceeding so far, it should be recalled. The other officers, French and British, pointed out how fully the nature of the case justified the responsibility he would assume by allowing the troops to proceed. He would listen to no expostulation, incur no responsibility, but literally obey a despatch sent in obvious ignorance of the real situation of affairs. Too much was done in Paris, too little in the Crimea. The French War-office pertinaciously meddled with everything; the French commander-in-chief was wafted hither and thither by its whims. A mutual understanding between the two generals could no longer exist. Lord Raglan was not willing to place himself under the command of the Emperor Napoleon, or Marshal Vaillant; and he must either be governed by telegraphic despatches from the French war-minister, or remain inactive, except so far as the prosecution of the siege-works of his own lines before Sebastopol. Such a state of things could not last. Canrobert immediately dispatched the French fleet to the Bosphorus to bring up the army of reserve, which was encamped under the command of General Regnaud de St. Jean d'Angély. In the meantime an envoy arrived from the emperor, Commandant Favé, who presented to General Canrobert a plan of campaign, which the emperor wished to have put into execution. He had himself abandoned the idea of carrying it out in person, in consequence, it was alleged, of the mode in which the Vienna conference terminated, although it was difficult to see how that could effect his personal superintendence of the campaign. It is certain, however, that on political grounds the emperor was well advised to abandon the project of a command in the field, and he accordingly committed the following scheme to his lieutenant:—

*The Emperor, to General Canrobert, Commander-in-chief of the Army of the East.*

*April 28, 1855.*

"The fire which has been opened against Sebastopol will, by this time, have either succeeded or failed. In either case, it is absolutely necessary to quit the defensive position in which the army has remained during the last six months. For this purpose, in accord with the English government, I would have the troops divided into three armies—one siege army and two of operations. The first

is destined to protect Kamiesch and to blockade the garrison of Sebastopol; the second to operate at a short distance from Balaklava, and, in case of need, to take possession of the heights of Maskenzie; and the third is intended to effect a diversion.\*

"If, as I have reason to think, the Russians have 35,000 men in Sebastopol, 15,000 to the north of Eupatoria, and 70,000 between Simpheropol, the Belbek, and the Tchernaya, it will suffice to have 60,000 good troops to destroy the whole Russian army, which might be taken in the rear before it could unite all its forces; and even should it be able to unite them, the numbers would be almost equal; for that great principle of war must not be forgotten, that, if a diversion is made at a certain distance from the base of operations, it is necessary that the troops employed in such a diversion should be in sufficient number to be able of themselves to resist the army of the enemy, which might unite all its efforts against them.

"All this being well considered, I would have sent into the valley of the Baidar the 40,000 men taken from the army of Sebastopol; and, supported by Lord Raglan, I would have occupied, from Skelia as far as the bridge of Teulé and Tchorgoum, the four roads which crossed the Tchernaya. We should thus have had so many *têtes-de-pont*, threatening the left of the Russians, established on the heights of Mackenzie.

"After this movement I would have left Lord Raglan master of all the positions on the left of the Tchernaya from Skelia as far as Tchorgoum; I would have assembled in the rear of the lines occupied by the English the 40,000 men of the active army, with the cavalry, and the means of transport at my disposal, waiting in that position, with look-outs on the cliffs by the sea-shore, for the arrival of my *corps d'armée*, which, coming from Constantinople, would have received orders to reconnoitre Cape Pharos.†

"What would be our position in regard to the Russians? The movement on Baidar, by

\* "1st. The siege army, composed of 30,000 French and 30,000 Turks ..... 60,000  
Without counting 10,000 men who cannot be disposed of.

2nd. The first army of operation, under Lord Raglan, of 25,000 English, 15,000 Piedmontese, 5000 French, and 10,000 Turks ..... 55,000

3rd. The second army of operation, of 40,000 French of the army of Sebastopol, and 25,000 of the army of reserve at Constantinople ..... 65,000."

† "The active army would be thus organised:—  
General Canrobert, General-in-chief.

1st *Corps d'armée*.—General Bosquet, with four divisions of infantry and one of light cavalry.

2nd *Corps d'armée*.—General Regnaud de St. Jean D'Angély, with two divisions of infantry, one division of the guard, and one division of heavy cavalry. General Pellissier would have continued to command the besieging army."

giving up the passages over the Tchernaya would have threatened their left, and led to suppose that it was our intention to lodge them from the heights of Inkerman Mackenzie. The Russians would have thus kept in check, and their attention drawn on Inkerman and Perekop. Our positions have been excellent, and my plans being known, if anything had deranged them, not would have been compromised. But, supposing that nothing had opposed the general plan, would have been carried out in the following manner:—As soon as the fleet, bringing 25,000 men of the reserve, had been approaching, orders would have been given to them to proceed to Alouchta, to that part of the beach which, secretly examined, should have been found favourable for a landing. The first body of 3000 men would, immediately after their landing, establish themselves three leagues from Alouchta, beyond the defile of Alouchta. No others would be landed until information had been received of the occupation of the defile. The reports being favourable, the advanced guard would take up a good position beyond the defile, intrench themselves, and await the army. The remainder of the 25,000 men would then land, and the 40,000 assembled at Baidar would receive orders to march along the road which skirts the sea-coast to Yalta. In three days, that is to say two days after the landing of the army at Alouchta, the 40,000 men from Baidar would have joined under the walls of Simpheropol the 25,000 landed; possession would have been taken of the town, and a sufficient garrison left in the rear, or a good position would have been taken on the road we had just passed, to secure the rear of the army.

"Now, of two things one: either the Russian army before Sebastopol would have abandoned that formidable position to meet the army which would advance from the side of Bagtché Serai, and then the first army of operation, under the orders of Lord Raglan, would push forward and take possession of the position of Inkerman; or the Russians would advance their lines the arrival of the army advanced from Simpheropol, and then the latter, advancing from Bagtché Serai on Sebastopol, always supporting its left on the mountains, would form a junction with the army of Lord Raglan (who would have advanced from Bagtché upon Albat), repulse the Russian army, and drive it back into Sebastopol or into the sea.

"This plan appears to me to possess great advantages. In the first place, the army, far as Simpheropol, which is only nine leagues from Alouchta, would be in communication with the sea; the country is very healthy, better supplied with water than any other part of the Crimea; its rear would be al-

ture; it would occupy ground where our superiority in cavalry would be less sensibly felt; and lastly, it would come suddenly on the Russian line of operations, and cut off all their supplies, by probably taking possession of their parks of reserve. If the defile of Ayen—indispensable element in the success of the plan—should be so fortified as not to be capable of being taken, the 3000 men who were advanced for that purpose would be at once disembarked; the army of reserve would then be landed at Balaklava, and the diversion which was intended to make on Simpheropol would be made by Baidar, but with fewer advantages. “As to the march of the 40,000 men from Baidar to Alouchta, it would be without danger, as the ground is protected by almost inaccessible mountains, and is at a great distance from the Russian army. Our army might, during almost all the distance along the sea-shore, be followed by steamers to receive the sick.\* If, on the contrary, it should be wished to make a diversion by Eupatoria, the opinion is that nothing could be more dangerous or more opposed to the rules of art and the counsels of prudence. In order to operate from Eupatoria on Simpheropol, the army so engaged would be in an open and unhealthy country, and almost without water; it would be on ground where the Russian army, which is very numerous, would have every chance of success; and it would have to make a march of sixteen leagues in face of an army which might come from the north as well as from the south, fall upon our columns, and cut off all retreat. The wings of the army would have no support from the nature of the ground. In order to go from Eupatoria to Simpheropol, it must carry with it all its provisions and all its ammunition; for when once the army had left Eupatoria, the 15,000 Russians in that neighbourhood (most of whom were cavalry) would harass its rear, and prevent the arrival of any convoys. If it should meet with any resistance at Simpheropol, and the Russian army should, by a change of front, be taken position on the road over which the army had passed, that army would be either annihilated or famished. There is, besides, another absolute principle; and that is, that a flank march is not possible unless at

\* On the other hand, the minister of war would have collected at Constantinople rations of meat, gunpowder, and other objects occupying little space, in order that the soldiers, by leaving all their baggage, might carry eight days' provisions, with a shirt and a greatcoat. The *corps d'armée* of reserve would have had on board the steamers eight days' rations for 60,000 men. The waggons which would follow the army from Baidar would carry the same quantity, so that the 60,000 men commencing the movement would have sixteen days' provisions assured to them. When once they had reached Simpheropol the waggons might revictual the army from Alouchta.”

a distance from the enemy, and when sheltered by the nature of the ground.

“The army which would operate from Eupatoria to Simpheropol would consequently have no line of operations, nor any defence assured for its flanks, nor any means of retreat, nor favourable field of battle, nor means of procuring food. Lastly, this army of operation, instead of being compact—composed of soldiers of the same nation, commanded by a single chief—would be formed in great part of Turks; and as some allied divisions would be added to it, there would be neither unity, nor security, nor absolute confidence.

“If, instead of marching on Simpheropol, the army leaving Eupatoria should desire to proceed direct to Sebastopol, it must recommence, under disadvantageous conditions, the campaign which we made in disembarking in the Crimea; it must carry the formidable positions of the Alma, of the Katcha, and of the Belbek. This enterprise is impossible, for it would be disastrous. Hence follows the absolute necessity of leaving at Eupatoria only the number of Turks strictly indispensable to defend the place.

“Such is the plan which I wished to execute at the head of the brave troops which you have hitherto commanded; and it is with the most profound and acute sorrow that I find that graver interests force me to remain in Europe. “NAPOLEON.”

There is one portion of the foregoing programme of military operations which was erroneous as to matter of fact. The objection to operations from Eupatoria because of deficiency of water is invalid. After Southern Sebastopol fell, Pelissier acted upon this unsound information, and Codrington, then in command of the British army, fell in with his views. The course which an army acting from Eupatoria must have taken was well watered. Mr. Upton, the distinguished engineer, son of Colonel Upton, who built the docks of Sebastopol, and who knows the topography of that region well, declared repeatedly to the author of this History, that the route of an army acting from Eupatoria in the direction indicated, would be favourable from the very circumstance that water existed abundantly. In other respects the opinions of the emperor did not rest upon sufficient data, but this is not the proper place to discuss them. When Canrobert perused the extraordinary document just quoted, he perceived that it was impossible for him any longer to hold the command of the army. He knew that Raglan and Omar Pasha would never consent to any such scheme, as both generals concurred in the opinion that if operations “on the exterior” were resolved upon, Eupatoria was a good base. Lord Raglan, however,

was for giving undivided and vigorous attention to the siege. There can be no doubt that as the English marshal gained experience in the command of a large body of men, his talents were seen to more advantage, and that he then generally displayed more soundness of judgment and military comprehensiveness than Canrobert. With such men as Sir Richard England, Sir John Burgoyne, Sir Harry Jones, and Sir Colin Campbell in his counsels, he was likely to improve, as he more frequently consulted his superior officers, and relaxed the reserve which was so injurious to him in the earlier stages of the campaign. Both the English and Turkish generals resisted this scheme of the emperor *in toto*. Omar Pasha came from Eupatoria to the Crimea, and conferred with the English general, and their concurrent opinion became strengthened in opposition to a plan, which, at all events to them, appeared wild and impracticable. The French general was obstinately determined to carry out his master's views as to Eupatoria, and the other allied generals were obliged to abandon all idea of action in that quarter. Thus a large force was kept idle where active operations might have been prosecuted with vigour and success. Lord Raglan considered that the route from Alouchta to Simpheropol was exposed; he preferred that from Baidar to Bagtché Serai, but did not approve of either; and the experience of General Pelissier, after the fall of Southern Sebastopol, justified the judgment of the English chief. In fine, Lord Raglan and Omar Pasha were opposed to the whole plan of the French emperor in principle and detail. Canrobert expressed his own concurrence with the emperor's views, and avowed his despair of ever carrying Sebastopol by assault, or subduing its earth-works. Raglan, Sir Richard England, General Jones, Sir George Brown, Pelissier, and Bosquet, were all hopeful that, by perseverance and courage, the place would be ultimately subdued, and the army set free for operations in the field, more hopeful of success than those sketched by the French emperor. Canrobert accordingly, following the patriotic and self-sacrificing impulses of his character, offered the supreme command to Lord Raglan, and advised Omar Pasha to follow his example: he declared that the war could not be carried on by a command divided among three co-ordinate chiefs. Lord Raglan, according to Bazancourt, was at first astonished, and refused so great a responsibility—then hesitated, and finally acceded; but, upon the first act of supremacy, Canrobert refused obedience to the chief he selected. According to Bazancourt, his lordship demanded that the English trenches should be occupied by the French army, and Canrobert refused compliance. Had his lordship made this demand it would not have been so

unreasonable, as it would have created unity in the action of the siege, and set the English army free for any exterior action which might prove feasible; but we doubt the assertion of Bazancourt, who is often insidiously destructive of the English generals.

It is certain that the resolution of Canrobert to carry out the projects of his emperor led to serious conferences, and one of them lasted seven hours. General Canrobert was, in the meantime, lampooned and caricatured by every wag in all the services, military and maritime, especially in the fleet and army of his own nation: yet he was both loved and respected. His vacillation and want of decided plans of action in conducting the siege were the cause of these acts of disrespect. It was not understood that his own government was in a great measure the cause of this. Under these circumstances, General Canrobert resolved to sacrifice his own position to the general good, and on the 16th of May, telegraphed to the French War-office his resignation of command.

"My enfeebled health no longer permitted me to retain the command-in-chief, my duty to my sovereign and my country compels me to ask you to transfer that command to General Pelissier—an officer of great skill and experience. The army which I leave to him is intact, warlike, ardent, and confident. I beg the emperor to leave me the place of a combatant in its ranks, at the head of a simple division."

In attributing his resignation to ill health, the general was actuated by a desire to conceal the real causes of his procedure from public view. On the 19th of May he thus expressed himself in a letter to the emperor:—

"The little relative effect produced by the numerous and excellent batteries of the allies against Sebastopol, since the reopening of the fire; the non-attack of our exterior lines by the enemy—an attack which had appeared very probable, and on which I had founded hopes of a success more decisive than that of Inkerman; the arduous duties which I have experienced in preparing the execution of the plan of campaign of your majesty, now becomes almost impossible by the non-co-operation of the chief of the English army; the very false position towards the English in which I have been placed, by the sudden recall of the Kertch expedition, which I have since discovered they attached great importance; the extraordinary moral and physical fatigues, to which for nine months I have not for an instant ceased to be subjected;—all these reasons, sire, have produced in my mind the conviction that I ought to

ger to direct in chief that immense army, esteem, affection, and confidence of which have been enabled to obtain. Thenceforward, duty towards your majesty and towards country was to retire, and ask to be received by the general for whom, in his intelligent foresight, the emperor had confided to a letter of appointment as commander-in-chief;\* and who united the conditions of capacity, moral authority, and the habit of conducting great undertakings, with the energy necessary to bring to a fortunate and permanent result the vast enterprise which the death of my predecessor and the will of the emperor had committed to me. The officers and the officers are all well acquainted with the warlike qualities of General Pelissier; they will give him all their confidence, and the cooperation of us all is secured to him; and I know that the new general-in-chief has the strongest confidence of success. Your majesty will allow me to observe, that my name is too little known to the troops, whose confiding affection has never ceased to do me honour, and in the existing circumstances not to remain in the midst of them, in order, in their dangers and dangers, to set them an example of devotedness to the service and glory of the emperor and of France. I therefore request your majesty to allow me to command a simple division in this fine and heroic army, the conduct of which has conferred and will continue to confer so much honour on France."

To the minister of war he wrote thus:—

The army which I leave to my successor will come out of the rude and perilous trials it has had to undergo, fuller of ardour and confidence than ever. It is a glory for France, which has never ceased to be to me a source of consolation, from the devotedness which it has shown towards me up to this day; and it is my duty to accomplish the greatest undertakings which may be required, in the service and for the glory of the emperor."

After these communications were made, he handed the presence of General Pelissier in the tent, when, according to Bazancourt, the following scene took place:—

"General," said he to him, "I was for a long time under your orders in Africa; now you who are under mine. In the high position which has been entrusted to me, it has been my duty to observe you closely; and I have recognised in the man who knows how to obey without murmuring, the rare quality

"The emperor, to guard against the chance that any fortune might deprive the army of its commander-in-chief, had dispatched to General Canrobert a letter of appointment for General Bosquet. After the arrival of General Pelissier, this secret letter of appointment (in case of accident, or of sudden death) bore the name of general."

of the authority of command;—that authority you must now prepare to exercise upon a large scale."

General Pelissier regarded him with astonishment.

"Listen to me with attention," continued General Canrobert. "The differences of opinion which, for some time past, have arisen between Lord Raglan and myself, have rendered my position a false one towards the head of the English army, and my relations, consequently, very embarrassing. In my opinion, under existing circumstances, and in consequence of unforeseen occurrences, my continuance in my present capacity adds farther complications to a situation already sufficiently critical. From this moment, therefore, it becomes my duty to the emperor and to my country to retire. I have, accordingly, requested his majesty to confer upon you the command-in-chief, and permit me to place myself at the head of a division."

"General," said General Pelissier, with emotion, interrupting him, "do not persist in this, I entreat you; hereafter you will bitterly regret it."

"To have performed a duty can never be a cause of regret," General Canrobert simply replied.

General Pelissier's feelings betrayed themselves in his voice. Tears rose to his eyes, and as General Canrobert seemed surprised to see so much emotion displayed upon that manly and warrior-like countenance, he said—

"Yes! It is so; I do not conceal it. I am deeply moved—not so much by the responsibility about to be laid upon me, as by such a complete abnegation of self. Wait yet awhile, general."

"The despatch has gone," replied General Canrobert; and he handed to his successor a copy of it. General Pelissier read it, and then, in silence, shook the two hands of General Canrobert, and the generals separated.

This was a touching scene, and merits to be preserved by history among its souvenirs.

In reply to Canrobert, a telegraphic despatch from the emperor was promptly sent. It was as follows:—

*Paris, May 16, 11 P.M.*

THE emperor accepts your resignation. His majesty regrets that your health has suffered; he congratulates you on the feeling which makes you request to remain with the army; you will there take the command, not of a division, but of the corps of General Pelissier. Transfer the command-in-chief to that general.

This was communicated to Pelissier. The staff of the French army was convened, and in their presence Canrobert proclaimed the change which had taken place. The occasion was one of deep emotion to the heads of the French army.

On the 19th, Canrobert bid farewell to the army as commander-in-chief, and Pelissier, in an order of the same date, paid a noble tribute to the merits and self-denial of the retiring chief.

Pelissier, on assuming the command, paid his respects to Lord Raglan, whom he treated with great deference, and for whom he felt much esteem. Scarcely was he installed in his new position when instructions from the emperor arrived, directing him to abide by the programme which his majesty had marked out for General Canrobert, as far as he possibly could, but at the same time appending this very important addition—"If it is necessary to modify them, let it be done with the concurrence of Lord Raglan. Act in concert." Pelissier did act in concert with Lord Raglan. In the first place, it was resolved to resume the expedition to Kertch: the English and French admirals united with Lord Raglan and Omar Pasha in demanding it; Pelissier entirely approved of it, and gave his hearty co-operation. In the second place, the plan of carrying on the siege urged by Lord Raglan and by the British engineers, Sir J. Burgoyne, before he left the Crimea, and General Jones, since he assumed the office of chief of the engineer staff, Pelissier also heartily approved. The English had suffered greatly, and were much impeded in their approaches by Canrobert's inaction in reference to the Mamelon, and the other counter-approaches of the enemy, or against the French works. Canrobert would neither storm the Mamelon nor consent to Lord Raglan's doing it, while the latter and his engineers declared that necessary to further progress. The English generals were for boldly assaulting all the outworks of the enemy upon a regular and well-organised plan of operating in detail. Canrobert hesitated, allowed time to pass, and was unwilling to hazard anything upon the desperate measures of assault. The French army generally concurred with the English in their bolder policy, and Pelissier thoroughly appreciated the feeling, and apprehended the peculiarity of the situation.

On the 18th, the day before Pelissier assumed the command, Regnaud de St. Jean d'Angély arrived with his new *corps d'armée*, of which he was permitted to retain the command.

It is important, at this juncture, in the state of affairs, to give some notice of the previous military career of General Pelissier. There was not, perhaps, in the whole French army a more experienced or competent officer. Although, perhaps, both Cavaignac (then in exile) and Bosquet were more fit for the command-in-chief of an army for very varied operations, Pelissier was by far the most suitable to conduct so stupendous a siege. His antecedents

were full of exploit. A French officer thus counts them, and sketches his life:—"I was born in 1794. He entered the school St. Cyr in 1814, and was attached in 1815 to the household artillery of the king, with the rank of sub-lieutenant. Being placed in activity at the disbanding of the troops on the 26th of August, he entered, at the end of the same year, the departmental legion of the Loire Seine. On the 20th of January, 1819, he was admitted, after an examination, to the corps of the staff. In 1823, he made the campaign of Spain, with the grade of lieutenant, and was named chevalier of the Legion of Honour. After his return from Spain, he was successively aide-de-camp to several generals. In 1827 he was a captain, and made in the years 1828 and 1829 the campaign of Greece, as aide-de-camp to General Durrieu. He brilliantly distinguished himself at the siege of the castle of Morea, and was named Knight of St. Louis. In 1830, when the Algerian expedition was resolved upon, he belonged to it, and, as in the two preceding campaigns, drew upon himself the attention of his superiors, who pointed him out to the minister of war as an officer full of promise. In the same year he was named major and officer of the Legion of Honour. Those two rewards which followed each other, at two months' interval, sufficiently show the services which he had rendered, and how much they relied upon those which he was to render subsequently. In 1832 he directed the war depot, for several months, the military section of Algiers. After having been successively attached, in the course of several years, to general inspectors, Commandant Pelissier was appointed lieutenant-colonel on the 26th of November, 1839, and he immediately started for Algiers, as chief of the staff of the division. From that moment he never quitted Africa. In 1842, he was named a colonel and deputy-chief of the staff of the Algerian army. Everywhere he gave proofs of high intelligence and daring courage. In 1846 he was raised to the grade of brigadier-general, and commanded in 1848 the division of Oran. In all the expeditions in which he took part, General Pelissier distinguished himself by the energy of his resolutions and of his enterprises. His name was several times mentioned in the orders of the day of the army, and twice he was wounded before the enemy whilst fighting with intrepidity. Frequently stern to excess, in command, he hides under this rough exterior a heart warm and devoted to those he loves. In the later years of his stay in Algeria—having been appointed general of division since the year 1850,—he added to the qualities of a valiant soldier, those of enlightened organisation and administrator, during the command of the division of Mostaganem, of the division of Oran.

MAJORAL PELISSIER.  
(DUC DE MALAKOFF.)

*From a Photograph by A. Pottier.*

and lastly, in the general government, *ad interim*, of Algiers. The capture of Laghouat was a bold and brilliant feat of arms, which crowned the previous military services of the general."

General Canrobert refused to take the place of General Pelissier in the command of the 1st *corps d'armée*, and which was therefore confided to General de Salles. This was not only self-denying, but judicious, on the part of General Canrobert; for had he assumed the command vacated by Pelissier, it would have devolved upon him to execute the very things he shrunk from undertaking as commander-in-chief. General de Salles was an officer of experience; he had seen service first in the expedition to the Morea, next in Africa, then in the siege of Antwerp, and again in Africa. His direction of the well-executed attack of the 2nd of May gained for him great reputation in the

Crimean army. Still, it was doubted whether his experience was sufficient for so large a command.

The events narrated in this chapter were too important not to be placed in detail before the reader. Their consequences were momentous, and therefore we have followed the track of all those circumstances which constituted the painful complications of the period, but which at last gave place to a new order of things. Canrobert retired with dignity, and the sympathy and respect of the allied armies and nations went with him in his comparative obscurity. He did not partake of what so many have experienced, and which Shakspeare has so well described—

"The painful warrior famoused for fight,  
After a thousand victories, once foiled,  
Is from the book of honour razed quite,  
And all the rest forgot for which he toiled."

## CHAPTER LXXXIII.

BEFORE SEBASTOPOL IN MAY, CONTINUED.—ARRIVAL OF THE SARDINIANS.—USEFUL LABOURS OF M. SOYER.—ILLNESS OF MISS NIGHTINGALE.—FRUSTRATED ATTEMPTS OF THE RUSSIANS ON THE BRITISH ADVANCED TRENCHES, AND BRAVERY OF THE 68TH REGIMENT.—EXTRAVAGANCE OF THE TRANSPORT MANAGEMENT.—SICKNESS OF THE TROOPS.—DREADFUL CONFLICTS ON THE LEFT OF THE FRENCH.—CAPTURE OF RUSSIAN AMBUSCADES.—ADVANCE OF THE ALLIES UPON THE TCHERNAYA.

"It is no time to discourse: the day is hot, and the weather, and the wars, and the king, and the dukes."—SHAKSPEARE.

In the last chapter, the events of the siege which occurred between the recall of the expedition to Kertch and the instalment of General Pelissier in the command of the French army were omitted, in order to allow of the consecutive relation of the incidents of such deep interest, which so rapidly succeeded in bringing about the retirement of General Canrobert, and the substitution of a more vigorous director of French military affairs. While the emperor was endeavouring to govern the movements of the allied armies, and the chiefs were disputing, the Russians were working. It was truly no time to discourse: the weather was hot, disease was reappearing in the camps, the emperor was interfering, and the leaders were quarrelling; but the foe was turning up the earth with mattock and spade, placing gabions, and making desperate attempts against the allied troops.

On the 8th of May, the Sardinian army, under the brave and skilful General Marmora, arrived at Balaklava, and sent up their advanced guard on the 9th. They had scarcely taken a part in the duties they had undertaken, when cholera and Crimean fever made their appearance among them, and some officers and soldiers fell victims. M. Soyer was exerting

himself to improve the dietary of the army. The indefatigable and devoted Miss Nightingale was ministering mercy throughout the camp; and the British soldiers and sailors were working indefatigably, still borne down by overwork.

On the night of the 9th, the enemy made two serious assaults upon the most advanced parallel of the British right attack. These conflicts bore a close resemblance to many which preceded them: the enemy came on furtively, but this time the British were more on the alert, and the chastisement inflicted upon the enemy was more severe. The French manifested an earnest desire to aid the British, and drew off the fire of the enemy considerably.

On the night of the 10th, an alarm ran along the whole of the British lines. The Russians sought to effect a surprise on the advanced British parallels, which was detected and punished severely. For about half an hour, in front of the English right attack, the musketry rolled ceaselessly, but all the efforts of the Russian officers, and they were strenuous and brave, could not induce the soldiers to charge the English with the bayonet. They lay down on their breasts upon the ground, and in this

way loaded and fired; they suffered, consequently, less than they otherwise would have suffered; but as the position was new to them, they fired too high, and very little loss was experienced by the British.

On the 11th there was an awful storm, and the Russians took advantage of it, hoping to come up unheard upon the British left attack. The sentries were vigilant, and the foe fell back before the resolute fire of our men. They were rallied by their officers, and it was next to impossible to hear their approach, so loud and fierce was the storm. They gained the parapet unheard and unseen, for although very stormy nights are seldom dark, that night was one of dismal gloom. As they leaped into the trench, they were received upon the bayonets of the 68th regiment. This corps behaved most gallantly, maintaining a formidable conflict hand to hand with superior numbers of the enemy. They had a brave and skilful commander in their colonel, Mackey. Clearing the Russians out of the work, the fight was resumed with the enemy's supports, and this time the Russians were obliged to use the bayonet in and out of the trench. The conflict ended as such conflicts between the British and Russians always ended, by a decisive defeat of the latter. Their dead and wounded were numerous, and prisoners were left in the hands of the gallant 68th. In reference to these combats the English commander wrote home on the 12th of May as follows:—

"I do myself the honour to acquaint your lordship that General de la Marmora, with a portion of the Sardinian contingent, arrived off Balaklava on the night of the 8th instant, and he came up to head-quarters the following morning. The very unfavourable state of the weather since the 9th has prevented any material part of the force being landed; and it has been found necessary to send the vessels that brought it, and which could not be got into the harbour, to Kazatch Bay, until it should moderate. Five troops of the 12th Lancers landed on the 9th from the *Himalaya*, which performed the voyage from Alexandria to Balaklava in ninety-four hours. The enemy made two serious assaults upon our most advanced parallel of the right attack on the night of the 9th, but were on each occasion most nobly met, and repulsed with considerable loss. The arrangements of Colonel Trollope, who had charge of the right attack, and Lieutenant-colonel Mundy, the field-officer of the trenches, were most judicious; and Captain Turner, of the Royal Fusiliers, and Captain Jordan, of the 34th regiment, are reported to have done their duty in the most gallant manner. They opened a powerful fire on our trenches on the following night, and exposed their columns to

a heavy musketry fire from the troops on duty. They did not, however, reach the parapets, nor, indeed, come very near them. Last night a very determined sortie was made upon the advance of our left attack. The enemy moved forward in two columns from the Woronzoff Road. Our advanced sentries having slowly retired, the guard of the trenches was prepared to receive them, and consequently drove them back in the most determined manner. A few Russians only got into the parallel, and five were left dead close outside. The conduct of both officers and men was admirable, and it is with deep concern that I have to report the death of Captain Edwards, of the 68th foot, and that of five men. I have also the pain of saying that the wounded amount to thirty. Owing to the great quantity of rain which has fallen during the last few days, the service in the trenches has again been most arduous and severe upon our men, who deserve all praise for their energy and untiring perseverance. I enclose the returns of casualties to the 10th instant."

On the 15th his lordship again addressed the minister of war:—

"Since my despatch of the 12th instant, nothing has occurred worthy of being reported to your lordship. The fire has been very slack, and that of the enemy has been directed towards the French works, rather than against the English trenches. The remainder of the 12th Lancers has arrived, and will be disembarked to-day. All our means are devoted to the landing of the Sardinian troops, which the bad weather had prevented on the arrival of the first ships. I have found it necessary, in some instances, to land artillery horses at Kazatch Bay, to avoid further crowding the harbour of Balaklava. I enclose the return of casualties to the 13th instant, inclusive."

The camps were much distressed to hear that Miss Nightingale was attacked with Crimean fever. The heat now set in with nearly as much inconvenience to the men as the cold of winter, and as there was much decomposing matter about the camps, sickness went on increasing. The troops suffered much from the want of water, and but for the rains which had fallen for some days, the inconvenience would have been much greater.

The correspondents of the English press complained of the extravagance with which the chiefs of departments conducted their affairs, especially in the navy; and the way in which transports were kept idle in the harbour at enormous expense. Sir James Graham, who, as first lord of the Admiralty under the Palmerston government, ought to have known something of these matters, stated

his examination before the Sebastopol committee, almost in the same breath, that Admiral Dundas and that Lord Raglan were the responsible persons having control in this department; both officers disclaimed it, and Admiral Dundas declared that he never did or would assume the smallest responsibility or control in connection with the transport service. Mr. Russell commented that every sailor serving ashore cost the country about £25 per day, in consequence of the detention of vessels for their use in one way or other. A transport laden remained, according to the *Times'* correspondent, six weeks in harbour, without discharging its cargo, the country paying about £2 15s. per ton, per month. By the middle of May the heat was ninety-five degrees in the shade, and the sickness, indicated in the early part of the month, much increased. This state of things, at last, called for the notice of the commander-in-chief in his despatches. The reports of the medical officers, sent by him as enclosures, were interesting statistically, and as showing the difficulties still to be encountered in this great war. On the 19th of May Lord Raglan wrote as to Lord Panmure:—

"I have the honour to enclose a letter from the inspector-general of hospitals forwarding the weekly report on the sick of the army under my command. I deeply regret to have drawn your lordship's attention to the fact that cholera has reappeared here, that twenty men have died, and that fifty-two men were yesterday labouring under the fatal disease. The troops have been free from it for several months, and I was in hopes that we should have had no return of it. General Canrobert informs me that it had never ceased to prevail in the French army, in a greater or lesser degree."

In this despatch Lord Raglan enclosed a report from Dr. Hall, inspector-general of hospitals, dated at the head-quarters camp, on the 12th, and which ran as follows:—

I have the honour to report on the weekly number of sick of the army serving in the Crimea, from the 6th to the 12th instant, and to observe that the following are the proportions, which are extremely moderate, viz.:—Ratio of admissions to strength during the week, 0.10 per cent.; ratio of deaths to strength during the week, 0.20 per cent.; but I regret to have to add that since the 12th instant spasmodic cholera has considerably increased, and as many as eighteen deaths, and fifty-two cases of treatment, have been reported within the twenty-four hours. The 4th division, including the Buffs and 71st, the 2nd and the 3rd divisions, with B G and P batteries of artillery, have suffered most; but as yet the

disease can hardly be said to exist in the cavalry, 1st and 3rd divisions, or in the siege-train. This exemption, however, there is reason to apprehend, will not be of any very long duration. Hitherto the disease has chiefly attacked new comers, and many of the cases have occurred when the men were either actually in the trenches, or immediately after their return from duty in them. This may have been owing to the combined causes of fatigue and local miasma, but to neither in particular, for we find the men of the B G P batteries, who never go into the trenches at all, and who are not overworked, have suffered nearly as much as any others. All the men attacked in them, with, I believe, one exception, had recently arrived in the Crimea. In the P battery, two of the men attacked had only just landed; one, I think, had been about twenty-four, and the other thirty-six hours on shore when they were attacked, and in both the disease followed intemperance.

"The weather, which for some days previous to the 10th had been extremely warm, was followed on that day by heavy rain, which continued, alternating with periods of dense fog, during the whole of the 11th and 12th; but it has now cleared up again, and the temperature has been considerably reduced. The Buffs and 71st, which had only just marched up to their new encamping ground before the rain set in, were ill prepared for such an occurrence, and their tents, which had not been properly trenched, were speedily flooded. The 48th regiment, in the 4th division, and the 2nd battalion of the Royals, in the 2nd division, both newly-arrived regiments, had been a few days longer in camp, and were somewhat better prepared, but the sites of their camp are not good, nor are those of the Buffs or 71st either. The 48th are on a level piece of ground, where the 63rd hospital establishments were in the winter: the soil is tenacious, and the water lodges in pools, and remains until evaporated by the sun's rays. The Buffs and second battalion of the Royals are on low ground between the second and fourth divisions, with the same disadvantages as the 48th; the 71st occupy rather better ground, as their tents are pitched just where the ground begins to rise to form the hill on which the huts of the 14th and 39th have been built; but, I think, all these regiments might be removed with great advantage to their health, to the higher and drier ground, and I hope, from the short distance, without any very material detriment to their military position. The health of the first division continues to improve, and the number of the fever cases in the 79th and 93rd is considerably reduced. The men are well supplied, and the duties and fatigues comparatively light. In the left siege-train and attack

some cases of low continued fever have occurred, arising, Mr. Elliot, the superintending surgeon, thinks, from fatigues in the heat of the day, and exposure to damp at night. Two serious accidents have occurred during the week, one requiring amputation of the thigh, on account of cannon-shot injury of the knee, the other an injury of the foot, occasioned by the same shot, requiring the removal of the heel and a bone adjoining it, called the astragalus. These injuries occurred on the 7th, and are both doing well. There is another interesting case in the hospital of the left siege-train, where the greater part of the lower jaw on both sides was carried away by a cannon shot. This case, under the able and indefatigable care of Staff-assistant Surgeon A. H. Taylor, is rapidly proceeding to a cure, and, by judiciously drawing the parts together, the deformity will by no means be so considerable as might be imagined. The man is now walking about, and though he as yet requires to be fed through a tube, he is able to smoke his pipe. The cavalry division is improving in health. There are fewer fever cases, and the man of the 13th Light Dragoons, who last week was considered in a hopeless state, is, I am glad to say, progressing favourably. The 10th Hussars is the only regiment in the cavalry division that has anything like a heavy sick list, and they are suffering from dysentery contracted in Egypt, and kept up by sleeping on the ground here, after the comforts of Indian barrack life. In the second division febrile complaints still continue to be the most numerous class of diseases, but bowel affections are becoming more common, and spasmodic cholera has made its appearance; eighteen cases have occurred during the week, of which seven proved fatal. In the third division, although there is no marked diminution in the number of sick, the decreased mortality marks a mitigation in the form of fever that is prevailing. The mortality this week is only one-half what it was last week. Fourth division:—Cholera has made its appearance in this division during the week, and thirteen cases have occurred, seven of which died, and four of them belonged to the 48th regiment.

"On the night of the 11th the Russians made a sortie, and one officer and five men of the 68th were killed, and twenty-two men were wounded; among the latter is a case of musket bullet lodged in the brain. The man must have been shot from above, as the ball entered the upper part of the head and lodged. The trephine was applied, and several *speculi* of bone, that had been driven down, removed; but the ball was so deeply embedded in the brain it could not be discovered. He is still alive, but there is little or no hope of his ultimate recovery.

"Light division:—In this division, as in others, fever is the prevalent disease, but on two deaths have occurred from it during the week. Seven men have died from wound and two of cholera—one in the 77th, and the other in the 23rd regiment. Fifty-five cases of gun-shot wounds were admitted during the week, the greater portion of them fresh wounds. Of the seven deaths that occurred, one was wound of the lung, one a wound of the abdomen, in which the small intestines were wounded; one a fracture of the skull by musket ball, another a severe fracture of the thigh and ankle, by the bursting of a shell besides bullet wounds through both arms. There was a second case of injury of the head as well as a second of injury of the lung. The seventh death is not detailed.

"Every precaution is being taken to remove nuisances from the camps and their neighbourhood, and to improve their sanitary condition, as well as that of the locality, and in this the sanitary commissioners sent out from England afford their cordial assistance."

On the 19th his lordship sent home a brief despatch to this purport:—

"I do myself the honour to enclose the list of casualties that occurred between the 14th and 17th instant. For the last two days there has been hardly any firing on either side. Larconvoys have come into Sebastopol from the northern side, but there has been no movement of importance. The heat has been very oppressive since Wednesday. I deeply regret to have to report that I have just received a letter from General Osten-Sacken, in answer to an inquiry I addressed to him on the subject informing me that Captain Arnold, of the 4th regiment of foot, who was wounded and taken prisoner on the night of the 5th, died the same night."

Another despatch, of the same date, was very satisfactory to the public:—

"I have the honour to enclose the copy of a letter from Captain Montagu, of the Royal Engineers, prisoner of war, dated Simpheropol April 28th, transmitting a list of British prisoners who died either there or on their route from Sebastopol. I beg to forward this return in duplicate. Your lordship will see with satisfaction that the British prisoners who are still in the hospital at Simpheropol receive equal, not greater attention than the Russian soldiers from the authorities, and are constantly receiving presents from visitors."

The enclosures which this despatch carried made the following report:—

*Simpheropol, April 28*

SIR,—I have the honour to enclose the accompanying list of prisoners who died either

re or on their road from Sebastopol. There were some others dead; but Thomas Berry, 8th Hussars, who furnished me with this list, could not remember the names of the rest.

I have, &c.,

H. MONTAGU,

*Captain, Royal Engineers.*

*To Major-general Estcourt, &c.*

"I have been given to understand that the prisoners who are sick in hospital have received equal, if not even greater attention than their own soldiers from the authorities, and are constantly receiving presents, &c., from visitors. There are five or seven men who will be sent on the first opportunity to Odessa, for the purpose of being forwarded to England, they being incapable of serving again."

The events of the siege up to the 26th are given in brief in a despatch of his lordship's, of that date:—

"I have the honour to report to your lordship that a portion of the allied armies took a position yesterday on this side of the Chernaya, the left of the French resting under a redoubt established upon the edge of this ridge overhanging the valley, and opposite the Kerman heights; the right extending beyond Baktar; and the ground more to the right, behind Tchorgoum, being occupied by the Sardinian troops, aided in their advance by the 10th Hussars, and 12th Lancers, and the horse artillery, under Colonel Parlbay. Omar Pasha at the same time moved forward to the low heights in front of Balaklava, and thus afforded support to the French divisions before him. These were commanded by General Canrobert, who pushed forward across the bridge of Baktar, and drove the enemy, who were not in great numbers, off, and, having cleared his front, he withdrew to this side of the river, where he now remains. Sir Colin Campbell advanced the Royal Marines from the high ridge on our extreme right to a point commanding the old Baidar Road; and Colonel Parlbay, with the regiments I have mentioned, reconnoitred the country on the immediate right of General La Marmora's position, and controlled along the Woronzoff Road, in the direction of Baidar. The appearance and bearing of the Sardinian troops are highly satisfactory, and I anticipate the greatest advantage from their addition to this army under their distinguished leader, General La Marmora, whose zeal for the service and ardent desire to co-operate with us I am happy to have so early an opportunity of acknowledging and recording. Nothing of importance has occurred in the British trenches since I wrote to your lordship on the 19th instant. The death of Colonel Egerton, of the 77th, on the night of the 19th ult., as already announced

to your lordship, prevented my receiving in due course the official report of the conduct of the officers serving immediately under him; and it is only a few days ago that I learnt that Captain Gilby was the next in seniority to him, of the 77th, on the occasion, and that he had highly distinguished himself. I deem it an act of justice to a most deserving officer to bring his conduct under the notice of your lordship. I enclose the returns of casualties to the 24th inst. Your lordship will regret to see that Lieutenant Williams, of the 17th, has been severely wounded. I have the greatest pleasure in announcing to your lordship the brilliant success which attended an attack by the French army of some ambuscades at the head of the Quarantine Bay, and in front of a cemetery near it. The attack was made on the night of the 22nd, and the operation was completed on the following evening. The enemy had collected a very large force on the first occasion to resist our allies; but, notwithstanding, the French were enabled, by their brilliant gallantry and determined resolution, to maintain themselves in the pits at the head of the bay on the 22nd, and on the 23rd to occupy the whole, with less resistance on the part of the Russians, who are stated to have sustained a very severe loss. The French were necessarily exposed to a very heavy fire, and were assailed by vastly superior numbers. The achievement they accomplished redounds therefore highly to their renown, and is hailed with satisfaction by their allies. An expedition, composed of British, French, and Turkish troops, sailed for Kertch on Tuesday evening and Wednesday morning, and I hope soon to be able to announce the landing of the corps, and the result of its first operations. It is commanded by Lieutenant-general Sir George Brown, and has been conveyed in English and French ships under the command of Admiral Sir E. Lyons and Admiral Bruat, whose exertions to carry out this important service have been most conspicuous. The 31st regiment has arrived from Corfu. I am much concerned to have to report that Major-general Buller has been obliged, by the failure of his health, to leave the army. He has been constant in the discharge of his duty since he joined this army, distinguished himself both at Alma and Inkerman, and persevered in taking his turn in the trenches until driven by illness to withdraw. I regret the loss of his services exceedingly."

The sailing of the Kertch expedition, referred to by his lordship in the foregoing, will form the subject of a separate chapter, as a distinct theatre of action will be brought before the reader.

The attack on the 22nd, of the cemetery and

rifle-pits referred to, was one of the most gallant acts hitherto effected by our ally during the progress of the siege. General Pelissier immediately on assuming the command, determined to carry into execution the measures which both he and Lord Raglan considered to be necessary. Instead of attacking the town as one vast intrenched camp, the points were to be selected for assault, to capture which would gradually break down the strength of the enemy's position; so that the siege would, as it were, resolve itself into several sieges, each having a certain distinct character from the other. The English directed their efforts against the Great Redan, and the Garden Battery; and the French more particularly directed their labours against the Mamelon. To distract the enemy's attention from the procedure against that work, as well as to dislodge him from a position of importance, the assault of the works about the cemetery was undertaken. The enemy had worked with sleepless vigilance and restless toil against the French approaches on the left, and their defences arose, as if by magic, formidable alike in strength and numbers. The French approaches, which were formed in the result of the gallant assault of the 2nd of May, gave the enemy serious alarm, and to avert pressure in that direction, the enemy turned his attention to his extreme right, on the side of the Quarantine. That which the French had to apprehend on this point was the formation, by the Russians, of a *place d'armes*, favourable for them against the left attack of the besiegers. To connect certain ambuscades on the bay with the larger side of the cemetery, appeared to be the object of the enemy, which Pelissier determined to defeat: he accordingly ordered De Salles to force the position. The nature of the operation was, in all respects, similar to that which De Salles had personally accomplished on the 2nd, in front of the Central Bastion; but the sphere of battle was larger and more favourable to the defenders. A most bloody resistance was expected. De Salles committed the conduct of the attack to General Paté, assisted by La Motte Rouge and Beuret, generals of brigade; in company with these officers De Salles reconnoitred the position, and then summoned Generals Dalesme and Lebœuf, officers of the engineers and artillery, and by their advice determined on the mode of procedure.

At four o'clock, the troops marked off for the attack assembled on the same spot where they had mustered, who on the 2nd of May issued forth against the works before the Flagstaff Bastion. Colonel Raoult marked the points of preparatory occupation.

The force was divided into two distinct commands: one detachment was to attack the ambuscades on the bay, the other to attack

those which debouched from an angle of the cemetery. On the former point, General Beuret was directed with three companies of the 10th battalion of foot Chasseurs, three battalions of the 2nd regiment of the Foreign Legion, and a battalion of the 98th regiment on the second, La Motte Rouge, with the pickets of the 1st regiment of the Foreign Legion, with two battalions of the 28th: a battalion of the 18th, and two battalions of the Imperial Guard were in reserve. The force thus set in motion was most formidable, and it was evident that the assault of these ambuscades would assume the proportion of a battle. The troops employed were excellent, and the Foreign Legion, as usual, were among the foremost. This body of men was comprised of Poles and Italians, with some Germans, Swiss, Belgians, and Spaniards; but either of the first two contributed more than all the last four put together. The men were brave, and generally hated the Russians; but were sensitive to the slightest reflection upon their respective nationalities, and were apt in such cases to desert.

At nine o'clock General Paté gave the signal and the battle began. The soldiers of the Foreign Legion darted forward with indescribable impetuosity upon the ambuscades of the cemetery, carrying it at the point of the bayonet. La Motte Rouge, ever foremost where engaged, leading them himself. The other body of the legion carried with equal courage the ambuscades on the bay. On that very night, the enemy had intended to connect by works these two points of attack; and there was, therefore, a far larger body of troops collected than otherwise would have been at hand. This is evident from the journal of the operations of the Russian army, which contains the following entry:—

“The aide-de-camp General Prince Gortschakoff having remarked that the enemy extended his trenches on the left of his approaches and thus menaced our lodgments near the cemetery, ordered that there should be constructed a line of counter-approaches, in front of those lodgments, on the declivity of the Mamelon, towards the enemy's side, with embankment towards Bastion 5. This new intrenchment could be defended by the cross-fire of our nearest batteries, and the proposed object was to establish, at its extremity, a battery to take in flank the works of the besiegers. Intending to finish in the night of the 22nd to 23rd May the intrenched work so commenced the aide-de-camp General Prince Gortschakoff ordered that the regiments of Chasseurs of the Marshal Prince of Warsaw and Podolia, with two battalions of that of Jitomir, should be concentrated at nine o'clock in the evening in front of Bastion 6, to protect the works. The battalions of the regiment of infantry of Minsk

d that of the Chasseurs d'Ouglitch were sent reinforce the troops engaged."

With these forces the Muscovites rallied and argued. For two hours the battle raged, and the French were victors; immediately they worked to fortify the conquered post, while the motion of the vanquished played upon them the case-shot. On the side of the Quarantine vine the Russians poured forth in great numbers; but the French engineers had to some extent directed the workmen to find shelter, while the obstinate Foreign Legion lined the ranks. It was the custom of the Russians to begin on formal attacks with great noise; their drums beating, trumpets braying, and the men uttering the most dissonant yells, to which their officers frequently gave a sort of key-note. But this was practised to intimidate the French with the idea of superior numbers, but the "inkerman screech," as the English called it, had no effect upon the legion, they silently and resolutely stood to their arms: they received the shock of the fanatical and excited attack, a few well-aimed volleys were exchanged, and then the dreadful bayonet shock smote the attacking lines. The night was not dark, it was summer, and the combatants could distinctly see one another in every varying phase of the fight. Terrible was this conflict—few living men have witnessed such another: each party brought up his reserves; the French guard engaged with shouts of enthusiasm, and the voltigeurs of the guard displayed the agility and valour for which their description of force has been celebrated since the campaigns of the Emperor at Napoleon. The French reserves as they came up were mowed down in considerable numbers by the cannon of the foe; and, after long struggle, and after penetrating every ambuscade, the French had to retire upon their entrenchments: they re-formed, were reinforced, fought in again with the same impetuosity, and again were victors. The French force on this point became overwhelmingly numerous at this juncture, for two other battalions of the voltigeurs of the guard had joined them, and two regiments of chasseurs; yet all that this great force could do was to destroy the ambuscades—the obstinacy with which the Russians fought prevented the permanent occupation of the post. Colonel Raoult was desperately wounded, and some officers of well-known merit perished.

The next night the battle was renewed: the Emperor declared that he would sacrifice 10,000 men, rather than allow the Russians to carry out their system of counter works in that direction: meanwhile, throughout the day, the Russians conducted a heavy fire from the town. In the evening the assailing columns were repulsed at the previous rendezvous; the division Le Vaillant was to bear the brunt of the

battle, and the guards and two additional battalions of voltigeurs were to form a strong reserve. On the extreme left of the French the conquest of the previous evening had been more complete, and there the troops were powerfully reinforced under General Couster: General Duval was to attack the works under the cemetery wall, for many had not been destroyed the night before. At nine o'clock a rocket shot up as the signal of advance, and the troops dashed on with the same impetuosity as in their previous attack. The enemy did not appear to expect any assault that night, and their false security betrayed them; almost without resistance they were expelled from all the posts they ought, with their usual bravery, to have defended. As soon as ever the enemy was driven out, the French engineers commenced their works, and continued under a heavy fire to urge them forward: so paralysed were the Russians by the suddenness of the *coup*, that they did not dare to resume the contest. The works went on all night until dawn under a heavy fire of grape, and such ambuscades as did not come within the French plans were destroyed.

On the 25th, Osten-Sacken sent out word that an armistice for burial was desired: it was granted. The French handed over 1200 dead to the enemy; many more perished, for the commander of the French artillery directed his guns with fatal effect upon the Russian reserves: 4000 men, in killed and wounded, were lost to the czar, and half that number to the French emperor.

Soon after this it was resolved to extend the positions of the army. It was necessary to do so from the scarcity of water, and of fodder for the horses. General Canrobert was entrusted with a force to clear the valley of the Tchernaya of any parties of the enemy lounging there, and open the way for the occupation of the ground to the very banks of the river. The whole valley was rich with verdure, and offered tempting supplies for the horses of the invading hosts. The force of Canrobert was composed of his own division, Bruat's division, and of the two cavalry divisions of Morriss and D'Allonville. Five batteries of the artillery of the reserve were added. These corps assembled at midnight on the plain. French authorities, in relating this affair, omit all mention of the Sardinians, who preceded Canrobert, and pushed their way to the Traktar Bridge, driving back the Cossacks, who made feeble opposition to their advances. A considerable Turkish force followed, of whom our French friends make no more mention than of the gallant Sardinians. Sardinians, Turks, and French, occupied the valley without resistance. The French threw their powerful force of cavalry across the stone bridge called

Traktar; and these were followed by French and Sardinian infantry. Upon all these troops the guns of the Russian redoubt gave play; but, before the arrangements made to storm it could be carried out, the enemy secured the guns, and retreated upon the M'Kenzie Heights, and upon Aitodor. The allies retired to the left bank of the river, and the French occupied the heights of Fedukhine. The Sardinians pitched their tents to the French right, on the heights between Inkerman and Tchorgoum. The Turks formed themselves into two lines on the knolls where the battle of Balaklava had so much of its interest. The French continued, day by day, to extend themselves towards the valley of Baidar, which furnished excellent and abundant sup-

plies for the cavalry. This the enemy would have destroyed had he any foresight as to its occupation by the allies; but he remained secure, supposing that their great sufferings, especially on the part of the English, would incapacitate them for such an extension of their lines.

General Canrobert resigned the command to General Morriss, the senior officer. The troops rejoiced in the re-occupation of this beautiful valley, then clothed with rich verdure, and variegated with flowers of every form and hue, for which the southern Crimea has been famed.

So ended May in the embattled army, which were preparing for still further carnage and still greater actions.

#### CHAPTER LXXXIV.

HOME EVENTS AFTER THE VIENNA CONFERENCE.—PARLIAMENTARY DEBATES.—STATE OF PUBLIC OPINION IN ENGLAND AND FRANCE.—DISTRIBUTION OF MEDALS BY THE QUEEN.

"There be three parts of business—the preparation, the debate or examination, and the perfection; whereof, if you look for dispatch, let the middle only be the work of many, and the first and last the work of few."—LORD BACON.

In the chapter on the Vienna conference some home events were anticipated in order to give a completeness of narrative to the whole series of events connected with that political abortion—

"Parturiunt montes nascitur ridiculus mus."

Scarcely had the Vienna conferences terminated, when the government was fiercely attacked for its conduct in connection with them. Some of those attacks were simply factious; others were dictated by principle, and a jealousy for the honour of the country. In the Peers, the Lords Grey, Derby, Malmsbury, and Ellenborough, looking at the war and the conduct of the ministry from very different stand-points, raised various discussions. In the Commons, Messrs. Gibson, Bright, Layard, Roebuck, and D'Israeli, conducted a series of cross-questions and debates exceedingly annoying to the ministry. These parties were hardly met by the Premier with sufficient dignity, and Lord John bore himself with an insolent *hauteur*, incompatible with his real position.

On the 11th of May, Mr. Milner Gibson proposed an address to the crown, declaring the regret of the house that the Vienna conferences had not been brought to a satisfactory conclusion; and asserting the opinion of the house that the overtures of Russia offered the elements of a just and equitable peace. As Mr. Gibson was the mouth-piece of the peace-party, this resolution was regarded as of supreme importance, especially as it was understood out of doors that the whole Peelite

faction would support the member for Manchester. Lord Palmerston, however, adroitly parried the blow, by stating that Austria was engaged in seeking a fresh solution of the difficulty; that he (Lord Palmerston) would eagerly receive any honourable approaches from the part of Russia, or any satisfactory mediation on the part of Austria, but he would never consent to the humiliation of the country by a treaty which did not guarantee a lasting and solid peace. This was well received in the house, and Mr. Gibson withdrew his motion. In the course of this debate, however, Lord John Russell delivered a verbose speech which did very much to impair the good effect of that made by Lord Palmerston, exciting some uneasiness in the house, and much disaffection in the country, as to the probability of useful conferences at Vienna impairing the spirit, energy, and earnestness of the allies in carrying on the war.

Later in the month Mr. D'Israeli divided the Commons on the conduct of the war, and of the Vienna negotiations. The speech was so thoroughly partisan that it failed in producing any moral effect; and, notwithstanding the deficiencies of the government, the discontent of the country, and the recent blundering of Lord John Russell at Vienna, Mr. D'Israeli, in a full house, obtained from all parties dissatisfied with the conduct of affairs, only 219 votes, while 319 were recorded for the government. Mr. D'Israeli, in the debate, made happy and effective use of the fact of Lord John Russell's ignorance, when foreign min-

of the actual treaties between Russia and Turkey, and his recognition of a protection of the sultan's Greek subjects by the czar. Lord John, by a weak, unworthy, and ludicrous distinction between the words protector and protection, sought to escape the position in which Mr. D'Israeli placed him, but only provoked more biting sarcasm and withering reproof from the eloquent opposition leader. It was evident, however, from the vote that no other public man shared the confidence of the house and the country so largely as Lord Palmerston, and that all attempts to disturb the ministry, by motions in either house, must prove failures. There was, however, one statesman who did not think so: Earl Grey, though a witness of the triumph of the government in the Commons, and well knowing that the Derby party were not disposed to unite with him, persisted in moving a resolution in the Lords similar to that of Mr. Gibson in the Commons. His lordship's resolution was thoroughly pro-Russian: it would pledge the powers of England to the adequacy of the Czar's terms of peace. He delivered a speech, clever, captious, inconsequential, and personally querulous, enunciating the most incompatible principles, and betraying a very vicious temper; and after all, finding no supporters, and uselessly consuming the time of the country, did not press his motion to a division. Earl Grey's motion was justly characterised by the *Times* as "extraordinary;" and the *Globe*, with equal propriety, remarked that no other member of either house could make such a motion and preserve his character as a man of sense, not to say a statesman; but the evening organ of the government had great faith that this feat, to all other men impossible, his lordship had achieved. It was quite certain that he achieved nothing else on the occasion—if, indeed, his reputation for either sense or statesmanship passed through the ordeal without loss; unless it be that, having already fallen so low, it could in neither respect continue to descend, whatever the political fluctuations of this eccentric peer. Lord Grey was of opinion that the terms offered by Russia were quite satisfactory, or, at all events, sufficiently so to cause us to sheathe the sword. But his lordship was neither a Quaker nor a Slav; there was no likelihood of his being found in the chair, instead of Mr. Charles Sumner, at a meeting of the Peace Society; nor was he likely to be seen "arm-in-arm" with the noble John Bright on his way to the Covent Street meeting-house in Manchester. He had a very expensive and ill-conducted mode of his lordship's management at the Cape, which he showed no such horror of war, for his own sake, as would interfere with the execution of his own administrative crotchets.

During the last Sikh war he was a very indifferent administrator, or minister, and he will never repair to Lord Gough for a character in these matters. To what, then, was to be attributed his lordship's anxiety to close with Russia in a peace, when, to use the well-known Hibernicism, "the reciprocity was all on one side?" We could comprehend Mr. Bright when he advised us to lay down our arms and betake us to the olive branch. To say that we should not resist, but only remonstrate by quaker or other deputations to St. Petersburg, may be erroneous, but there is a principle in it which we are bound to respect, and the men who urged it were consistent. Joseph Sturge did not blow hot and cold with the same mouth. He did not talk one day of the duty of a vigorous prosecution of the campaign, and another for closing it on any terms for peace's sake. It was with Lord Grey such a paradox of policy was alone to be found. What did Russia offer? She would consent that the Dardanelles and the Bosphorus should have open gates, through which the allies could enter the Euxine, and Russia enter the Mediterranean. This might or might not be an advantage to the Western powers; but it would be a very certain advantage to Russia. But what right had any power to demand of Turkey that she should open the sea-gates of her empire to the cruisers of all other powers? What would be thought of the honour of nations who allied themselves for the integrity of her dominion, and made peace by ceding her most sacred territorial privileges to her enemy? We had no right to enforce such a measure upon Turkey, even if the advantage to ourselves more than counterbalanced the concession to Russia. Russia had proved herself a perfidious enemy of Turkey. She had lent her help only the more effectually to destroy her. She repelled Mehemet Ali because it was not for her own interests to see so powerful a chief sitting in the gate of the City of the Sultan. She would rather aid the Padishaw to repel the Pasha than, by allowing the latter to clutch the reins of empire, find a more powerful barrier raised against her own encroachments. Yet, on the ground of such services, she asked for a recognition from Turkey of confidence, and a free passage through her waters. The other proposal of Russia, to keep the straits of the Dardanelles and the Bosphorus closed against all ships of war was nothing more nor less than to propose the *status quo ante bellum*: it was in effect to say, "Withdraw your armies from our territory, and your fleets from the disputed sea, and leave to Turkey and ourselves the task of balancing naval and military strength there." Why, this was just what the two powers had been doing hitherto, with exclusive profit to

Russia, with continual danger to the balance of European power, and uneasiness, if not alarm, to every government and people proximately or remotely interested. Yet Lord Grey thought this was all very good of Russia: so it was, for herself; and so it would be for Lord Grey also, sympathising as he did with the Greek church, and anxious to promote its power—at all events, when not in direct collision with the Latin. It would also bring into disrepute the politicians who excluded Lord Grey from power—Peelite and Whig—and smooth the way to the great object of that nobleman's ambition—the premiership. If, however, the government had gone out upon his motion, he would never have dared to carry into effect the policy upon which he should foist himself into power, admitting that in such case he would be sent for by her majesty. But he knew very well the government would scarcely go out upon an adverse vote of the lords; his aim must therefore have been to weaken them by such a vote at home, and more especially abroad, and prepare the way for himself on some other question. Still we do not deem it necessary to find for the noble earl any such calculating policy, however correctly the supposition may depict him. It may, after all, have been one of the frequent outbursts of oddity to which he is liable, arising in great part from the affectation of being wiser than everybody, and having the political sagacity of the empire centred in himself. This made his lordship the torment of every ministry with which he had been connected. His faculty of mischief, one way or other, in or out of office, seldom rested, and would, in his position, be far from harmless, if he were less odd and crotchety in his selection of occasions for its exercise. Yet this was the man who, some time previously, a party were anxious to make minister of war. *Proh pudor!* What a minister of war we should have had in the man who would again give up Turkey to the honour of a czar, the honesty of his diplomatists, and the mercy of his marauders. Welcome peace, if we can secure it with untarnished principle; but to play fast and loose with the empire which we interposed to save, and to gamble with our own blood and treasure—satisfied with a drawn game, where that was the only hope for our opponent, and the only fear for ourselves, was a policy as humiliating to our intelligence as it would have been to our honour and our power.

It was the tone adopted by both the government and its opponents in these discussions which incensed the Austrian government, and caused it to publish these documents which expressed the part Lord John Russell and the French foreign minister had played at the Vienna conferences. Count Buol addressed a

circular to the minister and agents of Austria at the various courts where her representatives were placed, recapitulating the facts of Austrian mediation at the conference, and the perfect willingness of the English colonial minister and the French minister for foreign affairs to accept her terms. On the 29th of June inquiries were made in the Commons as to the truth of the statements contained in that circular. The answers given to these inquiries showed the dangers to which secret diplomacy had exposed the country. It then came out that the cabinet ignored all that Lord John had proposed to do—that his French colleague retired because he could not conscientiously aid in carrying on war when he was convinced that the terms of peace offered ought to have been accepted while the English minister kept his place, and continued to be a most bellicose member of the administration, if his warlike speeches in the Commons were fair criteria of his views and spirit; he all the while conceived that Russia had offered terms which England ought to have accepted—the government and the minister so acting concealing the whole transaction from the country! On the 6th of July the consequence of these replies was developed—the whole matter was brought more formally and seriously before the house. On the 10th of July, Sir E. B. Lytton gave notice of motion: “That the conduct of our minister in the recent negotiations at Vienna, has, in the opinion of this house, shaken the confidence of the country in those to whom its affairs are intrusted.” Lord John, upon this notice, resigned his place in the cabinet, and thereby saved the ministry. There can be no doubt that a vote, as significant as that, adverse against the government as that obtained by Mr. Roebuck against the cabinet of Lord Aberdeen, would have marked the indignation of the commons and people of England at the underhand proceedings.

Independent of the class of debates in both houses, noticed in the foregoing pages, there were other important questions agitated, which stirred the heart of the nation. Late in April Captain Boldero brought before the house the deficiencies in the medical department of the army, and he adduced irrefutable proof of his allegations. The government resisted his motion, and succeeded in defeating it only by a very narrow majority. Their victory, however, was a moral defeat, for the public felt that while Lord Palmerston personally deserved their confidence, he was surrounded by men the enemies of all reform. Later still in the same month, the chancellor of the exchequer made his financial statement, producing a general conviction of his unfitness for the magnitude of the task imposed upon him. The demands made by him upon the resources of the country were appalling. Lavish as the

country had been of its treasures for the adequate prosecution of the war, all that vast supply had been expended, although the soldiers had been starved and left unclothed, without arms, badly armed to a great extent, and often, without supplies of ammunition which could not be used against the enemy. The country felt that it was plundered—for the wild and reckless waste of the public funds, unprincipled neglect, and the employment of incompetent persons to please the ruling class, when competent persons could be had for every purpose, was plunder, in fact, by whatever other name it might in common parlance be described. The chancellor of the exchequer showed that twenty millions sterling would be required for the army and navy, and that eighty-six millions sterling would be required for the year, and yet the estimate of taxes would be twenty-three millions short of the money required. A loan of sixteen millions, to be paid at one million per year after the war should terminate, was proposed to be taken up. These estimates provoked many discussions as to the competency and integrity of public men, which vibrated through the whole nation.

At the close of April Mr. Layard—to whose patriotism and ability the check put upon corrupt officialism was in a great measure to be attributed—gave notice of motion, “That the state of the country is such as to cause serious alarm; that the sacrifice of efficiency to family influence and party interests is the source of great misfortune and disgrace to the country; and that the house will support any ministry which can enforce the efficient conduct of the public service, and the vigorous conduct of the prosecution of the war.” “The house,” however, was not willing to do all that Mr. Layard proposed to it, and persisted in entertaining the hope that Lord Palmerston, by his ability, energy, and patriotism, would be found equal to the crisis. The attempts to run down Mr. Layard by all parties interested in speculation and abuse were very appropriate to the motives that dictated them. There was a very general desire to see Mr. Layard in office, and in the Treasury-office especially; and out of doors it was held on all hands that Mr. Frederick Peel ought to give place to the honourable member. Early in May discussions arose as to the comparative merits of the officers in the service of the crown, and in that of the Honourable East India Company. A very general impression prevailed that the country suffered by the inequality between the two services, and a great desire was spread to see the Company’s officers more extensively employed in the war. Lord Ellenborough, in the Lords, and Mr. E. Perry, in the Commons, called the attention of the government and the legislature to the importance of the matter. These motions,

though not immediately successful, laid the foundation for changes which were afterwards effected, equalising the degrees of rank of the two armies, and led in various ways to the employment of the Company’s officers while the war continued.

On the 15th of May the Earl of Albemarle made an important motion—“That in order to bring the war to a speedy termination, it is necessary to restrict the trade of Russia by more efficient measures than any which have hitherto been adopted or conceived by her majesty’s government.” The interest of this debate turned upon the economic considerations connected with the course proposed, and the undesirableness of doing anything that might offend Prussia, and throw her into the arms of the enemy. It was obvious from the facts brought out that Prussia was an enemy to the allies, and espoused, in every way which she dared, the cause of the aggressor.

On the 5th of May a movement commenced which was expected to do great things for the country. “The Administrative Reform Association” was formed at a public meeting, convened for the purpose in the London Tavern; Mr. Morley, an eminent merchant of the city, in the chair. This society did very little, and received very little general support, showing that, after all the misfortunes that befel the country, it was not prepared to “lay the axe to the root of the tree.” More failures, more discredit, and more suffering, and a *great deal* more of all these were necessary to shake the clinging reliance of the people from the classes who hitherto held the reins of power. Lord Palmerston saved these classes from ignominy, and preserved for them a longer hold of power, while he did his best to teach them to use well their position and influence. To no man living ought the aristocracy of England be so grateful as to Lord Palmerston. He saved that class—he served all others. His administration benefited the country at large, and averted the class ruin of his own order. Throughout the war the country was greatly indebted to the clear-sightedness, eloquence, and fidelity of Lord Lyndhurst. The veteran lawyer and statesman early in June called the attention of the peers to the double dealing and dubious policy of Austria. He boldly affirmed that a review of the whole course of procedure of that power led to the inference that she had a secret understanding with Russia and Prussia, and was playing the allies falsely. Lord Clarendon, in a tone and manner indicating that he was himself very much of Lord Lyndhurst’s opinion, deprecated any reflections upon an ally which might yet join her forces to our own.

A resolution of Sir E. B. Lytton was carried in the Commons, which gave great satisfaction

to the public mind, it was as follows:—"That this house recommends to the earliest attention of her majesty's ministers the necessity of a careful revision of our various official establishments, with a view to simplify and facilitate the transaction of public business, and, by instituting judicious tests of merit, as well as by removing obstructions to its fair proportion and legitimate rewards, to secure to the service of the state the largest available proportion of the energy and intelligence for which the people of this country are distinguished."

Early in June a very remarkable incident occurred, showing the feeling of the court and the alarm and disapprobation entertained in high quarters in reference to the public demand for the reform of abuses, and the more direct responsibility of the ministers and other officials to the Commons and the country. The desire of the country for a more direct and efficient popular control over the army, was alleged to have been one of the chief causes of the movement now to be noticed. On the 9th of June a banquet was given by the Trinity Corporation; Prince Albert was invited to that banquet. His royal highness was in a position in relation to the crown and the country which required the most careful abstinence from interference with the government of the country, except so far as he might give private advice to her majesty. The country would regard with constitutional jealousy any such interference on the part of a prince, a German by birth, and having German sympathies, and more especially as the retirement of Lord Palmerston from the Russell ministry was popularly believed to arise from his royal highness's too frequent meddling with foreign affairs. The old constitutional principle that the ministry are the responsible advisers of the crown, liable to be called to account by the people's house of parliament for any illegal, unconstitutional, or treasonable advice given to the crown, was too deeply seated in the English mind for the people to listen complacently to a lecture from the prince-consort on their behaviour to their rulers; and such was the character of the speech which he delivered. The English people felt that they were as competent to offer advice to his royal highness as he to them—that they had more experience than he had of the working of constitutional government—and that before he became the husband of their queen they had known how to perform their duty to her, and were likely to preserve their loyalty to her, and a just moderation towards any ministry appointed by her, without any help or counsel from him;—that to step out from his sanctuary of privilege to lecture them at public meetings for not confiding sufficiently in public men, when every

branch of the administration was proved to corrupt,—and that most of all with which officiously meddled, the army,—was on its part a great indiscretion. The public dealt leniently with this act of forgetfulness on the part of the prince, but they nevertheless felt that it was disrespectful to the nation which he adopted him; and a painful suspicion arose in the court sympathised after all with the foreign despotic governments, and that this sympathy was through his influence. No circumstance during the whole war tended so much to disturb the public mind, to make it suspicious of any movement of diplomacy, or to shake its loyalty—were that possible—to a queen so much beloved, and so deserving of that love, the intrusive speech of his royal highness at the banquet of the Trinity Corporation. The following are the passages which excited public surprise, and caused public censure:—

"If there was ever a time at which her majesty's government, by whomsoever conducted, required the support—aye, not the support alone, but the confidence, good-will, and sympathy of their fellowmen—it is surely the present. It is not the way to success in war to support it, however ardently and enthusiastically, and, at the same time, to tie down and weaken the hands of those who have to conduct it. We are engaged with a mighty enemy who is using against us all those wonderful powers which have sprung up under the generating influence of our liberty and our civilization. You find him with all that force which unity of purpose and action, impenetrable secrecy, and uncontrolled despotic power have given, while we have to meet him under a storm of things intended for peace, and for the promotion of that very civilisation, the offspring of public discussion, of the friction of party, and of the popular control on the government and the state. The queen has no power to lead troops, nor has she any at her command, such as offer their voluntary services. If the government can take no measure for the prosecution of the war which it has not beforehand to explain in parliament. Her armies and fleets can make no movements, nor even prepare any, without their being publicly announced in the papers. No mistake, however trifling, can occur, no want or weakness exist, which is at once denounced, and even sometimes exaggerated, with a kind of morbid satisfaction. The queen's ambassador can enter into no negotiations without the government having to defend him by entering into all the arguments which that negotiator, in order to be successful, ought to be able to shut up in the innermost recesses of his heart. Nay, at the most critical position, when war and diplomatic relations may be at their height, an adverse vote in parliament may at a moment deprive the queen

the whole of her confidential servants. gentlemen, our constitutional government is undergoing a heavy trial, and we shall not pass successfully through it unless the country will grant its confidence—patriotic, intelligent, and self-denying confidence—to her majesty's government."

Among the home incidents which attracted the attention of the people of England was the distribution of medals to the officers, non-commissioned officers, and privates, who had returned from the Crimea invalided or wounded. Her majesty had resolved to distribute the medals in person, and this greatly increased the interest of the occasion. It was deemed the public a most graceful and befitting act on the part of her majesty, to give, with her own hands, the decorations won by those whose courage so nobly shielded her throne. The feelings of the brave men who were to receive these decorations were raised to enthusiasm, when they learned that they were to receive as a reward of their courage and constancy from their beloved queen herself. The place appointed for this grand ceremony was most appropriate—the square of the Horse-Guards, St. James's Park. The writer of this History, when he looked upon the extensive and magnificent preparations for this event, felt strongly the effect it presented to the scene which he witnessed little more than a year before, near the same spot, when the people's representatives assembled along to Buckingham Palace to assure her majesty of their support in the war she had declared. Galleries were erected for the accommodation of the Lords and Commons, for members of the government, and for the families of those who were to be publicly honoured—a most graceful tribute on the part of the country to the feelings of these gallant men. How proud that day must many a wife's, parent's, and brother's, and sister's heart have been, as the objects of their affectionate gratitude bowed before his sovereign to receive on his breast the glorious badge his noble conduct won! The royal family occupied a spacious balcony projecting from the lower windows of the Horse-Guards, which was festooned with scarlet cloth and otherwise decorated.

At ten o'clock on the morning of the 18th of July, the scene presented from the windows of the Horse-Guards, and the windows and roofs of the neighbouring houses, was most strikingly effective: a vast mass of people filled the whole area within view, yet all preserving the best order. The most conspicuous object was a group of 100 officers, decorated with various foreign badges, those of Turkey, France, &c., awaiting the most highly appreciated of their distinctions which they were that day to receive. The bands of the household

infantry were upon the parade at nine o'clock, and the guard of honour consisted of the flank companies of the battalions which had remained at home. The non-commissioned officers and men who were to receive the medals were drawn up in the rear of the guards; there were also drawn up detachments connected with these regiments which were serving in the Crimea. When this arrangement was effected, the band of the Royal Marines was heard as they marched from Whitehall, followed by the officers and men of that corps, and by the officers and men of the other branch of the sea service who were to receive medals. Her majesty occupied a suitable position upon a *dais*. The Duke of Cambridge very suitably had command of the troops on the parade: he marched the men who were to be decorated until they came within 100 feet of the *dais*, where they stood directly in the presence of the queen. There stood the stricken, mutilated, heroic band of noble heroes and patriots. Her majesty never in any public scene, in which she always performs her part with queen-like dignity and womanly grace, betrayed so much emotion—not only her countenance, but her whole frame indicated the deep and throbbing sensibility of her heart. Never, perhaps, on any public occasion did the multitude manifest so much delicacy and tact, mingled with so much enthusiasm. The people of London have a just celebrity for the intuitive possession of what is fit when assembled in masses, such as no where else is conceived; it was so on the instant when the maimed warriors of England arrived, the word "halt" was given by the Duke of Cambridge, and they stood in the presence of majesty. The whole of the mighty assemblage gave utterance to their feelings—it was not a cheer—it was not a murmur of applause—it was not a buzz of approbation—it was as if an audible throb broke from the heart of queen and people at once, in their common homage to the heroism of the brave. The people felt, too, that they had a sovereign worth battling and bleeding for; and the queen felt that she had a people, loyal alike in weal or woe, affluent alike to her in their treasures and their blood. When the queen entered, it was—as usual on public occasions—amidst the thunder of cannon and the cheers of faithful multitudes, but when she and her wounded braves stood face to face, the suppressed, yet audible, emotion of the people was the most peculiar enunciation of feeling ever perhaps heard from a multitude. The candidates for honour passed in single file to the spot where her majesty stood; each man, as he reached the left side of the *dais*, presented a card to Major-general Wetherall, containing his name and rank, the nature of his wound (if wounded), and the engagement in which it had been sustained; the general read them aloud

for the information of her majesty and her glorious suite. The minister of war handed, in each case, a medal to the queen, who personally bestowed it upon the candidate for the honour. Alas, many of these gallant men wore honours given by the enemy in the scars which seared their manly countenances, or the maimed limbs which rendered them no longer able to tread the field of war. The Duke of Cambridge, and his aide-de-camp, Major McDonald, who so gallantly incurred such imminent peril by the side of his royal highness, were the first to receive the decorations; a flush of pride rose to the countenance of her majesty at the thought that so near a kinsman—one of her own royal race—should be the first among the ranks of the meritorious and the brave, to receive public honour at her hands. The bands played the coronation march from the *Prophète*. Sir De Lacy Evans, Sir J. Burgoyne, the Earl of Cardigan, the Hon. Major-general Scarlett, Major-general Torrens, and other officers of rank, were among the first received by her majesty. Three officers were wheeled up in Bath chairs: Sir Thomas Trowbridge was the first of these, he had lost both his feet at the battle of Inkerman. It is said that the queen was so overcome with feeling that she burst into tears; when the gallant soldier was borne up to her majesty, she leaned over the chair, and not only bestowed the decoration, but announced to Sir Thomas that he was henceforth her aide-de-camp,—a post not only of honour, but of emolument. Captain Sayer of the Royal Welsh Fusiliers, and Captain Currie of the 19th foot, were the other two officers thus drawn in a carriage. The Highlanders attracted much interest on the part of the spectators, as they marched up, or hobbled up, for many were so wounded and maimed that they could not be said to march; the band struck up “The blue bells of Scotland,” and “Whar hae ye bin a’ day.”

The queen generally made some kind remark to each soldier as he passed. The sailors and marines followed in like manner, and the astonishment of the tars when her majesty said some kind word to them was very ludicrous; Jack seemed entirely unable to know what to make of his position, he looked in almost every case as if he did not know where he was; and, despite the seriousness of the occasion, and the sympathy which filled the royal breast, her majesty must have been amused by Jack’s “dumfounded” expression and bearing. There was, however, no mistaking his proud look, as he “bore away” after receiving the distinction he had well deserved. Many officers and men crept slowly along the line of procession by the aid of a stick, or the assistance of a comrade, and

some could only approach her majesty on crutches. The compassion, as well as the exultation, of queen and people was deeply increased. After some military movements the bands struck up the national anthem, and the magnificent and touching scene closed.

The non-commissioned officers, and soldiers and marines, and the petty officers and men of the navy, were marched to the queen’s riding school in Pimlico, where an excellent dinner was laid out for them; her majesty, the Prince of Wales, and the royal consort visited them during their banquet.

Many of the gallant sufferers became the subjects of individual generosity, and all were the objects of national admiration and gratitude. “After all,” said one poor fellow, he limped homeward after the day, “our country has not forsaken us.”

The events which we have described received extensive publicity in France and Italy, and other parts of the Continent, and everywhere the good taste and well-timed manifestation of public sympathy with the shattered heroes of the Crimea were applauded.

During the interval from the mutual termination of the labours of the Vienna conference to midsummer, reinforcements were sent to the Crimea from both England and France. The latter country was much agitated during a portion of that time by discussions connected with the emperor’s expressed intention of proceeding to the seat of war, or upon some separate expedition. The failure of the second bombardment caused much despondency in France, where the war had not been taken up with the public spirit which attended it in England. The heavy losses of the French troops in the fierce and frequent encounters for the Russian rifle-pits, and from the numerous sorties of the besieged, also created dissatisfaction and doubt of success; and when on the 18th of May the resignation of General Canrobert as commander-in-chief of the army was announced to the French people, they were still more concerned for the fortunes of the war, and still less sanguine of success. Had Russia offered a moderate terms of peace, France would have hailed the opportunity to terminate a war which was felt to be burthensome, and had not yet brought all that glory so necessary to sustain our ally in great enterprises. There was also a feeling of disappointment created both in France and England by the want of success in the Baltic, and a second year of maritime failure in that quarter was foreboded.

Thus chequered and disturbed were the home events which followed the rejection of the Russian overtures at Vienna. We are more turn to the scenes of actual conflict.

## CHAPTER LXXXV.

THE NAVAL CAMPAIGN IN THE BALTIC TO THE END OF JUNE, 1855.—DISCUSSIONS AS TO THE COMMAND OF THE FLEET.—NEGLECT OF THE ADMIRALTY TO PREPARE GUN-BOATS.—PREPARATIONS OF RUSSIA ON HER BALTIC COASTS.—FURTIVE VIOLATION BY PRUSSIA OF HER NEUTRALITY.—CRONSTADT IMPREGNABLE WITHOUT GUN-BOATS.—HANGO MASSACRE.—DESTRUCTION OF A FLEET OF RUSSIAN COASTERS.

"I cannot discover the policy of not hitting one's enemy as hard as one can, and in the most vulnerable place. I am certain that he would not act so by us if he had the opportunity."—THE LATE DUKE OF WELLINGTON.

At the close of the Baltic campaign of 1854 the country expected that the Admiralty and pretentious first lord would make such exertions for the next campaign in those waters would demonstrate the invincible power England upon the sea. Two things had been learned from the experience of the previous season; namely, that the fleet should, if possible, consist of screw-steamers rather than paddle-wheels, and that it should be attended by a large number of small craft capable of navigating shallow waters, and comprising gun-boats suited to the creeks and sinuosities of the gulfs of Bothnia and Finland. Accordingly, much was heard through the winter of 1854 of wonderful preparations made by England to send out an equipment in every way fit for the great objects proposed. The fleet was certainly superior to that of the expedition of 1854; but it was deficient, after all, in the kind of armament most required. The following are correct lists of the ships and their armaments, as compared with those of 1854. The former have been already given; but, as various alterations occurred after that fleet actually set out, a comparative view of both fleets here, drawn from the most accurate sources attainable, will be desirable and useful to the reader.

Several writers have affirmed that the French did nothing in the Baltic in 1855. The above correct statement confutes that assertion. The British Baltic force was, however, vastly superior. Great importance was attached to the selection of a commander for the fleet of 1855; and the appointment of Admiral Dundas, and the setting aside of Sir C. Napier led to public discontent, and to discussions which created the conviction that the war revealed what in peace we had never found out, and probably never cared to find out—the thorough rottenness of our great official departments, civil and military. The letter of Sir Charles Napier, then going the round of the papers, exemplified this in a very forcible way. Sir

Charles was sent out with a fleet well adapted to clear the Baltic of the Russian navy, and to keep them shut up behind the granite defences of Sweaborg and Cronstadt. If that navy had encountered Sir Charles, it would have been sunk or captured. As long as our Baltic fleet could remain upon the station, not a Russian ship of war would venture out for any purpose. The object of sending out that fleet was not, however, simply for the purpose of a blockade; it was expected that Sweaborg and Cronstadt would be stormed, especially when the success of the allied forces at Bomarsund was so signal. As these objects were not answered, the dissatisfaction of the British public was great; and one of the most fertile sources of the unpopularity of the Aberdeen ministry was the do-nothing policy of the Baltic expedition. Sir James Graham, as first lord of the Admiralty, had the direction of the whole, and the responsibility rested mainly upon him, or upon the admiral he entrusted with the conduct of the expedition. No one could blame Sir James for his selection of a commander—Sir Charles had the heart of the nation with him. Either, then, the admiral disappointed public expectation, or Sir James thwarted, for some purpose or other, the gallant chief of as gallant a fleet as ever sailed the sea. Which? We never for a moment doubted that the trick and intrigue of the head of the Admiralty were the cause of the failure. It appeared that the admiral gave it as his opinion that, with a fleet of gun-boats, he could destroy the batteries of Sweaborg without troops, and that, with a certain degree of military aid, he could destroy Cronstadt. But that to such a fleet as he had—a fleet of large ships—both fortresses were impregnable. Sir Charles declared that he was baffled by the Admiralty and the government at home, and he brought against them, especially against Sir James Graham, the most grave and heavy charges. Everything that a government could do to render the Baltic expedition abortive was done. First, the admiral was allowed to undertake nothing that would risk the fleet without referring to the home authorities; yet he was told to attack Russia upon every vulnerable point. He accordingly informed the Admiralty that he could with his fleet destroy Sweaborg if there were no Russian fleet ready to pounce upon him after it had incurred damage and loss by the attack. But that, as the Russian fleet at Helsingfors and Cronstadt would certainly sally out and destroy his shattered squadrons after he had broken up Sweaborg, he must not make the attempt; but that if the Admiralty supplied him with gun and mortar-boats, and with Lancaster guns, he could accomplish the destruction of the island batteries at Sweaborg, and preserv

\* Altered from 120 in winter 1854—55.

is ships in readiness to encounter the Russian fleet should it venture forth. The Admiralty furnished him none of these appliances, which were, in a small degree, placed at Admiral Dundas's disposal, that he might be enabled to accomplish what Sir Charles had failed to do. After all the generals of engineers and artillery, and the admirals, had pronounced opinions more or less in accordance with Admiral Napier's, he was urged by Sir James to attack the Russian batteries. If the object of the government was to destroy the English fleet and save Russia, this is intelligible; but Sir Charles, or his officers, or the public, no way else. Admiral Chads, one of the first professors of naval gunnery in the world, expressed his accord with the opinions and policy of Sir Charles. Our readers will say, perhaps, Well, if Sweaborg and Cronstadt could not be battered down with the means at his disposal, why did not Sir Charles attack Riga and other small places on the coast, and why did he not make the blockade effectual?" Here Sir Charles pleaded that he was placed under two different directions—the Foreign Office and the Admiralty; the latter commanding him to obey the former, and yet still giving orders at variance totally with the orders of the new authority; so that the despatches of Sir James Graham and Lord Clarendon could not by any possibility be forthwith obeyed. If the object of the Aberdeen government was to protect Russia from any serious annoyance by the fleet so ostentatiously put out, this game of cross-purposes between the first lord and the foreign minister is ridiculous enough. It was a sure way of keeping the fleet knocking about, and of, perhaps, ruining the liberal and patriotic commander. On any other supposition, this handing over the admiral from one office to the other was altogether inexplicable. Lord Clarendon had properly nothing to do with the matter; but two offices were concerned, their chiefs might easily escape responsibility on the plea of misapprehension. Finally, the French admiral, stung with a sense of insult, and disgusted with the whole proceedings of the English Admiralty, prematurely withdrew his fleet, and left Sir Charles to himself. Upon his return he was deprived of his command, the government denying and prevaricating on the subject, until at last it was plain that the truth-speaking admiral was put aside. Sir Charles demanded the publication of his despatches; Sir James resisted on the ground of danger to the public service, and Sir Charles returned with impatience Sir James's false statements. At last Sweaborg was attacked in 1855; not with adequate resources, indeed, if these were not at Admiral Dundas's disposal, but with such means as enabled him to

burn and destroy vast accumulations of material of war, by the very means which Sir Charles had pointed out fourteen months before as necessary,—this very Admiral Dundas being one of Sir James Graham's confederates as a lord of the Admiralty, in sending out Sir Charles without a proper equipment for the service, and keeping him without it, notwithstanding his remonstrances. This very Admiral Dundas refused to go out without such aids as Sir Charles was promised and never received; yet he was Sir James Graham's backer in dismissing Sir Charles from an honourable post, that he might obtain it himself. He adopted Sir Charles Napier's plans, after having dismissed that officer for not carrying out his (Admiral Dundas's) own, which were impracticable. The collusion and treachery all through is revolting to every honourable mind. To "cap the whole," Sir James, according to Sir Charles Napier's allegation, falsified his despatches. When we couple all this with the promotion of Sir James Graham's son over the heads of his seniors and superiors by Sir Edmund Lyons, we have a picture of Admiralty mismanagement, injustice, and perfidy, which no honourable, intelligent, and free people would endure. The whole history of the Aberdeen government was one of infamy, and the administration of both our navy and army was corrupt to the core.

The discussions as to the conduct and competency of Admiral Napier, which arose in 1855, are too voluminous to transfer to these pages. When the Palmerston government was responsible for the Baltic fleet of 1855, they continued the appointments previously determined upon by the Aberdeen government. This could not well be otherwise, as Sir James Graham remained at the head of the Admiralty until the secession of the Peelites. After that event everything in this matter remained unchanged, and Admiral Dundas took out the fleet to its destination. Lord Palmerston found an occasion, however, to pronounce his opinion of Sir Charles Napier, when Mr. Malins introduced the whole question of the command of the fleet to the discussion of the House of Commons. The judgment then pronounced by the head of the cabinet was such as will give the reader a fair opportunity of judging between Sir Charles Napier and his censurers:—"I have had the pleasure and honour of a long acquaintance with the gallant admiral, Sir Charles Napier, who is the subject of this discussion, and, admiring as I do his professional and personal character, it would have been matter of very great and deep regret to me if he stood in the position of a man who had been censured and dismissed for conduct pursued in an important command. I think it has been

clearly established to the house that he has neither been censured nor dismissed. The honourable and learned gentleman quoted opinions expressed by me in a different room from this of the professional merits and distinguished qualities of my gallant friend, for so I must call him. I retract none of those opinions. I am proud to say that I think the courage, the gallantry, the professional skill and ability of my gallant friend stand as highly now as they did at the moment when I made those observations. It has been my fortune on a former occasion to profit, in the official capacity in which I was acting, by the invaluable services of Sir C. Napier. He rendered the most important service to the country by the able and distinguished manner in which he performed his duty on that occasion, and it is only due to him to say that, in my opinion, nothing has occurred in the course of the last year which in the slightest degree diminishes the high character which he has attained in the service of his country. Sir C. Napier rendered important service in the command of the Baltic fleet. He showed the greatest skill in conducting that fleet through the most intricate and dangerous navigation. He brought back a magnificent fleet without any injury, under circumstances in which a man of less skill and less judgment might have sustained serious and great disasters, and he secured the country against all those evils which might have arisen if the Baltic fleet of Russia had been permitted, either wholly or in part, to quit its ports and scour the sea. Sir, I shall only repeat, that the motion which is now made is one which the house ought by no means to agree to; but I wish it to be distinctly understood that, in negating that motion, I do not consider myself in the slightest degree, either directly or indirectly, concurring in the least impeachment of the character of Sir C. Napier. On the contrary, I think that his character stands as high as it ever did, and that my honourable and gallant friend will rank for ever among the most distinguished ornaments of the naval profession."

Such a eulogy, from such a man, ought to have been sufficient to soothe the wounded feelings of Sir C. Napier, by whomsoever aspersed.

The objects which this mighty armament was expected to accomplish were very different among different classes. A large portion of the public exulted in the anticipation of the speedy destruction of Sweaborg and Cronstadt. Those who were better acquainted with its adaptations, mourned over the neglect which left the country unprovided with gun-boats and floating mortar batteries. Sir J. Graham had warning enough, but he did not take it. The bomb-boats which accompanied the fleet were in some cases imperfectly constructed,

and the iron floating mortar-batteries were not in a state fit for service; they proved a wretched failure, sharing the fate of most specimens of naval architecture under the system of favouritism and jobbing which prevailed at the Admiralty and in "the yards." Sir James seemed to have been very much afraid of hitting the enemy too hard; the motto of this chapter did not convey to him any useful maxim or suggestion. The "hit-hard" system of the Great Duke had gone out of fashion under the influence of Peelite quackery. A considerable number of politicians were of opinion that the most that could be hoped for from the Baltic fleet was a blockade, that no more ships should be sent out than would render such blockade effectual, the true policy of the government being to bend all the energies of the nation upon the war in the Black Sea.

In Russia every exertion had been made to meet the stupendous power which it was apprehended the allies would put forth in the Baltic in 1855. The uttermost industry was used all the winter in providing and applying naval and military resources, so that the allied fleets might meet a warm reception whenever they came. The efforts of the enemy were chiefly directed to the chief fortresses, which they spared no expense to make as strong as possible. General Von Berg was appointed governor-general at Helsingfors, the Emperor Nicholas having much trust in his energy and resources. Early in February eleven large mortars arrived there, of ten to twelve inches in diameter in the bore, and capable of throwing shells of 1 cwt. Thirteen horses were required to draw these monster mortars, which were the objects of much curiosity, the people travelling from great distances to see them. Between Helsingfors and Abo large bodies of troops were placed; the cavalry were numerous and well mounted; they were so distributed, as to be able to throw themselves with rapidity upon any point where the allies might attempt a landing. From the end of February, until the fleets appeared off the coasts, detachments of Bashkirs arrived continually, these were to be employed as "advance corps" on the two shores of Finland. At Revel and Riga very strong parties of irregular cavalry arrived from the extreme east of the empire early in March. The general of artillery, Yermaloff, was dispatched by the Emperor Alexander, soon after his accession, with extraordinary powers to inspect these coasts. A regiment of hussars, 1200 strong, commanded by Gottschalk, arrived at Mittau, and extended its pickets as far as Taurogen. Between that and Libau a regiment of regular Cossacks, 900 strong, was posted in detachments. General Grekoff, with a large staff, took up his station at Libau, where he was continually reinforced by the arrival of

small detachments of Cossacks. General Siewers personally saw that Libau was put in a suitable state of defence, and showed vigour and activity throughout his command, inspiring the inferior generals with his animation. Two regiments of infantry took post in Mittau at the end of March. Five regiments of infantry, and (what the Russians call) a brigade of artillery, under General Siewers, early in the month garrisoned Norva, Riga, and Revel. The Hamburg correspondent of the *Independence Belge*, under date of the 24th of March, thus wrote:—"When I announced to you, in November last, that the Emperor of Russia had decreed the formation of an army of 100,000 men on the coast of the Baltic, I informed you that General Siewers, commander of the first army-corps in Poland, had been instructed by the emperor to organise that army, of which he was to assume the chief command. This general, who established his head-quarters at Mittau, has displayed so much activity that, towards the middle of January, he had already succeeded in uniting under his orders 62,000 men. The troops destined to complete this army are to be drawn from the different depôts of the reserve battalions, and are now *en route* from the interior to join their respective corps. To-day I have heard from Riga that the authorities have been ordered to prepare quarters for a division of 20,000 men, who are to garrison the city, and for a second corps of the same force, which is to remain in the neighbouring districts. A similar order has been addressed to the authorities of Revel by General Siewers, who is invested with all the discretionary civil and military powers conferred in Russia on the general-in-chief of an army in the field. An entire division of infantry, consisting of 16,000 men, will be shortly quartered in the barracks, public buildings, and private houses at Revel. The first corps are to arrive in those cities between the 10th and 15th of March. The Baltic army is to be *echeloned* from Cronstadt to Pölangen, that is, along the coast of the provinces of Esthonia, Livonia, and Courland. The parks of artillery stationed in 1854 in the environs of Riga and Revel, will receive this year a reinforcement of four mounted batteries."

Lines of telegraphs were formed along the shores of the gulfs, in order to prevent the possibility of surprise anywhere, and so that troops might be precipitated at a moment's notice upon the spot. Their naval preparations equalled their military. Immense supplies of hemp, tar, pitch, resin, rope, sails, spars, tanks, and other naval material, were ordered to be supplied at certain points of delivery before the end of March, under a heavy penalty. Contracts were formed with German merchants for various supplies, for which high prices were

given, bargains against time, so that before a certain date in April their supplies should be delivered at the places prescribed. It was supposed that the allies would trust a great deal to gun-boats of a new and formidable construction, and preparations were made to match them. In 1854 there were 250 Russian gun-boats in the Baltic; in 1855 they amounted to 400, each armed with one gun of 68, and four of 32-pounders. Still, with all their efforts, the enemy could only muster ten war steamers, when the English fleet entered his waters, although Cronstadt contained so powerful a force of sailing line-of-battle ships, frigates, brigs, sloops, &c., computed at thirty ships of the line, more than twice as many frigates (such as they were, many not deserving the name), and eight brigs. Early in February the *Invalide Russe* published in detail Admiral Glazenapp's report as to the build and construction of certain "new row gun-boats." They were armed in a peculiar way, to repel attempts at boarding. The *Invalide* thus described them:—"They consist of an iron lance, about seven feet long, and a mace of cast-iron, the massive head of which resembles a pine-apple, and like it is beset with a number of obtuse but pointed projections. Each boat is provided with from thirty to forty lances, and from fifteen to twenty maces, in the management of which the Finns are said to possess great skill." From this description these maces would appear to resemble the *morgernstern*, still in use with the watchmen in Sweden, and with one of which the Marquis of Waterford, some fifteen years back, came inconveniently into close contact.

So alarmed was Russia for the safety of her Baltic provinces, that the press of St. Petersburg contained the most inflammatory appeals to the soldiery quartered there, and to the loyal inhabitants. The *Abeille du Nord* of St. Petersburg published a fanatical appeal to the Russian people to rise in arms for the defence of the orthodox church. It called upon the clergy to exhort their flocks to fight for the good cause, and to impress upon them that the war was the ancient war "of the Prince of Darkness against the kingdom of Christ." It concluded with a prayer to the Almighty to admit those who fall on the field of battle for the good cause at once into the kingdom of Heaven.

On Cronstadt and Sweaborg the Russians expended all the resources of their fanaticism and their power. Every point where the slightest weakness was detected was strengthened; and prayers, masses, benedictions, religious processions, and religious harangues, were employed to consecrate every battery, and almost every gun. Sir Charles Napier did not think Cronstadt impregnable in 1854, if

he had suitable means for attacking it, but when he visited it early in 1856, after the peace, he was of opinion that after his fleet left the Baltic, and before the arrival there of Rear-admiral Dundas, it was made impregnable. On several occasions the gallant admiral recorded this opinion; in a letter to the *Morning Advertiser* he thus wrote:—"If fifty sail of the line, and 50,000 men in steamers, were to attempt an attack, it might just possibly succeed, provided they did not sink ships between Menschikoff and Cronslott, and our ships did not take the ground in going in. It would be necessary for the leading ships to anchor against the batteries. Those following should go in and break the boom. If they succeeded, we should probably overpower the fleet, and the steamers would and the troops on the seawall. If we failed in breaking the boom, there would be great confusion, and there is no knowing what would happen. It would also be necessary to have a strong reserve to take the place of the ships against the batteries, if they failed in silencing them, which is more than probable. If all went on right Cronstadt would be taken; and if all went wrong, the fleet would be lost. No one, I think, except the *Times*, would have tried Cronstadt. They said it was not necessary to see how one was to get out, it was only necessary to get in. I have shown that the north passage is double—I may say triple—holed, and four new batteries built; so that passage is sealed. There are no guns on the north wall; but outside there are redoubts well armed. On the south side, between Risbank and the mainland, there are two new batteries, which render it unsailable, and the passage up towards Peterhoff is holed also. On the ramparts there are about 120 guns, many of them pointing seaward. The carriages are not in good order. Fort Menschikoff is now fitted with platforms like a ship's decks, with 32-pounders, where the seamen are exercised in the winter. It is well ventilated, having no guns on the sides or rear. On the shore, inside Peter the Great, there is a heavy earthen redoubt, which points to the sea. There are redoubts all over the island, and on the western part of it a new fortification is begun, right across, and between it and the town a chain of redoubts. The line wall is of small stones, like Bomarsund, which could be easily knocked down. There is a ditch, but no glacis. I forgot to say that the screw line-of-battle ship has 830 men, excluding engineers and stokers."

Again, in his place as a member of the British parliament, he observed:—"He had seen many strong fortifications in his time—he had seen Toulon from the sea, and from the shore too; he had seen Cadiz; he had not seen Brest, but he had seen Cherburg,—but no

place he had ever yet seen was to be compared with the fortifications of Cronstadt. It was not the forts only that made it so strong,—for if he had had to deal with those stone three-deckers and stone four-deckers, as they might be called, in the open sea, where they could be got at, he should not have hesitated a moment in attacking them,—because ships in general, when well exercised and well disciplined, fired their guns with more celerity and almost as well as forts. It was the danger of going in that made Cronstadt so strong; the passage was very narrow and very shallow."

Whether the means provided by the British Admiralty to meet the case for 1855 had been sufficient, our readers must judge for themselves, by a comparison of such statements with Sir James Graham's defence of himself and the Admiralty, of which he was the first lord. In his speech in the House of Commons, in reply to Sir Charles Napier, he said:—"Neither in the Black Sea nor in the Baltic may we have been so successful as we desired; but in my conscience I can say that, whatever may have been our failures, they have not proceeded from want of exertion on the part of the Board of Admiralty. With respect to preparations, I say distinctly that, if we had received the honourable and gallant officer's report of what was necessary, in his opinion, for the attack of Sweaborg by naval means only in the beginning of June, it was quite in the power of the Admiralty to have sent out such a quantity of mortars as would either have sufficed to plant on the islands occupied in the attack in 1855, or, placed in mortar-vessels, would have aided the operations of the fleet in the manner recommended by the honourable and gallant officer, before even in his view the season would have prevented the attack. Be that as it may, however, was I negligent in the intervening time? In concert with my colleagues, I prepared, in the autumn of 1854, to be ready to sail with the fleet in the spring of 1855, twenty-six gun-boats, twenty-two mortar-vessels, and five floating batteries, all built and ready for sea in April, 1855. By an agreement with the French government, an equal force of gun-boats, mortar-vessels, and floating-batteries, had been prepared and built by France; and, in addition to four screw line-of-battle ships, commonly called block-ships, we fitted five other line-of-battle ships with high-pressure engines; so that there were ready for attack in the Baltic in the spring of 1855—nine sail of the line, twenty-six gun-boats, twenty-two mortar-vessels, and five floating-batteries; this number of gun-boats, mortar-vessels, and floating-batteries being doubled by the arrangement made with France."

The statement of Sir James Graham as to

CRONSTADT.

the gun-boats provided for the fleet was indirectly met by a letter from Sir Charles to the editor of the *Times* :—

"SIR,—If your 'Special Correspondent' had taken the trouble to examine the chart of Cronstadt, which a sensible and honest man ought to have done, before he attacked me, he would have seen that the north of Cronstadt could only be approached by gun and mortar-boats with a light draught of water, not one of which I had; he would also have seen that the passage to the north (which was never available for large ships) was protected by a barrier supported by eight or ten block-ships, pwards of one hundred gun-boats, several steamers, and the boats of twenty sail of the line."

"Your 'Special Correspondent' says the Russians were perfectly aware that the northern side could be forced, and it was quite possible for a determined enemy to run past the forts, most of which were constructed on arcs of spheres having their *maximum* of amount of guns directed in front, and having only part of their guns available for an enemy attacking their right flank."

"Now, sir, the Russians knew perfectly well that the passage to the north was not practicable, and there were no batteries constructed on arcs of spheres. To the north it was barred, as I have already described, and could only have been attacked by gun and mortar-boats of light draught of water, and this I stated to the Admiralty in 1854, and was complimented on that they were pleased to term my very able report."

"In 1855, when Admiral Dundas appeared here, they had in the winter of 1854-5 constructed another barrier, outside of the shoal water, to further protect the north; and, though he found a passage through the piles of his gig, he did not venture to attack the north of Cronstadt with the gun-boats he had at his disposal. Why he was not furnished with more the Admiralty can best answer; they had a year for consideration."

"In 1856, when I was at Cronstadt, they had constructed a third barrier right across, protected by five batteries, which rendered an attack on the north impossible."

"Had the Admiralty, in the autumn of 1853, well examined the north of Cronstadt, they would have known that gun and mortar-boats were the only means of attacking it with success; and if I could make such a report from a reconnaissance from the sea in 1854, a much better one might have been made from the north wall in 1853."

"I am, sir,

"Your obedient servant,

"C. NAPIER."

As the full discussion of this subject here will prevent the necessity of encumbering with it the narrative of the operations in the Baltic, we will notice another episode in the controversy. Sir Robert Peel visited St. Petersburg and Cronstadt after the war had terminated; he was then a lord of the Admiralty. On his return he declared that the Grand-duke Constantine informed him that in 1854 Cronstadt was not impregnable, and that if Sir Charles Napier had had the spirit to do so, he might have destroyed it. Sir Charles, with this statement of Sir Robert's in view, made observations at another public meeting in direct contradiction to it, declaring that the grand-duke had given him a precisely opposite opinion :—"He went to Cronstadt because he was extremely anxious to examine it with his own eyes, to see whether he was right or wrong, and he must confess that the fortifications were much stronger than he believed they were when he was off it. He considered it was entirely impregnable. The Grand-duke Constantine had favoured him with an interview, and showed him the plan of the defences of Cronstadt, and a more judicious and proper plan was never entered into. The Grand-duke Constantine was a man of talent and ability, and was perfectly honest and plain with him. He said that if the British fleet had attempted to go into Cronstadt it would have been destroyed. More than a thousand guns, he said, would have been brought to bear upon the fleet—that there was not water for the large ships—that the channel was narrow, and filled with infernal machines—and that even the Russian ships in passing were in danger of being blown up. He (Sir Charles Napier) then asked the grand-duke why they did not meet them at Kiel, when they were badly manned and disciplined; and the grand-duke held out his hand to him in a frank and sailor-like manner, and said he did not know it until it was too late, and that perhaps it was very lucky he did not meet them. The gallant officer, in conclusion, referred to the necessity of keeping the navy in a state of efficiency, and declared that if they were determined, as Lord Palmerston had said at Manchester, not to bear wrong, they must be prepared to resist it."

It became important to the allies to conciliate the good-will, and, if possible, secure the alliance of the neutral Baltic powers. Prussia continued to practise rather an original neutrality,—she allowed through her own territory all contraband of war to reach Russia, yet when a vessel containing some copper, exported to England from Russia, and which the Russians themselves allowed to pass, touched at one of her ports, she treated it as contraband of war—dealing more stringently with us than the enemy with whom we did battle, while

showing for that enemy on every occasion a gross partiality. The weakness of the allies towards Frederick William was very unaccountable, unless it was their policy, until Russia was conquered in the Black Sea, not to arm any portion of Germany against the alliance, reserving their opportunity in such case to deal with Prussia more vigorously. But that power had a very large force of *Landwehr*, and, contrary to her usage, a sea force, which was thus described by Mr. Scott Russell, the constructor of the *Nix* and *Salamander*:—"I know as a fact that the navies of certain foreign governments have steam gun-boats, for which no vessel in our navy is at all a match. They have proved themselves perfectly good sea-boats in the open sea. Under steam, in their best trim, they go fifteen statute miles an hour; in their worst, thirteen. Their light draught, fully armed and equipped, is only five feet; their load draught, with coals for 2000 miles, less than seven feet. They carry four long 68's, and four long 32's. They can fire two of the 8-inch guns parallel to the keel at either end, and can bring all the four 8-inch guns over to either side for a broadside. These long 8-inch guns are all mounted on the traversing slides, and there is ample room for the stowage of the guns when out of use and in action. I have seen these guns worked with perfect ease and security in so heavy a sea that the water was coming over the weather bow in such quantities, that an experienced officer in the Royal Navy assured me it would have been impossible to work the long guns of a steam-sloop of 1200 tons, then under his command, in similar circumstances, without water pouring down the bore of the gun."

The influence of Prussia upon the other Baltic nations was injurious. Denmark and Sweden, however interested in the war, could not disregard the policy of the German nations, even when the fleets of the two greatest naval powers in the world crowded their waters, offering them alliance, and blockading the harbours of their foe, who was not less their foe, although not waging upon them an immediate war. The Danish king was as little desirous as the Prussian king to quarrel with the czar—despotic sympathies united them all. The Danish king was satisfied if the independence of his gallant little kingdom lasted his time—its crown might grace the head of the Tartar after he passed away; he had neither the patriotism, sincerity of creed, nor personal manliness to make the slightest effort for his country, his church, his people, or his honour. The alliance of Denmark could not be counted upon.

Sweden was full of sympathy for the allies. Her alliance would have been a great accession. Her navy was at this juncture considerable:—Ten sail of the line, six frigates, four schooners,

four brigs, nine steam schooners, seventy-seven gun-boats, one hundred and twenty-two armed boats, six mortar-vessels, twenty-two steam despatch-boats, two royal yachts, twenty-one transports, five hundred and ninety-four armed row-boats. Norwegian fleet:—Two frigates, two schooners, two steam schooners, one brig, forty-three gun-boats, five tugs, with a steam frigate, and a despatch-boat, both of which were being finished on the stocks at Christiana. All the vessels of war were ready to go to sea, but in time of peace they are laid up in ordinary. Only the vessels strictly required by the government are kept on service.

But while the feelings of the Swedes, and, still more, the feelings of the Norwegians were with us, there were grave political considerations to deter these united Scandinavian states from joining the allies. The point of view from which the people regarded the probable consequences to themselves may be seen by a quotation from a paper published at Stockholm, called the *Svenska Tidningen*:—"Now that the sun of spring is beginning to melt our snow, and burst the ice which enchains our seas, the Western powers will assuredly renew their appeals to the Northern states to join their alliance. Will they succeed? Will the King of Sweden and Norway, who by the fundamental laws alone has a right to declare war, break the neutrality he has hitherto maintained? This is a question of immense importance for the future of our country, which our governments must face in the midst of difficulties, dangers, and caprice. The Western powers have already attached Sardinia to their cause; she has sent 15,000 men to the eastern seat of war. The same powers are striving to gain Portugal, which can only offer them a still smaller number of troops. If England and France are seeking such allies, what advantages would they derive from having Sweden and Norway on their side, able to throw very considerable forces on the side of the Baltic? Our assistance would be of especial service to England, when she possesses at this moment no army to send to the Baltic, nor can she form one; and in our flotilla she would find that species of maritime arm so necessary for crippling the Russians. France, too, would have 60,000 men at her disposition, whom, in the event of our non-assistance, she would be compelled to send to the north. Our situation is not that of Sardinia or Portugal, although there is some resemblance between the population and military forces. We are not, like them; at a great distance from the seat of war; we are, not like Sardinia, enclosed between two great protecting powers; nor, like Portugal, situate at the extremity of Europe, under the ægis of an imposing flag. Our situation has more analogy with that of Austria.

ke her, we are close to the great enemy, far from our great allies; we should be the *first*, and probably the *last*, to bear the burden of the war. Austria, who can bring into the field 100,000 men, for whom the present war is a real question, as her most precious commercial advantages, her religious and political independence are at stake—Austria, who has on her right Turkey for an ally, and on her left France, ready to send a formidable army to her aid through Germany—Austria hesitates about drawing the sword, and is using her utmost exertions to terminate the contest by negotiations; and we, for whom the famous ‘four emperors’ present scarce any interest—for whom the war has no settled object—are expected to hurl ourselves into it blindly!”

Such was the state of affairs in connection with the theatre of war in the Baltic, when the British fleet, under Rear-admiral Dundas, sailed from the English shores in March and April, 1855. No display was made as in 1854. The fleet departed quietly to its sphere of duty. Captain Watson, commanding the advanced squadron, left England on the 20th of March, and on the 17th of April declared the blockade of the Russian Baltic ports. Before the end of March the captain reached the Kattegat, and then divided his squadron, taking with him a portion of the ships through the Great Belt to Kiel, and ordering Captain Yelverton, with the other portion, through the Sound. The ice in the Baltic was then fixed in some places, and floating in great masses in others. The following letter depicts this:—

*Nyborg, March 25.*

“Two days ago the Great Belt was passed, but a severe storm from the south-east, which has been blowing ever since this morning at daylight, has brought in large fields of ice, which have completely blocked up the strait, so that the passage between Helsingør (Canute’s Head) and the island of Sprogø is no longer to be attempted. The strait and port of Kiortemünde are free from ice, as well as the whole of the upper part of the Sound, and six boats came across from Seeland yesterday. At Elsinore the Sound is free of ice; but between Vedbek and the island of Hven it is still firm, and at Copenhagen it extends beyond the Trekroner Battery. The Bay of Kiel was partially free of ice, but the prevalent easterly winds have drifted in large masses. The ice in the harbour has not yet been broken up. Several colliers from English ports to Elsinore and Wingo Sound, with coals for the Baltic fleet, were seen on the 21st near Copenhagen entangled in the ice. Some ice-boats were sent to their assistance.”

By such circumstances Yelverton was obliged to linger at Landskrona for a considerable time.

The great fleet, commanded by Admirals Dundas, Seymour, and Baynes, with the honourable W. F. Pelham, as captain of the fleet, made ready for sea. On the 9th of April it departed from the Downs. Admiral Dundas reached Kiel on the 17th, and remained during the month in Danish waters. During this time he was the object of much public attention and respect from Danish citizens, and once the king received him. Several prizes, of no great value, were captured by Captains Yelverton and Watson.

On the 3rd of May, Dundas being informed that the ice was now well cleared, left the harbour of Kiel at the head of a large portion of his ships, consisting of thirteen line-of-battle, five frigates, and two gun-boats. The rendezvous was Gothland, whither the advanced squadron had already gone. Several detachments then struck off from the main fleet to Nargen and Revel, the Åland Isles, and Hango. The admiral followed with the fleet to Revel, which he found well prepared to receive him,—bristling with new batteries, well manned, and furnaces ready to enable the batteries to discharge red-hot shot. Opposite Revel is Nargen, a pleasant island, which the admiral found abandoned. This spot was chosen as the British headquarters, for which it was favourably situated, being just within the Gulf of Finland. A squadron was sent to reconnoitre Riga, which was found as well prepared with batteries and troops as Revel. This squadron captured a swarm of small vessels laden with various articles carried in the Baltic coasting-trade. Dundas proceeded to reconnoitre Swaaborg and Cronstadt, both which places were in the condition already described in this chapter. These proceedings consumed the remainder of the month of May.

On the 1st of June Admiral Penard and the French fleet, or rather squadron, joined Dundas before Cronstadt, and a council of war was convened to determine the question of its pregnability. The admirals landed at Tolbukén Lighthouse, at the west end of Cronstadt Island. From this spot a panoramic view of the island, the channels, and the batteries could be had, and the allied chiefs were utterly astonished at the vast magnitude and power of the defences. They then steamed along the southern coast of the island, reconnoitring the various batteries. It was seen that three line-of-battle ships and two frigates were moored across the harbour, before which was planted enormous piles of timbers, which just appeared upon the surface of the water. The harbour was also defended by a flotilla of gun-boats, not less than 200 in number. Earthworks of enormous magnitude, and constructed with the greatest labour and care, were erected wherever this description of defence was available. Not a point could be traced which the

enemy had left vulnerable to ordinary means of attack. Admirals Seymour and Baynes, in a ship's boat, attempted a close and minute reconnoissance, and were in imminent danger of being captured.

To attempt the breaching of the forts and batteries with large ships was impracticable; the liners could not steam nearer than two miles and a half, and Admiral Dundas had only twenty gun-boats, two of which were of no use: these could effect nothing. All Sir James Graham's tricky eloquence, sustained by the voice of party hacks in the Commons, was here tested. Where was the result of the exertions of the Admiralty after the dispatch of the Baltic fleet in 1854, to the time of the dispatch of that fleet which was provided with twenty gun-boats where 400 was required? England had the material, and could have commanded any amount of skill and labour; but she had not a competent Admiralty. Rear-admiral Dundas was himself one of the lords of that Admiralty, under whose misdirection and deficient zeal his fleet was obliged to sail without the weapons by which alone the stronghold of the enemy was assailable. Sunk *caissons* (infernal machines) at sea, and skilful intrenchments on shore, contributed to the defence of a place strong by nature and bristling with ponderous batteries. A sort of fishing expedition was set afloat to catch the infernal machines; and the tars became so expert at this novel angling, that the machines were caught up without much injury being sustained. From two boats a long rope was held, the boats separating nearly to its length; the rope was then sunk ten or twelve feet by weights, but held suspended by empty casks. These floating buoys showed by their motion as the boats rowed away that a machine was entangled: they served as the corks to the angler's line; the instruments of mischief were then hauled carefully up. These "infernals" were kept floating at a certain distance beneath the water by anchors; they were loaded with powder, and a chemical preparation ignited upon a slight concussion and discharged the powder; the shock and damage to a ship might prove very great: several of the vessels were injured.

After much reconnoitring and many councils of war, the idea of attacking Cronstadt was given up. The fleet was sent out without the means of inflicting injury against the place. Admiral Seymour was dispatched to Narva, which he found protected with earth-works, the batteries well manned, and cavalry, infantry, and field artillery in position to prevent a landing. Seymour, leading the *Blenheim* and *Exmouth*, with the *Pincher* and *Snap* gun-boats, exchanged fire with the batteries, and sheered off, unable to effect anything.

While these proceedings were taking place,

an affair occurred at Hango, which will leave a deep stain on the Russian name and character, although it is to be regretted that the careless conduct of the English afforded the Russians a plausible pretext. Several merchant vessels had been captured by the British steamer *Cossack*. The crews of these vessels were generally Finns, and as that name showed friendly feelings to the English wherever it had opportunity, the British captain solved to land the men under a flag of truce. A boat was accordingly dispatched for that purpose, near Hango. A Finnish captain suggested that as there were no Russian troops there, the inhabitants would be found willing to sell provisions; it was arranged to attempt this—a palpable violation of the rights of a flag of truce. In the boats several muskets were stowed away unloaded; but there was considerable supply of cartridges—another palpable violation of a flag of truce.

The *Cossack* remained beyond cannon-range but did not exhibit a white flag, which the Russians allege that the laws of war require if the captain of that ship desired to speak with the shore. The captain alleged that he remained at the ordinary distance required in blockade, and did not suppose that he was bound to hoist a white canvas, as the boat sent ashore carried a flag of truce. Nothing in such cases, should be left to chance; the gallant captain of the *Cossack* was so to blame. In the boat itself a white handkerchief held on a stick, which was afterwards carried on shore, was the signal of truce very improperly relied upon; and this the Russians afterwards protested that they never saw—falsehood on their part, and proving that, their blood-thirstiness, they were willing to take advantage of any neglect or oversight on the part of the British. On the morning of the 5th Captain Fanshawe of the *Cossack* sent in the boat, with twenty-four men, to land the Finnish prisoners. The officer who commanded was Lieutenant Geneste, and Mr. Sullivan, master's assistant, directed the boat. Three stewards also went for the illegal purpose of purchasing provisions. Several intervening islands hid the boat as she rowed forward, so that Captain Fanshawe could not see whether the flag of truce had been properly displayed. When the cutter reached the shore there was no one visible. The officers landed holding up the white flag, or white handkerchief, whichever it was. On advancing a short distance, 500 Russians, who had been concealed behind rocks, suddenly rose and fired. Lieutenant Geneste, Mr. Sullivan, and Dr. Easton, were all struck, and fell, it was supposed, dead. The Finnish captain called out that they came under a flag of truce, to which the Russian officer replied in English, that I

THE DECK OF A SHIP

ould have nothing to do with the d—  
g of truce. Some of the English sailors  
nded to give assistance to their officers,  
it were, of course, instantly shot down;  
ditional volleys were poured forth from the  
ussian line, until not a man remained stand-  
g, and the boat was riddled with balls above  
e water-line. The Russians then entered  
e boat, and bore away whatever it con-  
ined. As several of the officers and men  
ere found to be only wounded, they were  
und-tied and driven away from the shore.

The cutter not returning, Captain Fanshawe,  
te in the afternoon, sent the gig in search of  
with another flag of truce, under charge of  
eutenant Field. As the gig neared shore,  
e cutter was perceived to move towards it  
a very helpless manner; and on bearing  
wards it, one wounded sailor was seen to  
skull it" along. When taken into the gig,  
he exclaimed—"They are all killed!" and  
inted. He was borne back to the ship, and,  
ter some time, stated that the Russians had  
ed upon the party, and afterwards rifled the  
at; but, as he lay insensible, did him no  
rther injury. His arm was broken by two  
usket-balls. This sailor, a man of colour,  
as intelligent and trustworthy; and it was  
his conviction that the whole party had  
rished. He signed the following state-  
ent:—"On the cutter, with a flag of truce  
ing, getting alongside the jetty, or landing-  
ace, near the village of Hango, the officers  
d liberated prisoners jumped out, and Lieu-  
nant Geneste held up the flag of truce to a  
umber of Russian troops, who had suddenly  
rung up from the cover of houses and rocks  
bout 500, dressed as riflemen, and armed  
th muskets, swords, and bayonets), and told  
em what it was they meant, and why they  
aded. They replied, 'That they did not care  
d—for flags of truce there, and would  
on show them how the Russians could  
ht;' or words to that effect. A volley was  
ten fired at the officers and liberated prisoners,  
d afterwards on the boat, until all were  
posed to be killed. The Russians jumped  
to the boat, and, after throwing several dead  
dies overboard, lying on the arms in the  
lthom of the boat, they found Henry Glid-  
n, A.B., who was only wounded; they took  
m out of the boat, and bayoneted him on the  
arf. John Brown, lying by his side, and  
rely wounded, feigned death: he was  
agged from one end of the boat to the other,  
t, luckily, not thrown overboard. They  
ten took the arms, magazine, colours, &c.  
e officers and liberated prisoners were shot  
wn first. Dr. Easton was the first who fell,  
ten the Finnish captain; the next who took  
e flag was Lieutenant Geneste, and, waving  
i shouted—"A flag of truce!" which had been

previously explained to them before they fired.  
The Russians spoke English; and the person  
who led them, from his dress and appearance,  
seemed to be an officer. The Russians yelled,  
and fired on the men before they could defend  
themselves; indeed, there was not an attempt  
made."

Captain Fanshawe opened fire from the ship  
at a distance of 600 yards; it was not re-  
turned, and, a dense fog falling, he retired to  
a safe anchorage.

When the affair was thoroughly investi-  
gated, it appeared that seven of the crew of  
the cutter had been killed, and the rest taken  
prisoners, most of them badly wounded, and  
that the Russians justified their firing, on the  
ground that they saw no flag of truce; and  
then that it being irregularly hoisted, they  
were not bound to respect it, but had every  
reason to believe that it was borne to cover  
surreptitious objects. This was true only so  
far as the purchase of provisions was con-  
cerned; but if true in every respect, the con-  
tinued fire of 500 men upon twenty-five, and  
those unarmed, was a cold-blooded and shocking  
murder. No summons to surrender was given,  
and all could have been captured without  
shedding one drop of blood.

Captain Fanshawe reported the occurrence  
to the admiral, who forwarded that report to  
the Russian general, De Berg, observing:—  
"In calling your attention to these facts, I hope  
I shall not be making a vain appeal to your  
honour, as an officer, to give me such explana-  
tions as you may deem suitable under the actual  
circumstances; and I am happy to take advan-  
tage of this circumstance to afford you the  
means of defending the character of your flag."

The polite suggestion that De Berg would  
be obliged to the admiral for the opportunity  
of clearing the character of his flag, was simple  
folly: the Russians merely laughed at the  
refined feelings of the allies, and steadily  
watched for every opportunity to execute a  
brutal and cowardly revenge upon the wounded  
or unarmed. The letter of Admiral Dundas  
received, however, a prompt reply, and as  
clear as prompt, from De Berg, who made  
ingenious use of every act of error and neglect  
on the part of Captain Fanshawe, connected  
with the dispatch of the cutter to the shore:—

*Helsingfors, June 5 (17th).*

"MONSIEUR L'AMIRAL.—Before replying to  
the letter of your excellency of the 3rd  
(15th) of June, I must observe with regret  
that the vessels of the English fleet hoist Rus-  
sian colours the more easily to capture any  
Russian vessel they come across. The journals  
have sufficiently made known how, from the  
commencement of the war, the flag of truce  
has been abused in every sea to take soundings

and to make military observations. The hostility displayed against inoffensive towns and villages, inhabited by peaceful populations, has been but too well proved by all that has taken place in the Baltic. On the 14th (26th) of May a cutter—I do not know from which ship—landed with a little white flag near the village of Twerminne. Not finding any troops stationed near the village, the crew of the cutter wantonly set fire to some huts and boats, despite the white flag. On the 26th of May (5th of June) another cutter, belonging to the corvette *Cossack*, made for the Hango coast. This boat had the British flag flying. The officer in command of her pretends to have hoisted a little white flag in her prow on a stick. Neither the men on duty at the telegraph on the neighbouring heights, nor the military post on the coast, perceived this pretended white flag. It was, consequently, quite natural that they should attack the cutter and its crew as soon as the latter landed. Lieutenant Louis Geneste pretends that a servant carried by his side a stick with the white flag on it. The soldiers and officers of our advanced posts, questioned as to the existence of this flag, affirm that they never saw it at all. M. Geneste pretends that he was sent with a flag of truce to give up some of the crew of merchantmen captured during that fortnight. If such had been his intention, it would have been a much simpler plan, as the *Cossack* came from the neighbourhood of Cronstadt, to have sent them to Sweaborg, or to have landed them on some island, from which they could easily have reached the coast. The captain of the *Cossack* ought to know that the bearer of a flag of truce cannot, and ought not, to be received upon the first landing-place, promontory, or rock, it may suit him to select. My outposts see, and will continue to see, in such missions only military reconnaissances, which use similar pretexts to make explorations and secure provisions. The hostile, and by no means truce-like character of this mission is, moreover, proved:—1st. By the loaded arms seized. Three muskets show, by their exploded caps, that the crew of the boat made use of them in the struggle. 2nd. By the care shown in providing the cutter with 360 cartridges, and a chest full of incendiary articles, which is actually in our possession.

“On the following day the *Cossack* kept up a heavy fire, during an hour, against the village of Hango and its peaceful inhabitants; and a few days later, the 1st (13th) of June, the attack was repeated, to set fire to the telegraph and to destroy some houses, instead of going to Sweaborg to demand explanations. Despite the superiority which steam and screws give to your vessels, they do not cease to hoist the Russian flag to seize our coasting-vessels.

In the same manner, some yards of white canvas have evidently been turned to account to take soundings and make explorations.

“I am willing to believe, M. l'Amiral, that this is done without your knowledge. Allow me to express the hope that you will in future prohibit the missions of such pretended flags of truce. The crew of Lieutenant Geneste's boat were caught in their own trap. Seven men were killed, four wounded, and the remainder made prisoners, as the list I enclose will inform you. The affair only lasted a moment. It was impossible to distinguish the English from the prisoner sailors they brought with them. One of them, Lundstrom, who spoke English, was the first man killed, and two others were wounded. The responsibility of the whole affair rests with the irregularity with which missions of this sort are made. It appears to me that it would be more suitable to make communications to Sweaborg, and entrust them to some vessel sent there, in the same manner as you sent your letter of the 3rd (15th) of June. The *Cossack* should not have deviated from the rule. Vessels wishing to enter into parley should hoist a white flag of large dimensions, and anchor beyond long range, and await a boat to receive their message in writing. We will never receive another. The *Cossack* did nothing of the sort. It seems to me that the honour of your flag ought to exact the most strict and scrupulous observance of the rules established on such occasions. The honour of my flag will never permit me to depart from them.

“I can assure you that the wounded are well taken care of, and the prisoners well treated.

“I have the honour to be,

“Monsieur l'Amiral,

“Your very obedient servant,

“DE BERG,

“*Aide-de-camp-general of his majesty.*”

On the 29th of June a Russian war-steamer bearing a flag of truce, rode out from Cronstadt to the allied fleet. An officer delivered to Admiral Dundas a message from Prince Basile Dolgorouki, minister of war, giving notice that in future flags of truce would only be received at Cronstadt, Sweaborg, and Revel, and refusing to receive any flags of truce unless a Russian boat first went out to receive the message in writing, the delivery of which the flag of truce was intended to cover. The British admiral remonstrated, reminding the minister of war that cases might arise requiring more immediate attention than such regulations would allow. The remonstrances of the admiral produced the desired effect upon the minister, who appointed as additional places Libau, Windau, Wasa, and Tornea, which

which modified the severity of the proposed action; that severity would have been principally detrimental to the Russians themselves. Admiral Dundas also demanded the liberation of the prisoners, which Dolgorouki refused, offering to treat the action of Lieutenant Geneste as a stratagem of war. Against this view the admiral afterwards urged the account which Lieutenant Geneste himself gave of the transaction, which was as follows:—

*Helsingfors, July 8, 1855.*

SIR,—In obedience to your orders, on Monday, the 5th of June, I proceeded to the meeting-place at Hango Head, in the cutter, flying a flag of truce, in order to land Russian prisoners, and communicate with the general at the telegraph station. We arrived at the pier, and no person being visible on shore except two or three women standing near the houses, I landed the Russian prisoners, and, in company with them and Dr. Easton, proceeded towards the house to communicate with the people and with the officer at the telegraph. The three stewards also accompanied us, in order, if possible, to procure fresh provisions; but all the boat's crew were left in the boat, with strict orders not to leave, as you had directed. We also carried with us a white flag of truce on a boarding-party. Lorton, the midshipmen's steward, carried it beside me. We had only proceeded about fifty yards from the boat, when suddenly Russian soldiers (who had lain concealed behind the rocks and houses, and of whose position we were completely ignorant) rose and opened fire on us and the boat from all sides. Taking the white flag from the steward Lorton, who was shot down by my side, I endeavoured to hold it in my hand, to prevent the soldiers from seeing the boat, and so called the attention of our officer, who came near me, to it. However, I regret to state that the firing did not cease until many of our people had been killed. As we were completely surrounded by Russian soldiers being within a few yards of the boat on every side; and seeing the inutility of offering any resistance, not having a loaded vessel in the boat, and the greater number of the small boat's crew of eleven men being killed and wounded by the fire of the enemy, no shot was fired on our side. We were all taken prisoner by the soldiers, taken to the houses, without a moment's delay, placed in cages, which appeared to me to be ready made, and transported to Eckness, where we arrived the same afternoon. I regret to have to state that we have lost six of our men killed, and our have been wounded badly, nearly all of them having slight scratches. Our Finnish captain was also killed, and two Russian

captains wounded. The wounded men were carried to Eckness, and placed in hospital there. I enclose a list of the killed and wounded. The fate of several of the killed I know only by the Russian report, as we were hurried away too quickly from the scene of action to ascertain it for ourselves; but I fear the report is too true, as we have six men missing, and they report seven dead bodies at Hango Head, which would be correct with our six men and the old Finnish captain, whom we saw shot down and bayoneted. We remained at Eckness during Tuesday, and on Wednesday Mr. Sullivan, myself, and the four unwounded men, were removed to this place, leaving the four wounded men at Eckness, with Dr. Easton to attend them. The wounded men were all doing well when we left Eckness. One of them, Gliddon, had to undergo amputation of his right arm, near the shoulder, which had been successfully performed. Since our arrival at Eckness we have received every attention and kindness from the Russian general and officers that our position would admit of. The wounded men have been treated with the greatest care and consideration. I requested General Möller, the officer commanding at Eckness, to send a boat on the day following this unfortunate affair with a flag of truce, to inform you what had happened; but he declared it to be impossible. I do not know how this letter will reach you, but the general will forward it by the first opportunity. As we were taken prisoners under a flag of truce, I presume we shall be shortly released; but am at present in perfect ignorance of their intentions with respect to us. I send this letter open and unsealed.

"I am, &c.,

"LOUIS GENESTE, *Lieutenant.*"

"*Captain Fanshawe, H.M.S. Cossack.*"

Admiral Dundas, in his correspondence with Dolgorouki, commented upon the fact of carts having been at hand to convey away the prisoners, proving that the boat had been seen to approach, and that the enemy had determined to disregard the flag of truce. The correspondence was finally terminated by Prince Dolgorouki declining further discussion upon the subject, insisting that all the evidence went to prove that Lieutenant Geneste landed without waiting for his flag to be legally recognised and admitted. Of this there could be no doubt. Lieutenant Geneste had no right to land on the enemy's territory under a flag of truce before the enemy chose to reply to it and recognise it. That constitutes no excuse for the cowardly waylaying and revengeful slaughter of a few men, who could as easily have been captured as slain. Captain Fanshawe and his lieutenant acted illegally and carelessly—the

Russians barbarously and cowardly, and altogether in a way only to be expected from savages. Even the cultivated Russ were little better than their Bashkir and Cossack slaves. "Scrape a Russian, and the Cossack is visible," was the *bon mot* of a French traveller, epigrammatically expressing the essential barbarism, under a superficial civilisation, of the Russian people. It was in keeping with this estimate of them that the press of St. Petersburg justified the cold-blooded atrocity of Hango. The *Invalide Russe* rejoiced over the foul deed, congratulating its readers that the enemies of holy Russia were thus treated. Captain Hall, a brave and enterprising sailor, subsequently inflicted a most retributive humiliation upon the Russians for this massacre. The incident is thus related by an officer:—"I have to tell an anecdote relating to Captain Hall, who has been hovering about Hango for some time, in hopes of having revenge for the massacre of the *Cossack's* men. After harassing in every way in his power the Cossacks stationed in the neighbourhood, he one morning landed all his marines, who at once formed a *cordon* round the village of Hango, placed the gun-boats close in shore, and, with a party of blue-jackets, carrying a flagstaff with an ensign half-mast on it, the band playing the *Dead March in Saul* in front of them, marched up to the place where two of the boat's crew and the Finnish captain who was to have been released were buried. On arriving at the graves, the chaplain of the ship read the funeral service. After that was over, a tablet, which had been neatly carved on board the *Blenheim*, was placed, by way of a tombstone, over the spot, with the following inscription:—'Sacred to the memory of the boat's crew of Her Britannic Majesty's ship *Cossack*, and a Finnish master of a merchant vessel, who were barbarously murdered by Russian troops, under the command of an officer, when under the protection of a flag of truce; and to that of the wife of the above-named Finnish master, who died of grief at Helsingfors, when she heard of her husband's death and her country's dishonour.' Having done this, the whole party re-embarked."

On the 20th of June the allied fleet returned to Cronstadt, after a brief, desultory, and useless cruise. When about three miles west of Tolbuken Lighthouse it divided, one division continuing its course along the north side of the island, until it anchored within five miles of the town of Cronstadt, where it was in sight of the domes and spires of St. Petersburg, which glistened beneath the summer sun; the other division remained in reserve between the lighthouse and the opposite coast.

Admiral Seymour and various other officers had a narrow escape of life from an infernal

machine. In examining one of them on the poop of the *Exmouth*, he tapped rather smartly a small projecting piece of iron, remarking, "This must be the way they are exploded;" the machine immediately burst, knocking down every person that was near, and severely injuring several. Admiral Seymour's face was burned, and his eyes so injured that the loss of sight was for a time apprehended. Lieutenant Lewis was struck by a fragment on the knee, and his hands and arms were burned severely; the signal man, who held the machine in his hands, was frightfully burned. The following description of these machines from a gentleman present when the fleet was before Cronstadt, will interest the reader:—"Each machine consists of a cone of galvanised iron, sixteen inches in diameter at the base and twenty inches from base to apex, and divided into three chambers; the one near the base being largest, and containing air, causing it to float with the base uppermost. In the centre of this chamber is another, which holds a tube with a fuse in it, and an apparatus for firing it. This consists of two little iron rods which move in guides, and are kept projected over the side of the base by springs, which press them outwards. When anything pushes either of these rods inwards, it strikes against a lever, which moves like a pendulum in the fuse tube, and the lower end of the lever breaks or bends a small leaden tube containing a combustible compound, which is set on fire by coming in contact with some sulphuric acid held in a capillary tube which is broken at the same time, and so fires the fuse, which communicates with the powder—about nine or ten pounds—contained in the chamber at the apex of the cone. At the extreme apex is a brass ring, to which is attached a rope and some pieces of granite, which moors the machine about nine or ten feet below the surface, so that the only vessels they could hurt (the gun-boats) float quietly over them; and now you know what they are, they have been disarming of all their dread."

The cruise of the *Harrier*, Captain Story, was very successful. On the 23rd of June the gallant captain discovered a number of the enemy's coasters of various tonnage under the guns of 700. These ships were lying at Taock near enough to the town of Nystad to be, in the opinion of their captains, secure. Several of them were that night destroyed, and one fine barque of 450 tons, carried off as a prize. The next day Captain Story perceived that a great number of ships—a perfect fleet of merchantmen—stood in so close to Nystad as to render capture or attack difficult. The boats of the *Harrier* were immediately armed, and so operated that day and the ensuing night that the whole of this fine fleet of coast-

destroyed. Forty-seven ships were sunk without the loss of a single man of boats' crews. Twenty thousand tons of shipping were destroyed at Nystad in thirty-hours.

With this successful feat the narrative of the operations, as to the present chapter, closes.

The following are the principal despatches of the period to which the chapter refers. Captain Shawe thus addressed the admiral on the 6th, from on board the *Cossack*, off Nargen:—

It is with the deepest concern that I have to report to you the destruction of a cutter's crew and the officers who went into Hango with a flag of truce yesterday, the 5th instant, in order to land the three prisoners who had been taken with some merchant vessels by her Majesty's ships *Cossack* and *Esk*, and also four others to whom I gave a passage to Nargen, after having received their liberty from the hands of the officers of the vessels captured by her Majesty's steam-ship *Magicienne*. The ship having arrived off Hango island yesterday forenoon, the cutter was dispatched at 11 A.M. in charge of Lieutenant Geneste, with orders to land above persons, and to return without delay, taking care that no one straggled from the cutter.

The officers' stewards were allowed to remain on the boat on the same conditions, as was at his request, Mr. Easton, surgeon of this cutter.

The enclosed statement of what occurred on the boats approaching the shore is that of the only man who has returned alive, and I have every reason to believe it correct. Finding that the boat did not duly return, I sent the first lieutenant, about half-past four P.M., in a gig, also with a flag of truce, to ascertain the cause of the delay; and, as neither had returned at the close of the day, I anchored this ship and the *Esk* in the inner roads.

The gig returned about half-past eight, after a search, having discovered the cutter hauled up on a small jetty, and containing the dead bodies of two or three of her crew. It being late, I made arrangements that the ships should weigh at half-past 2 A.M., and take station as close to the inner village and the telegraph station as possible; and, as I then learned that the rest of the crew and officers who had been made prisoners, I proposed to send in a boat to the nearest military authority, demanding that they and the boat should be given up. But while getting under weigh, the cutter observed to leave the shore, with one man at the stern, who was endeavouring to scull the boat. I therefore immediately sent a boat to her assistance, which brought her on board, where we found to contain the dead bodies of the crew, which were riddled with shot-balls.

"The man who came out in the boat made the accompanying statement of the details of this atrocious massacre; he is very dangerously wounded in the right arm and shoulder, and was left for dead in the boat; but the account he gives of what he saw before he was struck down is clear and consistent, viz.—that on the boat reaching the jetty, Lieutenant Geneste, Mr. Easton, surgeon, and Mr. Sullivan, master's assistant, and the Russian prisoners, stepped on shore and advanced a few paces, Lieutenant Geneste carrying and waving the flag of truce. On their landing, a large party of soldiers, commanded by an officer who spoke English, appeared suddenly and advanced in a threatening manner. The officers then pointed to the flag of truce, and claimed its protection, and also endeavoured to explain the reason of their landing, but to no avail. A volley of musketry was immediately fired at them, which killed them, and also some or all of the Russian prisoners; volleys were then fired into the boat, by which all were struck down, and the assailants then rushed into the boat and threw most of the bodies overboard, and then removed the arms and ammunition which were stowed underneath. Neither before nor during this indiscriminate slaughter was any resistance made, nor hostile intentions shown by the boat's crew with the flag of truce, the muskets that were in the boat not having been loaded, and being in the bottom of the boat, and therefore there appeared to be nothing to justify this barbarous infringement of the usages of war. I therefore opened fire with both ships upon the place at about 600 yards' distance, but it was not returned either with rifles or artillery; and a thick fog having come on shortly afterwards, I ceased firing, and withdrew the ships, the position which they were in not being one in which they could with safety remain at anchor.

"I enclose herewith the names of the officers and men who have met their deaths on this occasion."

The subjoined is a list of officers and cutter's crew who were killed at Hango on the 5th of June, as furnished by Captain Fanshawe:—

"Louis Geneste, lieutenant; R. T. Easton, surgeon; Charles Sullivan, master's assistant; Edward Thomson, leading seaman; Benjamin Smith, able seaman; James Cornwall, ordinary seaman; John Gliddon, able seaman; George Boyle, ordinary seaman; William Roskelly, ordinary seaman; Thomas Stokes, ordinary seaman, second class; John Haughey, stoker; Francis George, ordinary seaman; Owen Francis, able seaman; William Linn, captain's steward; William Banks, gun-room steward; John Lorton, subordinate officers' steward."

To this he added a postscript:—

"It is now said that the three officers are alive, though wounded."

The following report was signed by Mr. Wise, the paymaster, and Mr. McKenna, the assistant-surgeon of the same ship:—

"About a quarter to four o'clock, John Brown, ordinary seaman, after being taken to the sick-bay, stated, that on the cutter, with a flag of truce flying, getting alongside the small jetty at the village, the officers and liberated Russian prisoners jumped out, and Lieutenant Geneste held up the flag of truce, and told the Russians (who had assembled close to the water and on the jetty, to the number of about 500, dressed as riflemen, and armed with muskets, swords, and bayonets) what it meant, and why they had landed. The old Finn (meaning the captain of the prize *Johanna*) also explained to them, but they said they did not care for flags of truce there, and would show them how to fight the Russians, or words to that effect. A volley was immediately fired at the officers and liberated prisoners, and then into the boat. When all were supposed to be killed, the Russians jumped into the boat, and, after throwing the bodies of the men lying on the arms in the bottom of the boat overboard, took away all the arms, magazine, &c. Brown, though dangerously wounded (having received two shots through the right fore-arm, and one in the shoulder where the bullet lodged), managed in the morning to get up and scull the cutter out. He states that when about 200 yards from the jetty, about 200 men came running down from the telegraph.

"To Mr. Wise.—I am positive that the officers were shot down at once, and before they fired into the boat.

"To Mr. McKenna.—The Russian prisoners were also shot down while on the jetty.

"To Messrs. McKenna and Wise.—The boat went straight into the landing-place. The Russians spoke English, and the person who led them, from his dress and appearance, seemed to be an officer.

"Dr. Easton was the first officer who fell. The old Finnish captain took the flag of truce from Mr. Geneste, and waved it, shouting 'Flag of truce! Truce!' But the Russians yelled and fired upon them. Before the men could do anything they were fired upon, and the Russians, with cutlasses, jumped into the boat. They did not use the cutlasses."

A report of proceedings at Narva was drawn up by Admiral Seymour, as follows, dated June 19th:—"In obedience to your directions of the 15th inst., I quitted Seskar anchorage at 8 A.M. on Saturday, the 16th, anchoring at 7 P.M. under East Tyters Island, off a village situate

on its S.S.E. extremity, with a view of obtaining information respecting the River Narva but only succeeded in learning that a considerable body of troops were about Narva and vicinity. Quitting East Tyters on the evening of Sunday, the 17th, Narva Lighthouse was made out yesterday, at 2.30 A.M., with a broad extent of sandy beach that borders the bay. On nearing the entrance of the river, which is narrow, and has a bar on which the breaking shoal water was visible, a considerable number of troops, including a party of cavalry, were seen in active movement, and a large *caisson*, or construction of timber, was floated and sunk in the entrance of the river, and became the means of communication with either side; a few wood vessels and river craft only were visible inside the river, the banks of which are of sand, thickly timbered, and well adapted for defence by troops. An earth battery of twelve guns lies on the east side of the river's entrance, and one of ten guns near the lighthouse, with another in its rear, seen from the masthead, apparently to command the river, and two other guns were placed in position at the right extremity of the Lighthouse Battery. An opportunity was afforded to try the practical efficiency of the gun-boats *Pincher* and *Snap*, under the immediate charge of Captain Hall, and the *Blenheim*, who, with good judgment, added one of his maindeck 68-pounders to the armament of the former, and, until rain and squall weather interfered, their practice was good, and their constant change of position rendered the difficult objects to hit, though the fort guns were well served, using hot shot, which frequently passed near and over them. On the weather clearing, the gun-boats opened fire, and the *Blenheim* and *Exmouth* likewise took advantage of the opportunity of a couple of hours' practice, covering the gun-boats with good effect, who were ably manœuvred by Lieutenant C. A. De Crespigny, in command of the *Snap*, and Lieutenant Stewart, in command of the *Pincher*, in the former of which I had placed Lieutenant Travers, Royal Marines, with ten gunners of the Royal Marine artillery of the *Exmouth*, who did good service. Mr. Harper, assistant-surgeon of this ship, was likewise on board the *Snap*, he having volunteered for that service. As it was evident from the first that no serious attempt could be made on the enemy's position, and as a large expenditure of ammunition would have been useless, I considered that enough had now been done to occupy the attention of the troops in the neighbourhood, and no advantage appearing to offer itself for a longer continuance in Narva Bay, the signal was made to discontinue firing, and I proceeded in compliance with your orders, to rejoin your flag. I enclose a return of a casualty which I regret to learn, occurred to Captain Seagrave.

the *Blenheim*, the effects of which, I trust, will not prove serious."

The following is an extract of a letter from the admiral Hon. R. S. Dundas, to the secretary of the Admiralty, dated *Duke of Wellington* Tolbuen Lighthouse, July 7:—"I can conclude this letter without calling the particular attention of their lordships to the active exertions of Captain Story, of her majesty's ship *Harrier*, which led a few days later to the destruction of a large amount of shipping, dispersed afterwards in another anchorage near Nystad, as detailed in the enclosure to Captain Warden's report of the 2nd inst.:—"I have the honour to inform you that the boats of this ship destroyed forty-seven ships belonging to the enemy, varying from 700 tons to 100 tons, on the nights of the 23rd and 24th inst. On the first night the ships destroyed were one mile from the town of Nystad, and on the second three miles from the ship, and we were enabled to bring one bark, the *Victoria*, of 450 tons, off with us. On the following morning the steam was got up and we proceeded to sea, to anchor the prize off Enskov Lighthouse. At 5 p.m., however, we steamed towards the land, and anchored at about 7.30

p.m., and at 8 p.m. the boats were again dispatched. During the night and following day we discovered forty-two ships, the whole of which we either burnt or scuttled. I have the greatest pleasure in being able to state that these proceedings were so successfully carried out without any casualty. Owing to the distance we got away from the ship (ten or eleven miles), and the blowing weather, accompanied with rain, that came on during the morning, we were prevented from bringing any vessel out with us. We did not get back to the ship until after 6 p.m. this afternoon, the men having been on their oars twenty-two hours. I think, sir, I am only doing common justice to the men when I state how pleased I was to see the zeal and perseverance with which they worked for so many hours, neither can I omit stating my belief that this arose in a great measure from the good example of the officers, especially the senior lieutenant, Mr. Annesley, from whom I have ever received the most active assistance. Having, then, in two following nights and one day, destroyed the whole of the Nystad shipping (probably upwards of 20,000 tons), I trust these proceedings will meet with your approval."

## CHAPTER LXXXVI.

SEBASTOPOL PARLIAMENTARY COMMITTEE: EXAMINATIONS AND REPORT.—THE SEBASTOPOL MINISTERIAL COMMISSION: INVESTIGATION AND REPORT.

"Can such things be,  
And overcome us like a summer's cloud  
Without our special wonder."—SHAKESPEARE.

new events had such influence upon the progress of the war as the appointment of a committee was popularly called the "Sebastopol Committee," and the "Sebastopol Commission." In discussing home events, the occurrences were noticed, and the immediate effect of the former of these upon the state of parties in the British parliament; the downfall of the Aberdeen cabinet; the appointment of Lord Palmerston to the chief direction of affairs; the subsequent secession from his ministry of the Peel section of it; and the ferment among the public that the necessity should have arisen—from the action of incompetent government at home, and incompetent direction of the war at home and abroad—for its appointment.

Our readers have been reminded that, in consequence of the public agitation caused by neglect and improper management of the war in the Crimea, by those whose duty it was to have ministered to its wants and directed its affairs with discretion, two bodies of committees were appointed by two different authorities at home. One of these consisted of

Sir J. McNeil, Colonel Tulloch, and Dr. Gavin: they were appointed by the government to act as commissioners of her majesty, to proceed to the Crimea, and inquire on the spot concerning the actual state of the army, and the causes which had previously entailed such sad disaster. This commission of inquiry was to report to her majesty's government, and that report was to be private; but, on the demand of the Commons, it was eventually published. Its ostensible use was to guide her majesty's ministers in adopting governmental remedies against the recurrence of similar disasters.

The other inquiring body was composed of a committee of the House of Commons, appointed by that house, and its use was for the information of the Commons, and the people whom that house represented in the legislature, that such measures might be adopted by it as the exigencies of the case might demand. This body of inquirers, and the design of their appointment, were thus officially designated:—"The committee for inquiring into the state of the army before Sebastopol." The inquiry was to be conducted in one of the com-

mittee-rooms (Room No. 17) of the Parliament House.

It will be recollected by the reader of this History that on the 26th of January, 1855, Mr. Roebuck, M.P. for Sheffield, moved in the house for the appointment of this committee: on the 29th his resolution was carried. The change of ministry which followed, the consequent delay in the transaction of all parliamentary business, and the secession of an important section of the Palmerston cabinet, rendered it impossible for the committee to meet, for the conduct of the inquiry, before the 5th of March. The examinations of witnesses were conducted through the months of March, April, and May, communications of importance being occasionally made to the house. On the 18th of June the full report was made and read before the house. The committee consisted of Mr. Roebuck, chairman, Mr. J. Ball, Mr. Bramston, Mr. Drummond, Mr. Ellis, Mr. Layard, Colonel Lindsay, Sir James Pakington, General Peel, Lord Seymour, and Sir J. Hanmer. Strangers were admitted,—a resolution of the house having been passed, making it an open committee. The first day was signalised by the examination of two important witnesses—Mr. G. Dundas, who had visited the Crimea during the occurrences of many of the circumstances causing the investigation; and Lieutenant-general Sir de Lacy Evans, Bart. Their testimony was seriously inculpatory of the officials, civil and military. The next day the general was again examined. The main features of his evidence this day were the allegation that, notwithstanding bad food and the severity of the weather, the troops would not have sickened and died to such an extent but for the laborious work in the trenches, which, from the first, was far beyond the numerical force of the army. The government at home, in undertaking such an expedition with a force inadequate, and the commander-in-chief in consenting to occupy a position in the siege beyond the power of his army, were the parties to blame. The expectation of the Aberdeen government that the czar would not persevere in his demands against the armed remonstrance and demonstration of England and France, the general also considered the cause of the expedition having been unprovided with the necessities of campaigning; this threw the blame chiefly upon the Earl of Aberdeen and his cabinet. With the command of the sea possessed by the allies, it was the general's conviction that the authorities could have supplied the troops with every requisite, military and commissariat.

It would be impossible to insert even an abstract of the evidence, as it occupies a vast

blue-book, the contents of which would fill many numbers of this History. All that is possible in this respect is to give a portion of the evidence of a few of the more important witnesses as specimens of the character of the proceedings. It is scarcely necessary to say more than this for the information of the readers, as the evidence taken before the committee is frequently embodied in the narrative of events in the Crimea connected with the state of the army, and of the conduct of the war at home and abroad.

On the 12th of March, his royal highness the Duke of Cambridge was under examination. His mode of giving his evidence was frank, open, and manly, eliciting the admiration of the committee and the spectators. His evidence was substantially the same as that of Sir de Lacy Evans. The latter officer did not speak so highly of the staff of the army as his royal highness did, but considered the expectations of the public too high after long a peace.

On the same day that the duke was examined, Colonel Wilson gave startling and appalling evidence. He declared that ten men were literally killed by overwork in the trenches; that for a long time they had on three hours of the twenty-four off duty; that frequently they were on duty three nights successively without any sleep; on the fourth some rest might be taken, and then the painful round of sleepless nights began again. During these long watchings they were hard at work and often had to defend themselves against the arms of the enemy. In the field-hospital the men lay on the bare ground, which was often damp.

On the 13th of March Captain Kellock, of the *Himalaya*, testified that he brought charcoal for the troops, which would not be received at Balaklava; and he had to take it back to Constantinople, although he offered to land it at Balaklava with his own boats and by his own crew. He also stated that he had ordered to convey the convalescents from Scutari to join their regiments in the Crimea when the men were in the most wretched state of emaciation and debility; some, in answer to his remonstrances, were re-landed.

On the same day a non-commissioned officer was examined, whose presence attracted a great deal of attention; he had lost his arm at Inkerman. This witness was Sergeant Thomas Dawson. He, especially, bore evidence to the willingness of the soldiers to suffer rather than leave them behind, as they were compelled to do. One of the chief sources of suffering and sickness, in his opinion, was sleeping on the bare, damp ground with any shelter. When the men had tents, many as fifteen soldiers had to live in one tent.

Bulgaria, in the heat of summer, and the pestilence was raging. This witness presented that the stock caused the men to suffer on the march in warm weather, causing men to drop out when proceeding to the encampment to Varna. Examined

Mr. Layard:—"You worked in the trenches?"—"Yes."—"Did you hear any complaints of the tools?"—"Yes, often; the tools we had were very bad indeed. The bills could not cut a piece of wood—pieces chipped off the edges an inch long. The pickaxes were generally bad; they were always coming off the handles, if they did not break. The axes were worse than the picks."—"How did the men like the Minié rifle?"—"Very ill; only when engaged there is no time to think of the slides, and the men have to judge the shot by their own eye."

The examination on hospital subjects it is necessary even to glance at, as in the body of this work a full account of the history and condition of the hospitals in the East is given.

The Duke of Newcastle was one of the most important witnesses, and was under examination during the 23rd, 24th, and 25th of April. The main points of the duke's testimony were, that he deviated from established forms, to promote the efficiency of the service, whenever he dared; that he sought means of correcting abuses and overruling formalities, but that his office did not give him the power to do so efficiently; that there were so many co-ordinate departments controlling the army—such as the War-office, Colonial-office, the Secretary at War, Ordnance, the Horse-Guards, and the Treasury—that it was frequently impossible to know to which department a particular matter belonged; that the cabinet was kept in extraordinary ignorance of the real state of things, both in the offices at home and at the theatre of war; and that the reports made to different heads of departments distinctly contradicted one another; hence the contradictions of ministers in parliament, and their inconsistent statements concerning matters about which the country supposed them well informed.

The appointment of Lord Raglan to the command of the army in the Crimea, he being the master-general of the Ordnance, without making his resignation of that office dependent on his acceptance of the command, was the cause of many of the obstructions which the Duke of Newcastle had to encounter. A lieutenant-general of Ordnance was appointed, but in relations to the master-general, or the War-office, or the government, were never clearly defined, and therefore confusion reigned in every branch of the department. Almost all

the misadventures connected with the sending out of huts, their inopportune arrival, the dispatching of shells without fuses, and cartridges that would not fit the firearms for which they were intended, resulted from the absence of the master-general and the ill-defined relations of his lieutenant.

On the 1st of May another very important witness was placed before the committee—Lieutenant-general Sir John Burgoyne. As in the case of Sir de Lacy Evans and the Duke of Cambridge, he attributed the chief evils that befel the army to the great error of attempting a great undertaking with an utterly inadequate numerical force. The skilful and gallant old chief bore hard upon the inefficiency of all our arrangements for an army in the field.

Mr. Sidney Herbert, Sir James Graham, Vice-admiral Dundas, Lord Hardinge, and the Earl of Aberdeen, were all brought forward. The last witness examined was the ex-premier. He admitted that his first information concerning many of the painful facts which caused the committee of inquiry to be appointed was derived through the newspapers, and at first he did not believe them, and therefore adopted no means of remedying them. This evidence produced much sensation in the committee room, and afterwards throughout the country.

On the 18th of June Mr. Roebuck presented the report to the house; it was read by Sir Ducis le Marchant. Its spirit was most lenient towards individuals, but its language severe as to the working of our whole official system. It analysed the state of the army at Sebastopol, declining any opinion as to the propriety, in a military point of view, of engaging the men in an undertaking so disproportionate to their numbers. It declared that sufficient cause was not shown for the wants and sufferings of the men on the spot, nor were sufficient precautions taken against the calamities which, without such care, must under the circumstances be expected to occur.

The want of a clear understanding as to the relations of the commissary and quartermaster-generals, and of the former officer to the chief of the medical staff, was productive of general disaster; and the impossibility of the commissary-general obtaining from home or from the commander-in-chief in the Crimea instructions sufficiently definite, deprived him of the power in many cases of exercising the provision requisite in his situation.

The report dwelt on the inhumanity and folly of distributing green coffee berries to the troops; while the commissary and the home government were carrying on a lengthened correspondence as to the best way of preserving the aroma of the berry, and the advantages of the Turkish mode of packing!

The distribution of bad tools was denounced

as proceeding from the carelessness or the dishonesty of the officials at home.

The state of the hospitals on the Bosphorus was the subject of severe comment. The military superintendent was declared to be incompetent, and timid of all responsibility to a degree which injured the public service. Dr. Menzies, the chief medical authority there, was censured for reporting that neither medical appliances nor stores were wanting, at a time when the hospitals were nearly destitute of everything. The severity of this officer where the sufferings of the men were concerned was reprehended; but some apology was admitted for him on the ground that his duties were onerous beyond endurance, and finally broke down his health. Just tributes of respect were paid to Miss Nightingale, the Hon. and Rev. Sydney Osborne, Mr. Stafford, Mr. Macdonald, the *Times*' commissioner, the *Times* itself, &c. &c., for the humanity displayed to the sick, and the aid extended to them.

The management of the transport service was very strongly denounced. At Balaklava there were three authorities—the director of transports, the harbour-master, and the commander-in-chief (through his quartermaster-general)—perpetually in conflict, none knowing his proper province. At the Bosphorus Admiral Boxer worked hard, and behaved coarsely. His representations to the home authorities were valuable, but neglected by Sir James Graham, the first lord of the Admiralty. The want of proper regulations for the guidance of the transport service generally was denounced as an error of the government. Sir James Graham represented Admiral Dundas and Lord Raglan as having a concurrent jurisdiction, which appears to us to be the true view of the case. Lord Raglan never exercised any authority, except in especial instances; and Admiral Dundas refused, even when urged by the Duke of Newcastle for the sake of the service, to do so.

The committee were severe upon purveyors, and especially upon the medicine purveyor at the Bosphorus, who for months kept no accounts.

The state of the official departments at home the committee considered to be discreditable to the country. A mere formal routine took the place of all thought and considerate attention for the advantage of the country. There was no sufficient scheme of responsibility—no well-defined arrangement of the provinces of the various departments—such as the Horse-Guards, War-office, Ordnance-board, Board of Admiralty, &c.

The chief censure of the committee was directed against the cabinet of the Earl of Aberdeen. In the opinion of the committee, that government was faithless to its duty—it entered upon the war without a definite policy

—made no preparations for a contest—provided no army reserve near the seat of war—and militia reserve at home. It directed the Crimean expedition without any information as to the topographical peculiarities of the country as affecting military purposes, or the strength of the enemy. The ambassador the czar was ignorant on the subject—so was the ambassador to the Porte, although Russia had long been preparing such vast resources and appliances there for aggressive purposes. When the expedition landed, no provision was made for a winter campaign, although there was plenty of time to do so, and the government had abundant resources at command. Besides all this there was a general inattention and indifference shown by the government to the progress of the war, which exposed the country to peril. The report placed the responsibility of the misfortunes that had occurred chiefly upon the incompetency, indifference, and want of intelligence of Lord Aberdeen and his cabinet. The concluding passage of the report is instructive and impressive:—"Your committee, in conclusion cannot but remark that the first real improvements in the lamentable condition of the hospitals at Scutari are to be attributed to *private suggestions, private exertions, and private benevolence*. A fund, raised by public subscription, was administered by the proprietors of the *Times* newspaper, through Mr. Macdonald, an intelligent and zealous agent. At the suggestion of the secretary at war, Miss Nightingale, with admirable devotion, organised a band of nurses, and undertook the care of the sick and wounded. The Hon. Jocelyn Percy, the Hon. and Rev. Sydney Osborne, and Mr. Augustus Stafford, after a personal inspection of the hospitals, furnished valuable reports and suggestions to the government. By these means much suffering was alleviated, the spirits of the men were raised, and many lives were saved. Your committee have now reverted to the chief points contained in their replies to above TWENTY-ONE THOUSAND QUESTIONS; and, in noticing these various subjects, they have divided them under distinct heads in order fairly to apportion the responsibility. Your committee report, that the sufferings of the army mainly resulted from the circumstances under which the expedition to the Crimea was undertaken and executed. The administration which ordered that expedition had no adequate information as to the amount of the forces in the Crimea. They were not acquainted with the strength of the fortresses to be attacked, or with the resources of the country to be invaded. They hoped and expected the expedition to be immediately successful; and as they did not foresee the probability of a protracted struggle, they made

vision for a winter campaign. The patience and fortitude of this army demand the admiration and gratitude of the nation on whose behalf they have fought, bled, and suffered. Their heroic valour, and equally heroic patience, under sufferings and privations, have given them claims upon their country which will doubtless be gratefully acknowledged. Your committee will now close their report, with a hope that every British army may in future display the valour which this noble army has displayed, and that none may hereafter be exposed to such sufferings as are recorded in these pages."

The general feeling in the house upon the reading of the report was, that it was discreet and prudent, and, on the whole, a very good report. The general feeling of the country was, that the officials were protected by a majority of the committee, and that Mr. Roebuck and Mr. Layard were overruled and outvoted by that majority in the patriotic efforts of those two honourable members to bring to light the corruption and culpability that prevailed. Colonel Peel and Mr. Drummond were (perhaps unfairly) supposed to be the chief advisers by whom the two honourable members were exposed to abuses were thwarted and impeded. In all events, the report failed in giving satisfaction to the public; there was a desire to find one victim—to single out some one for punishment; and the qualified disapprobation expressed by the committee when the Duke of Newcastle, Sidney Herbert, and Sir James Graham, were concerned, was attributed to a desire to screen these persons from the punishment they deserved. In truth, the public did not know that, whatever the errors and incompetency of all or any of these administrators, the difficulties by which the system beset them were all but insurmountable. There was no remedy put forth by the public to reform "the system" at all adequate to the demands of the emergency; and neither peers, commons, nor cabinet, were as much in earnest in effecting reform as the outburst of feeling connected with the appointment of "the Sebastopol Committee" would lead men to expect. Some reforms did result from the disclosures made, and the suggestions and censures contained in the report, and the effect of the appointment of the Sebastopol Committee terminated. The report itself, however, still remains as a warning to the present generation, and will be a warning to posterity, to watch all governments with constitutional jealousy, and to insist upon the principle being carried out thoroughly in every branch of the public service—

"Palmarum qui meruit ferat."

The proceedings of the commission sent to the Crimea were scarcely less important than

those of the committee of the House of Commons. The commissioners, before reaching the Crimea, examined minutely the state of affairs at the Bosphorus, where it was discovered that stores of almost every kind were in great quantities at the very time that the sick in the hospitals were perishing for want of them, the storekeeping department having been managed without regularity or skill. The intelligence gleaned by the commissioners there, set them upon the right track of inquiry when they arrived in the Crimea. To this they bore testimony in the following language:—"The information we obtained at Scutari and Constantinople was of great importance to our future proceedings; we ascertained that the sick arriving from the Crimea were nearly all suffering from diseases chiefly attributable to diet, and that the food supplied to the army during the winter, consisting principally of salt meat and biscuit, with a very insufficient proportion of vegetables, was calculated, in the circumstances in which the troops were placed, to produce those diseases; it was therefore evidently desirable to increase the supplies of fresh meat and vegetables, and to substitute fresh bread for biscuit. Regarded merely in a pecuniary point of view, irrespective of higher considerations, moral and political, the most wasteful of all expenditure is the expenditure of men. There is hardly any conceivable price that it may be necessary to pay for what is required to preserve the health and efficiency of the soldier that is not advantageously laid out. Every soldier has cost a large sum before he is landed in the Crimea fit for duty, and it costs a like sum to replace him. The value of the other considerations cannot be estimated in money, for they are above all price."

When they arrived at Balaklava, every obstruction was thrown in the way of these gentlemen by certain officials there, but the commissioners were not the men to be deterred from their duty; they vigorously prosecuted it, and, although they found it extremely difficult to obtain proper information from some who ought, from their position, to have upheld the authority of the queen's commission, all essential information was procured. It is unnecessary to recapitulate that, as in the course of the narrative of events before Sebastopol it has been brought out. The commissioners, in the report, blamed "the system" rather than individuals; but they did not hesitate to fix upon certain persons much censure—Sir Richard Airey, the quartermaster-general; Colonel Gordon, his assistant; the Earl of Lucan, commander-in-chief of the cavalry; the Earl of Cardigan, the commander of the light cavalry; and other officers. All these noblemen and gentlemen denied the justice of the critiques of the commissioners' report, and de-

manded further investigations, which the government at home granted, and which resulted in a formal acquittal from blame of the individual officers. The "system" stood proxy for everybody upon whom any imputation rested. The following extract from the commissioners' report will depict the state of matters in the Crimea as it appeared to them, and appropriately close this chapter:—

"The sufferings of the army in the course of the winter, and especially during the months of December and January, must have been intense. We have not noted all the particulars related to us, many of which were unconnected with our inquiry; but we may state that it has been only by slow degrees, and after the frequent repetition of similar details, as one witness after another revealed the facts that had come under his own observation, that we have been able to form any adequate conception of the distress and misery undergone by the troops, or fully to appreciate the unparalleled courage and constancy with which they have endured their sufferings. Great Britain has often had reason to be proud of her army, but it is doubtful whether the whole range of military history furnishes an example of an army exhibiting, throughout a long campaign, qualities as high as have distinguished the forces under Lord Raglan's command. The strength of the men gave way under excessive labour, watching, exposure, and privation; but they never murmured, their spirit never failed, and the enemy, though far outnumbering them, never detected in those whom he encountered any signs of weakness.

Their numbers were reduced by disease and by casualties to a handful of men, compared with the great extent of the lines which they constructed and defended; yet the army never abated its confidence in itself, and never descended from its acknowledged military prominence. Both men and officers, when reduced that they were hardly fit for the lighter duties of the camp, scorned to be excused the severe and perilous work of the trenches, lest they should throw an undue amount of duty upon their comrades; yet they maintained every foot of ground against all the efforts of the enemy, and with numbers so small that perhaps no other troops would ever have made the attempt. Suffering and privation have frequently led to crime in armies, and in other communities, but offences of a serious character have been unknown in the British army in the Crimea. Not one capital offence has been committed, or even alleged to have been committed, by a soldier, and intemperance has been rare. Every one who knows anything of the constitution of the army must feel that when troops so conduct themselves throughout a long campaign, the officers must have done their duty, and set the example. The conduct of the men, therefore, implies the highest encomium that can be passed upon their officers. They have not only shared all the danger and exposure, and most of the privations which the men had to undergo, but everywhere found indications of their solicitude for the welfare of those who were under their command, and of their constant readiness to employ their private means in promoting the comfort of their men."

## CHAPTER LXXXVII.

NAVAL OPERATIONS IN THE PACIFIC AND KAMTSCHATKA.—ESCAPE OF THE RUSSIAN FLEET FROM PETROPAULOVSKI AND FROM DE CASTRIES BAY.—DESTRUCTION OF THE RUSSIAN FRIGATE DIANA, AT JAPAN, BY AN EARTHQUAKE.—CAPTAIN AND PORTIONS OF THE CREW OF THE DIANA ELUDE THE BRITISH CRUISERS.—CAPTURE OF TWO HUNDRED AND EIGHT SEAMEN OF THAT SHIP BY THE BARRACOUTA.—NAVAL OPERATIONS IN THE WHITE SEA.

"C'est trop tard."

DURING the years 1854 and 1855 the language of this motto might be with great justice applied to all the naval operations in which England was engaged. "Too late!" might be written over the doors of the Admiralty. A French politician of distinction taunted his government for their tardiness, by an eloquent iteration of these words through the medium of the press, and the Earl of Derby, in the British House of Peers, dextrously rounded the periods of an eloquent declamation against the Aberdeen government by a repetition of the same accusation of fatal and infatuated delay. It was always too late, whatever was projected in our naval plans, and

wherever their execution was attempted. In the Baltic, in 1854, nothing could be done because, as Sir Charles Napier declared, of the tardiness of Sir James Graham in supplying him with gun-boats, while Sir James related that all the mischief arose from the admiral being *too late* in asking for them. In the Baltic, 1855, the Admiralty actually sent out a reinforcement of mortar-vessels when Dundee was sending home the fleet. In the White Sea, in both years, the season was too far advanced for an effective campaign when the ships arrived there. In the Black Sea, in 1854, the action of the allied admirals and their responsi-

海軍大元帥の乗船

大日本海軍大元帥の乗船

re governments was *too late* to prevent the massacre of Sinope, or even to avenge it; and in 1855, the only action of the fleets—that at Pertch and in the Sea of Azoff—was a month *late* for all the purposes of the important objects contemplated, Canrobert being then the clog upon the fleets and armies. So in the Northern Pacific, in 1855, “too late” may be written under every separate procedure of the fleets of France and England. The conduct of a war through the previous year was marked by the grossest incompetency. Admiral Price led his part in the transactions by suicide; and the whole of the allied squadrons ended theirs by disgrace and defeat before the enemy. The conduct of the war in these parts in 1855 was also characterised by disgrace and defeat, not, indeed, in essays of arms, but by allowing inferior Russian forces to elude the vigilance of the naval chiefs who should have found, conquered, and captured them.

It will be recollected from our narrative in the previous chapter, that the allied attempt on the town of Petropaulovski was repulsed, and that the baffled squadrons sailed southward for winter shelter, the English having no port in these regions, while the Russians have no less than five ports where ships could winter. It is a provoking taunt for an American to write, but we fear it is a just one, that had the English possessions in the Northern Pacific belonged to the American Union, thriving cities and flourishing ports would arise even in these ungenial and remote regions, now sterile and unfrequented under the depressing influence of the Hudson's Bay Company and the English Colonial-office.

In the spring of 1855 the English prepared, under Admiral Bruce, to assume the offensive in the Northern Pacific. No means were taken to procure information there, or to send out information from home; while the Russians spent considerable sums in gaining a precise knowledge of the force and intentions of their enemies, principally by means of American captains and commercial men. From Russia, also, across the frozen tracks of Siberia, a journey of 7000 miles, the energetic, vigilant, and persevering government of St. Petersburg transmitted orders of intelligence with a rapidity which any other nation in the world, except perhaps the American, would have deemed impossible; and which, although Englishmen would have undertaken and executed, an English government would never have tried to accomplish.

In the Pacific Ocean at the opening of 1855 there were two English squadrons—one was the Chinese seas, under Admiral Stirling; the other in the Northern Pacific, under Admiral Bruce. The former protected the commerce of the allies on the coasts of China and Australia; the latter was to cruise by the

western coasts of America. Before the end of March the allies had assembled in the Chinese seas five frigates, five sailing sloops, seven war-steamer, and a number of tenders, steam and sailing vessels, making a force of 300 guns, and ten times as many men. This fleet detached ships and squadrons in the different directions where it was expected the Russians would be met with, where they were to be joined by detachments from the other fleet off the American coast. The month of April had advanced before these squadrons and ships were dispatched, long before which time the Russians had orders from St. Petersburg, and intelligence from their American emissaries in these seas, which enabled them to take their measures to insure, if possible, security, notwithstanding the odds against them. Admiral Stirling frankly stated before the season commenced that he had no intention of attacking any of the Russian ports.

On the 7th of April the *Sibylle*, a 40-gun frigate, the *Bittern* brig of war, and the *Hornet*, a fine steam corvette, left Hong-Kong, under the orders of Commodore the Hon. C. Elliott. The destination of this squadron was the Amoor. On reaching the Japan Isles fogs intercepted the navigation. Passing through the Corea Straits and the Sea of Japan, the squadron steamed through the Strait of Sangar, and anchored off Hakodadi, in the island of Yeszo, on the 27th of April. Here the ships remained until the 7th of May, losing time after the fashion of Admiral Price at Honolulu the previous year. On the 7th of May the commodore quitted Yeszo, and passed into the Gulf of Tartary, sailing northward to the mouth of the Amoor. This river rises in Mongolia, and falls into an arm of the Oekhotsk Sea, called the Gulf of Saghalien, opposite the north end of the peninsula which bears that name. This peninsula is generally represented to be an island, but it is connected with the main-land by low sand-banks, skirted with immense beds of sea-weed. Over this bank the sea at certain periods flows, just covering it, which can hardly cause the peninsula to be properly called an island. This peninsula (or island, if such a name be applicable) was carefully examined by La Perouse, the French navigator. He believed he could sail round it, but on making the attempt was unable to bring his vessel far up the gulf, because of the sand-banks. He then sent forward boats, which were unable to proceed, owing to the shallowness of the water. The officers in charge of the boats could observe no signs of the slightest current, and concluded that the notion of the projecting land facing the gulf being an island was erroneous. Captain Broughton afterwards went nine miles farther up, and found the passage closed by low sand-banks. There are

therefore, no sufficient grounds for the description of Findlay, when he says, "It is not absolutely determined whether Saghalien be a peninsula or an island." This peninsula is not much short of 700 miles in length, stretching parallel with the coast of Chinese Tartary; between either shore lies the Gulf of Tartary and the Gulf of Saghalien. In the Gulf of Tartary is a bay called De Castries. While Commodore Elliott was sailing northward to the Amoor, he looked into the Bay of De Castries, and there found a Russian frigate, three corvettes, a brig, and a small steamer: this was on the 20th of May. The commodore found it impossible to obtain a safe entrance to the bay, and his force was inferior to that of the Russians. After reconnoitring and repeatedly exchanging fire with the enemy, he resolved to communicate with his admiral, then 1500 miles away, and for this purpose sent the *Bittern*. The commodore had the egregious folly to accompany her three days' sail, and when he returned after a week's absence, the Russian squadron had escaped—he was "too late."

In an agony of chagrin and anger, the commodore beat about, not knowing where to go or what to do. It never occurred to him that the enemy would take advantage of his absence to escape to a place of greater security. He seems to have imagined that the Russians should have stayed where they were, until it suited his convenience to attack them with advantage. The commodore contrived to get in when the enemy had got out, where he found the remains of a Russian settlement, which the people had evidently deserted, accompanying the squadron. There was discovered a package of Russian documents, which might have been of importance, and thrown some light upon the course which the Russian squadron had taken, if it acted under any especial directions from St. Petersburg, which was in fact the case. One would suppose that a squadron would hardly be sent to sea, whose duty it was to go in quest of an enemy along his own coasts, without some person being appointed to accompany it acquainted with the language of that enemy; but nothing seemed to be thought of at home or abroad connected with naval matters until *too late*. When it was *too late* a person was found to translate the documents. Very little information could be wrung from the British Admiralty concerning any of these transactions, and few despatches were published. The government was evidently ashamed of everything connected with these operations, except to promote the commodore to the honourable office of a naval aide-de-camp to the queen, in common with the practice all through the war, of promoting persons of high influence and connexion, whatever the disasters which attended their want of vigilance and skill. The information so

difficult to obtain from English sources was in this case supplied by the enemy.

The *Morski Sbornik*, a naval magazine published at St. Petersburg, gives the following narrative of how the Russian fleet in the Pacific escaped the English cruisers:—"As soon as Admiral Savoiko, commander of Petropaulovski received orders to destroy the fortifications of that town, and to proceed to the liman of the Amoor, he made his preparations for evacuating the place, had a passage sawn through the ice in the Bay of Avatscha, and went to sea on the 17th of April, with the corvette *Olivouska*, the *Aurora* frigate, and three transports, *Dwina*, *Irsysk*, and *Baikal*. The squadron counted about 300 souls, including women and children of all inhabitants of Petropaulovski. After most trying passage the squadron cast anchor in Castries Bay (51° 27' north latitude), and the admiral placed his ships behind some banks and shallows, so as to prevent their being turned by the enemy. On the 20th of May a frigate, a corvette, and an English brig made their appearance; the corvette approached and threw some shells against one of the Russian vessels, but the whole enemy's squadron soon went to sea again. As Admiral Savoiko had been informed that Cape Lasareff, situate more north at the mouth of the Amoor, was free from ice, he took advantage of the departure of the English vessels, weighed anchor, and, after a perilous passage, his vessels reached their destination one by one, between the 1st and 6th of June. Batteries were thrown up on the shore, and a few weeks later all the vessels were placed in shelter behind the bars of the Amoor. During the run from Castries Bay to Cape Lasareff an American vessel, the *William Penn*, was spoken. She had on board 150 Russians of the crew of the *Diana*, wrecked, it will be remembered, on the Japanese coast, and shortly after his arrival at Cape Lasareff, Admiral Savoiko was joined by Admiral Paniutin; the latter had made his escape in a very bold and enterprising manner. After the shipwreck of the *Diana*, he conceived the idea of making his crew build a schooner. The undertaking succeeded so well that, after ten weeks' hard work, to which the Japanese and their government gave an assisting hand in providing materials, sails, &c., a vessel of the desired size was launched and named the *Khida*, after the port where it was constructed. Forty men and seven officers formed the crew of the schooner, which reached Petropaulovski on the 22nd of May. Finding that place abandoned, the admiral lost no time in leaving Avatscha Bay, which was watched by hostile cruisers, and he succeeded in reaching the Prouse Straits, between the islands of Saghalien and Yeszo. Here he was nearly surprised one night by a vessel of the enemy, which passed within 700 yards of him. He was given

ase to; but the admiral escaped, and continuing his course northwards, he joined, as already stated, the rest of the Kamtschatka fleet at Cape Lasareff. Thence he proceeded shortly to the Nicholas Station, the chief and well-fortified point of that territory, and deposited there all the *materiel* which the squadron had brought from Petropaulovski."

Meanwhile the *Bittern* found Admiral Stirling, on the 29th of May, near the coast of Japan, whither he had transferred his headquarters. On the next day he set sail in the *Winchester*; the *Spartan* and the *Tartar* joined the *Winchester* and the *Bittern* in the Strait of Nargar. The admiral was at this time within a couple of days' sail of the commodore; but he was in no hurry; it was not the custom in this war for British admirals to make haste, in any way or for any purpose. It was the 7th of June before the admiral and the commodore formed a junction. For ten days they did nothing, or next to nothing, to discover the enemy, and the entire month of June was consumed without any development of skill or energy. A letter afterwards published contains the following passage concerning the occupation at this juncture of some of the ships from the fleet by Admiral Bruce:—"In the Gulf of Tartary, lat. 48° 56' a large and convenient bay was discovered on the Corea, affording an excellent anchorage, and in the bay were found the remains of a Russian man-of-war, which had been recently burnt. Two batteries had been erected to protect the vessel in her berth, and numerous huts, &c., were on the shore. From the inscriptions on various tombs it appears the Russians had been there about two years, and the natives gave our fleet to understand that the Russian sailors had left on sleighs about seven weeks before their visit. There seems no doubt that the vessel was the frigate *Ullas*, as her figure-head was found. She must have been there about two years undiscovered by our men-of-war, who, we are informed, were by their orders prevented from searching that coast."

At the close of 1854, orders had been sent to Bruce to watch Petropaulovski, as soon as the season for operations should open. At the beginning of April he found himself at the head of a powerful armament, consisting of the *President*, 50; *Encounter*, 14; *Barracouta*, 6; *Albatross*, 40; *Trincomalee*, 24; *Amphitrite*, 24; *Albatross*, 18; and *Brisk*, 14. The French admirals, Manros and Fournichon, had a small squadron, and the whole fleet, whose headquarters were at Valparaiso, numbered twelve ships, carrying 354 guns. The *Barracouta* and *Encounter* were dispatched to watch Petropaulovski. About the middle of April they arrived near Kamtschatka, and stayed there until it was too late to watch Petropaulovski. The British

officers all through seem to have regarded the Russians as a dilatory race, whose modes of action were formed by the rules and regulations of the British Admiralty. *These two ships "watched Petropaulovski" at a distance of between sixty and eighty miles, until the end of May, when Admiral Bruce, not being in any greater haste than his subordinates, or co-operating admirals and commodores, leisurely arrived off Kamtschatka, and found the "watching" ships waiting for him. The fleet proceeded to the place where they hoped the enemy would have remained until their arrival, in order to be caught. The admiral found all that he deserved to find—a deserted town and an empty harbour. Petropaulovski had been fortified after the conflict of 1854, and so strongly, that the admiral and his fleet would have met from its batteries and the ships, had they remained there, a formidable reception. The Russian orders, however, which arrived across land early in March, were for the ships to escape to the Amoor early in the year, and for the fortifications to be defended by the troops and the inhabitants to the last extremity. The *Diana* frigate, the governor was informed, would bring him a supply of ammunition, and land some heavy guns and mortars. The *Diana* not having arrived at the appointed time, the governor feared that she had encountered the enemy, and he therefore dismantled the batteries, buried the guns or carried them away, and removed the troops and the inhabitants. The fate of the *Diana* was singular. She put into the chief port of Japan, and was wrecked by an earthquake there. Her energetic commander sent a portion of her crew in an American ship to Petropaulovski, which arrived in time to accompany the fugitives thence to the Amoor. He afterwards built a sloop, and in it reached the same place in safety, escaping the vigilance of all the English cruisers. Had a tenth part of the energy and foresight of this one Russian been displayed by any of the British or French admirals or commodores, not a Russian ship in these seas would have escaped. All the Russian authorities, wherever acting on these shores or waters, showed the utmost zeal for their country's service, the most untiring vigilance, the quickest celerity and promptitude, a sagacious foresight, and careful precaution.*

Admiral Bruce found a Russian whaler, which had been snugly moored in a quiet and sheltered creek. This had been retained to convey away the governor and his family, who had fled to the interior. Bruce contrived to open communications with him, and exchange some prisoners. After these exploits, the admiral, with puzzled and disappointed mind, considered whither he should go to find ships, batteries, or anything belonging to the foe.

The fairest months of summer had been spent: three admirals, two commodores, and a score of captains, had been roaming about the Pacific, unable to come up with anything Russian, without any well-concerted plans of action, and without knowing how to dispose of the large forces under their command with any advantage to their respective countries.

During the months of July and August the time was consumed by the fleets in cruising about in a bewildered way—some of the ships in and out of the Sea of Ockhotsk; some trying to get into the Amoor, from which a barrier of sand-banks kept them, and no spirited or skilful efforts were put forth to penetrate the intricacies of these obstructions.

When the gallant captain of the *Diana* escaped with a portion of his men in the sloop he had himself built, there were about 280 of his sailors left behind; these procured a Dutch ship to take them to the Amoor, but were intercepted by the *Barracouta*, and captured; the only piece of good fortune that fell to the allies during the season, unless the taking possession of the little island of Urup, a Russian possession, may be also esteemed such. This little isle is the centre of the trade of Russia in the Kurile Archipelago; and the French thought it of sufficient importance to change the name to "Alliance." A tolerably good prize was found there—a vessel laden with furs.

A letter from San Francisco, dated the 5th of September, gave a succinct account of some of the proceedings of a portion of the allied fleets which we have not noticed elsewhere:—"Her majesty's frigates *President*, 50, Captain Burridge, and *Amphitrite*, Captain Fredericks, are both in the Bay of San Francisco, anchored off Sancelito. The *Dido*, 18, Captain Morshead, arrived at San Francisco on the 18th of last month from Vancouver's Island, and sailed on the 1st inst. under sealed orders, but supposed to be for the Sandwich Islands, Tahiti, and Valparaiso. The *Monarch* is hourly expected with the admiral from Vancouver's Island. The *Amphitrite* arrived on the 21st of August from the Russian possessions of Ayan and Sitka. It will be remembered that this vessel sailed from Petropaulovski after the French and English found that place abandoned by the Russians, for the river Amoor, to join the combined French and English squadrons which had previously sailed from China to the Amoor. From the Amoor the *Amphitrite* was to have brought to the admiral at San Francisco news of the attack upon the Russian fortifications believed to be built upon that river. To our surprise, it turns out that the representations which had floated about over all the countries of the Pacific respecting these fortifications were fabulous. None such

exist; at any rate, not at the point near the mouth of the Amoor where rumour had located them. I will endeavour, from such meagre materials as I possess, to condense the *Amphitrite's* cruise. She left Petropaulovski on the 13th or 14th of June, in company with the war-steamers *Encounter* and *Barracouta*, and the man-of-war *Pique*, and arrived at Ayan on the 7th of July. Ayan is situated upon a small island off the mouth of the Amoor. It is a neat little town, containing thirty-five houses, and a church, built of wood. The place was found almost deserted by its Russian inhabitants, who had left their houses and furniture in good condition. A Russian iron steamer, belonging to the government, which was found lying at Ayan, was blown up and destroyed by the crew of the *Amphitrite*. This was the only act of hostility committed; and a proclamation was issued, declaring that private property would be respected. Everything was accordingly spared except this steamer. The *Amphitrite* lay at anchor for five days in the channel leading to the entrance to the Amoor, during which period soundings were taken, from which it was found to be impossible for a ship of war or any large vessel to enter the river. It was found that there were no fortifications at the mouth of the river. From several whalers spoken by the *Amphitrite* in the Sea of Ockhotsk, it was ascertained that the English and French fleets destined for the Amoor had been fallen in with (on their way to the north) in the Gulf of Tartary, whither the two English steamers *Encounter* and *Barracouta*, and the *Pique*, sailed from the Gulf of Saghalien to join the allied fleet; and the *Amphitrite* sailed from Ayan on the 15th of July, and arrived at San Francisco on the 21st of August, as already stated. There was nothing new at Sitka, and the town was in its usual quiet state."

The weather at last became unfavourable: it was *too late* in the season to do anything, and each division of the fleet sought its respective rendezvous.

Thus 1855, like 1854, was wasted by the incompetency and impromptitude of those to whom the country's interests were committed in those waters.

#### NAVAL OPERATIONS IN THE WHITE SEA.

The proceedings of the allies in the White Sea in 1855 were expected to commence much earlier than in 1854, when much time was lost, for which there was the excuse that it was the commencement of the war. The conduct of the English Admiralty was as dilatory in 1855 as in the former year. Sir James Graham was still at the head of the Admiralty when it devolved upon the board to prepare an expedition. By the end of April a squadron

s ready, which, from some cause or other, own only to the Admiralty, did not set sail til May, and did not arrive off Archangel til the month of June. The French government and marine, still more dilatory in their operations against Russia, did not dispatch a squadron until later. When the English arrived, they found that the squadron had been sent out too late; these seas had been long open, and even entirely free from ice, and enemy and neutral states had all taken advantage of the absence of hostile cruisers to trade, and to convey troops and munitions of war from one port to another. The blockade was not established until the 11th of June, at least a month too late. This blockade included all the ports and harbours in the White Sea from Point Orlofska, in long. 22°, to Cape Kanoushin, in long. 43° 49'. The ports of Archangel and Onega were the special objects of the vigilance of the allies, their commercial importance being the greatest. Indulgence was extended to all trading vessels already in those ports; and they were very numerous, the tardy procedure of the allies having encouraged the traders on these coasts to an unusual degree of enterprise. The commercial fleet in these seas which took advantage of the absence of the allied cruisers belonged to Swedish, Norwegian, Dutch, German, and American ports. The English squadron was under the command of Captain Elliot; the French under that of Captain Lambert.

During the winter the fortifications exposed by the British in 1854 were strengthened; and where difficulty of access was then found, it was greatly increased by piles, stakes, and sunken boats, and trading-hulks. The defence of Archangel was very ostentatious, for could be seen in the neighbourhood a large force of Cossacks, and other light cavalry, 1000 regular infantry, and perhaps half that number of militia. The Russians expected early in the season a powerful naval and military demonstration would be made there by the allies. This arose from certain questions put in the British House of Commons early in the year, the answers to which were very bellicose, intimating that as soon as the White Sea was free from ice squadrons would be sent, and vigorous action taken. Admiral Schtscheff was governor of Archangel and the circumjacent province; the inhabitants reposed entire confidence in his skill and courage, so that the squadrons were regarded with more curiosity than alarm in the principal towns. It does not appear that the allies attempted anything but a blockade for a month after their arrival. On the 9th of July an English steamer anchored before the village of Koutsa, near Onega, and sent four boats with

armed parties on shore. According to the St. Petersburg press, the boats were fired upon by the peasantry, under the guidance of an old soldier, and compelled to return to the ships, which immediately opened a broadside, discharging grape and canister, while the boats, returning armed with guns and rockets, also opened a heavy fire. After three hours' cannonade, two of the boats pulled in shore. The peasantry, although only thirty-two in number, led by the priest, prevented their landing, and the boats once more retired to the ship, which again opened a formidable cannonade, throwing this time round-shot. This firing was continued all night; the next morning the vessel sheered off. Several of the men in the boats had been killed and wounded by the well-directed fire of the villagers, but only one of the latter was hit, and he was only slightly wounded. The Russians suffered the usual loss, only on this occasion it was not a poor Cossack, as there were none of that class at hand to receive the honour. Such is a specimen of the reports made through the St. Petersburg journals of the operations on these coasts.

The simple truth was that the *Phoenix*, cruising off these coasts, sent two boats, with a flag of truce and an interpreter, in order to obtain provisions, the villagers spoke them from the shore, consenting to traffick with the sailors, and when, unsuspecting, they were about to land, a murderous fire was opened on them. The boats were signalled to retire, and the *Phoenix*, to punish the base treachery, flung shot and rockets into the village, scattering the houses as dust. Thus everywhere—in the Euxine, the Baltic, and the White Sea—flags of truce were fired upon by the treacherous and sanguinary foe.

After this event the squadron was more active, and was less disposed to treat the enemy with leniency, various villages were burnt; timber-yards, boat-houses, small docks for building coasting-vessels, &c., were burnt and destroyed. Jack, ever generous to a manly or a helpless foe, resented with mortal antipathy the perfidy and cruelty of enticing men ashore under a flag of truce to murder them. The *Phoenix* and *Meander* were very active in searching all the creeks and bays where there was the slightest chance of discovering a ship, or boat, or any ship-building *materiel*, or government stores. During the season, the villages of Kouzoff, Shelná, Zaiatski, Megra, Solovetz, Kemi, Kollovara, and at least as many more small places were attacked, and some injury done to them. All these villages were well armed, a regular coasting navy to convey arms and ammunition having been in action while the allies were leisurely tarrying in their own ports at home, or slowly

making way to their posts of duty. The trade of those coasts was, however, effectually stopped from the arrival of the cruisers until the ice began to set in. Great injury was the result to the people of these shores, to whom the coasting-trade is vital; and so great has been the increase of late years of the commerce of Archangel and Onega with even remote countries, that the blockade was felt as a severe visitation. By means of a strict blockade upon the Russian coasts, with continued incursions of marines and light troops up the rivers and bays by which these shores are indented, an amount of chastisement could be in a few years visited upon the government through the sufferings of the people, which would make the czar feel it to be his interest and the interest of his dominions to come to terms of peace. At the close of the season the squadrons returned home, not having effected anything great, but, on the whole, a good deal that was useful. The blockade had been more rigorously maintained than in the previous year; but the captures were fewer, and of little value. The duties were not harassing to the squadrons, Jack having just sufficient excitement to arouse him, and keep him busy.

The importance of a demonstration of British power in the White Sea was not small, as from its ports Russia has long meditated a descent upon the coast of Norway. A writer, well acquainted with that sea, and the designs to which Russia wishes to make her power in it subservient, thus wrote on the subject:—"Suppose some new European convulsion, when Western Europe has home difficulties to contend with, what is there to prevent the

Russian fleet of the White Sea from securing the best harbours in Norway, and that Cronstadt from taking possession of Gothland instead of merely asking for it, as in 1834. This is no chimerical fear; and that the English government may not be again surprised by some audacious invasion of an unguarded port in an allied country, it may be well here to recapitulate the resources of our crafty neighbour. Russia possesses in the White Sea 400 transports, of about 15,000 tons burthen most of them manned by sailors acquainted with every nook and cranny of the rocky coast of Finmark, as well as every shoal in the fiords. They are so constructed that they can easily be adapted to convey not only troops but artillery; and such a fleet could carry 10,000 men, with heavy guns and stores for three months' campaign. Such an expedition might disembark anywhere between the Gulf of Waranger, at the north-eastern extremity of Finmark, and the Gulf of Drontheim, on the south-western; that is to say, along nearly 800 miles of coast, without meeting with a single military post. Russia already shows symptoms of sinister designs on the islands of Gothland and Bornholm, as well as the deep bays of Finmark. Scientific expeditions now, as in 1841, are set on foot by the Russian government, and military roads are being constructed leading towards the coveted points of Lapland. The Norwegian journal of Cromsoe complains bitterly of the number of armed boats which have come this year to Vadso, in the Bay of Waranger, perhaps to fish—perhaps to lay the foundation of some future Sebastopol—within 200 miles of the British coast."

## CHAPTER LXXXVIII.

JUNE BEFORE SEBASTOPOL.—THE THIRD BOMBARDMENT.—SUCCESSFUL ATTACK BY THE FRENCH UPON THE MAMELON AND THE WHITE WORKS, AND BY THE BRITISH UPON THE QUARRIES.—DESPERATE ATTEMPTS OF THE ENEMY TO RETAKE THESE POSITIONS.

"It is no time to discourse: the town is besieged, and the trumpet calls us to the breach."

SHAKESPEARE.

DURING the first week in June no incidents of importance occurred in the active prosecution of the siege until the capture of the Mamelon was attempted, and happily accomplished. The English endeavoured to throw some "carcasses" into the works of the enemy; but these means of offence had been lying for a great number of years in England before they were sent out, and were consequently useless: they were, unfortunately, so far effective as to fall and burst in the British advance trenches, killing and wounding a number of our men; Lieutenant-colonel Mundy was among the latter. Thus, in almost every cannonade, and at every step during the progress of the war, the unfaith-

fulness of the departments at home exposed our brave soldiers to unnecessary sacrifice. It was affirmed that these carcasses *had been lying in store more than half a century.*

Admiral Boxer, to whose rough energy the harbour of Balaklava was indebted for improvement, died on the 4th of cholera. His nephew to whom he was much attached, died three days previously of the same disease, and it was believed that the shock rendered Admiral Boxer's system more susceptible to that malady.

An event occurred about this time, so utterly discreditable to certain authorities of the British army in the Crimea, that were the relation of it less worthy of credit, every generous

and would refuse to believe it. Mr. Woods, a talented correspondent of the *Morning Advertiser*, was attacked with the Crimean or ergoum fever (as the Russians call it), and was admitted into the Marine Hospital at Balaklava, where the persevering skill and care of Dr. Edward Derryman were the means of his recovery. Colonel Hurdle, of the *Times*, was also a generous benefactor of this *littérateur*. After the recovery of Mr. Woods, and his return to England, Colonel Hurdle and Dr. Derryman were both severely rebuked for allowing the correspondent of the *Times* to enter into the hospital! One would suppose that any Englishman, so far from home or help, in such a deplorable condition, would find a cheering arm in every other countryman; but the staff of the British army (not including the generals of division or brigade in the term) was composed, for the most part, of narrow-minded, prejudiced, and vindictive men, hating every liberal idea or institution, and cherishing a morose hostility to any one connected with the press. The neglect, blunders, callousness, incompetency of these officers, were exposed to the country first through the instrumentality of the correspondents of the London press, who accordingly stretched their brief authority as it respected the literary gentlemen in Crimea, with an eager, personal, and personal animosity, which faithful history cannot denounce. Mr. Woods has spared the names of these tyrants who acted to him so cruelly, although, soon after, another agent of the press was allowed to lie down and die, without any medical help, because the prohibition of these authorities prevented the gentlemen in charge of hospitals from extending assistance. On the 6th of June the third bombardment of Sebastopol commenced. The English opened 157 guns and mortars; the French with nearly twice as many. The English pieces were generally of larger calibre, and were more fully and vigorously worked, so as to be less effective in the cannonade than the batteries of their allies. The peculiar characteristic of the fire, as compared with that of the April bombardment, was the power and number of the mortars; more than sixty large mortars vomited their shells rapidly and incessantly upon the enemy's works. The fire extended momentarily along the whole line after the discharge of a blank signal-gun, at three o'clock in the afternoon. The day was excessively warm, not a breath of air was moving, the smoke-wreaths settled upon the enemy's lines, adding to the picturesque effect of the cannonade, as the flashes of the guns were revealed through the looming volumes of smoke, like lightning through the dark clouds of a stormy sky. The Russians were as effectually taken by surprise as they were in the first battle.

second bombardment, and scarcely answered the guns of the allies for the first half-hour, and then only feebly. A large portion of the garrison had been detached to the heights overlooking the Tchernaya valley, in observation of the Sardinians and French, whom Canrobert and Marmora had led to the positions described in a former chapter. The allies in neither of the previous great cannonades directed so sustained and ponderous a shower of shot upon the Russian defences. Into the Malakoff, and still more into the Mamelon, shells poured in a constant and fiery current, slaying the garrisons of these forts, and rendering everything that offered resistance to their disintegrating force. The English used their long guns with extraordinary rapidity and unprecedented certainty; every shot appeared to tell. A new trench had been cut by the Russians in front of the Redan, connecting their system of rifle-pits, of which a description was given in a previous chapter. Into the works of this trench the English sent destruction from cothorns, which they had placed in their advanced works. Great numbers of the Russian riflemen were cut to pieces in that trench. In this way the cannonade continued, until the shades of evening hid the defences from view, and then the shells were flung with unrelenting fury, especially from the English batteries. As the day closed a distant thunder-storm lighted the horizon with other flashes, producing a strange effect, as if heaven and earth were warring around doomed Sebastopol. When the morning of the 7th dawned, the English long guns recommenced the murderous practice of the preceding evening, and throughout the day threw their dark missiles upon the crumbling ramparts of the enemy. The terrible Redan gave signal evidence of the success of the British artillery practice; its embrasures were broken in every direction, yet its disfigured face still looked frowning and formidable.

On the evening of the 7th the allied chiefs had resolved to storm the Mamelon. Lord Raglan had been anxious for this during the command of Canrobert, but that general would not consent to adopt so vigorous a course. Pelissier, who fell in more cordially with his lordship's plans, resolved to signalise his new command by this grand undertaking. To Lord Raglan it was a necessity, as it was impossible for him effectually to push on his works in the direction of the Redan while the Mamelon commanded the approach. Pelissier and Raglan agreed upon their plan of action at the beginning of the month; it was in brief this:—After a bombardment of two days, the White Works (which had been constructed by the Russians so early as the 27th of February), were to be stormed by the French, also some

smaller works towards Careening Bay, while the English were to force the Quarries, in front of the Redan, which were, in fact, regular works, but still called the Quarries, according to the aspect they presented when the English first broke ground near them. To this undertaking the French general of engineers was opposed, as he believed the fortress could only be subdued after a complete investment. The English engineers, on the contrary, urged the bombardment and storming of each separate work by a series of sieges, as it were, until one defence fell after another, according to their concentrative or connecting relation to one another in the defence. Pelissier, himself an engineer officer, fell in with that opinion. The principal difficulty in the way of this new undertaking was the fact that the French advanced parallels were still between 300 and 400 metres from the point to be attacked, and it must be approached under fire of certain of the enemy's batteries, unless he should be taken by surprise. A council of war was held at Sir Harry Jones's quarters, when various plans were proposed, and certain diversions in the direction of the M'Kenzie Heights advised. General Niel and General Jones were not of the same mind, but Pelissier, Raglan, and Jones concurred in the course to be adopted.

Another council of war was subsequently convened: the officers present were Generals Bosquet, Niel, Thiry, Lebœuf, Beuret, Dalesme, Frossard, Martimprey, and Trochu, on the side of our allies; Generals Sir H. Jones, Dacres, Airey, and Colonel Adye; Major Claremont and Captain de Polignac, of the Artillery. At this council the commander-in-chief did not permit the project to be discussed, but only the *modus operandi*, and the hour. It was decided to open the bombardment on the 6th, and to storm the works on the 7th. The council were generally of opinion that shortly after dark would be the fittest time; Pelissier, Raglan, Jones, and the English artillery officers were in favour of an attack by daylight. Lord Raglan's troops preferred seeing their enemy and the work before them; Pelissier considered that the task itself could be more satisfactorily executed by daylight, whereas the consolidation of the position, if conquered, or the retreat, if vanquished, could be best conducted under the darkness of night. To this opinion, in which the English officers especially concurred, all deferred, and five o'clock on the evening of the 7th was the hour designated. The details were committed to General Bosquet, an officer to whom every description of service seemed to be equally easy, so felicitous and varied were his talents. It was the desire of Pelissier and Raglan to have the assault so conducted that the enemy might be taken by surprise. The French did not keep their own secrets well on

such occasions, and accordingly many hours before that named for the attack, the whole French army knew what was contemplated, and the English heard from their allies that great project had been upon the *tapis*, and would that night be brought into practical force. Happily, no adventurous deserter crossed the lines with the tidings to the enemy. For a few hours before the moment appointed the cannonade of the allies was dreadful; the English smote the Redan with unintermitting fury, and a fiery deluge overwhelmed the Mamelon. Soon after five o'clock the forces designed for the assault were collected in the trenches, and a death-like stillness reigned throughout the lines, as on every point groups of officers and men were gathered to behold the terrible tournament. They spoke but little, and that little in whispers. "It was no time to discourse; the town was besieged, and the trumpet called them to the breach."

The French force was very large, and was composed of Imperial Guards, Zouaves, Indigènes, Chasseurs, and regiments of the line, which, with the reserves, made a muster of 20,000 men.

The storming party consisted of three companies, of 200 men each,—of Chasseurs, Indigènes, and Zouaves; two columns of support amounting to 10,000 men, sustained the companies. The remainder of the French and 3000 of Osman Pasha's Turks, remained in reserve.

Nothing was left undone by Pelissier and Bosquet to secure the success of the attack. Both officers reconnoitred the ground from the British position at different times in the evening of the 6th. Pelissier, about five o'clock that evening, proceeded to the Lancaster Battery, where he remained a considerable time; as he retired, the British soldiers issued forth from their tents, lining the way the general took, throwing their caps in the air, and shouting; the officers, catching the *furor* of the men, waved their swords. The general was deeply affected by the enthusiasm of his allies; and a French officer in the general's confidence has thus expressed himself:—"General Pelissier was much moved by this sudden and voluntary expression of respect and kindly feeling, and never mentions the episode without emotion." Meanwhile Bosquet named the second, third, fourth, and fifth divisions for the attack—all from the second *corps d'armée*.

At four o'clock on the evening of the assault Bosquet addressed each battalion as it filed passed him, and was elated by the acclamations of the gallant men in whom he reposed confidence. At half-past four the attacking column descended into the ravines of the Careenage and Karabelnaia, which afforded them shelter both from the observation and the fire of the foe.

former direction the chief operations were committed to Lieutenant-colonel la Bousserie. The point of attack on the right was the White Works, which the Russians called the Volhynian and Selinghinski Redoubts; on the left the Quarries, which the English called the Ravine; in the centre, the main point of conflict was the *Mamelon Vert*, as our allies called it, and which the enemy named the *Antschatka* Redoubt. The two ravines separated the first-named works from the Mamelon on the one side, and that from the English point of attack on the other, so that in each case the ravine might be made a way of stealthy approach as well as of effective shelter to the French.

Near the Careening Battery Generals Mayran and Dulac drew up the third and fourth divisions; Generals Camou and Brunet, at the head of the second and third divisions, commanded the Mamelon. General Bosquet took command of the English battery called the *Lanciers*. The signals ascended from the British battery, and the rockets gave their fiery warning to the host which silently awaited their summons. Brigadiers Faily and Lavarande precipitated themselves upon the White Works; Brigadier-general Wimpffen advanced against the base of the Mamelon.

The former attack was the more speedily successful, although, in proportion to the time consumed, more sanguinary. The Russians were watchful at the White Works, and both redoubts which composed them were well garrisoned. The advancing French were taken in flank and front by a terrible fire of artillery; and as the space over which they had to pass was very considerable, their loss was great. With cries of "*Vive l'Empereur!*" they scaled the redoubts, and put their dependance on the bayonet. Colonels Rose, Polkes, and Brancion greatly distinguished themselves; Brancion stood alone for some moments waving the flag of France upon the parapet of one of the two redoubts, until he fell covered with wounds. Lavarande's brigade arrived in the trenches of the Careening Works a little later, and dashed on for the other redoubt—that is, to the French as the work of the 22nd of February (the other was known as the work of the 27th), of which he made a speedy and bloodless conquest. The French immediately pursued the enemy, who took refuge in and around a battery erected by them on the 2nd of May, to protect the head of the ravine of the Careening. After a close conflict the battery was captured, and the guns spiked. In accomplishing this, the enemy rallied his powerful reserves, and returned to the attack; the French were driven back as by a main force, but General Mayran, deservingly the hero of the Russian supports, caught

the advancing column in flank with the bayonet, causing death and confusion, many falling prisoners into his hands. The French re-entered the redoubts, the Russians, complete fugitives, abandoning every post of defence. At this moment Lieutenant-colonel Larouy d'Orion, with two battalions, emerged by the right bank from the ravine, where he had been concealed in support, and cut off the retreat of the flying enemy. Four hundred prisoners, including twelve officers, were taken, and many killed and wounded.

The grand attack was upon the Mamelon, where the defence was most obstinate, and the victory most important. About half-past five the French columns were found at the entrance to the ravine which divided the extreme right of the English from the new French positions at Inkerman. At the head of one of the French battalions was a *vivandiere*, who was on horseback, and wore a white hat and feathers. She carried, slung by her saddle, a little keg containing brandy. This lady appeared to belong to the Zouaves. Another honoured the Chasseurs by her presence; she was both handsome in features, and elegant in general appearance; she, too, was mounted, and had her little keg slung by her saddle. The bearing of these ladies was as free from alarm as if riding on a parade, notwithstanding the probability that their path would soon be strewn with the dying and dead. The troops descended the ravine, but after a short time they suddenly emerged, and rushed upon the works of the Mamelon. The Russians apprehended no attack; they were not on the *qui vive* as were their compatriots at the White Works. The French surmounted the parapets, and fired down upon the garrison, who, panic-struck, fled, but not until the Zouaves, dropping down from the parapets, or entering through the embrasures, plied the bayonet with terrible activity. The pursuit was hot, and as the Russians retreated upon the Malakoff thither the pursuers followed. It was the intention of the officers only to make a demonstration against that work, in order to give time for the engineers and sappers to turn the Mamelon to account as a temporary advanced work against the enemy; but the men, in their furious courage, attempted to scale the face of the Malakoff; many of them did so, and fired down into it, but fell dead before the superior fire of the enemy. That vast work opened the fire of all its guns, while the infantry plied their muskets through the embrasures; the space around this work was speedily strewn with its prostrate assailants, a column of the enemy instantly emerging while the French were in confusion from so irresistible a fire, pursued them in turn. The French retreated upon the Mamelon, where a shell from the

enemy exploded a magazine, shattering the whole work, and leaving it a heap of ruins. The French literally fled to their supports, leaving the track of their flight covered with their dead and wounded. Colonel de Brancion had already fallen, Lieutenant-colonel Lablanc fell under the iron shower which the enemy threw upon the retreating force. General Bosquet saw all this with deep anxiety, and poured brigade after brigade to the contested point to retrieve the disaster. They advanced under a heavy fire, for now the enemy put forth all his power and vigilance. The fresh troops rushed forward, as did the former columns, and were also successful; the enemy lost all his vantage ground, and once more retreated upon the Malakoff. It was then half-past seven; the position was secured, and the setting sun shed his parting rays upon the victorious eagles of France as they were waved above the Mamelon. The engineers lost no time; the works of the Mamelon and Mount Sapoune were put into such a state as would enable them to be held against a renewed attack of the enemy. Three times during the night his columns assaulted the captured works, and were each time received by a close fire of musketry, and repulsed. The French captured 502 prisoners, and "sixty-three live bomb-shells" fell into their hands. On the following morning General Lavarande, a very young general of brigade, whose valour and skill contributed much to the victory at the White Works, was killed by a shot from the Russian batteries.

The attack upon the Mamelon would have certainly proved a failure, but for the presence of mind and vigilance of Bosquet; the rashness of the French soldiers in pursuing the enemy to the Malakoff endangered the whole of the operations. This they did contrary to an order of the day from General Pelissier, forbidding any attempt to carry any other work than those upon which the assault was directed. "The enemy," wrote the general-in-chief on the 9th of June, "has only made ineffectual demonstrations against the conquered works. He has abandoned the battery called the 2nd of May; he has also completely abandoned to us the right bank of the Careening Bay; and the vessels in the harbour take shelter in Artillery Bay, where, nevertheless, our heavy shells can reach them."

While the French were thus signally engaged, and signally successful, the British performed their part with their accustomed heroism. Detachments from the light and second\* divisions, not exceeding 1000 men, were directed against the Quarries. The plan

was to conquer the works so-called, and advancing towards the Redan, find shelter, keep up a fire which would engage the attention of the enemy while a body of 800 men with picks and shovels, threw up a parapet towards the city, thus turning the Quarries into an advanced work of the English. British rushed forth against the enemy's works in their usual style, and the enemy fled without firing a shot, or feeling the point of the bullet. The British then advanced towards the Redan, and, encountering no opposition, pressed on and entered the Redan, which they found without defenders, the garrison having gone to assist in the defence of the Malakoff. The soldiery were afterwards much disappointed that the Redan was not occupied; they did not understand how completely it was commanded by the guns of the Malakoff. Eventually the Russians returned to the Redan, and attacked the British, who fell back with loss upon the conquered Quarries. The obstinate reluctance of the British to retire before the superior force which pressed upon them, and their impression that the Redan might have been retained, cost many valuable lives, some of our officers having fallen within that work itself. The Russians, increasing in numbers, advanced to retake the Quarries; but the English reserves coming up, they were driven back with slaughter upon the Redan. Six times during the night the Russians renewed their attack upon the Quarries, so anxious were they to reconquer the post; but although the English were few in number, they defended it with the most daring courage, and when morning dawned they were the victors. Considerable anxiety was felt for their safety, as throughout the short night the flashes of musketry could be seen. "Sometimes," says Colonel Hamley, "a burst sounded shrilly in the still night; once or twice there was a cheer; and these sounds and the rattle of the small arms showed the chief part of the combat in which so many of our comrades and friends were darkly engaged. Sometimes the sounds of strife died away, and then were renewed. These sudden outbreaks marked the onsets of the Russians. Toward morning they advanced on our trenches, penetrated into some of the approaches, were driven out without loss. The next morning the Russian works, beaten into mere heaps, were almost silent, firing only an occasional shot." The English report of casualties upon the 9th of June on the morning of the 8th was 100 killed, and 270 wounded. The 7th Rifle Fusiliers (commonly called the "Flourishers," from having worn that insignia on their caps) and the 88th, or Connaught Rangers, were the regiments which bore the brunt of the baffled efforts of the Muscovites, and these two corps had the heaviest loss; but

\* The Baron de Bazancourt says, "of the 2nd regiment of the line." That is a mistake; the 2nd regiment of British infantry was not in the Crimea.

es of the British from three o'clock on the ten in the morning of the 8th, was 11 ers and 112 men killed, 30 officers and 522 n wounded. The French had 1700 men ed and wounded; the Russians 2000, ex- sive of those lost in the struggles on the ning of the 7th and the night which fol- ed.

Ir. Stowe relates the following incident con- ted with the conflict:—"Among other strations of character which came out ing the recent struggle, it may be told that of our sailor artillerymen being desired to p under cover, and not put his head out to pt a rifle bullet, grumbled at the prohibition, ng to his comrades loud enough to be over- d, 'I say, Jack, they wont let a fellow go look where his own shot is: we ain't id, we ain't; that's what I call hard lines.' s due to Lance-corporal Quin, of the 47th, ake public the bravery which he last night bited, and which has already brought him er the notice of General Pennefather. In of the attacks made by the enemy on the ries, after they were in our possession, Russians experienced some difficulty in ing their men again to the scratch. At th one Russian officer succeeded in bringing ur men, which Corporal Quin perceiving, ade a dash out of the work, and with the end of his musket brained one, bayoneted ond, and the other two taking to their e, he brought in the officer a prisoner, hav- dministered to him a gentle prick by way ickening his movements. After deliver- im up, he suggested to his comrades that e were plenty more to be had."

he same writer thus describes the scenes h met his eye the morning after the e:—"The ammunition waggons, the am- ce carts, the French mules, with their iers full freighted, thronged the ravine r our light division, which is the straight- ther the crooked—road down to the attack e right. Troops of wounded men came y up, some English, the greater portion h, begrimed with the soil of battle. On ft a party of Zouaves had stopped awhile t their burden, it being the dead bodies ee of their officers. A little lower an sh soldier was down on the grass ex- ed, and well-nigh unconscious from some n seizure. A party of French were ed round him, supporting him on the and offering water from their canteens, he wildly motioned aside. On the right, a deep bay in the gorge, was dotted over e of ground a French reserve with their ts piled, attending the signal to move d. They were partially within view of alakoff, and the round-shot and shell plumping down into the hollow, produc-

ing every minute or so little commotions of the *sauve qui peut* order, replaced the next moment by the accustomed nonchalance, and the crack of stale charges, fired off by way of precaution. A lively and even pretty *vivandiere* came strid- ing up the ascent, without a symptom of ac- knowledgment to the racing masses of iron, and smiling as if the honour of her corps had been properly maintained. At ten o'clock the little incidents of the halting war perceptible through the telescope from the crown of the hill below the picquet-house were these:— At the head of the harbour the Russians were busily engaged burying their dead; outside the abattis of the Round Tower several corpses of Zouaves were to be distinguished; about the Mamelon the French troops were hard at work, some of them stripped, for coolness, to their drawers, and were seen creeping down the declivity on the side towards the Malakoff, and making themselves a deep shelter from its fire. Our people, meanwhile, on the right attack, were calmly shelling the Malakoff in a cool matter-of-business sort of way; but the eternal gun on its right, which has been endowed with nine months of strange vitality, launched an indirect response into the Mamelon. From after eleven o'clock the Russians, as usual, slackened fire, nor was there any duel of artillery on a great scale until after dark. Lord Raglan in the afternoon went round the hospitals, and many a procession crossed the plain bearing some officer's body to its resting-place. Our loss in officers killed has been great. The 88th have been the severest sufferers, having three officers killed, one missing and conjectured to be killed, and four wounded—all, indeed, who were engaged. The four senior officers of the 62nd were put *hors de combat*."

The following despatches, relating to the operations before Sebastopol up to the 9th, were sent home by Lord Raglan. The first of these was written on June the 5th:—

"I have the honour to inclose a letter from the inspector-general of hospitals, forwarding the weekly state of the sick of the army. The cholera has sensibly diminished in the camps before Sebastopol; but it has attacked the Guards and the 31st regiment, near Balaklava, and some of the new batteries, as well as the followers of the army in that town. It is hoped that the disease will pass from them as it has from the stations where it first appeared. I am grieved to have to say that it has fallen heavily on the Sardinian contingent, and that General La Marmora is in great anxiety about it. I am rendering him all the assistance in my power. While writing to your lordship, an officer has brought me a letter from him, announcing that his brother, General La Mar-

mora, who commands his second division, has been very severely attacked. He has been accommodated with a quarter at Kadikoi, and every attention shall be paid him."

The following bears date June the 9th:—

"I have the great satisfaction of informing your lordship that the assault which was made upon the Quarries in front of the Redan, from our advanced parallel in the right attack, on the evening of the 7th inst., was attended with perfect success; and that the brave men who achieved this advantage, with a gallantry and determination that does them infinite honour, maintained themselves on the ground they had acquired, notwithstanding that during the night, and in the morning of yesterday, the enemy made repeated attempts to drive them out, each attempt ending in failure, although supported by large bodies of troops, and by heavy discharges of musketry, and every species of offensive missile. The French on our right had shortly before moved out of their trenches and attacked the *Ouvrages Blancs* and the Mamelon. These they carried without the smallest check, and their leading column rushed forward and approached the Malakoff Tower; but this it had not been in contemplation to assail, and the troops were brought back and finally established in the enemy's works, from which the latter did not succeed in expelling them, though the fire of musketry and cannon which was brought to bear upon them was tremendous. I never saw anything more spirited and rapid than the advance of our allies. I am happy to say that the best feeling prevails between the two armies, and each is proud of and confident in the gallantry and high military qualities of the other. I apprised your lordship, by telegraph on the 6th, that our batteries reopened that afternoon. The fire was kept up with the greatest energy until the day closed, when it was confined to vertical fire; but the next morning the guns resumed the work of destruction, and the effect was such that it was determined by General Pelissier and myself that the time had arrived for pushing our operations forward. Accordingly, soon after six o'clock on the evening of the 7th, the signal was given for the assault of the works I have enumerated, and the result was most triumphant. The troops employed in storming the Quarries were composed of detachments from the light and second divisions, and at night they were supported by the 62nd regiment. The command of these troops was intrusted to Colonel Shirley, of the 88th, who was acting as general officer of the trenches, and he was assisted in the arrangements, and guided as to the points of attack and distribution of the troops by Lieutenant-colonel Tylden, of the Royal Engineers, the directing engineer officer

of the right attack. Although nothing could be more spirited than the attack of the Quarries, or more creditable to every officer and man engaged in the operation, yet I cannot refrain from drawing your lordship's especial attention to the energy and determination with which they all displayed in maintaining and establishing themselves after their first successes. They were repeatedly attacked during the night, and again soon after daylight on the 8th, and it was in resisting these repeated efforts on the part of the enemy that a great portion of the heavy loss the army has to deplore was sustained. The mode in which Colonel Shirley conducted this very arduous service, and carried out his orders, entitles him to my highest commendation. I have great pleasure in mentioning the following officers who are stated to have distinguished themselves on the occasion, viz.—Lieutenant-colonel Campbell, of the 90th, who commanded the storming-party; Major Mills, Royal Fusiliers; Major Villiers, 47th; Major Armstrong, 49th, who are all severely wounded; Lieutenant-colonel Maxwell, of the 88th; Major Bayle, of the same regiment, who was unfortunately killed; Lieutenant-colonel Grant, 49th; Major Simpson, of the 34th; Lieutenant-colonel Johnston, of the 33rd; Major Herbert, of the 23rd; Captain Lowry, of the 47th; Captain Turner, of the 7th; Captain Lowndes, of the 47th; Captain Nason, of the 49th; Captain Le Marchant, of the 49th, who was wounded; Captain Wolseley, 90th; and Lieutenants Chifford and Eustace, of the 49th; and Palm Irby, and Waddilove, of the 47th; and Captain Hunter, 47th; and Lance-corporal Quinlan, 47th, who took a Russian officer prisoner in the most gallant manner. I also feel it my duty to solicit your lordship's notice to the eminent services of Lieutenant-colonel Tylden, of the Royal Engineers; he has been indefatigable in the discharge of his peculiar duties from the commencement of the siege, and he has always been at hand to aid in the repulse of the enemy when they have assaulted our trenches. I eulogise the conduct of Captain Browne, of the Royal Engineers, Lieutenant Elphinstone, of the same corps; Lieutenant Anderson, 90th foot (acting engineer), who is wounded; and he laments the death of Lieutenant Lowry, R.E., who conducted the storming-party, and was afterwards killed by a cannon-shot. Notwithstanding the frequency of the endeavours of the Russians to regain possession of the Quarries, and the interruptions to the work which these attacks gave rise, Lieutenant-colonel Tylden was enabled to effect the lodgment, and to establish the communication with the advanced parallel, and this redounds greatly to his credit and that of the officers and men employed as the working-party; and I can

at this opportunity to express my approbation of the conduct of the Sappers throughout the operations. The exertions of the Royal Artillery, under Brigadier-general Dacres, and those of the Naval Brigade, under Captain Washington, R.N., in serving the guns, cannot be too warmly commended. The accuracy of their fire is the theme of universal admiration, and the constancy with which they applied themselves to their arduous duties under all circumstances, however dangerous, cannot be too strongly placed upon record. It is deeply to be lamented that this success should have been followed by so heavy a loss as is shown in the accompanying returns, which, however, are still incomplete; but I have the assurance of the principal medical officer that many of the wounds are slight, and that by far the greater portion of the sufferers are progressing most favourably. I have just learnt that the enemy have abandoned a work in the rear of the *Tranchées Blanches*, which they constructed at the commencement of the month of May. The French took possession of it on the 7th, but

did not retain it. In the other works they captured sixty-two pieces of artillery, and they have fourteen officers and about 400 men prisoners. We have a few prisoners, and among them a captain of infantry, who was wounded, and taken by Corporal Quin of the 47th regiment."

On June the 8th he wrote as follows:—

"I have the honour to inclose a letter from Dr. Hall, inspector-general of hospitals, inclosing a return of the casualties, so far as they had been ascertained when he visited the hospitals yesterday morning, which took place in the attack and continued occupation of the Quarries on the evening of the 7th and morning of the 8th. I visited most of the wounded yesterday, and was much pleased with the attention of the medical officers to the sufferers, and with the patience and resignation of the latter; and I am happy to say, while there are some very serious cases, the greater portion has every prospect of recovery, and many of the wounds are slight."

## CHAPTER LXXXIX.

### SECOND EXPEDITION TO KERTCH.

"Our ship now goes with a pleasant gale,  
Give it to her, boys, now give it her!  
For she's the craft to carry sail,  
Give it to her, boys, now give it her!"—*Sea Song.*

On the 22nd of May the second Kertch expedition departed. On the morning of the 24th a flotilla doubled Cape Takli, where a sinuosity of the coast presented a good place for anchoring; this place was called Kamich Bay. The lighthouse of the cape was the appointed rendezvous. On the right lay the island of Ak Bournou and the citadel of Yenikale marked the extremity of the deep bay, where an ancient town of Kertch displayed its spires, which seemed as if War never rolled his dark cloud above it. Admiral Bruat, in his despatch to the French minister of marine, thus describes the approach of the fleet:—"On the 24th of May, at daybreak, the two squadrons were assembled at the place of rendezvous, five miles to the south of Cape Takli. The frigates, barges, and paddle-box boats were anchored, and the steamers ranged themselves in line, and took their course towards the bay, which is formed by the low point of Kamich, which extends towards the east. All arrangements had been made for throwing on shore, in a single operation, at least 3000 infantry, who were to be strongly supported by three pieces of artillery, and the half of a rocket-party."

As soon as the fleet came in sight, the Cosack videttes along the coast gave the alarm; the enemy had not sufficient force to resist, and therefore retired; the boats immediately landed the detachment. By half-past three o'clock in the afternoon all the allied troops were landed. Before the Russians retired, they blew up all their batteries, and ruined the defences. Scarcely had the troops begun to land, when dense columns of smoke ascended from Ak-Bournou, which were succeeded by repeated explosions.

The steamers of the two fleets passed through the strait and entered the Sea of Azoff, where a large fleet of merchant coasters of that sea were crowding all sail to escape capture. The wind and current were against them, even if they could have otherwise had any hope of escaping the steamers. The gun and mortar-boats, and other light vessels belonging to the allies, pursued and made prizes of many barques, brigs, schooners, and other small craft of various designations. A Russian steamer of war rushed out of the Bay of Kertch, and made for Yenikale; she was pursued by a gun-boat, gave battle but for a moment, and again sheered off. Another came to her assistance; the con-

sort of the gun-boat also arrived, and continued the pursuit. Batteries on various sand-banks opened on both; reinforcements of British and French steamers silenced the batteries, and the pursuit was sustained by the vicious little gun-boats, until the enemy, seeing resistance hopeless, surrendered.

Where the allies landed, provisions of every kind were found in abundance, to which they helped themselves, and where any opposition was offered the farm-houses were given to the flames. The proceedings of the troops were not creditable; the private property of unoffending farmers was taken or most wantonly destroyed, and quiet homesteads were reduced to ashes. The men seemed roused to vengeance by the treachery and vindictiveness which the Russians had hitherto shown in the war.

The retreat of the enemy was for the purpose of choosing a more efficient line of defence. They hoped to be able to make the old Turkish castle at Yenikale tenable; it was solidly built and very strong. Gun-boats, some small vessels of war, and floating-batteries increased the defence in an imposing manner. The allies directed their attention at once to this place. The *Fulton* British steamer opened fire, supported by others, and the cannonade was returned. Soon, however, the defences suddenly became silent; the old fortress on the instant was wrapped in a column of flame; and a shock produced by an explosion was felt far out at sea, so that vessels three miles off were shaken by the concussion of the waters around them. The enemy at the same moment retreated from the town. The allied troops advanced upon it, and passed by Kertch and partly through it at early dawn, and before mid-day entered Yenikale without opposition. A letter was found, which had been written by Prince Gortschakoff to General Wrangel, informing him that the reinforcements he demanded could not be sent, and ordering him to evacuate the neighbourhood and bring all his cavalry to Sebastopol.

The rapid and easy conquest of these places need excite no surprise, when the powerful forces sent into these parts is considered. Independent of the troops already referred to, and who were so apportioned from different arms of the military service as to constitute a very complete although small army, the naval armament was overwhelming. The admirals had under their command the following ships. Sir Edmund Lyons, with his second in command, Admiral Stewart, had at their disposal the *Royal Albert*, *Hannibal*, *Algiers*, *Agamemnon*, *St. Jean d'Acre*, *Princess Royal*, *Sidon*, *Valorous*, *Leopard*, *Tribune*, *Simoom*, *Furious*, *Highflyer*, *Terrible*, *Caradoc*, *Sphinx*, *Spitfire*, *Gladiator*, and *Banshee*. The French fleet, under Admiral Bruat, comprised the *Montebello*, *Napoléon*, and *Charlemagne*, men-of-war; the

*Pomone*, *Caffarelli*, *Mogador*, *Cacique*, *Descartes*, *Asmodée*, and *Ulloa*, steam-frigates; the *Véloce*, *Primauguet*, *Phlégethon*, *Berthollet*, *Roland*, and *Caton*, steam-corvettes; the *Lucifer*, *Mégère*, *Milan*, *Brandon*, *Fulton*, and *Dauphin* steam-sloops; the *Vantour* steam mortar-boat, and few other vessels—the troops being distributed among the various ships. Besides the above there was a flying squadron, consisting of a few very small French steamers, and the following British vessels of light draught—the *Miranda*, *Vesuvius*, *Stromboli*, *Medina*, *Ardent*, *Arrow*, *Beagle*, *Lynx*, *Snake*, *Swallow*, *Viper*, *Wrangle*, and *Curlew*, the whole under the command of Captain Lyons, son of the admiral, who hoisted his flag on the *Miranda*. Lieutenant-general Sir George Brown, and the French General d'Autemarre, who commanded the troops, were officers signalised by their promptitude and daring, and this the enemy well knew. The troops who accompanied them were also known to the enemy to be very fine corps. The 19th, 26th, 39th, and 74th French regiments of the line, and the 8th and 14th battalions *chasseurs-à-pied*. The British were the 42nd, 71st, 79th, and 93rd regiments—a splendid body of troops. Means of land transport as well as of marine transport, were well provided. Engineers, sappers and miners, with abundance of material for throwing up defences were also conveyed with the expedition. The whole fleet amounted to sixty ships of war. When they arrived off Kertch it was the queen's birthday, and the ships were therefore gaily hung with flags. The loyal feelings of the British, and the courteous manner with which their allies regarded that loyalty and respected the day itself, gave an air of alacrity and enthusiasm to every movement of the men of both fleets and armies.

The march to Yenikale, on the 25th, was like a holiday affair; the spirit of the soldiers was exuberant of joy, although the weather was oppressively hot, and there was no water; so they suffered severely from these causes. The inhabitants of Kertch at first remained, confident in the honour of the invaders; at Yenikale, not only did the garrison retire, but the inhabitants also—terrible tidings of rapacity and violence had reached them. Their fears were well founded, for very soon their own town was plundered of everything movable, and the ships of war were receptacles for the plundered property. General d'Autemarre made his headquarters at Kertch, and, on examination of the authorities and perusal of documents, it was discovered that General Wrangel had commanded 6000 troops in Kertch and its vicinity, and on resolving to abandon the place had consumed the granaries and provision stores from which the army at Sebastopol had received constant supplies. He destroyed half a million

n pounds weight of flour, and nearly four millions and a quarter pounds weight of corn, chiefly wheat. The only danger incurred by the fleet was from the narrowness of the straits, and from infernal machines placed in them, which were connected with the shore by galvanic wires. The courage of the Russians evaporated too quickly to allow them to fire the infernals." The land batteries, or strand batteries, as they may be with stricter propriety called, offered but little mischief, and that to gun-boats only.

In Mr. Wyld's map of the country between Kapa and Kaffa, including Kertch and Arak, there is a plan of the attack on Kertch and Mikale, by Lieutenant Bingham, of her Majesty's ship *Terrible*, which shows at a glance the skill and facility with which the enterprise was conducted. The number of ships under Wrangel, although considerable, were not sufficient, even with the utmost zeal and bravery on the part of the inhabitants, to render any effectual resistance; besides, with the exception of the cavalry, the troops were of inferior quality, the infantry being mostly raw recruits, and the artillery engineers, &c., penitents and retired veterans, who were all *d'age*. "Discretion was the better part of valor," and the enemy practised it to advantage, destroying what they could not carry off, leaving, as they thought, a barren victory to their foes. This was not so, however, at Kertch no less than 17,000 tons of coals were stored, which the enemy failed to set on fire, and this useful capture supplied the members of the fleet with fuel. The importance of the conquest of this town may be judged by the reader from a single circumstance discovered by the allies after their occupation. Several days previous to the capture, General Wrangel had sent 1500 waggons, each loaded with half a ton weight of flour or grain, to the various parts of the Crimea, especially at Sebastopol.

It is to be regretted that the French general command of the place allowed the soldiers to plunder not only the houses, but the persons of the inhabitants. It is true that these distasteful acts were chiefly perpetrated by the Tartars, and by the Tartars their friends, who were united with them in hatred to the Russians; but these excesses could not occur without the sanction of the general, and they were not suppressed until his garrison had disgraced itself. The respectable inhabitants, filled with terror,

George Brown made Yenikale his headquarters; and when he found that similar deeds were being enacted, he issued an order of the stern in its severity, and took steps to punish and flog any soldier found aiding in any of the scandalous outrages.

The French general captured in the neighbourhood of Kertch 250 oxen, and as many sheep, half of which he presented to the fleets. At the same time a foundry was destroyed, in which shot, shell, and Minié balls, were manufactured; and it is to be regretted that the proprietor was an Englishman: he was arrested.

Our readers will regard with curiosity the light in which these successes of the allies were placed by the enemy, always so dextrous in glossing over defeat, and pretending that victory crowned his arms when he sustained signal discomfiture. In this instance he preserved some truthfulness. The following is a translation of the report addressed to Prince Gortschakoff by Lieutenant-general Baron Wrangel, commanding the troops in the eastern district of the Crimea:—

"On the morning of the 24th of May the enemy's fleet, of seventy vessels, appeared in the Strait of Kertch. On account of the fog, it was not observed till it was abreast of the lighthouse of Takli. Later, I received a report from the commandant of Theodosia, announcing the passing of a large hostile squadron making for Kertch, and information from Aide-de-camp General de Kotzebue that about seventy vessels had left Sebastopol with 25,000 of the enemy's troops. The enemy, who was soon abreast of the village of Kamich-Bourno, brought to with his larger ships out of reach of the Paul Battery, and ran in his steamers and gun-boats close to shore, and then proceeded immediately to land his forces under the protection of the fire of his ships. Whilst this was going on, one of his gun-boats ran in close to the battery, but being received with a round of cannon-shot, soon got out of reach again. In the meantime the assailants had disembarked six columns of infantry, who advanced in the rear of the battery. Yielding to the decided superiority in number, the troops defending it spiked the guns, and retreated in the direction of the post-station of Soultanovka, after having destroyed all the munitions of war.

"The enemy then, with a part of his steamers, rapidly advanced into Kertch Bay. Seeing the evident impossibility of resisting this attack, I gave orders for the immediate destruction of the depots of flour and forage situate at Kertch, and also for that of the vessels that might fall into the enemy's hands. In consequence, there were burnt—the war-steamer *Mogoutchy*, which was under repair, and with her machinery out, and the private steamers *Berdiansk* and *Donets*. I do not know what became of the steamer *Argonaut*, except that she succeeded in doubling the cape.

"The fortifications of Kertch and Yenikale kept up till evening a well-sustained and very successful fire against the enemy's steamers, which were proceeding towards the Strait of Yenikale. It was not till night that attention was turned to rendering the cannon unserviceable, and to the destruction of whatever might fall into the enemy's hands, which being done, the garrison left the fortifications, under favour of the darkness.

"All the troops at Kertch and Yenikale effected their retreat with the most trifling loss. I have learnt that the garrison defending Yenikale was obliged to follow not the road to the Soultanovka post, but a parallel road on the right, and nearer the Sea of Azoff.

"I have arrived to-day at the village of Arguine, where all the detachment is concentrated, and where it will be joined by the regiment of hussars of the Grand-duke of Saxony, the regiment of dragoons of Prince Emilius of Hesse, and No. 26 battery of horse-artillery. It was impossible for me to halt nearer to Kertch, on account of the want of water in that part of the country, and also to be able to furnish assistance to Theodosia, in case the enemy should determine to attempt anything against that town. When I have received reinforcements I shall act as circumstances may require."

The following despatch, written by the vigorous pen of Admiral Bruat, gives a clear and succinct account of what was accomplished at Kertch and Yenikale. It was dated the 26th of May, from the *Montebello*, before Kertch, and was addressed to the French minister of marine:—

"As I had the honour to inform you by my telegraphic despatches of the 22nd and 25th of May, a new expedition to Kertch was resolved upon on the 20th. The embarkation commenced on the evening of the 21st; the expedition sailed on the 23rd; it landed on the 24th at Kamich-Bourno; and on the 25th occupied Yenikale, having passed Kertch, and taken possession of the batteries situated in the vicinity of Ak-Bourno. On the 25th, Admiral Lyons and myself entered the Sea of Azoff, whence we sent a squadron to Berdiansk and Arabat. It left during the night, and consisted of four French steamers, and ten English steamers, some of which are gun-boats.

"The complete success of this expedition, where our troops, led with great decision by General d'Autemarre, displayed their usual ardour, is also due to the rapidity of its execution. In this respect I must acquaint your excellency how complete and cordial, under all circumstances, the co-operation of Admiral Lyons has been.

"On the very day we cast anchor, the land of the French troops commenced in order under the direction of Captain Jurien de Gravière, of the navy, the chief of my staff.

"Having assured myself of the promptitude with which the landing of the troops was effected, I hoisted my flag on board the *place*, and proceeded to reconnoitre the batteries of Cape Ak-Bourno, the powder-magazines of which the Russians had already blown up. Perceiving they would be turned, the enemy lost no time in blowing up the others, evacuating their positions. Shortly afterwards an English gun-boat, of a light draught of water, made for Yenikale, to cut out a Russian steamer which had left Kertch, and was trying to gain the Sea of Azoff. A sharp encounter soon commenced between the two vessels, in which the batteries of Yenikale took part. I ordered the *Fulton* to hasten to the aid of the gun-boat, which arrived with all speed at the scene of combat, and had to withstand a heavy fire. I ordered the *Mégère* to support her, and Admiral Lyons, on his part, ordered succour to be given to the gun-boat. Nevertheless the enemy's steamer, which knew had the treasury of Kertch on board, escaped, leaving in our hands two barges containing precious objects and a portion of the military and civil archives. But the confidence of the Russians, attacked unexpectedly by land and sea, became so great, that they soon relinquished all thoughts of further resistance, and did not even take care to remove the wounded from Sebastopol, who were in the hospital in the citadel. In the course of the day they set fire to considerable store-houses they possessed at Kertch. Finally, before evacuating Yenikale, they blew up a powder-magazine containing about 30,000 kilogrammes of powder; the shock was so great, that many houses were destroyed, and vessels anchored ten miles out at sea felt it severely. To sum up, the enemy has lost up to the present—160,000 sacks of oats, 360,000 sacks of corn, 100,000 sacks of flour. A carriage-factory and a foundry were burnt down; three steamers, one of which was a war-steamer, were sunk by the Russians themselves. Some thirty transport ships were destroyed, and at least as many taken. In the different explosions about 100,000 kilogrammes of powder were destroyed. A great store of shells and cannon balls no longer exists.

"I shall send your excellency later a statement of the condition of the guns which have fallen into our hands. They are sixty or eighty in number. These guns are highly finished, and of large calibre."

The British admiral's despatch was not so full as that of Admiral Bruat, but it contained

the report of Lieutenant M'Killop, who, for his spirited and efficient conduct, was made a commander. Admiral Lyons wrote from on board the *Royal Albert*, in the straits, on the 1st of June.

"In my letter of the 26th ult., I stated that we had captured fifty of the enemy's guns. It now appears that more than 100 guns have fallen into our hands in the different sea defences, many of them of heavy calibre, and remarkably well cast. Those which may not be required for the land defences which the allied armies are now constructing, will be shipped and sent to England and France.

"It has been ascertained from the Custom-house returns, that the enemy on evacuating Kertch, on the 24th ultimo, destroyed 166,000 lbs. of corn, and 508,000 lbs. of flour. This quantity, taken together with what has been destroyed by the allied squadron in the Sea of Azoff, comprises nearly four months' rations for an army of 100,000 men; and it seems that, shortly before our arrival, the enemy had commenced sending towards Sebastopol daily convoys of about 1500 wagons, each containing half a ton weight of corn or flour.

"Sir George Brown confidently expects that by the 7th inst. Yenikale will be in such a state of defence as fully to justify his leaving in charge of the Ottoman troops now here, under the command of Hadji Reschid Pasha, and that the British and French forces will be at liberty to proceed to the attack of Anapa, Soujuk-Kaleh, in order to drive the enemy from his last holds on the coast of Circassia."

The following is the official account of the action with Russian steamers, given by Mr. M'Killop, of her majesty's ship *Snake*, off Yenikale. It was dated the 4th of May:—

"I have the honour to inform you that in obedience to your signal granting me permission to intercept a Russian war-steamer, that she proceeded into Kertch Bay, exchanging shots with the batteries at Ak-Bourno in passing. I succeeded in cutting off the steamer and engaging her, but not until she had placed herself under the protection of the forts of Yenikale. For a sharp fire on both sides for three quarters of an hour, I was fortunate in succeeding in setting her on fire with Lancaster shells, which she blew up—the crew with difficulty getting away. She had apparently no men on board. During this engagement the forts at Yenikale hulled the ship, and kept up a well-directed and continuous fire the whole time, which was returned with apparently good effect with our heavy shell.

Three steamers also came down from the Sea (to the Sea of Azoff), and opened fire with very long-range guns, their shot

frequently passing over us at about 4000 yards. I continued to engage the batteries and steamers after the arrival of the ships sent up to my assistance, until recalled by signal from the *Miranda*.

"The whole of the sailing vessels standing towards the Sea of Azoff were intercepted, and afterwards captured; two steamers, also intercepted in Kertch Bay, were blown up by their own crews, and a gun-boat sunk. The batteries along the coast, which fired upon us while chasing the steamer, also were blown up.

"I should feel I was neglecting my duty unless I mentioned the zealous and creditable manner in which the officers and crew performed their duties; being very short-handed, rendered working the guns for so many hours a work of great labour. I beg to recommend, for your favourable consideration, Mr. N. B. Herbert (Second Master in charge), who with much skill conducted the ship through the intricate and comparatively unknown passage, under the guns of Ak-Bourno, and inside the shoal of Yenikale, without any accident. I am equally indebted to Mr. Sydney E. Wright, assistant-paymaster (an officer of long and meritorious service), for his assistance as a volunteer executive, who, with Dr. Roche and Mr. George Wilson (senior engineer), manned and worked the 12-pounder howitzer, sinking a gun-boat.

"I am happy that no casualties occurred, and the *Snake* received but little damage—one shot through the mizen-rigging carrying it away, and one through the hull at the water-line."

Lord Raglan's despatch, like that of Admiral Lyons, was only interesting for its inclosure, the report of Lieutenant-general Sir George Brown. The brave old man wrote as well as he made war. Everything he undertook was completely performed, from a drill to a battle, from an order of the day about wearing stocks to the conduct of a separate corps of the army. His report to Lord Raglan was written not only with military perspicacity but with picturesque effect. Lord Raglan's letter was as follows:—

"Sir Edmund Lyons' telegraphic despatch of the 25th, which was forwarded from hence on the morning of the 27th, and one from me that immediately followed, will have informed your lordship that the allied expedition to Kertch reached its destination on the morning of the 24th, and the troops having landed without delay, and the war-steamers drawing little water having pushed on towards Kertch and Yenikale, that all the objects in contemplation were accomplished in twenty-four hours, without any resistance on the part of the enemy, who blew up the fortifications on

both sides of the passage and retired, thus leaving us masters of the Sea of Azoff, to be speedily occupied by a French and English flotilla.

"I have now the honour to lay before you a copy of the report of Lieutenant-general Sir George Brown, commanding the allied troops, and in congratulating your lordship, which I do most cordially, on the complete success of the operation, I have the greatest satisfaction in drawing your attention to the promptitude with which the disembarkation was effected; to the efficient measures taken by the lieutenant-general to insure his position and attain the objects in view; and to the just tribute which he pays in his interesting narrative to the judicious arrangements of Admirals Bruat and Sir E. Lyons; and to the zeal and energy displayed by the officers and men of the allied fleets in carrying them out under their vigilant superintendence, as well as to the cordial co-operation and assistance of General d'Autemarre, commanding the French division, and Reschid Pasha, commanding the Turkish troops."

The following is General Brown's report:—

"The expedition to this place so far has proved entirely successful, and we have got possession of all we proposed without striking a blow, and almost without firing a shot.

"On leaving the anchorage of Sebastopol, on the 22nd, the night came so foggy that the fleet made but little progress towards its destination, but the whole of the ships and steamers reached the rendezvous, four leagues off Cape Takli, soon after daylight on the morning of the 24th, when it was speedily determined to run at once in for the spot at which, as your lordship is aware, it was originally proposed to disembark, and which is a fine smooth bay, round a low point running out immediately under the village of Kazatch-Bourno.

"The water in the straits is so shallow, that large ships cannot ascend higher than about three miles from this spot; but the steamers and vessels in which the whole of the British infantry and artillery were embarked could get at least a mile nearer to it." All the vessels got as high up as the depth of water would permit, and came to an anchor about eleven, when the English and French troops began to get into the boats; and small steamers, which were assigned to them, towed them to the shore, and the gun-boats and smaller war-steamers were stationed to scour the beach, and protect the disembarkation. Although we had observed some six or eight pieces of light artillery following us along the shore, no opposition was made to the disembarkation, and the first of the troops reached the shore at ten o'clock, which, as soon as they were formed, were pushed on

to occupy the village on the rising ground bordering the marshy plain, on which they landed for the purpose of covering the remainder of the disembarkation. As they were the most numerous, and as your lordship had done so on a former occasion, I placed the French on the right, and the British troops on the left, intending to hold the Turkish contingent in reserve. Soon after the disembarkation had commenced, several loud explosions were heard, and it was soon discovered that the enemy had blown up the magazines of his batteries on Cape St. Paul, and was retreating by the road leading to Theodosia or Kertch. It therefore became exceedingly desirable that I should advance to the ridge of which the cape is the continuation; but as only a few of the Turkish troops had yet landed, and but little of the artillery, I contented myself by requesting General d'Autemarre to patrol to the east and towards Kertch, and took up the best position I could find for the security of the troops and the protection of the disembarkation of the necessary *matériel* and horses during the night, just before dark, which, in an open steppe, where we were exposed to the attack of cavalry, was an operation of some difficulty.

"In the course of the evening several more loud explosions were heard, and it was soon discovered that he had also blown up and abandoned the whole of his works here, along the coast between this and Kertch, and spiked all the guns. He had also set fire to and destroyed some large corn-magazines at Kertch, as well as two steamers in the harbour; and the Cossacks, as usual, burnt the forage and farm-houses in their way.

"As soon as the batteries on Cape St. Paul were abandoned, or soon before, some of the smaller war-steamers were enabled to round Cape Ak-Bourno, and enter the Bay of Kertch, when they engaged and endeavoured to cut off some of the enemy's steamers attempting escape into the Sea of Azoff. They succeeded, I believe, in capturing a small one, but the other two managed to get through.

"The disembarkation of horses, guns, and *matériel* went on during the whole night, and the zealous and active superintendence of Rear-admiral Houston Stewart and Captain S. Thomas Pasley; but, with all this, there was a good deal to be done at daylight this morning, and I was ultimately compelled to proceed with only three of the guns of the Turkish contingent, and without any of their officers or horses. Under the circumstances, however, I considered it imperative to proceed, and the whole force marched off this ground at six this morning, the French in contiguous columns followed by their artillery; the British in echelons of columns, covering their flank, and their own artillery and baggage; and the

turkish troops in contiguous columns of battalions, covering the rear of the whole, until they approached the precincts of Kertch, when the whole of the troops broke into an ordinary column of route. The town of Kertch is clean, and remarkably well built, and the troops passed through it with the greatest regularity, and without the slightest disorder; subsequently the day became excessively hot, and the march being a long one, the men suffered greatly from fatigue and want of water, which was only to be found at occasional wells. We managed to get in here, however, by one o'clock, where we were soon after visited by the three admirals, and found a large squadron of small steamers and gun-boats, ready to proceed into the sea of Azoff, under the command of Captain Lyons, of the *Miranda*.

"The result of these operations, besides the opening of the passage into that sea, and the destruction of the enemy's works, has been the capture of upwards of fifty of his guns, many of them of the largest calibre and the best construction; and if the enterprise has, from circumstances, not added greatly to her majesty's arms, it has, as already stated, so far been attended by complete success. That success, however, is mainly to be attributed to the judicious arrangements of Admirals Bruat and Sir E. Lyons, and to their indefatigable attention in carrying them out, as well as to the able and willing assistance they have received from the captains and other officers of the French and British navy under their respective commands; nor must I omit to mention the invariable and willing assistance I have on all occasions received in the course of my service from General d'Autemarre, commanding the French division, and from Reschid Pasha, commanding the sultan's troops.

"I omitted to state that, in passing through Kertch this morning, observing that an iron foundry there had been employed in the manufacture of shot and shells, as well as in casting shell bullets, I caused it to be destroyed, with its new and expensive machinery."

Few places in any land are more interesting to the archæologist and natural philosopher than the places of which the allies had thus taken possession. In connection with the Cimmerian Bosphorus, historians and antiquarians have always found themes of curious and also useful discussion. On p. 408, vol. i. of his History, a brief sketch was given of the historic interest of Kertch, which was there described as "a poor substitute for the glories of the once mighty Panticapæum." Nevertheless, Kertch was a handsome city when in May, 1855, it was submitted to the allies. Its public buildings were large and elegant, and both as to their number and architectural pretensions,

were superior, in proportion to the number of the population, to those of any other town or city belonging to the Russians in the Black Sea. The site of Kertch is peculiarly pleasant; its sea-views are varied and picturesque, and in the distance the mountains of the Caucasian range display their lofty grandeur. The antiquity of Kertch extends even beyond the ancient Panticapæum. It is supposed that some rude town existed even in the days of the Cimri, but history fails to trace the character of the occupation of these regions in an antiquity so remote. In looking back through the revolutions of ages to such periods, we must be satisfied with the discoveries of the first indications of civilisation, and with tracing the glories of its early progress. In doing this the imagination is apt to betray the judgment, and invest with fictitious interest the earlier triumphs of social progress.

"Thus will memory oft in dreams sublime  
Catch a glimpse of the days that are over,  
While looking back through the waves of time,  
That their long faded glories do cover."

Whoever the Cimmerians were, their history is lost in the darkness of the long past; they were succeeded by a race more barbarous—the Tauri, a race of Anthropophagi, fierce, bloody, and relentless. They seem to have excavated abodes from the solid rock, occupying a *heaven city*, so to speak, in the vicinity of Kertch. They were, in turn, subjugated by the Scythians, a people who appear to have descended from the mountains of Thibet, a brave, severe, stern race, dauntless in battle, and of undiminished spirit. These were afterwards known by the name of the Tauro-Scythians. It is not improbable that the present race of Tartars occupying that country are descended chiefly from them, although there is a large admixture in the race of other Tartar tribes, and of the ancient Huns. The Milesians expelled the Scythians, and have obtained the credit of marking those realms with the first traces of civilisation. History has scarcely done justice to the Scythian race, many of which remained among both the Ionic and Doric settlements, or on the shores of the Cimmerian Bosphorus and of the Black Sea, and were a stable and hardy element in the vigour of these infant colonies.

Kertch was the site of an ancient settlement of the Ionic branch of the ancient Greek race, as the Chersonese was of their rivals of the Doric branch. The country at that time was covered with fine forests, and hence the settlers dedicated it to the sylvan god Pan; the abundance of wine produced led to the worship of Bacchus, and the city, founded by this ingenious people 500 B.C., was designated Panticapæum.

The ancient city occupied a range of heights

from Mons Mithridates (formerly a precipice above the sea, which has now considerably receded) to a large artificial mound, which became the tomb of Milesian princes, and probably was previously the burial-place of Scythian chiefs. The country abounds in large mounds of a similar creation, and used for a similar purpose; they resemble the cairns of Ireland and Scotland, but are of vastly larger dimensions (showing the wealth and population of these Milesian colonies), and are objects of inquisitive interest to the learned. Herodotus refers to these vast piles for sepulture in these terms:—"The tombs of the Scythian kings are seen in the land of Sberri, at the extreme point to which the Borysthenes is navigable. Here, in the event of a king's decease, after embalming the body they convey it to some neighbouring Scythian nation. The people receive the royal corpse and convey it to another province of his dominions, and when they have conveyed it through all the provinces they dig a deep square fosse, and place the body in the grave on a bed of grass. In the vacant space around the body in the fosse they now lay one of the king's concubines, whom they strangle for the purpose, his cupbearer, his cook, his groom, his page, his messenger, fifty of his slaves, some horses, and samples of all his things. Having so done, all fall to work throwing up an immense mound, striving and vieing with one another who shall do the most."

The Russian government of late years explored many of these "tombs of the kings," and removed many beautiful relics to the Hermitage at St. Petersburg. Among these trophies, gathered from the graves of antiquity, were—personal decorations, implements of war, and instruments of worship, carvings, engravings, &c. Duplicates of all these were deposited in the Museum of Kertch. The French Chasseurs not only permitted the Turks and Tartars to destroy these relics of long-past ages, but joined in the barbarous demolition and dispersion; and such English sailors and marines as found opportunity participated in the barbaric work. Some bas-reliefs were secured by Dr. Macpherson, of the Turkish contingent, and a few other officers of taste, and sent to England to the British Museum.

About fifty years before Christ the Romans assumed authority in the Tauric Bosphorus; the Huns overran the country 375 A.D. For 900 years Huns, Goths, and other barbarous races, continued to overflow that fine realm, gradually defacing the traces of its once glorious civilisation. The Genoese then became its conquerors, and held it for a period of 200 years: they were expelled by the Tartars and Turks, who retained it for 300 years, until the Russians expelled them, who continued undisputed lords until the lion standard

of England and the eagle standard of France scared them away. In October, 1855, when the Turkish contingent occupied Kertch (will be seen in a future chapter), Dr. Macpherson above alluded to, made excavations in several of the sepulchral monuments which cover the vicinity, and discovered various interesting objects. In a paper read by a doctor before the Geographical and Ethnological section of the British Society for the Promotion of Science, the following interesting information was presented, which we take substantially from notes of a report of the proceedings of that section:—"Dr. Macpherson's duties at the late seat of war have led him to Kertch, he was induced, by hearing of the former discoveries of the Russians, to commence excavations, which eventually led to the discovery by him of so many interesting traces of the ancient city of Pantapæum. There are few spots so replete with interest as the Cimmerian Bosphorus, once one of the most flourishing settlements of the ancient Greeks, and the extreme limit in the parts of the colonization of this wonderful race. Here the archæologist and the searcher in natural history will still find a wide field for exploration. Dr. Macpherson was stationed there from October, 1855, to June, 1856; but the severity of the weather rendered explorations impossible, and his public duties, as principal medical officer over a force of 20,000 men, so continually occupied his time, that he was unable to prosecute his researches. Assisted by Major Crease, Royal Engineers, Dr. Macpherson has carefully explored these tumuli. In some, the tomb was found under the natural surface, and in many beneath it. Some were arched in the Egyptian, others in the modern style. Square flags, resting on each other in the centre, and supported by a niche in the side wall, supported a few others had flat roofs, while occasionally no masonry was discovered. Fragments of brackets, which were exhibited in the room, were found in one of the tumuli. Having descended many feet under the natural surface, he came upon the bed of ashes. The bones of a horse, human skeleton, and other remains, were all met with; and, on removing the masonry, fibulæ and bronze coins were picked up in niches between the stones. Having worked at this tumuli for two months without success, he turned his attention to Mons Mithridate. The whole of this hill, from its base to its summit, and the spur extending from it to a distance of three miles, is composed of broken pottery and debris of every description, to a depth of from 10 to 100 feet over the natural clay hill. The height and size of this Milesian work are so enormous, that it is scarcely possible to believe it to be the result of human

our, and it must have been the work of ages have conveyed the surface soil from the ins below to raise it and the neighbouring ghts to the present elevation. On the top his hill is a rude chair, cut out of the rock, a hollow resembling a sacrificial altar. He menced his operations on the sides of these ks, and came to excavations cut out of the es, and probably the abode of the Tauri, which had been converted into tombs by Milesians. These tombs had, however, a explored; but he secured several speci- es of the handles of amphoræ, with the es of Greek magistrates stamped thereon, a few coins with the effigy of Pan, or the ek ruler for the time being, represented a them, with the figure of a griffin, which the emblem of the city, on the reverse. far from Mons Mithridates he came upon rtion of an aqueduct, which probably con- ed water to the acropolis. It was formed oncave tiles, and one of them he exhibited e meeting. After describing the result of e of his labours, he proceeded to state, that ath an extensive sloping artificial tumulus, ing at right angles with the ridge, ex- ing northwards from Mons Mithridates, ame upon a mass of rubble masonry, be- which was a door leading to an arched ber built under the side of the mound. led to a larger chamber, which was also ed. The walls of the larger chamber marked off in squares, with here and flowers, birds, and grotesque figures. the entrance to this chamber were ed two figures of griffins rampant. Two men—one a person in authority, and ther his attendant carrying his spear— rudely sketched on one of the walls. some exploration, the skeleton of a as was found, near which lay a human ton; and, continuing his researches, he k upon a tomb cut out of the solid rock. ar from this a smaller excavation in the as was discovered, and, clearing the surface, ck was found to be hewn out three feet ith and twelve in length. Here he came the skeleton of a horse, and, a few feet er on, an upright flag, four feet high, ound placed over the entrance of a tomb ut of the calcareous clay. The tomb f a semi-circular form, and he found, on ng, that the floor was covered with iful pebbles and shells, such as are now on the shores of the Sea of Azoff. The f the human frame, possessing still the f man, lay on the floor. The bones had led into dust, and the space occupied by ad did not exceed the size of the palm e hand, the mode in which the garments ped the body, and the knots and fasten- y which they were bound being easily

traceable in the dust. Several bodies were discovered, and at the head of each was a glass bottle, and in one of these bottles was found a little wine. A cup and a lacrymatory of the same material, and a lamp, were placed on a small niche above each body. A coin and a few enamelled beads were placed on the left hand, and on the right a number of walnuts. Other similar tombs were explored, and various specimens of pottery, personal orna- ments, vessels of glass, coins, beads, and other objects of interest, were found."

It is much to be regretted that so few of these valuable antiquities were brought to England. It was the good fortune of the British Museum to obtain some spoils of value. A lion and lioness, full-sized figures in marble, exquisitely sculptured, had been at the en- trance of the Kertch Museum: these were sent to England. The *Firefly*, a hired transport, by which they were conveyed, afterwards brought home some marble slabs, of a very remote anti- quity, covered with figures of the early kings of Pontus.

On the evening of the 25th, Captain Lyons (son of the admiral) prepared to cross the Sea of Azoff to its northern shores, which he effected on the 26th. A part of his squadron cruising about captured coasters and gun-boats. At three o'clock on the 26th, they arrived at the Spit of Berdiansk, the rendezvous for the French and British. In half an hour the whole squadron anchored off the lighthouse which is on the spit; this was done in such a manner that while some of the vessels can- nonaded the merchantmen in the harbour, others cannonaded the beach, so as to render it impos- sible for the enemy to assemble either infantry or artillery there. Commander Osborn took the command of the boats, French and British, and attacked the ships in the harbour; the gallant officer dispatched a portion of his boats a distance of four miles, where some Russian coasters found anchorage: the whole were set fire to and consumed. The necessity of great celerity in accomplishing the work committed to Captain Lyons compelled him to forego capture, and to consume what other- wise would have constituted valuable prizes. From this anchorage, and while yet the work of destruction was going on, Captain Lyons dispatched some of his fleetest steamers in pursuit of other vessels descried at a distance, which were captured. Before dark, the work of capture at sea and destruction in the har- bour was completed. At dawn of the 27th, the captain conducted his squadron up to the town of Berdiansk; by consulting "Wyld's Map of the Sea of Azoff, and the surrounding Shores," the reader will perceive that the Spit of Berdiansk projects a considerable distance into the sea, the lighthouse and port being at

its extremity. On that point the work of the preceding evening was accomplished; the *town* of Berdiansk was at the other extremity of the spit, where vessels of an inferior draught could go in; the difference of draught could not, however, be great, as four small war-steamers, which had escaped from Kertch on the 24th, made for the town of Berdiansk, and found a haven of security there, as their commanders hoped. The approach of Lyons' squadron to the lighthouse at the other end of the spit removed that hope, and the steamers were burned to the water's edge when, on the 27th, Commander Lambert, to whom Captain Lyons intrusted the duty, arrived at Berdiansk. The commander summoned the governor to surrender, who complied; private property was spared; the inhabitants, who were descended from Greek and Genoese colonists, were friendly, and readily gave any information the allies sought. All government property was destroyed—this included corn to the value of £50,000. A beautiful 8-inch 62-cwt. gun was carried away. While these proceedings took place, Cossack videttes reconnoitred; they were sent out from Petroiskoi, a town five miles off: they did not venture upon any hostile demonstration.

On the return of the commander with the boats, Captain Lyons, with his characteristic promptitude and skill, directed a combination of movements which, suddenly executed, embarrassed and distressed the enemy. He sent a portion of his squadron to the entrance of the Putrid Sea, stationed a swift ship off the estuary of the Don, and directed the remainder of his force upon Arabat. He arrived off that place on the 28th, which he immediately attacked. There was shoal water, and the wind was on shore; but the ships, French and English, were so well handled that every shot upon the batteries told. The vessels were ordered to keep at shell range. One shell made a lodgment in the magazine, blowing it up, and producing great destruction of life and *materiel*. The fort at Arabat mounted thirty guns, and the fire of the ships was answered with great spirit and resolution. With the destruction produced by the explosion the gallant captain contented himself, as it was impossible to conquer the batteries with the force at his disposal, as there was a large body of troops on shore. There was a vast store of grain on the Spit of Arabat, near the town, but no effort was made to destroy it; the reason for not making the attempt being, that the boats would be exposed to a dangerous cannonade. To expose ships or boats, in any sea, to a dangerous fire from the forts or batteries of the enemy, had gone out of fashion. No doubt our ships would have been matched against ships at any odds; but our commanders

everywhere during this war had the honor of bringing their ships safe out of the way land defences. The force under Captain Lyons was so considerable, that we can hardly doubt a spirited attempt to destroy the granaries the spit would have been successful, not indeed without loss;—but the English people had no notion, in sending out their fleets, that important exploits could be performed with immunity from loss of men or *materiel*. It may be that the captain perceived that to advantage, if obtained, would not compensate for the loss which was certain to occur. After the affair at Arabat, Captain Sedaiges and his fine ships left the squadron and returned to Kertch. This seems to have been very unaccountable every way—it was another instance of the uncertainty of co-operation from the French fleet, everywhere that the command of a French general-officer could reach the sea. Sedaiges was as amenable to General d'Aumare as Bruat was to Pelissier; and the result was that the operations of the French navy were so completely subservient to the convenience of the army that, as in the case of the first expedition to Kertch by Canrobert, and in the instance of the abandonment of Lyons by his French coadjutor, there was no calculating upon their consistent and continuous action. While Lyons was bombarding Arabat, the little squadron at the Strait of the Putrid Sea was not idle. The entrance to the sea is not more than fifty yards wide, between the low cliffs of Genitschi (or Yenitschi) commanded it. The *Swallow* and *Wren* were the vessels which performed there the duty entrusted to them by Captain Lyons; they took three vessels as prizes, and destroyed several others; but the majority that were at Genitschi took refuge in the Putrid Sea. This was the state of affairs when Lyons, steaming along by the spit from Arabat, arrived at Genitschi. On the morning of the 29th, the captain sent a flag of truce to demand the surrender of all the government stores at Genitschi. This was refused: the governor pointing to the force at his disposal, expressing his determination to resist. That force was considerable; besides the batteries (which were inferior), there were six field-pieces, 200 artillerymen, a battalion of infantry, and several sotnias of Cossacks drawn up in a favorable position to protect them in case of landing. Captain Lyons, after giving the governor more time for reflection than he deserved or was necessary, began to act. A loss of time allowed might have been fatal to the expedition, for if the enemy had changed his position, so as to cover with his force the passage into the Putrid Sea, the boats would not have effected an entrance, which was the chief object Captain Lyons desired to attain.

could not bring his ships nearer than long range, because of the deficient depth of water; therefore shelled the town, spreading devastation everywhere, and while the panic and confusion created by such a bombardment, the boats passed in behind the Arabat, and attacked, burned, and destroyed twenty-five ships. There were within the town considerable granaries; most of these were given to the flames. Lieutenant Mackenzie, who commanded the boat expedition, effected the demolition of most of the houses and ships without losing a man, retired. Captain Lyons, however, was not satisfied that the whole of the stores and ships were destroyed; and, notwithstanding the danger of enterprise, the boats were again sent in to check the shipping, while three volunteers undertook the daring feat of firing the remaining stores. These three intrepid men were Lieutenant Buckley, of the *Miranda*; Lieutenant Burgoyne, of the *Swallow*; and Mr. Roberts, gunner of the *Ardent*. Seldom have men served better of their country than these three fearless men. They landed and accomplished their purpose, escaping through showers of grape-shot, and having been in imminent danger of being cut off from the boats. Meanwhile Mackenzie succeeded in burning seventeen merchant ships, making a total of ninety. The stores and corn were at least worth £150,000. The value of stores, ships, houses, and other property consumed was such as to inflict a vast amount of injury upon the enemy. Already the squadron of Captain Lyons entered the Sea of Azoff, there were captured or destroyed six war-steamers, 246 merchant-vessels, and stores to the value of £150,000. On the morning of the 21st of May to the evening of the 29th, this ruin to the property of the enemy, and the capture of the cities of the straits, and all the stores within them, were effected. Had the expedition to the Putrid Sea been any longer delayed, it would have been too late, as the enemy intended to sink ships across the strait, and thus actually protect the property within it. There was a great store of coal at Genitschi, which was burned by the shells from the ships. It will doubtless amaze our readers, much as they have seen in these pages of the lying letters of the Russian chiefs, to learn that once Gortschakoff informed his imperial minister that the allies had met with a series of defeats, unless the devastation of private property and defenceless towns was, in the estimation of the Western powers, victory. The vice admiral boasted in his despatches that he had seen this enterprise of the enemy, and had prepared against it; that other modes of communication having been provided, little injury befell the Russian communications or

the Russian supplies, and that, in fact, he had ordered his troops everywhere to give the enemy such a reception as would severely chastise him for his temerity. When reading all this boasting and arrogance, one is tempted to exclaim—

“Now, in the names of all the gods at once,  
Upon what meat does this our Cæsar feed,  
That he is grown so great?”

On the other hand, we have the despatches of Captain Lyons, recounting deeds of the utmost importance, and concerning which he was entitled to say—

“Et quorum pars magna fui;”

and whoever contrasts the modesty of these despatches with the vaunting effrontery of Prince Gortschakoff, will admit that the British officer appears to immeasurable advantage. The first of these was dated May 28th, off the town of Arabat; the second, May 29th, off Genitschi:—

“I have the honour to inform you that, on hauling down your flag on the afternoon of the 25th, I proceeded with the steam-vessels under my orders, and the French steamer *Lucifer*, towards Berdiansk; at dark we stopped for the French steamers *Megère*, *Brandon*, and *Fulton*. These having joined, at 3 A.M. on the 26th, we all went on in company; at 3.30 P.M. on that day we anchored off the lighthouse on the Spit at Berdiansk, in such a position as to command the harbour and beach and a large number of merchant vessels. I then sent the boats of the squadrons, under Commander Sherard Osborn, accompanied by the boats of the French ships, to destroy these vessels, as well as some lying about four miles off, and a storehouse. All this was completed by dark. During this time steamers of the two squadrons were chasing and destroying vessels in other directions. At daylight of the 27th I weighed with the ships under my orders, accompanied by the four French steamers, and anchored off the town of Berdiansk, the *Miranda* in fifteen feet, and the gun-boats in proportionally less water, in a position which effectually commanded the town and beach. Here we found run on shore and burnt to the water's edge, and abandoned, the four steamers of war which had escaped from Kertch, under the command of Rear-admiral Wolff, whose flag was flying in the *Moloditz*. I now landed the small-arm men and marines of the squadron under Commander Lambert of the *Curlew*, accompanied by those of the French ships, with orders to destroy all shipping and government stores, but to respect private property. This was done without molestation, although we had information that 800 Cossacks with guns were at Petroskoi, five miles off. Many vessels were destroyed,

and corn stores to the estimated value of £50,000. An 8-inch and 62-cwt. gun was also recovered from the wreck of one of the Russian steamers, and is now on board the *Miranda*. Immediately the boats returned, the squadrons weighed for Arabat; I at the same time detached the *Swallow* and *Wrangler* to Genitschi, to command the entrance to the Putrid Sea, and the *Curlew* to cruise between Krivaia Spit and Sand Island, and thus prevent vessels escaping us by getting up the Don.

"On the morning of the 28th we arrived off Arabat, and engaged the fort (mounting 30 guns) for an hour-and-a-half, at the end of which time a shell blew up the enemy's magazine; the ships having been ordered to keep at shell range, and being well handled, had only one casualty, the chief engineer of the *Medina* being slightly wounded by a splinter. The French senior officer's ship received two shots in the hull, but fortunately no one was hurt. The enemy must have lost many men, from the precision with which the shells burst in his works, independently of that caused by the explosion.

"The commanders of the vessels employed deserve every credit for the skilful manner in which they manœuvred their vessels in a very strong breeze and shoal water without a single accident, and I may be permitted to say none were more distinguished than our gallant allies. The large garrison at Arabat rendering any attempt at landing out of the question, I now proceeded for Genitschi, parting, with regret, from Captain de Sedaiges and his squadron, who left at the same time for Kertch. I take this opportunity of mentioning the efficient, cordial, and hearty co-operation I received on every occasion from M. de Sedaiges and the ships under his orders, and my hope that it may again be my good fortune to have him for my colleague.

"The allied squadrons have destroyed upwards of 100 vessels during the three days they have been in this sea, principally laden with provisions for the Russian army in the Crimea. Had we sent these vessels in as prizes we should have lost much valuable time, and not been able to effect so many captures. The active and zealous way in which the officers and ships' companies perform their duties, and the cheerful manner in which they suffer this pecuniary loss for the benefit of the service, will, I trust, meet with your approbation."

"I have the honour to inform you that I arrived here shortly after dark last night, with her majesty's ships under my orders, and joined the *Swallow* and *Wrangler*, which ships had already destroyed or captured all the vessels in

this neighbourhood outside the Straits of Genitschi; but a very great number had passed the straits, which are only fifty yards wide, and are commanded by the low cliffs on which the town is built, and were moored inside under the cliff. At six o'clock this morning I sent Commander Craufurd with a flag of truce to demand the immediate surrender of all the vessels, and of the immense corn stores for the supply of the army in the Crimea, and of all government property of every description, stating that if these terms were complied with I would spare the town, and respect private property; but, if not, the inhabitants were immediately to leave the town. Commander Craufurd was met by an officer of apparent high rank, who refused to accede to the terms, saying that any attempt to land would be resisted. The enemy at this time had a field-piece in position, and about 200 men with them, and, visible from the mast-head, drawn up behind the town, a battalion of infantry, besides Cossacks.

"Having allowed till 9 A.M. for the reconsideration of the refusal to deliver up the vessels and stores; and receiving no answer, at that time hauled down the flag of truce, and placed the steamers as near to the town as the passage into the Putrid Sea as the depth of the water would allow, but they were unable to approach within long range. Seeing that if the enemy, who had removed their guns from their position, could place them in the town, so as to command the passage, and that if he could place his infantry in a similar manner it would be impossible for the boats to pass the channel, and destroy the vessels and stores, I directed the ships to shell the town, which they did so effectually that the boats, under the command of Lieutenant J. F. C. Mackenzie, got safely through the passage, and set fire to the shipping (seven in number) and the corn stores. The service was ably performed by Lieutenant Mackenzie, and the boats returned without accident.

"The wind having shifted about two hours after the boats came off, some of the corn stores did not catch fire; conceiving the destruction of this corn, as well as of some more distant vessels, in so favourable a position for supplying the Russian armies in the Crimea, to be of the utmost importance, I sent the boats again, commanded and officered as before, although I was aware that, from the enemy having had time to make preparations, it would be a hazardous enterprise. The ships accordingly resumed their fire upon the town, and the boats proceeded. Lieutenant Cecil W. Buckley of this ship, Lieutenant Hugh T. Burgoyne of the *Swallow*, and Mr. John Roberts, gunner of the *Ardent*, volunteered to land alone, and

stores; this offer I accepted, knowing the imminent risk there would be in landing a party in presence of such a superior force, and of gun-shot of the ships. This very dangerous service they most gallantly performed, bravely escaping the Cossacks, who all but took them off from their boat; at the same time Lieutenant Mackenzie pushed on, and burned the remaining vessels, the enemy opening a fire from four field-guns and musketry, placed most within point-blank range of the boats. Everything being now effectually accomplished, the boats returned. Although several of them were struck by grape and case-shot, most fortunately only one man was slightly wounded. Lieutenant Mackenzie speaks in high terms of the coolness and excellent behaviour of all employed under his orders; and I trust I may be allowed to bring to your notice the conspicuous merit of Lieutenant Mackenzie himself on this occasion, when more than ninety vessels, and the corn for the Russian army of the value of £100,000 were destroyed, owing to his gallantry and ability, with so trifling a loss as one man slightly wounded.

Since the squadron entered the Sea of Azov, four days ago, the enemy has lost four frigates of war, 246 merchant-vessels, also a large quantity of gunpowder and flour magazines to the value of at least £150,000."

It has been related that the *Curlew* was stationed at the estuary of the Don while Captain Lyons was engaged at Arabat and Genuchi. At the termination of these exploits the squadron steamed towards Taganrog, taking the *Curlew* in its course, and anchored about five miles off. This city was founded by Peter the Great; but since his time the importance of the position has passed away; the approaches have been filled up by sand; and when the wind blows from the land it is very difficult for vessels of any draught to come up to the town. With great labour ships were brought within three miles of Taganrog. As soon as they approached, a vessel was seen on fire in what is called the Merchant Harbour (a plan of Taganrog in the old map will reveal the position). The difficulty of bringing up the ships caused the garrison to resort to the expedient of rafts to carry 32-pounders, his ships' boats bearing arms heavier than 24-pounder howitzers. A detachment reached the shallows; and, unfortunately, at this juncture an auxiliary flotilla arrived which had been dispatched by the Russians to Captain Lyons' aid. The reinforcement consisted of twenty launches, armed with 32-pounders and rocket-mortars. Captain Lyons, of the French marine, rejoined Captain Lyons with these new succours. A flag of truce was sent to the governor, demanding

the surrender of all government property. The governor refused. Commander Coles, of the *Stromboli*, led in forty craft of various descriptions, and opened fire with such rapidity, that ships and stores were soon in flames. This was followed up by a landing of marines, who extended the destruction already caused by the rockets and shells. The marines had to fight their way in accomplishing the object. All the officers regretted the necessity they were under to do so much harm to a city so beautiful and so pleasantly situated. Many ladies in their carriages watched the approach of the flotilla, as if its purpose were peaceful. They were under the delusion that the troops would sink it, or cause it to put about. Several superb stone buildings became the prey of the devouring element; and the beautiful gardens, for which Taganrog is famous, were to a great extent destroyed. This was the favourite residence of Alexander I., and where he died. When the invaders attempted to burn the great store-houses, 3000 soldiers were drawn up for their defence. These men behaved bravely; but no troops could maintain a position beneath the hurricane of rockets and shells that fell upon them. The buildings had an enormous frontage along the beach, which rendered an effectual defence impossible. A huge raft lay close by, which was loaded with timber; and this catching fire, burned so fiercely, that the troops could not descend the beach to take aim with rifles or musketry, and not a man in the boats was killed. What loss of life was caused to the Russians it is impossible even to guess; but it is to be feared that not a few non-combatants—even women and children—were victims to the obstinacy of the governor. This personage, in his despatch, alleged that he offered to meet the allies outside the town, and to allow the fate of Taganrog to depend upon the result of the battle. It is scarcely necessary to say he made no such offer; and if he had been so foolish as to do so, no notice would have been taken of it. The official account of the loss by the enemy, irrespective of the wounded, reports the ever-recurring lie of *one Cossack killed*.

The arrangements and progress of the defence were, according to the commander-in-chief of the garrison, General Krosnoff, as follows:—

"The defence of the principal approach by the rough ascent leading from the quay to the street of the Greeks was intrusted by me to Major-general Count Tolstoi, who had shown a noble readiness to contribute to the defence by his experience and military acquirements. The half-battalion of the garrison of Taganrog had been posted near the ascent (*escarpement*) with about 200 inhabitants, who had been

hastily armed. In case of an attack, Count Tolstoi, with his infantry, supported by three sotnias of Cossacks of the regiment of the Don, No. 68, was to charge the enemy at the point of the bayonet, and rout them, while the regiment d'Instruction was to take the assailants in flank, and decide the affair. But, instead of the expected descent, the allies, having taken up a position with their steamers and fifty vessels differently armed with cannon opposite the timber-yard, commenced an infernal (*sic*) cannonade, which lasted till half-past six o'clock. At the same time seven large ships of the enemy, armed with heavy Paixhan guns and congreve-rockets, anchored at a distance, and commenced firing at an elevation upon the town. There was one uninterrupted noise of shells bursting, fuses, and grape, accompanied by fire-rockets, and rifle-balls. A conflagration burst out in the town, especially near the Exchange, the street of the Greeks, and at the Gostenoi-Riad; and at half-past three o'clock the assailants landed about 300 men, whom they advanced towards the high ground, upon which is the church of the Czar Constantine. This detachment opened an irregular fire of rifle-shots from behind the bushes, but at this decisive moment Count Tolstoi intrusted a company of the half-battalion of the garrison to the retired Lieutenant-colonel Makedonsky (who, under these difficult circumstances, had again offered his services to his country), and ordered him to drive back the enemy. This distinguished superior officer spread out his company in an inclosure covered by an orchard, in a moment forced the enemy's sharp-shooters to fall back, and then charged them vigorously at the point of the bayonet, routed them, and drove them back to their boats. The squadron then opened a terrible cannonade, but which only lasted a quarter of an hour. The allies, convinced that no cannonade would impose upon the Russian troops, withdrew to fifteen versts' distance from the town, and on the 25rd of May (the 4th of June) went again to sea, steering in the direction of Mariopol.

"Thus ended this new act of powerless animosity directed against a peaceful commercial city, which during so many years had provided the West with its magnificent grain; against a town which ought to be sacred to England, to France, and especially to Sardinia, in memory of the last days of the Emperor Alexander, who had conferred so many benefits upon them.

"By the special grace of God, our loss during this bombardment was very slight. One Cossack was killed; Lieutenant Volkoff, attached to the half-battalion of the garrison of the town, was seriously wounded by two rifle-balls in the chest and head; Baron Franck, assessor of the college, attached to the military

governor, Count Tolstoi, received a contusion on the head, occasioned by the fragment of a grenade; and Major Bozenko, police-master of Taganrog, who had his horse shot under him, also received a contusion: twelve men were wounded. A report is being made of the inhabitants killed and wounded, and also of the houses burnt or destroyed."

We shall reserve Captain Lyons' despatches until the close of the narrative, as the remaining operations require but little notice.

From Taganrog the squadron made for Mariopol, a good port situated on the extreme north of the Sea of Azoff, just within the Gulf of the Don. In this place considerable stores of grain were usually laid up in the service of the Russian armies in the Crimea, and even south of it. The flotilla appeared off Mariopol on the 4th, and its commander summoned the governor in the same terms as at Taganrog, and met with a similar reply. Early on the morning of the fifth the boats prepared for action, but no opposition appearing, a landing-party destroyed the granaries and all the government stores. A place called Eijsk on the opposite side of the gulf was next visited, and the whole of the government property which it contained reduced to ashes. The storage of hay and straw found at Eijsk was enormous. There was also a vast quantity of corn, particularly rye. From the nature of these commodities, the commutation was speedy, and the work of destruction soon over.

While these operations were going on within the Sea of Azoff, others were being conducted without the Kertch Straits on the shores of the Black Sea. On the 28th of May, the Russians abandoned Soudjuk-Kaleh, first spiking sixty guns and mortars, blowing up the magazines, and setting fire to the barracks and public buildings. On their retreat they demolished a fort on the coast between Soudjuk and Anapa. On the 5th of June they evacuated Anapa, the most important of all their possessions on these coasts. The allies had intended to dispatch portions of troops at Kertch and Yenikale, under d'Autemarre and Brown, with squadrons of the fleet under Stewart and Claiserau, to conquer and occupy Anapa, and co-operate with the Circassians. The Russians saved them the trouble of a military expedition. Rear-admiral Stewart, however, visited and inspected the place, and found it for the most part a smouldering heap of ruins. The admiral was surprised at the great strength of the position. There had been eighty long guns, fifteen mortars, twenty-one howitzers, and a garrison of 8000 soldiers. This force made a sanguinary resistance to any detach-

was brought against them, but the proceeding of Captain Lyons in the Sea of Azoff rendered it impossible for them to hope for supplies of provisions, and compelled them to retreat. On their retreat before they crossed the Cuban, they were harassed by the native Circassians. The Circassians were permitted by the Russians to occupy the place.

On the 13th of June the allied admirals and generals resolved on returning to Balaklava and Kamiesch; but garrisons of Turks were sent to occupy Kertch, Yenikale, and Fort St. Catherine, while a light squadron of the fleets was sent to the Sea of Azoff. The active efforts of the expedition terminated with the 13th of June; but the utility of the light steamers and gun-boats was again to be tested before the summer was over; an account of their exploits will be reserved for the appropriate place in the order of our narrative. The following extracts were the official record of the services rendered at Taganrog, and on the eastern coast of the Black Sea. In Lord Raglan's letter, June the 12th, reference is made to the services before Sebastopol, which although not mentioned in the other portion of his letter, were intact, especially as it brings out the deeds and sufferings of men who took part in the glorious feats of arms recorded in the last chapter on the siege. On June 6th Admiral Lyons thus addressed the Admiralty:—

*Straits of Kertch, June 6th, 1855.*

Captain Lyons of the *Miranda*, having informed me that the squadrons under his orders would be ready about the 2nd or 3rd instant, to commence operations in the shallow waters of the Gulf of Azoff, Vice-admiral Bruat and I considered that the moment had arrived for reinforcing them with gun-boats, which would have embarrassed them in their previous movements in deeper waters; we therefore dispatched twenty launches of the line-of-battle ships armed with 24-pounders, howitzers, and rockets, and their lordships will be pleased by Captain Lyons' letter, of which I enclose a copy, that their presence on the spot was most opportune and attended with the happiest result; for, under the management of the officers who commanded them, they mainly contributed towards the capture of 3500 of the enemy, and the destruction of the public buildings and government magazines of provisions at Taganrog.

Captain Lyons' account of the operations is clear, and his appreciation of the merits of the officers acting under his orders on this important occasion so just, that I feel that it would only be weakened by any observations or recommendations of mine."

My reports of proceedings at Taganrog, by Captain Lyons, of her majesty's ship *Miranda*,

in Taganrog Roads, on June 3rd, was as follows:—

"I have the honour to inform you that I was anchored in eighteen feet water, with the squadron under my orders, in Taganrog inner roads, at about eight and a half miles from the town, on the evening of the 1st instant, without any accident, although the enemy had removed the light-vessels and beacons. During the night an easterly wind sprang up, and the water fell three feet, with every appearance of still falling; we were, therefore, obliged to remove a mile and a half further from the town.

"The 2nd was employed in reconnoitring the town, which I was enabled to do satisfactorily in the *Recruit*, Lieutenant Day, commanding that vessel, having found a passage during the night. I had arranged to proceed at 3 A.M. the following morning, to summon the town, and in the event of a refusal to surrender, to endeavour to destroy the immense stores of grain and other government property in that place. Matters were in this state, when, at sunset, to my great satisfaction, the *Sulina*, *Danube*, and *Medina*, with the twelve armed launches of the line-of-battle ships, hove in sight; this most welcome and opportune reinforcement of exactly the description of force required for the purpose in view, rendered success certain; and not long after, the French steamer, with launches in tow, arrived. Having concerted measures with Monsieur de Sedaiges, commanding the French steamers, I proceeded at 3 A.M. in the *Recruit*, with the vessels and boats, and accompanied by the lightest French steamers (M. de Sedaiges being on board one of them) towing their launches. Having anchored the *Recruit* at 1400 yards from the Mole Head, and collected all the boats astern, I sent Lieutenant-commander Horton with a flag of truce, accompanied by a French officer with similar orders from M. de Sedaiges, to demand the surrender of all government property, of every description whatsoever, and of all grain, flour, and provisions (which I considered as contraband of war, knowing that even in the event of its not being government property, that it could only be intended for the supply of the Russian army in the Crimea), the whole to be delivered over to us to destroy; the troops to remove, during this necessary destruction, to a place five miles from the town, and within sight of the ships; the inhabitants to withdraw, except those appointed by the authorities to open the stores and assist us; any approach of troops, or any infraction of these terms, if accepted, to be considered as cancelling them, and to be punished with instant bombardment; one hour to be allowed for a decision, and no modification of the terms to be entertained. At the expiration of the

hour, Lieutenant Horton and the French officer were informed that the governor refused the terms, and that, having troops at his disposal, he intended to defend the place. On this, these officers came off, and the flag of truce was hauled down from the *Recruit*. Shortly afterwards the *Recruit* commenced firing, and the boats proceeded, under the command of Commander Cowper P. Coles, of the *Stromboli*, in tow of one another, and accompanied by the French boats, until, having arrived in the required position, the tow was cast off, the boats' heads pulled round to the beach, and so heavy a fire opened that, although the enemy made repeated attempts to get down to the houses lining the beach, so as to save the long range of store-houses from destruction, they never succeeded in doing so in sufficient numbers. Lieutenant Mackenzie (the senior lieutenant of this ship) had charge of a separate division of gun-boats, with rockets and one gun, to cover the approach of Lieutenant Cecil Buckley, of the *Miranda*, who, in a four-oared gig, accompanied by Mr. Henry Cooper, boatswain, third class, and manned by volunteers, repeatedly landed and fired the different stores and government buildings. This dangerous, not to say desperate service, when carried out in a town containing upwards of 3000 troops constantly endeavouring to prevent it, and only checked by the fire of the boats' guns, was most effectually performed. The *Recruit*, from her light draught of water, was enabled to take an effective position at 1400 yards, and so was the *Mouette*, French steamer, and the *Danube*, with 24-pounder howitzer and rockets, was very useful. By 3 P.M. all the long ranges of stores of grain, plank and tar, and the vessels on the stocks, were in a blaze, as well as the Custom-house and other government buildings, and unfortunately, but unavoidably, the town in many places; and our purpose being amply effected, the boats returned to the *Recruit*. The loss of the enemy in men must have been severe, as many were seen to fall; they deserve credit for the obstinacy with which they endeavoured to gain positions to prevent our effecting the object we had in view, but it was impossible to face the continuous and well-directed fire kept up. Their loss in grain of different descriptions I cannot estimate; but as it comprises all, or very nearly all, in store at Taganrog, it must be enormous. The only casualty in carrying out this service was one private, Royal Marine Artillery, severely wounded in the face by a musket-ball.

"I must now beg to be allowed to bring to your notice the very meritorious conduct of Commander Coles on this occasion, in command of so large a force of boats; and I cannot speak too highly of his energy, decision, and ability,

which left me nothing to desire. He speaks the highest terms of all under his orders, particularly of Lieutenant J. T. C. Mackenzie, in charge of a separate division, who behaved with his accustomed spirit and judgment; of Lieutenant Buckley, who so well carried out the hazardous service he volunteered. All the officers and men employed conducted themselves to my entire satisfaction; but those above mentioned were in such conspicuous situations, I trust I may be pardoned for submitting their names to your favourable consideration. I cannot refrain from bearing testimony to the admirable conduct and co-operation of our allies, under the personal direction of M. de Sedaiges; the boats being under the immediate command of M. Lejeune, *capitaine de frégate* and first aide-de-camp of Admiral Bruat. A Russian sergeant who volunteered, and gave himself up to a French boat, states the number of troops in the town to have been 3200, of which 800 arrived last night. A Russian war schooner, which had been on shore near the town and abandoned, was set fire to and burnt, and so was a large raft of timber. The wreck of a large vessel (a *guard-ship*), which we observed to have been by the enemy and blown up on our first appearance in Taganrog Roads, was visited, and was found to be already effectually destroyed. Many large buildings had the black flag hoisted as a sign, I presume, of their being hospitable; these were most carefully respected by us, as were the churches, and, so far as possible, the private houses."

Concerning the evacuation of Anapa, Admiral Lyons wrote, in a letter dated June 11th, from the Straits of Kertch:—

"My telegraphic message of yesterday, which I have had the honour to inclose in copy, will have informed the lords commissioners of the Admiralty that Admiral Inglefield and I had received intelligence of Anapa having been evacuated by the enemy on the 10th instant. I have now the honour to inclose in copy of a report which has just reached me from Rear-admiral Stewart, whom I sent to Anapa to act in concert with Rear-admiral Charner, to prevent the possibility of the anchorage being occupied by a Russian force, leaving the political part of the question in the hands of Mr. Longworth, the agent of her majesty's government, whom I sent to the spot in the *Hightflyer*, a few hours before Rear-admiral Stewart left this anchorage."

The report of the Rear-admiral, dated the 11th of June, on board the *Hannibal*, was as follows:—

"SIR,—In pursuance of your orders of yesterday's date, I have the honour to inform you that I arrived at this anchorage at 10 A.M. to

; Rear-admiral Charner did not arrive till at 1 P.M., Admiral Bruat having last night ordered me not to wait for the *Napoléon*.

I inclose a return of the guns, by far the better part of which have been rendered quite useless by the Russians themselves; the remainder of them are being made unserviceable thrown over the cliffs, under the direction of Lieutenant Arthur, the gunnery officer of this

The Russians have exploded nearly all powder-magazines in the place, and those which remain are empty. The barracks were burnt by the Russians, as also a good number of buildings, and all the coal and grain, which used to have been in considerable quantities. The garrison is estimated by the Circassians at between seven and eight thousand, and they are on the Cuban River, which they crossed by a bridge, destroying the latter between them."

Lord Raglan's letter to the War-office was written:—

In my despatch of the 5th instant I informed your lordship that the Russians had evacuated Soujuk Kaleh on the 28th of May. We now have the satisfaction to acquaint you that they withdrew from Anapa on the 5th instant, and thus they have abandoned their stronghold on the coast of Circassia. Intelligence of this event was brought to Sir E. Bulwer-Lytton by Captain Hughes, who, in his zealous endeavour to give the admiral the earliest intimation of it, went from Soujuk to Kertch in an armed boat, and on passing Anapa, observed it burning, it having been set on fire by the Russians. Captain Hughes, who arrived yesterday, entertains no doubt that the Russians have retired across the Cuban. The abandonment of Anapa is one of the fruits of the attack and capture of Kertch, and one of the brilliant operations of the allied naval forces in the Sea of Azoff, where no flag now flies but that of England and France.

Nothing material has occurred here since the honour of addressing your lordship on the 11th instant; both our allies and ourselves are making advantage of our success to push forward our advances, and erect new batteries on the ground which was gained upon that occasion, and I hope I shall soon be able to report further progress.

We have had a second report from Colonel Bulwer-Lytton, in which he begs to draw my attention to the services of officers whom he omitted to mention in the first instance, and whose names I have now the honour to bring to your lordship's notice. They are the following:—Major Macdonell, Rifle Brigade, who commanded a portion of that corps, and of the 41st, 49th, 77th, and 90th regiments, detached

from the guard of the trenches; Captain Ambrose, who had charge of 200 men of the Buffs, and was himself wounded; and Captain Dixon, also wounded, who commanded a large detachment of the 41st; Captain Shiffner, of the 34th; Captain Hunter, and Lieutenants Lucas, Gaynor, and Stokes, of the 47th; Lieutenant Beresford, of the 88th, who succeeded to the command of a part of that regiment, his seniors being either killed or wounded; Lieutenant Pearson, of the same corps; and Lieutenant H. M. Jones, of the Royal Fusiliers. Colonel Shirley likewise eulogises the conduct of the 62nd, under Colonel Shearman; and here I must be permitted to express my deep regret at the death of that officer, who fell mortally wounded; and of Major Dickson, of the same regiment, who was unfortunately killed upon the occasion. Both these officers are serious losses to her majesty's service.

"I inclose returns of the killed and wounded from the 4th to the 7th, and those of the casualties that have since occurred up to the 10th instant. These lists, I much lament to say, are very heavy.

"The *Alma* has returned from Kertch, having on board the 72nd and 63rd, whose services ceased to be required, as soon as it was known that Anapa had been abandoned."

The operations of our naval and military forces, above recorded, became of increased importance as the season advanced, and their effects were severely felt by Russia throughout the war. From Sebastopol to the entrance of the Putrid Sea, and all around the eastern shores from Azoff to the Isle of Taman, every city, town, and fort was captured or burned. Nearly 400 ships of commerce, six ships of war, and a large number of passage and grain-boats were destroyed, many of them laden with flour and wheat. Supplies for an army of 100,000 men for nine months were cut off from the Russian commissariat. During winter, the Sea of Azoff is always frozen, and communications are carried on across the ice; these were rendered difficult, either for purposes of information or aid, by the allies continuing to hold all the prominent places, such as Mariopol, Taganrog, Kertch, Yenikale, &c. In dry seasons, and during the heat of very hot summers, the northern extremity of the Sea of Azoff is passable, and both on horses and by foot considerable intercourse takes place on such occasions. If we had merely made a naval demonstration in that sea, we could not have cut off the Russian intercourse between the two shores, to intercept which proved of so much importance to the war in Asia. We should in winter have been shut out by the ice, and in summer from insufficient depth of water; but, occupying

military positions on all the most valuable points, and garrisoning them with Turkish rather than with French or British troops, we effectually barred the access from one shore to the other. The Cossacks had no ill-will to the Turks, the Tartars had a friendly feeling to them, and the Turkish garrisons more easily established amicable relations with the natives. The rivers which empty themselves into the Sea of Azoff were not only commercially useful to Russia—they were the highways from the interior. The Don was especially necessary to Russia as a means of communication, and the command of its mouth was of more importance as to the general issue of the war than the destruction of one thousand soldiers. These operations in the Sea of Azoff had, as their necessary complement, successful operations on the north-eastern coast of the Black Sea. The position assumed by Russia there, made her more formidable to Turkey and Persia, and even to England, than any other which she occupied. The character of the Russian navy in the Black Sea was such as to make it unsuitable for the transport of a large army from Sebastopol to the Bosphorus, or even to the northern side of the Baltic in the Black Sea—as, for instance, to Varna. The sudden descent of a large army upon Constantinople, however possible a great many years to come, was not within the power of the Russian navy at Sebastopol to execute. There were other and more dangerous uses to which it might be put, viz., in support of an invading army entering Bulgaria, or advancing from Bulgaria to Roumelia. But so practicable is the defence of the Danube by any army commanded by Europeans, and disciplined according to the European school, and so weak is the defensive system of the same river on the Wallachian side, that an army on the southern shores, numerically equal, can always dislodge an army from the opposite line of the river, and drive it back upon Bucharest, so that, even when in possession of Wallachia, Russia can be combated upon the Danube with success. The line of the Pruth, however dissimilar to that of the Danube, affords an effective defensive system on its southern side, but with an indifferent one upon its northern side—again affording a double advantage to the Turks, if they made their stand upon their proper boundary. From the junction of the Pruth with the Danube, the defensive system of the latter becomes exceedingly strong on the Russian side of the river, rendering an attack upon Bessarabia in front by no means feasible for the Turks; they, however, occupying Wallachia, would always hang upon the flank of a Russian army in Bessarabia, and thereby render the Russian hold upon the Danube insecure. But, by occupying the Caucasian shores of the

Black Sea, Russia could always give powerful support to her armies acting upon the European side; while, by her possession of Mingrelia, Immeritia, Georgia, and the line of the Araxes (and she is actually in possession of territory south of the Araxes), she can always march into Turkey by way of Asia Minor; she can march on rapidly to Persia, and she can, by the route indicated to the Emperor Alexander by the Emperor Napoleon I., push her step by step, to India. We know that the Russians “pooh-poohed” most fashionably; but we know that it is practicable, and that it is a part of the schemes of her ambition. To march an army from her present frontier, by way of Khiva and Bokhara, would be deemed impossible; but to bring these nations into Central Asia within her frontier, and there her basis of operations, is not impossible, nor is such an undertaking so very distant. The future of Russian aggression as some persons imagine, if she be only allowed to follow at the rate of the conquests of the previous century in that direction. Since the treaty of Adrianople, Russia has had from the Porte the title (which, indeed, the Porte had no right to give) to the eastern shores of the European Sea from Anapa, near to the Strait of Tamar, more than 200 miles, to Fort St. Nicholas. Nearly all that territory was most gallantly contested with her by the Circassians, or properly Caucasians, as the Circassians but one tribe of many inhabiting the Caucasian range. The Russians owned nothing but a series of forts on the line of coast—the shores of the Caucasians swept them away from the Caucasians. These forts could always be supplied from the Sea of Azoff, and reinforced at ease. Our occupation of that sea then, had, as its first-fruits of victory, the abandonment of all that line of coast by the enemy. The communications between the sea government and the Asiatic territory south of Georgia would be over the eastern port of the Caucasus, and by the slow route of the Caspian Sea, where, on every step from Russian Armenia and Georgia, northward and westward, Russian troops or couriers were met with enemies. Anything like vigorous operations by Turkey upon her Asiatic frontiers would have driven back the Russians from the Caucasus; that they had torn from her there; and Persia to descend upon the Araxes with 30,000 men, led by European officers, the cavalry might ride in victory over the territories lately wrested from her. All Russian Armenia, and Georgia, and the country of the Caspian would have been abandoned as spoils as the Russian forts on the Caucasus; the Daghestans, Lesghians, and Avarians, pouring down in alliance with advancing Turkish and Persian armies, would

pared the whole country, from the Caspian sea along the line of the Terek; and every mile from the northern slopes of the Caucasus moving forward simultaneously, the line of the Cuban would have been occupied with ease; the Cuban Cossacks driven away, or taken into the alliance of the independent tribes; and beyond the Cuban, step by step the Dón, there would be found races to fight in the tide of wild horsemen that could be rolled on against Russia in that direction. The vast territory lay at the mercy of the allies, not only south but also north of the Caucasus—a region bounded on the north by the river Don, on the east by the Caspian Sea, and on the west by the Sea of Azoff. Our readers will comprehend, from these considerations, how important were the injuries inflicted upon Russia by the operations, conducted with such skill and success, on the coasts of the Sea of Azoff. For seventy-five years Russia had

warred for what she lost in a few days. For this she had sacrificed at least a million of lives, and the allies, without loss of a ship, but with prizes and profit, drove her from it all. Heart-sickening at St. Petersburg and Berlin were the tidings of Sir George Brown and Captain Lyons' proceedings; while along the whole range of the Caucasus, from the Straits of Taman to Georgia, the hills were lighted up with fires—the symbols of rejoicing among the free sons of the mountains. Since the English public had begun to watch the war, and inquire into its conduct, much more vigour marked the proceedings of our fleets and armies: still there was, in the courts and cabinets of Western Europe, consideration for the feelings of the Russian army and nobility—but none for the plundered Armenians, and none for the nobler races who had guarded their mountain-homes, and kept at bay the power of Russia, while our statesmen were its abettors or its dupes.

## CHAPTER XC.

### SEIGE OF SEBASTOPOL: FOURTH BOMBARDMENT.—DEFEAT OF THE ALLIES IN A COMBINED ASSAULT, JUNE 18TH.

"Night closed around the conqueror's way,  
And lightning showed the distant hill,  
Where they who lost that bloody day  
Stood few, and faint, and fearless still!"—MOORE.

AFTER the capture of the Mamelon by the French, and of the Quarries by the English, the fire of the allies relaxed; but their labours were not. It was necessary for the English to strengthen the Quarries as an advanced position, and to turn against the enemy the guns which they had there captured. The French had a more laborious task at the Mamelon (now called by them the Brancion Redoubt). They found only a heap of ruins as the fruit of their labours, and works of magnitude had to be constructed to make the place an outwork of attack. Thus nothing of consequence in the way of conflict occurred until a renewed bombardment was opened, preparatory to a general and almost general assault.

It was agreed by the two commanders-in-chief that the fleets should co-operate, and accordingly, on the night of the 16th, they opened a heavy fire at a closer range than they had previously discharged their cannon since the bombardment of the 17th of October. On the sea-defences and the town itself suffered from the fiery fall of rockets and shells. The cannonade was returned with vigour from the sea-batteries, and several of the ships had men killed and wounded.

The new batteries had been completed the day before, but did not open fire until the 17th. The bombardment, still more terrible than any of the preceding, was then directed against

the place. The Russians at first replied spiritedly, but their cannonade died away; and in the evening it slackened to such a degree, that the French were convinced such languor resulted from the disabled state of the batteries; and accordingly Pelissier resolved, at three o'clock in the morning of the 18th, to storm the great defences of the place. This had not been the original design of the allied generals, who had agreed upon a more protracted bombardment; but Pelissier was so satisfied that the batteries of the enemy had been rendered powerless by the day's cannonade, that he took this resolution. Lord Raglan remonstrated, observing, that by maintaining a fire which had proved so superior to that of the enemy, they would *make sure* of rendering his batteries unserviceable, and, besides, breach the abatis of each of the great works to be assaulted, opening a way for the assaulting columns,—thus securing success, and at a less sanguinary cost. The impetuous Pelissier would not be guided by these prudent counsels; he resolved upon an assault. This was not the first time that the views of Lord Raglan proved to be more sagacious and comprehensive than those of the French generals; but the latter had always the advantage over him in their capacity to handle large bodies of men.

On the night of the 17th the sea-defences

were again bombarded by a squadron of the allied fleet, and with such success, that many guns were silenced, many men slain, and much injury done to the town itself. The ships came in nearer, and the conflict was close and fierce. The following frigates and sloops were more particularly engaged:—the *Tribune*, *Highflyer*, *Terrible*, *Miranda*, *Niger*, *Arrow*, *Viper*, and *Snake*. Captain Lyons, who had so recently distinguished himself in the Sea of Azoff here won fresh glory. His command of the *Miranda* elicited admiration. On the night of the 17th the *Princess Royal* and the *Sidon* lost several men, and a considerable number received slight wounds. Captain Lyons was amongst the wounded. A letter from an officer who served in the Black Sea fleet thus related the issue of the misfortune which befel that brave and useful man:—"The wound was only a flesh one, and would not at all justify the surgeons in operating; but mortification set in, and closed the scene. This was to be feared, as he had been for a good while an invalid; but at the first every hope was entertained of his recovery, with a useful limb. His death was like his life—calm, good, brave, and amiable. He heard of his doom with a smile, made his will, left messages for his officers and men, spoke of his passionate fondness for his father over and over again, dictated messages and wishes, the most minute, about his servants, as well as others, and retained his senses until nearly the last. He said, 'How fortunate he was to have lived so long; that he was thirty-six the day before; had been fortunate in the service; and though he did not inflict as much damage upon the enemies of his country as he wished, that he was happy in doing something.' At another time he said—"This is the way the captain of a man-of-war should die were he not killed at once." When death drew near, and his fine mind was clouded by suffering, he thought he was on the deck of his ship taking her into action, and in this way his duty occupied him until the last. The last words he spoke were in a loud voice—"Steady! ease her! stop her!" and so he gave up his great spirit to Him who gave it, and to whose mercy he had previously commended it. His remains are now in the church-yard of Therapia. Two trees hang over his grave, and his face is towards the sea he loved so well."

The loss of such a noble son to the brave and skilful man who commanded the British fleet was most trying, and he was justly the object of sympathy with all who loved the country which both father and son so gallantly served. Heart-sinking as the bereavement was, it did not deter Admiral Lyons from his duty, which he continued to perform with a resolute, but sorrowing spirit.

In order to create a diversion, and give the better prospect of success in the contemplated assault, the Turks and Sardinians were ordered to advance beyond the Tchernaya. This river is in the latter part of autumn, and in the latter part of spring, a torrent; the rains, in the one case, and the thawing of the snow, in the other, sending down from the high country, rolling with fierce velocity, a great body of water. Early in spring, and sometimes at its close, the valley is flooded, and unfavourable to the passage of troops; but in summer, "the black river," as the Russian name means, is a crawling rivulet. Before sunrise on the 18th the Turks and Sardinians, supported by the French, crossed this turbulent stream without difficulty or opposition. The Turks marched in the direction of the Lower Tchorghoum, the Sardinians in that of the Upper Tchorghoum. The former met with some outposts of the enemy, and, throwing forward their light troops, engaged them by a desultory fire, before which the Muscovs retired. The troops of both armies continued to spread themselves over the country, as if meditating some enterprise of importance; but the enemy made no show of resistance, nor indicated any appearance either of apprehension or surprise. Small detachments watched the allies, falling safely and skilfully back upon their support. The Russians were apprised of the plans of the allied generals; as in a former instance, the whole scheme was bruited about the French camp, and so early as the 17th the English troops gathered from French gossip the precise nature of the enterprises intended for them. Russian spies conveyed the intelligence to Prince Gortschakoff, who took his measures accordingly. The Turks and Sardinians, therefore, did not distract the attention of the enemy, did not draw off any body of troops from the defence of the place, and were unable to effect anything except display their forces by day and their watch-fires by night. The summer was fine; the country bloomed in its richest beauty, and the officers of our allies literally lived in bowers erected for them by the Turkish soldiery, who were practised in making a summer bivouac very pleasant. These troops remained in their picturesque position the remainder of June and the early part of July, and then retired to their former posts.

While these sections of the allied army were marching upon the Tchernaya, one of the bloodiest conflicts of modern times began around southern Sebastopol. It was the wish of Lord Raglan, again and again pressed upon Pelissier, that the assault should be preceded by a bombardment and cannonade of thirty hours; but the general was resolved to assault the place without any antecedent fire, relying

on that of the previous day as having silenced the batteries. Pelissier was influenced this, against his own judgment, by a council of his officers, who wished to make the assault for the day. The English artillery officers suggested that the Russians might, as on previous occasions, have withdrawn the guns for their protection, seeing that they could not silence the attack, and they gave it as their decided opinion that in three hours they could so far outflank the defences of the Redan as to render the assault comparatively easy, and perhaps insure success. Pelissier was still obstinate, unwilling to yield to the will of his officers other than to that of the British; and Lord Raglan, for the sake of union, deferred to his wishes. This was one more instance of the evil tendency upon a divided command. The terms definitively agreed upon were as follow:—The French were to make three distinct movements, and the English two: those of the latter to be dependent upon the success of the former. The French attacking body consisted of 25,000 men, and the three separate detachments into which this force was divided, were commanded by Generals Mayran, Brunet, and Lutemarre. The English were to divide their assailing forces upon two separate points, one under Sir George Brown, and the other under Sir Richard England. The first was to storm the Redan, and to advance upon it in three separate columns of attack. The form of the Redan was that of the tooth of a saw; on each side a column of attack was to pre-empt itself, and, upon their first token of success, a third was to seek an entrance by the apex in front. The second body of the French consisted of the division of Sir Richard England, which was to take the cemetery, and threaten the works at the head of the Sardinian Creek. This was the only successful movement of the day, but it was made unproductive by the failure of the others. The character of the assault requires that the attempts of our allies should be first recorded. The check by the French comprised not simply the Malakoff, as various accounts represent, but a range of works consisting of the Malakoff, the Little Redan, the Curtain, and “the Batteries of the Point,” and, in case of success on these points, the Flagstaff and Central Bastions. It devolved upon Pelissier to appoint a commander of the corps to act upon the Tchernaya, and he committed that trust to General Bosquet. His appointment caused great discontent among the French soldiery, who hoped that Bosquet, always so successful, and to whose command the capture of the Mamelon was attributed, was to direct the difficult assault upon the Malakoff, and its chain of dependent works. Thus Pelissier was not only so unfortunate as to offend the English artillery, and

to differ from the English generals, but to cause dissatisfaction in his own army also. Every step he took in connection with that ill-fated day was *mal à propos*, and many steps were taken in error. His energy and active courage were superior to his forethought and his genius.

When Bosquet received the notification of the change of command he was much chagrined, for his whole time and thought had been directed to the study of this grand attack, which he knew must be made, and which would require the most comprehensive, and yet most minute study of all its combinations and parts. “You will to-morrow,” wrote the general-in-chief, in this letter, “resign the command of the attacks to General Regnaud de St. Jean d’Angély, at whose disposition, for the details of the service, you will leave the Commandant Henry, your deputy chief of the staff.”

The general appointed to succeed Bosquet in the command of the *corps d’armée* from which the troops for the attack were to be selected, was the chief of the Imperial Guard. The following were the orders he received:—

“Sunday, 17th of June, at day-break, general opening of the fire against the place. On the same day the Sardinian and Turkish armies will make an offensive movement towards Aitodor, so as to threaten that quarter.

“On Monday, the 18th, early in the morning, assault on the Malakoff Tower, with an attack on the Redan by the English. After success, and when it shall have taken place, assault on the Flagstaff Bastion and the Central Bastion.

“A corps of nearly 25,000 men is formed by the French army on the Tchernaya, either to support the demonstration of the Turkish and Sardinian armies, or (if I give the order) to attack and carry the batteries of the right bank of the Tchernaya, and take possession of the plateau in the intrenched camp of the Northern Fort. The design will be, with the concurrence of the English, and by making a junction with the Turkish and Sardinian armies, to march upon Bagtché Serai.

“It is for this contingency, ulterior to the assault, that we must be completely prepared, by organising beforehand the convoys, munitions, and ambulances for the troops who are to take part in the movement.

“In order to insure the execution of this general plan, so far as concerns the French army, I have nominated you to take the command of the corps that will be charged with the attack on the Malakoff; General Bosquet taking under his orders the troops that are to form on the Tchernaya. These troops will be composed of the 1st, 2nd, and 4th divisions

of the 2nd corps, and of the 1st division of the corps of reserve (General Herbillon's); of all the cavalry; of Morris's and d'Allonville's division; of Forton's brigade, and of four horse-batteries of the reserve.

"I have said to you that the attack on the Malakoff will take place on the morning of the 18th. The troops charged with this operation (who will be under your orders) will be the 1st division of the 1st corps (General d'Autemarre's), the 3rd division of the 2nd corps (Mayran's), the 5th division of the 2nd corps (Brunet's), and the division of the guard (Melinet's).

"As to the *corps d'armée* under General de Salles, charged with the attacks of the left, it will be composed of the 2nd, 3rd, and 4th divisions of the 1st corps, and of the 2nd division of the corps of reserve (D'Aurelle's).

"All the movements of the troops which are to complete these dispositions will be effected to-morrow, in the afternoon, under private orders from the commanders of the different corps. The Imperial Guard alone will be retained, until fresh orders, in the position which it at present occupies.

"In consequence of these dispositions, I request you to place yourself immediately in a condition to know the ground on which you will have to act, in order to submit to me, on the morning of the 17th, your plan of action. It is a question which General Bosquet has been in a position to consider fully, and of which he will furnish you with the details. You will go to receive the command from that general to-morrow, at two o'clock in the afternoon; and you will install yourself in the present head-quarters of the 2nd corps, the position of which is well known.

"You will, early to-morrow morning, take your chief of the staff to confer with General de Cissey, in order to receive all the information that will tend to insure a fortunate continuation of the attacks and of the details of the service.

"The deputy chief of the staff of the 2nd corps, Commandant Henry, will remain with Colonel Vaudrimery until after the success of the assault. You will request the intendant of the corps of reserve to repair to the Intendant de Molines, to-morrow morning very early, to take the direction of the administrative services of the new *corps d'armée* placed under your orders, that you may be in a condition to supply all that circumstances may demand—such as ambulances, munitions, &c.

"The companies of engineers engaged in the works of the siege will remain there. You will have under your orders, for the attack of the Malakoff, Generals Frossard of the engineers, and Beuret of the artillery."

Bosquet descended from the plateau to where

the division of General Canrobert was posted and took the general directions of the French Sardinians, and Turks, who, in case of success in the storming on the 18th, were to be pushed on towards Bagtché-Serai, and to sustain the operations which the failure at the Malakoff rendered abortive. General St. Jean d'Angély did his best to carry on an operation for which he was not previously prepared by the state of its difficulties. Under his orders General Mayran's division was to leave the Careening Bay, pass along the left side of the ravine, extend its line to the right, and attack with the first brigade what was called the *Battery of Point*, and which was turned by the gorge. The second brigade was to storm the Little Redan, which was on the right of the Careening Batteries. General Brunet's division was thus disposed:—the first brigade was in the front trench to the right of the Mamelon; the second was in the parallel to the rear of the first, and it was to pass between the Malakoff and the Little Redan, entering the curtain, and also on the right face of the Little Redan, and on the left front of the Malakoff. D'Autemarre's division was to march by the ravine of the Karabelnaia. Its duty was to attack the curtain, which uniting what was called the "Gervais Battery" with the Malakoff. Two troops of horse-artillery were to be placed behind the Mamelon, to be pushed forward to the enemy's position at the moment the troops had made a secure lodgment. The three divisions were to attack simultaneously, upon the safe execution of which arrangement, followed by the opportunity of the English, victory depended.

Against all these complicated preparations the enemy had in the meantime made effectual arrangements. The batteries were by prodigious labour repaired, and the whole force of the Russian army was ready to support them. The Redan was especially strengthened, though not so important a work as the Malakoff; and the deep ditch around it was sown with bayonets—the handles embedded in the ground, so that as the men descended into it they would be received by lines of bayonets, more firmly fixed to receive them than if held by the hands of men.

On the eventful morning Pelissier selected the Lancaster Battery as his post, having previously announced to the generals that it would give the signal of attack, which was to consist of a bouquet of fireworks. At half-past one o'clock in the morning the troops were placed in the different localities designed for their occupation. Captain de Launay was sent towards the extremity of Careening Bay to receive the drums of the enemy's beat *garde à vous*, which left no doubt that an attack was expected, and that they were apprised

time for which it was contemplated. At half-past three o'clock the generals of division were to expect the signal. At ten minutes before three, several shells, the fuses of which were very brilliant, were thrown from the melon, and General Mayran called out that this was the signal. His officers assured him that it was not—that such shells had been frequently fired during the night, and that it was more than half an hour before the appointed time. He insisted that it was the signal; and said, "It is better to be too soon than too late attacking an enemy." With these words he ordered forward his columns—a fatal movement, as everything depended upon a simultaneous advance of all the divisions, to prevent the foe from converging his fire on any one point of attack. The preparation of the Russian artillerymen instantly became obvious; a tempest of grape and round-shot swept upon the columns, making havoc not only in the advanced brigade, but also in that of Delort, by which it was sustained. While the ranks of Mayran were mowed down by the cannonade, stillness rested upon the other points of attack, no signal having been given, all wondering what could occasion the change of battle in that single direction. D'Autemarre himself supposed it to be a sortie, until his aide-de-camp, hastening to the scene of combat, brought him word that Mayran was engaged in dreadful and hopeless battle. Had he been at this moment in the Lancaster Battery all might have been redeemed by giving the signal, if, indeed, the plan of assault had been effectually carried out under the circumstances, without the previous cannonade, so pressingly urged by Raglan and his corps of engineers and artillery. General D'Autemarre was only then on his way to join the army, who had no discretion allowed him, whose orders were to await the arrival of the commander-in-chief. At last the signal was given, and the general movement was commenced. But it was too late; Mayran's division, at that short time (from twenty to twenty-five minutes), had been nearly cut to pieces. They dashed on against the curtain, over difficult ground, the steamers in Careening Bay firing over the whole space a flood of projectiles. Mayran was struck by a cannon-ball on the arm, but yet, in an agony of pain, urged his troops. Several field-officers of his division fell as their general was wounded. He still pressed the brave man and his following followers, until a cannon-ball from one of the steamers swept him from their head. He perished at fifty-three years of age, in the fullness of life. His troops reeled back, disordered and broken, clinging to any shelter they could find, yet firing a useless musquetade at their aggressors.

When the two other divisions pushed forward to accomplish the parts assigned to them in this sanguinary tragedy, they also found embarrassments independent of that caused by Mayran's rashness. Brunet had to make a *detour* through narrow trenches before arriving at the point of attack, and so intricate was the course, that he did not reach the spot where he should have promptly emerged until after a delay fatal to his success,—the guns of the enemy already swept the ground with grape and musket-balls as his confused battalions came forth in a desultory way from the cover under which they had advanced so far. The general, foremost in the track of danger, foremost fell; a cannon-ball upon the breast smote him when he advanced a few paces before the trench. Nearly at the same moment the officer in command of the artillery of the attack, Lieutenant-colonel de la Boussinière, was struck by a cannon-ball, which carried away his head. The division of Brunet was broken as a shell cast upon the ground.

General d'Autemarre was more successful than Brunet, chiefly owing to greater order and celerity of movement, for the dangers were the same, but he had no obstructions similar to theirs, encountering which brave Brunet and his division were lost. The Chasseurs of d'Autemarre took at a run the Gervais Battery. Their commander wisely exclaimed, "None first! none last!—all must be together!" These words at once guided and inspired his men. This battalion did not leave more than 100 men behind; they at once climbed the parapets, bayoneted the artillerymen, and put the Russians to speedy flight. The divisions of Mayran and Brunet halted to open fire with their muskets, and fell as seared leaves in the autumn blast. The gallant Chasseurs of d'Autemarre arrived at the Gervais Battery with their rifles loaded; not a shot had been fired. They delivered their contents with a deadly volley from the captured battery into the retreating foe. Commandant Garnier was the officer who deserved the credit of this skilfully and gallantly performed feat: he received a musket-ball in the body, and a bayonet-thrust in the arm, in the act of storming the work, but still maintained his command. Prince Gortschakoff, in his report to the czar, gives credit to this brave band in these terms:—"The hostile columns advanced to the Gervais Battery, seized upon it, drove back the battalion of the Pultowa regiment that defended it, and, in pursuing it, occupied some houses of the Karabelnaia faubourg, between the Malakoff hillock and the ravine of the docks." This account was correct. When the Chasseurs attained the streets they found most of the houses dismantled, and behind and within their ruins every spot was crowded with Rus-

sian soldiers, whose fire was delivered with the greatest coolness. The Chasseurs charged with the bayonet, and a struggle ensued of bloody desperation, the combatants fighting in every form of close and deadly contest. Colonel Manèquè, at the head of a small detachment of the 19th regiment, arrived to the succour of the Chasseurs. This officer, with a calmness and skill the most surprising, collected the scattered combatants, and placed them where they were secure from the fire of both the Malakoff and Redan; but General Chruleff arrived to the support of his countrymen with a powerful column, and Manèquè and Garnier retired into the battery, followed by the Russians. Both officers were covered with wounds; and the struggle still raged, although hopeless for France. Pelissier had sent in several battalions of the Guards to reinforce the men on the points where succour could be of avail, but this order was indifferently executed; and on the point where we now describe the battle as ebbing, there was no timely help. At last Colonel Lesbiers, at the head of the 26th regiment, arrived; General Niel, and other superior officers, with fragmental detachment of troops, arrived also. General Niel being informed that there was a practicable place at the gorge of the Malakoff, made a last attempt to enter. The 20th and 26th regiments, with General Niel and Colonel Manèquè at their head, rushed forward; they were received with an avalanche of shot and fire. They must all have perished had they not fallen back on the support of the 39th regiment, which had just then come up. This regiment, and the shattered remains of the brave corps it so happily aided, then concentrated themselves on the side of the ravine.

Pelissier, at last disheartened, ordered his broken divisions to return to the trenches. It is related by French historians of the war that the French commander-in-chief, at the request of d'Autemarre, ordered up fresh troops to renew the attack, and sent to Lord Raglan, to request him to attempt the Redan a second time (for his attack on that work had also failed), but his lordship refused. We much doubt the truth of this story; but if it be true, it reflects credit on Lord Raglan's wisdom, for it was useless to attack the Redan while the Malakoff, which commanded it, was unconquered. This was proved two months later under more fortunate circumstances. Lord Raglan acted as prudently in determining that the assault should not be renewed, as he had previously advised that it should not take place under the circumstances in which it was so inauspiciously undertaken.

The troops under Sir George Brown were placed in their positions before daylight. Two

of the three columns of attack were placed to take either flank of the Redan, and the third to seize the salient angle of that work. Each column numbered about 1800 men; and the middle column was composed of three detachments, consisting of a storming-party, a working-party, and an artillery-party, to spike guns, and direct them against the enemy, as might favour. The columns on either side of the work were commanded by Colonel Ewan and Windham: the former consisting of troops told off from the light division; the latter consisting of men from the fourth division. The centre column was commanded by the tenant-colonel Ewan, consisting of men from the second division.

Lord Raglan never expected to take the Redan independent of the capture of the Malakoff. If that work were won, the Redan would have fallen without the necessity of a second assault, because the one commanded the other. Lord Raglan hoped to do was to create a diversion as would prevent the fire from the Redan raking the approaches to the Malakoff, and in case of a decided prospect of victory on the latter, then, by storming the Redan, to prevent its garrison hastening to the relief of the other bulwark of the defence. The object to facilitate such an object was to have a powerful fire of the Redan by artillery, as to render an assault possible at the time that the French were assaulting the Malakoff. This the French generals of the day prevented, as before shown, by prevailing on Pelissier to change on the night of the 18th the hour and plan upon which he and Lord Raglan had agreed.

The English columns were to be led by engineer officers, and strong parties from the Naval Brigade volunteered to carry ladders under the command of the intrepid Captain Peel, and other naval officers of inferior rank. The unsuccessful character of the French assault was obvious to Lord Raglan before he gave the signal for his troops to attempt the works which frowned so grimly before them; when, therefore, his lordship gave the order for the attack, he knew that success was impossible; that if his brave fellows did drive the Russians out, they would certainly be slaughtered by the fire of the Malakoff, and that renewed attacks of Russian infantry, against which so small a force never could have stood, the Redan, even if the fire from the Malakoff could have been braved. The conduct of Lord Raglan is open to criticism. He himself felt it to be a point of honour in which his country and himself personally were involved, to make the movement; but war was distinctly understood between the two chiefs that only in case of hopeful success in one direction, was anything serious to

pted in the other, it is difficult to see how blunders and defeats in the French lines trained the honour of the English to spill blood in an enterprise that must be fruit-

As to drawing off the fire of the Redan from the retreating French, a cannonade would have been more effectual, than to send, into a space of 700 yards which separated the French from their works, the British soldiers certain destruction. Some officers agreed with his lordship in this point of honour; others, and the great majority of civilians, regarded it as a blameworthy sacrifice, and were ready to exclaim, with the national poet, in *Richard II.*—

"The blood of English shall menace the ground,  
And future ages groan for this foul act."

I doubt his lordship acted conscientiously; that is not a sufficient apology where the needlessly perish, and the widow, and orphan, and their country have cause to mourn. Lord Raglan felt as tenderly for the life of human life as a general possibly could, and in this instance he yielded to the stern demand of a high sense of honour and duty. Giving that the French in vain assaulted the Redan, he sent up the appointed signal, and the flanking columns were ordered forth to the attack, so that, contrary to the original arrangement, while yet the French fought and fell, the English were also engaged in a conflict equally murderous.

At two o'clock in the morning, while it was dark, Lord Raglan took post in an advanced position, from which he could have a good view of the Malakoff and the Redan. During the battle this position was one of great peril; officers and men were killed and wounded all round his lordship, who never evinced the least trait of uneasiness or concern for himself, and it was only for the sake of those under him he consented to change that perilous position for another, which, although less exposed, was sufficiently commanding for purposes of observation. When Mayran's division became fully engaged, the English listened with anxiety and concern, for they became at once conscious of the true state of things, that the misapprehension the hour of assault anticipated. Colonel Hamley says that the amount of success obtained by the French in the cause of Lord Raglan ordering the retreat; but his lordship assigned as his reason for issuing his columns of assault the *success* on the part of the French, and his desire to save their men by a sacrifice of numbers. French officers generally do not make generous acknowledgment of this; they follow Colonel Hamley's view of it, and even admit their own defeat as partly dependent on the failure of the attack on the Redan

by the English; even officers of high distinction have given this very unfair view of the matter to the world.

On the right the stormers were led by a party of the light division, with a company of the Rifle Brigade, and of the 33rd regiment. The engineers conducted these advance companies, attended by men of the Naval Brigade, carrying the implements of escalade. Between the Quarries where our troops found cover, and the Redan, was a smooth grassy slope; over this the brave fellows who led made their way without any material loss or accident, until they arrived within a few yards of the abattis which surrounds the Redan; then the cannon opened with a perfect "hell-fire" (as an officer described it) of grape-shot. The troops lay down, that the storm might sweep above them, and while recumbent, fired into the embrasures, the Rifles, especially, with an aim so deadly, that the Russian gunners fell fast. These advanced companies remained *en l'air*, yet rendering useful service, waiting in vain for their supports. The engineer officers retired under this desperate shower of grape to bring them up, but the men would not advance. Some of the officers stood upon the parapets exposing their persons to encourage the men; others ran forward waving their swords, and calling upon the troops to follow; but these consisted almost wholly of young raw lads, recruits, who had not long arrived in the camp, and had witnessed no severe warfare; groups of the bravest of them, and such old soldiers as were among them, rushed out and followed their officers, only to be swept away as the besom of the gardener sweeps the fallen leaves from a smooth garden-walk. The artillery-party attached to the columns, consisting of twenty men, sallied forth with their officers, and most of them reached the advanced companies, but only nine returned without a wound. The sailors were equally prompt and daring, but no example could move the great body of the men; they were under the conviction that they were being led forth to unnecessary slaughter, as their numbers were too few to accomplish anything. Had they been in sufficient force to inspire a hope of victory, they would have followed their officers anywhere, young as they were, and whatever the peril to which they might be exposed. Colonel Yea exclaimed, "Anything is better than standing still!" and sought for a trumpeter to sound the charge, but there were none unhurt. Collecting a few men, he led them on, but he was killed by a grape-shot. Officers and men in the advance and in the trench perished in numbers, and at last the companies in advance fell back, or rather ran back, as fast as they could to the trench, many of them falling to rise no more.
